The immigrants of the mid-19th century were largely northwestern European, with the majority coming from Germany and Ireland. In the decades between 1851 and 1880, Irish and German immigrants combined were never less than 40 percent of America's total immigration pool, and they constituted more than 70 percent of America's immigrants between 1851 and 1860. The demographics of the immigrant stream changed over time and varied among national-origin groups, but, generally, immigrants were male, single, and between 18 and 40 years of age. Some came highly skilled, like the Jewish tailors of eastern Europe and the potters of Staffordshire, England, while some came seemingly unprepared to make a life in America. The demographic profile of those who immigrated shifted in reaction to current conditions. For instance, the Irish potato-famine migrants generally came as families rather than single individuals, but in the mid-1850s, legal developments in land policies in Ireland brought proportionately more single women than the Irish or other immigrant groups had previously sent.

Unlike the fanciful tales of immigrants seeking refuge in the United States after dreaming for their entire lives of riches and freedom, historians have come to understand that immigrants to the United States were generally very shrewd and took into account conditions not only in their homeland but also in potential destinations. For instance, the number of immigrants arriving in the United States during the CIVIL WAR dropped significantly, just as they did during depressions and panics in the American ECONOMY. Immigrants generally made the choice to come to the United States when that choice was advantageous to them. Thus, the moti-

vations of immigrants are complex and individual. Among the key reasons for immigration during the mid-19th century were rapidly changing conditions in Europe, the economy, religious persecution, and political strife.

In the middle of the 19th century, Europeans were caught in a nexus of events and developments that made the likelihood of immigration greater. Famines, like the potato famine that decimated Irish and German potato crops from the 1840s through the 1850s, forced many people to leave their homes merely in an effort to survive. Religious persecutions brought more immigrants to America's ports. For example, in the late 19th century nearly 2 million Jews came to the United States to escape pogroms in Europe. Political persecution, or fear of it, brought another flood of immigrants, especially the German "48ers" who came in large numbers to the United States after the failed revolutions of 1848 in Europe. On a larger scale, a dramatic increase in European populations meant more people needed food, land, and EMPLOYMENT, while at the same time the spread of commercial AGRICULTURE consolidated land holdings and pushed smaller farmers off the land. The rise of the factory system in Europe moved people from the rural areas to the cities and put them in contact with the growing proliferation of relatively inexpensive TRANSPORTATION.

Transportation developments played an important role in the process of immigration. The 1850s began the age of steamships. As late as 1856, 95 percent of European immigrants to the United States arrived by sailing ship after an arduous journey of anywhere from one to three months. By 1873, 95 percent of European immigrants were arriving in America's ports on steamships, whose passage time was generally 10 days. It was a difficult trip nonetheless, as immigrants' accommodations were generally cramped, dark, and lacking in ventilation and amenities, sometimes with tragic consequences. For instance, in 1866 cholera killed hundreds of German immigrants on National Line ships out of Rotterdam.

Other developments in transportation also helped fuel immigration to the United States. The improved European rail network that helped change landholding patterns also allowed for easier and cheaper transportation within Europe, especially the port cities. Some businesses, particularly settler-hungry American railroad companies with land grants and steamship companies seeking to fill all their berths, set up easily accessible ticketing agencies in Europe and America. The most popular ticketing option was for immigrants who had made their “fortune” in the United States to buy prepaid travel packages for their family and friends back home, developing what historians refer to as a “chain migration.” U.S. land-grant RAILROADS heavily promoted this scheme of migration, which ultimately had a significant impact on the settlement of the American West and Midwest. Railroad ticketing agents facilitated what amounted to the transfer of whole European villages to the American territories, thus developing enclaves of Welsh, Norwegian, German, and Russian settlers across America’s heartland. In addition, states and territories in the United States, campaigned in Europe for settlers. They advertised cheap or even free land, plentiful resources, and a harmonious environment, all waiting to be selected by a willing immigrant as his or her own.

The first sight most immigrants had of the United States in the mid-19th century was Castle Garden, New York, which served as the East Coast’s main immigrant entry port until Ellis Island opened in 1892. For West Coast immigrants, Angel Island in San Francisco was the general port of entry. Beyond the gates of the processing centers at the ports, immigrants faced a United States that was not hospitable. Americans wanted immigrants to easily assimilate into their culture, to work hard for whatever wages were offered, and to be literate.

America’s largest immigrant groups of the mid-19th century, the Germans and Irish, were generally Catholic and imbibers of alcohol, both character flaws as far as “old” Americans were concerned. The largely Protestant United States had an overwhelmingly negative opinion of Catholicism. Native-born American distrust of the immigrants’ ties to the Catholic Church was only exacerbated when German Americans placed such great emphasis on parochial school development, and Irish Americans poured millions of dollars into building towering cathedrals like St. Patrick’s in NEW YORK CITY. Beyond their suspicions of immigrants’ Catholicism, alcohol use by immigrants became a key target of protesters in the mid-19th century. In 1851 Maine passed a statewide prohibition law, and other states followed with their own version of what came to be known as “Maine laws,” but the restrictions of alcohol were rarely enforced effectively.

With two strikes against them already, Irish and German immigrants inspired even more animosity by affiliating

themselves with urban political machines. Both immigrant groups were adopted by Democratic political machines, who came to depend on the votes of immigrants to stay in power. Most notorious of the urban machines was New York’s Tammany Hall, which reached the height of its power under the leadership of the notorious William “Boss” Tweed. Despite their political skullduggery and unsavory reputations, however, the urban machines offered immigrants an important support network—jobs, assistance in times of need, and a chance to rise in the machine and the city. Because of their affiliation with the machines, Catholicism, and alcohol, German and Irish immigrants were the targets of rising tides of anti-immigrant sentiment, or NATIVISM. Newspapers portrayed them as baboons and drunkards who stole ELECTIONS and defiled democracy. Many argued that these immigrants could never be real American citizens.

The assimilation of these “unassimilable” immigrants came in a drastic way. With the advent of the Civil War, many immigrant groups seized their chance to prove their allegiance to the United States. Immigrants of all ethnicities answered calls like that of the Irish-American newspaper, the *Boston Pilot*, which urged its readers to “Stand by the Union; fight for the Union; die for the Union.” Across the North, ethnic units like the 79th New York Infantry (Scottish), the 55th New York Infantry (French), the 15th Wisconsin Infantry (Scandinavian), and the famed “Irish Brigade” formed. The Confederacy had its ethnic regiments as well, such as the “Emerald Guards” and the “New Orleans Jägers,” but most immigrants in the preceding decades had settled in the North because of the limited employment opportunities open to them in the Southern slave system.

Many members of these ethnic units signed on for less lofty reasons than saving the Union or the Confederacy. Many were moved, just as their native-born fellow soldiers had been, to sign up for adventure and for the economic opportunities enlistment provided. For the typical immigrant worker in Northeastern cities or on Midwestern farms, the monthly soldier’s salary was good money in comparison to their own laborer’s earnings. Few immigrants enlisted with the aim of freeing the slaves, since most immigrants were on the bottom of the labor ladder and thus would be competing with freedmen for jobs. For this reason, many immigrants declined to participate in the Civil War, particularly after Lincoln’s issuance of the EMANCIPATION PROCLAMATION. The most notable example of racial tensions during the war came with the NEW YORK CITY DRAFT RIOTS of 1863, when mobs of angry Irish New Yorkers ransacked African-American neighborhoods. The negative impact of the draft riots, however, was far outweighed by the positive contribution that immigrants made to the Union war effort. Over the course of the Civil War, more

than 200,000 German-Americans and 160,000 Irish-Americans served in the Union and Confederate armies. Other immigrant groups provided troops in lesser, but still substantial, numbers. Throughout the war, immigrants' enlistment rates remained high, and their battlefield prowess and bravery won them great acclaim and a significant measure of respect from old-stock, native-born Americans.

Even after dedicated military service, however, immigrant life was not easy in the United States. In employment, immigrants were always near the bottom of the ladder, generally only advancing when a new wave of immigrants came along and pushed them up. Along with a reliance on machine politics, some immigrant groups formed alliances with organized labor to assist their rise in the United States. Association with organized labor, however, generally put immigrants once again at odds with the larger American society. The Knights of Labor, one of the foremost unions of the late 19th century, exemplified the connections between the immigrant, his homeland, and the United States. The Knights forged links to the Land League, a nationalist movement for Irish independence and land reform, and Clan na Gael, an Irish nationalist society. In the 1860s a controversial and "secret" labor organization of the Pennsylvania mining region, the Molly Maguires, was said to be an offshoot of the Irish-American association, Ancient Order of Hibernians.

Other American immigrant groups also found the post-war United States to be a difficult place. Chinese immigrants, who originally came to work the California gold fields in the 1850s and then worked for the Union Pacific half of the transcontinental railroad in the 1860s, made up 9 percent of the California population from 1860 through 1880. The work they did in the labor gangs of the Union Pacific was invaluable to the success of the line, but their sacrifice was not rewarded upon its completion. When the transcontinental railroad was finished in 1869, large numbers of unemployed Chinese immigrants were left in its wake. Anti-Chinese sentiment rose throughout the West, culminating in riots and expulsions of immigrants through the 1880s. The federal government was constrained in its actions by the Burlingame Treaty of 1868, which allowed unrestricted Chinese immigration, but in 1882 Congress finally passed an act suspending Chinese immigration for ten years. The act was renewed several times.

For all the trials and tribulations, immigration to the United States continued unabated. Through the end of the 19th and into the 20th century, it followed time-worn patterns of largely economic push-pull factors, but in the 1880s and 1890s "new" immigrants from southern and eastern European nations like Russia, Italy, Turkey, and Greece replaced the "old" northwestern European immigrants. The rise of southern and eastern European immigrant streams fed the fires of nativist concerns once again, and a new group of immigrants were subject to American suspicion

and attack. In 1896 "new" immigrants outnumbered "old" ones for the first time in U.S. history. For all that immigrants had accomplished for themselves and on behalf of the Union in the mid-19th century, Americans had learned very little as a nation about the benefits of new citizens.

### impeachment of Andrew Johnson (1868)

On February 25, 1868, the House Managers of Impeachment, led by THADDEUS STEVENS, appeared before the U.S. Senate to present 11 articles of impeachment against President ANDREW JOHNSON. Their case rested on Johnson's removal of Secretary of War EDWIN M. STANTON from office, but the action really grew out of a political struggle between Johnson and Congress over RECONSTRUCTION. The sensational trial brought the national government to a halt for three months. On May 26, 1868, the Senate voted 35 to 19 to convict Johnson, only one vote short of the two-thirds necessary to remove him from office. Johnson was acquitted, but his effectiveness as a leader was destroyed.

When Vice President Andrew Johnson assumed the office of president in April 1865 after the ASSASSINATION OF ABRAHAM LINCOLN, he enjoyed the united support of the Northern leaders and citizenry. Johnson, a Democrat who was the wartime governor of Tennessee, appeared on the 1864 ticket to broaden the appeal of the REPUBLICAN PARTY beyond its traditional base. Johnson's deep hatred of the Southern slaveholding class was widely known. RADICAL REPUBLICANS, a strong wing of the party led by CHARLES SUMNER of Massachusetts, had good reason to assume Johnson agreed with their harsh position on Reconstruction. They believed, as did the majority of more moderate Republicans, that Congress and the executive would work together well to determine the process of incorporating the Southern states back into the Union.

Johnson was no stranger to Congress. He had served on the JOINT COMMITTEE ON THE CONDUCT OF THE WAR with BENJAMIN WADE, Zechariah Chandler, and GEORGE W. JULIAN, all Radical Republicans. Ominously, although a staunch Union man who favored EMANCIPATION, he had never supported an agenda that included black suffrage and civil rights. His sympathies were for the plain white farmers of the South, and his beliefs were those of a typical Democrat, including the desire for a small national government and the upholding of STATES' RIGHTS. He loudly proclaimed that he would follow in his predecessor's footsteps, with a lenient and merciful Reconstruction policy. Unfortunately, Johnson was sorely lacking in Lincoln's political skills. Called by some the "accidental president," he was inflexible, stubborn, and, in the end, self-destructive. Understandably, Johnson wanted to control Reconstruction from the White House, but his many vetoes, together with his adamant refusal to compromise with congressional Republicans, brought catastrophic results for the nation.

Johnson's earliest policy moves alarmed the Republican-dominated Congress. He readmitted Virginia with only a

few restrictions and on May 29, 1865, issued a Proclamation of Amnesty, setting in motion liberal policy of pardons for ex-Confederates.

The new president had initiated a heated struggle over the control of Reconstruction that eventually led to his impeachment. Johnson supported the restoration of landed property to ex-Confederates, and early in 1866 he vetoed the FREEDMEN'S BUREAU bill. Throughout this period many Republicans grew increasingly alarmed but did not break with the White House, hoping to work out an agreement before the fall ELECTIONS. Only when the president vetoed the CIVIL RIGHTS ACT OF 1866 and made known his opposition to the proposed FOURTEENTH AMENDMENT did congressional Republicans declare an open war and take their case to the voters.

The fall elections of 1866 went badly for Johnson and his supporters. Radical and moderate Republicans were united and now had the power to act on their desire to end Johnson's obstructionist stance on Reconstruction. Congress intended to halt the widespread removal of Republicans from government positions by Johnson. The first step was to deprive the president of his patronage powers.

Sketch showing the U.S. Senate as a court of impeachment for the trial of Andrew Johnson (Library of Congress)

Early in 1867, the Tenure of Office Act passed. In the same session, Congress also passed legislation to limit Johnson's influence over the military. Still not finished, Congress, over a presidential veto, initiated the RECONSTRUCTION ACT that established military governments throughout the South. Congress and the president were declared enemies. Republicans hoped to force the South to accept universal male suffrage and the Fourteenth Amendment. Johnson, horrified by what he described as a blatant violation of the Constitution, fought hard to stop the legislation and employed the veto. These policies, the president also believed, would severely hinder the South's recovery. Congress overrode his veto with ease. Johnson's fierce opposition, however, threatened their future Reconstruction plans. Impeachment talk was becoming common within congressional chambers.

In December 1867 the House of Representatives began the impeachment proceeding against Johnson. For the moment, they were unsuccessful, but the newly elected president of the Senate, Radical Republican Benjamin Wade, was determined to pursue the issue. Over the following year, Wade directed a Congress that set its Reconstruction policy in motion without hesitation. Yet another Reconstruction bill passed over Johnson's veto. The president's response was twofold. First, he outwardly complied with their policy, but he made sure that the military GOVERNORS of the reconstructed South were conservative and effectively blocked the Republican's agenda. Second, Johnson removed Radical sympathizer Secretary of War Edwin M. Stanton from office, a defiant challenge to the Tenure of Office Act. Every Republican felt that the president had gone too far. Despite the seriousness of the situation, a comic element surfaced as Congress and the president alternately fired and rehired Stanton.

Congress reinstated Stanton to his cabinet post in February 1868. Johnson brazenly defied that body by again ordering the secretary's dismissal, replacing Stanton with former Union general Lorenzo Thomas. His bold action brought swift reaction. Within days, the House of Representatives voted for impeachment of President Andrew Johnson for "high Crimes and Misdemeanors." Naturally, the vote was along strict party lines. The first eight articles of impeachment, which were the heart of the case, focused on the president's alleged violations of the Tenure of Office Act. On February 25, the Senate initiated its proceedings, and the trial began on March 30. Chief Justice SALMON P. CHASE presided over the trial and, to his credit, tried to govern the process in a fair and impartial manner.

The political subtext of the trial was the fight over Reconstruction policy. Johnson's able defenders, including former associate justice Benjamin R. Curtis, argued correctly that the Tenure of Office Act was clearly unconstitutional. The Republicans, meanwhile,

attacked the president's opposition to their policies for the Southern states. Their primary concern was that Johnson was subverting the Union victory in the war. By May 6, the arguments had concluded, and only the vote remained. As it turned out, none of the articles of impeachment passed, and a motion to adjourn the trial was offered and adopted. Seven Republicans voted against impeachment.

Johnson had survived the trial, and the Republicans searched for explanations. Many congressmen came to believe that the case against Johnson lacked proof that he had undermined the Constitution, since Lincoln had appointed Stanton. Others distrusted the intentions of Benjamin Wade, next in line for the presidency should Johnson's impeachment be successful. Wade's extreme position on Reconstruction and his almost obsessive pursuit of Johnson worried many of the moderate Republicans. In the end, the spectacle of the trial and Johnson's acquittal had serious consequences. The Radicals' moment had ended. Northerners felt sorry for Johnson and preferred a more modest approach to Reconstruction. ULYSSES S. GRANT, the choice of the moderate majority of the Republican Party, was the candidate for president in 1868. Johnson's acquittal, then, signaled the beginning of the Radicals' quick political decline. Significantly, the fact that Johnson remained in office emboldened ex-Confederate leaders to oppose the Reconstruction of their states that began to be imposed in 1868.

## impressment

During the 19th century, impressment, or the appropriation of private property during emergencies for military use, was recognized by American military precedent as a power granted both civilian and military leadership. During the first year of the CIVIL WAR, the Confederate government used this policy to obtain needed supplies. However, public outcry against it led to severe limits on the practice, and the government quickly rejected it as a regular means of obtaining supplies.

By late 1861, however, the Confederate supply agencies experienced increasing shortages of raw materials. The lack of available materials was compounded by the hoarding of supplies by speculators. As a result, Quartermaster General Abraham C. Myers and Commissary General Lucius B. Northrup requested Secretary of War JUDAH P. BENJAMIN to grant them and their bureau purchasing

agents impressment powers. In November 1861, Myers granted his subalterns the authority to impress if “absolutely demanded by the public necessities.” Still, the practice of impressment remained limited through spring 1862.

During the first half of 1862, however, instances of impressment became more common as the government seized medical supplies from blockade runners and speculators, took quartermaster hardware, appropriated forage, and forced the sale of horses held by reluctant sellers. In a sweeping and unprecedented move, the secretary of war began impressing major items such as railroad iron and distilleries.

While such seizures created some public opposition, it was the extension of policy to foodstuffs that created widespread resistance. This step was believed necessary by commissary officers unable to feed the soldiers in the field. Outraged private citizens and speculators evaded impressing officers and in some cases destroyed food items rather than turn them over to commissary officials. The War Department attempted to defuse the conflict by creating formal rules for impressing. For example, they devised a universal price schedule for foods like flour and sugar. Individuals were given the option to accept the price offered or face impressment. Agents provided evidence of authorization from their commanding officer, paid on the spot, left enough subsistence for the family, and provided written forms detailing the transaction. To ensure that no abuses occurred, the supply bureaus maintained records open to the public. Even this more formalized policy brought a loud protest from Confederate newspapers and citizens.

In March 1863, Virginia speculators challenged War Department rules in state courts and forced the Confederate Congress to take action to uphold the system. Congress enacted legislation that legally established in civil law the practice of military impressment. They strongly agreed that only extreme measures could keep the rebel armies in the field.

War Department officials worked to soften the impact of impressments, promising in one general order that “wherever the requisite supplies can be obtained by the consent of the owner at fair rates, and without hazardous delay, the military authorities will abstain from the harsh proceeding of impressment.” Yet, through 1863, the seizures continued.

Increasingly, field agents resorted to arbitrary actions to obtain raw goods. As a result, civilian opposition hardened, and as the war dragged on the program lost much of its utility. The failure stemmed in large part because the law enacted by Congress lacked any punitive provisions. Coupled with the open resistance of local police and civil authorities to impressing officers, the program yielded smaller and smaller returns. By 1864, it became clear that

impressment had failed as a means of domestic procurement of military supplies, and the government rescinded it as an official policy.

## industrial development

Historians Charles Beard and Mary Beard, writing in the 1920s, described the CIVIL WAR as “The Second American Revolution.” They believed that the Civil War started the United States on the path to industrialization, a development that transformed the face of American society. This may be an overstatement—the forces that gave rise to industrialization were already present in the United States before the war started. However, it is certainly the case that the Civil War sped up the move toward industrialization while solidifying the North’s dominance in American manufacturing.

In a wartime ECONOMY, some industries suffer while others prosper. The North’s largest industry at the start of the war was cotton textiles, but manufacturers of cotton goods saw a 74 percent decline in business during the war due to the loss of Southern raw material and Southern customers. Shoe manufacturers were also negatively affected by the loss of the Southern market, although to a lesser extent because military contracts made up for much of the shortfall. The profits of the coal and iron industries dropped precipitously in the first two years of the war before finally rebounding in 1863 and 1864.

Not all Northern industries struggled, however. War-related businesses naturally did well throughout the war. These included the manufacturers of gunpowder and firearms, wool clothing, leather, copper, and packaged foods. The strength of these industries allowed the North to produce 13 percent more goods in 1864 than the entire nation had produced in 1860. For the entire course of the war, there was actually a slight drop in national output, likely because more than one-third of the workforce was in the army. A burst of productivity in the 1870s made up for the shortfall, and by 1880 America’s level of production stood almost exactly where it would have if the Civil War had never happened.

Although the Civil War did not cause tremendous growth in the Northern economy, it did accelerate the process of industrialization. The TRANSPORTATION industry underwent a boom during the war. The four years of the war saw the construction of twice as many merchant boats as had been built in the four years before the war. At the same time, railroad traffic doubled, and thousands of

new miles of track were built. These boats and RAILROADS would be utilized to move goods between markets in the postwar era and would therefore play an important part in the industrialized economy.

The demands of the UNION ARMY also helped to speed up the move toward mechanization and the factory system. For example, the need for millions of army UNIFORMS transformed the clothing industry. The sewing machine had been invented in the 1850s, and the number of sewing machines in use in the North doubled between 1860 and 1865. As clothing production became increasingly mechanized, it also became standardized. The War Department provided manufacturers with a set of graduated measurements for soldiers, thus creating the concept of “sizes” for uniforms and, after the war, civilian clothes.

By compelling large numbers of Northern businessmen to expand transportation networks, invest in machinery, and adopt standardization, the Civil War helped hasten the onset of the industrial era in the North. In part, this was possible because the North had the capital resources and labor necessary to make such changes. The South, on the other hand, enjoyed no such advantages. More than 90 percent of the nation’s manufacturing capacity in 1860 was located in the North. The South had some modern manufacturing facilities, notably the TREDEGAR IRON WORKS in Virginia, but they were few in number. The North also had the majority of the nation’s capital in 1860. What capital the South did have was tied up in land and slaves and could not easily be converted into the equipment needed for manufacturing.

Given the scarcity of privately held factories in the South, the Confederate government was compelled to go into the manufacturing business for itself. By 1863, publicly owned firms were producing virtually every manufactured good needed to wage war—ships, guns, bullets, blankets, wagons, and uniforms. However, when the war ended and the Confederate government collapsed, these industries disappeared, and the South was once again left with almost no manufacturing capacity. Meanwhile, over the course of the war and RECONSTRUCTION, a major redistribution of wealth took place. The South had 30 percent of the nation’s wealth in 1860 but only 12 percent in 1870. The war had also caused the collapse of the Southern banking system. With no factories, no capital, and no source of credit, Southern businessmen could hardly hope to develop any sort of manufacturing capacity in the postwar era. While there were some Southern leaders who called for an industrialized “New South,” this was not an easily realized possibility, although cotton textile mills flourished in several Southern states by the 1880s.

The Civil War, then, did not spark a revolution. However, as Northern manufacturers struggled to be profitable and to respond to the needs of the Union army, they made

choices that accelerated the pace of industrialization. They built more railroads, invested heavily in the new machinery that had been developed in the 1840s and 1850s, and utilized standardization with increasing frequency. Meanwhile, wealth flowed from South to North, creating an imbalance that would exist long after Reconstruction had ended. These trends would, in the late 19th century, culminate in an economy dominated by manufacturing and by the North.

### Irish-American regiments

The famous “Irish Brigade,” one of the most important and brave combat units in the UNION ARMY, epitomized Irish-American participation in the CIVIL WAR. The brigade began as the 69th New York Militia under Irish-born Col. Michael Corcoran. The unit fought with distinction at the FIRST BATTLE OF BULL RUN in July 1861. After serving out its 90-day federal enlistment, most of its members reenlisted in what became the 69th New York Volunteer Regiment. The idea for and formation of the all-Irish brigade was largely attributed to Thomas Meagher. He anticipated that such a brigade would silence the Know-Nothing attacks on Irish Americans and would emulate the glory of Irish brigades that fought in the Catholic armies of France and Spain. After the brigade was formed, President ABRAHAM LINCOLN appointed Meagher its brigadier general.

The Irish Brigade saw its first action under GEORGE B. MCCLELLAN in the PENINSULAR CAMPAIGN, gaining quick notoriety for bravery at Gaines’s Mill, Savage’s Station, and Malvern Hill in June and July 1862. That September, as the brigade prepared to take part in a desperate frontal assault at the BATTLE OF ANTIETAM, Father William Corby (later the president of the University of Notre Dame) rode along their line granting general absolution. The Irish Brigade fiercely attacked the strong Confederate position at the “Bloody Lane.” Though decimated by horrendous fire, they held their position until relieved by another brigade. They participated in an even more famous and deadly assault (Marye’s Heights) at the BATTLE OF FREDERICKSBURG in December 1862. Following two failed assaults, the Irish Brigade surged

Photograph showing a group of soldiers from the Irish Brigade during the Peninsular campaign, 1862 (Library of Congress)

forth while shouting an old Irish cheer, “Faugh-a-Bellagh,” or “Clear the Way.” The brigade was shattered, reduced to less than 400 men. However, the Irish Brigade persisted, serving vital roles at the BATTLES OF CHANCELLORSVILLE, GETTYSBURG, SPOTSYLVANIA, COLD HARBOR, and the assault on St. Petersburg. The Irish Brigade stood at APPOMATTOX COURT HOUSE, having suffered the third-highest casualty rate of any brigade in the U.S. Army.

### ironclad oath

The “ironclad test oath of loyalty” was the oath of allegiance to the Union required by the U.S. government of citizens and Southerners in Union-occupied areas. Instituted in the

summer of 1862, the ironclad oath remained in place until the 1880s.

The ironclad oath incorporated and merged the various civil and military oaths of allegiance that had been in place from the beginning of the CIVIL WAR. It required the person taking it to proclaim that he or she had “never voluntarily borne arms against the United States.” In addition, this oath required the taker to swear to uphold the U.S. Constitution, defend the United States from foreign and domestic enemies, and forsake state allegiance. In essence, the ironclad oath forced takers to renounce any affiliation to any entity other than the U.S. government. It also asked Southerners to deny an active role in SECESSION and the war against the United States.

Federal authorities required that everyone in areas under Union control during the Civil War swear to the ironclad oath. Northerners readily swore to the terms of the oath as they supported the Union through military or material means. So did Unionists throughout the Confederacy as their areas came under federal control. Those in occupied areas gained special protection and rights from their status as loyal U.S. citizens. Some Unionist Southerners took the ironclad oath multiple times, as different Union detachments marched through their towns, hoping for the protection and rights the oath promised to grant them.

Other Southerners were forced to take the oath despite their continued support for the Confederacy. People living in Union-occupied areas were required to take the ironclad oath to do business in the occupied city or with the federal government. As a result, many unwilling Confederates swore to the oath to support their families. Other Southerners took the oath because doing so entitled them to reimbursement for property taken by Union troops. Other Confederates refused to take the oath under any circumstances, arguing that it denied their commitment to Southern independence and their right to secede. Even so, many Confederates found themselves in a position that required them to take the oath, despite their protests. In these instances, some took the ironclad oath only under duress and without necessarily following its guidelines.

Union officials also required that Confederate prisoners of war take the oath before they were released on parole. Confederate soldiers who took the ironclad oath did not always follow its rules against taking up arms against the United States. Many gained parole only to return to the ranks of the CONFEDERATE ARMY and continue fighting Union troops. The Union terminated its practice of exchanging Confederate prisoners by the end of 1863, in part due to the persistent reenlistment of paroled prisoners.

The ironclad oath’s strict prohibitions against takers having “voluntarily” fought against the Union caused problems after the Civil War. In a highly charged atmosphere of sectional tensions and resentments, this stress on a renun-

ciation of Southerners' roles in the Confederate fight for independence impaired the effort for national reunification. Many Southerners who played roles in military and civilian capacities refused to renounce their support of the Confederacy. Those who did so and did not take the ironclad oath were prohibited from holding local, state, or federal office or serving in the military. In response, many Confederate military leaders appealed to the president for pardons and had their federal rights and citizenship restored without a renunciation of their roles in the war effort. In 1884 the United States replaced the ironclad oath with an oath of allegiance that only required oath takers to support and uphold the U.S. Constitution.

## ironclads

An ironclad is a warship that is partially or fully shielded with iron plating. Some textbooks incorrectly state that ironclad ships were invented during the CIVIL WAR. In fact, the first ironclads were constructed more than 250 years prior by Korean admiral Yi Sun Shin, who led a fleet of armored ships to victory over Japanese naval forces in the late 16th century. Shin was ahead of his time; after his death ironclads were not utilized by any of the world's navies until the Crimean War of the 1850s. During the conflict, both the British and French navies relied upon ironclads, demonstrating their superiority over wooden ships to the rest of the world.

When the Civil War broke out, it was clear to leaders on both sides of the conflict that they needed ironclad technology. The Union, with its superior industrial capacity, was the first to act. In the first few months of the war, the UNION NAVY commissioned and began construction on three ironclad warships: the *New Ironsides*, the *Galena*, and the *Monitor*. These ships were finished by early 1862, and numerous others followed. By the end of the Civil War, the Union navy had constructed 71 ironclad ships, vastly more than any other naval power of that era.

The CONFEDERATE NAVY did its best to keep up with the Union, but they faced several handicaps. Raw materials were in short supply in the South. This was particularly true of iron, which was needed not only for ships but for railroad rails and for armaments. Even if supplies had been abundant, the South did not have any factories capable of manufacturing all of the parts necessary to build an ironclad ship. So, the Confederate navy was compelled to modify existing

vessels, usually damaged ships that had been abandoned by the Union navy. The Confederates had some success doing this, and by the end of the war their navy had 25 ironclads in service that had been constructed in this fashion. Southern leaders also tried to purchase some European-made ironclads, which utilized technology vastly superior to that possessed by the Union navy. However, diplomatic pressure from Northern authorities largely compelled France and Britain to turn a deaf ear to the Confederates. The rebel navy did manage to purchase one ship from France, the *Stonewall*, but it did not arrive in the United States until after the war was over.

There was a great deal of variety among Civil War ironclads, but most can be grouped into two basic classes: Casemates like the USS *New Ironsides* were iron boxes, usually with slanted sides, placed on top of a wooden hull. Sailors and guns would be contained within the iron box, which protected them from enemy fire. Casemates were typically very large and not very maneuverable, so they were most effective when used for defensive purposes or for bombardment of targets on land. Most Southern ironclads were casemates.

The other class of ironclad was the monitors, named after the USS *Monitor*. Monitors were low-freeboard steamships, meaning that their decks were very close to the water. While casemates tended to have fixed guns, monitors had turrets that could be rotated to aim their guns. The majority of Union ironclads were monitors, although most Northern naval leaders, including Adm. DAVID GLASGOW FARRAGUT, preferred casemates.

Ironclad ships played a role in most of the major naval battles of the Civil War. They achieved their greatest fame, however, in an engagement that had very little to do with the outcome of the war. In March 1862, several Union warships were destroyed or severely damaged by the CSS *Virginia*, a casemate ironclad that had been built by converting the abandoned USS *Merrimack*. In order to save the remaining Union ships, John L. Worden, commander of the recently completed USS *Monitor*, was ordered to engage the *Virginia* at Hampton Roads, Virginia. The *Monitor* arrived early on the morning of March 9, just as the *Virginia* was preparing to finish off the USS *Minnesota*, a wooden ship. The two ironclads fired at one another all day, inflicting very little damage. Finally, Worden was wounded, and the *Monitor* had to withdraw temporarily so he could be relieved. By the time the ship had returned to the fray, the *Virginia* had backed off, ending the engagement.

Although Hampton Roads did not impact the Civil War, it was still among the war's most significant engagements. Ironclads had been used in warfare before, but Hampton Roads marked the first time that two ironclad ships had faced off against one another. Both Northerners and Southerners took pride in the accomplishment, and a wave of songs, poems,

and newspaper articles praising the ironclads swept across the country. Union and Confederate naval leaders knew from the outset that wooden ships would soon be replaced by ships made of metal, and now the general populace knew it too. The value of existing wooden ships was vastly reduced in popular and professional opinion, setting the stage for an arms race in the construction of iron and, eventually, steel ships, a trend that would last for nearly a century.

**Jackson, Claiborne F.** (1806–1862)

Claiborne Fox Jackson was GOVERNOR of Missouri at the outbreak of the CIVIL WAR. Jackson was born in Fleming County, Kentucky, on April 4, 1806, and in 1825 he moved to Missouri to work in banking. He later pursued public office, holding a seat in the state house of representatives from 1836 to 1848 and in the state senate from 1848 to 1852. An ardent proslavery Democrat, Jackson successfully opposed longtime ally Jesse Hart Benton over the latter's refusal to support SLAVERY in the new territories.

In 1860 Jackson successfully ran for governor as a moderate on the issue of SECESSION. During his inaugural speech of January 3, 1861, however, he declared that Missouri would resist any Union coercion by force of arms. He then called for a convention to pass a secession ordinance, but that body, dominated by Unionists, defeated the measure. After the fall of FORT SUMTER, SOUTH CAROLINA, in April 1861, Jackson denounced President ABRAHAM LINCOLN's call for volunteers and began plotting to seize the U.S. Arsenal in St. Louis. To that end he dispatched secret emissaries to Confederate president JEFFERSON DAVIS and received four large cannon.

But Jackson's scheme was defeated by the prompt actions of Cap. Nathaniel Lyon, who attacked and scattered Jackson's "State Guard" at Camp Jackson on May 10, 1861. Jackson fled the state capital, Jefferson City, as Lyon's forces approached and established a rump legislature at Neosho; this body formally voted to secede the following October. However, continuing Union successes under Gen. Samuel R. Curtis sent the secessionist governor and his followers fleeing again, this time into Arkansas, where they erected a temporary capital at Camden. Jackson died at Little Rock, Arkansas, on December 7, 1862, his grandiose plans for a Confederate Missouri unfulfilled.

*ern Identity in the Border West* (Columbia: University of Missouri Press, 2000).

—John C. Fredriksen

**Jackson, Thomas J. (Stonewall)** (1824–1863)

*Confederate general*

Thomas Jonathan Jackson was born in Clarksburg, Virginia (now West Virginia), on January 21, 1824, to Jonathan and Julia Beckwith Neale Jackson. He lost both parents as a child and spent much of his youth in the household of an uncle who owned lumber mills in Lewis County. Educated by tutors as a youth, he entered the UNITED STATES MILITARY ACADEMY AT WEST POINT in 1842. Poorly prepared for the rigorous coursework at West Point, he succeeded only by working resolutely on his studies. He improved his class standing to 17th of 59 by the time of his graduation in the class of 1846.

War had erupted with Mexico before Jackson's graduation, and he soon found himself a second lieutenant of artillery with the invading U.S. Army commanded by Winfield Scott. During Scott's campaign against Mexico City in 1847, he fought at the siege of Veracruz and in the Battles of Cerro Gordo, Contreras, and Chapultepec, so distinguishing himself that he won brevets (honorary rank for exceptional service) to the rank of major. After a year with the American army of occupation in Mexico, he saw peacetime service in New York and Florida.

In 1851 Jackson accepted a professorship in artillery TACTICS and natural philosophy at the Virginia Military Institute in Lexington, Virginia. He taught there for the next 10 years, earning a reputation as an inflexible and often boring instructor. He married twice while in Lexington—in 1853 to Eleanor Junkin, who died in childbirth after just more than a year of marriage, and in 1857 to Mary Anna Morrison. Both women were daughters of Presbyterian clerics, and Jackson himself became a devoted member of that church. His extreme piety caused considerable comment when he achieved military fame.

Thomas J. "Stonewall" Jackson (Library of Congress)

Jackson remained loyal to Virginia in the SECESSION crisis of 1861. A Democrat who owned a few slaves, he harbored fewer doubts about secession than many people in his native western region of the state. Commissioned a Confederate colonel and given a command at HARPERS FERRY, he was promoted to brigadier general on June 17, 1861. He made a dramatic military debut at the FIRST BATTLE OF BULL RUN on July 21, where his brigade helped stop a Union assault and turned the tide in the war's first big battle. Jackson also won his famous nickname that hot July afternoon when a South Carolina officer pointed toward him and shouted, "There is Jackson standing like a stone wall." Promoted to major general on October 7, 1861, he shortly thereafter assumed command in the Shenandoah Valley and mounted a largely ineffective campaign into western Virginia that winter.

On the eve of his celebrated SHENANDOAH VALLEY CAMPAIGN, Jackson was known as a good soldier but had yet to gain wide fame. ROBERT E. LEE sketched the broad outline of the Shenandoah operation, hoping Jackson would tie down Northern forces under Nathaniel P. Banks and John C. Frémont in the valley and farther west in the Allegheny Mountains, so they could not reinforce the UNION ARMY menacing RICHMOND. An initial clash

at First Kernstown on March 23, though a tactical defeat for Jackson, prompted the Federals to retain troops in the lower valley. Reinforced to 17,500 by early May, Jackson embarked on a whirlwind of action. He struck part of Frémont's force west of Staunton at McDowell on May 8, then marched back to the valley and turned northward to capture a Union garrison at Front Royal on May 23 and defeated Banks in the first Battle of Winchester two days later. Continuing on to the Potomac River, he subsequently moved south to the vicinity of Harrisonburg, eluding Union forces under Frémont and James Shields. In early June, he turned to meet his pursuers, defeating Frémont at Cross Keys on June 8 and Shields at Port Republic the next day. The Federals withdrew northward, freeing Jackson to reinforce Lee's army outside Richmond. Jackson had used rapid movement and boldness to craft a memorable success. His victories, which came in the midst of a run of Southern defeats, not only prevented a concentration of Union forces at Richmond but also lifted Confederate civilian morale. Typical of reactions behind the lines was that of a diarist in Richmond, who wrote that "General Jackson is performing prodigies of valor in the Valley."

Jackson participated in all of the great battles in the eastern theater during the remainder of 1862. He stumbled badly at the Seven Days' Battle and also failed to carry out his assigned roles at Mechanicsville, Gaines's Mill, and White Oak Swamp. Detached by Lee from the army at Richmond in early August, he defeated a portion of John Pope's Army of Virginia on August 9 near Culpeper in the BATTLE OF CEDAR MOUNTAIN. Later that month, he carried out a memorable march around Pope's right flank, destroying a vast Union supply depot at Manassas Junction and setting the stage for Lee's victory at the SECOND BATTLE OF BULL RUN on August 28–30. He played a key role in the Maryland campaign in September, capturing the 12,500-man Union garrison at Harpers Ferry on September 15 and then joining the rest of the army near Sharpsburg, Maryland, for the bloody fighting at the BATTLE OF ANTIETAM two days later. Promoted to lieutenant general on October 10 and given command of the Second Corps in the Army of Northern Virginia, he defended Lee's right flank in the Confederate victory at the BATTLE OF FREDERICKSBURG on December 13.

Jackson's reputation reached new heights during the BATTLE OF CHANCELLORSVILLE in May 1863. Confronting a superior Union force, he and Lee decided on a bold response. On May 2, Jackson took his corps on a flank march around the Army of the Potomac, launching an attack that routed the Federal 11th Corps. In the confusion of battle and darkness that evening, he was wounded by his own men. His left arm was amputated that night, and though it seemed at first that he would recover, he died eight days later. President JEFFERSON DAVIS spoke

for the Confederate people in describing Jackson's death as a "great national calamity," and Robert E. Lee remarked that the army would miss "the daring, skill and energy of this great and good soldier."

### jayhawkers

Officially, the CIVIL WAR began on April 12, 1861, with the firing on FORT SUMTER, SOUTH CAROLINA. However, armed combat had been underway for years before that along the Kansas-Missouri border. In 1854 the KANSAS-NEBRASKA ACT had opened up the Kansas Territory to popular sovereignty, which was supposed to allow the people of Kansas to decide for themselves if they wanted SLAVERY. Whenever a vote on the issue came up, however, proslavery Missourians would cross the border to Kansas and vote illegally in hopes of getting Kansas admitted to the Union as a slave state. Armed violence between proslavery and antislavery guerrillas regularly occurred on these occasions, and eventually a state of near-constant warfare developed. The proslavery guerillas were known as "BUSHWHACKERS," and the antislavery forces were called "jayhawkers."

The jayhawkers, like the bushwhackers, had few scruples when it came to enforcing their will. They supplied themselves almost entirely by stealing. They usually killed any enemies they encountered, women and children included. Their leader was "Doc" Charles Jennison, who had given up medicine for a career as a horse thief. The ranks of the Jayhawkers also included Senator James Henry Lane, Susan B. Anthony's brother Dan Anthony, and JOHN BROWN's son John Brown Jr. Between 1855 and 1860, more than 200 people were killed by the jayhawkers, and countless thousands of dollars worth of goods were stolen.

When Civil War finally came to the rest of the nation, the jayhawkers were accepted into the Union ranks as the Seventh Kansas Volunteer Cavalry Regiment, with Jennison as colonel and Anthony as lieutenant colonel. Mustered into service on October 28, 1861, the jayhawkers had only loose ties to the UNION ARMY. They continued to supply themselves by stealing, and they generally operated independently of any Union command. They also continued to operate mostly in Missouri. This was a problem for Union leadership, because Missouri had remained with the Union, and many of the people killed by the Jayhawkers in 1861 were loyal Unionists. Concerned that the unit was creating

more rebels than it was conquering, the jayhawkers were transferred to Kentucky and then to Tennessee. They performed well in these new assignments, particularly after Jennison and Anthony resigned and were replaced by more able officers. The jayhawkers did not return to Kansas until they were mustered out in 1865.

**Johnson, Andrew** (1808–1875) *U.S. vice president, 17th president of the United States*

Tailor, merchant, governor, U.S. senator, vice president, and 17th president, Andrew Johnson took office upon the ASSASSINATION OF ABRAHAM LINCOLN in April 1865. An "accidental president," Johnson's tenure as chief executive was marked by turmoil and controversy, some of it due to his political blunders and incompetence. He enjoys the dubious distinction of being the first president to be impeached while in office.

Born on December 29, 1808, in North Carolina to parents of humble means, Johnson had virtually no schooling.

Andrew Johnson (Library of Congress)

As a young boy, Johnson was apprenticed to a tailor but fled at the first opportunity, landing in Greenville, Tennessee. There, he opened a thriving tailor business and established himself as a wealthy merchant. Married and successful, Johnson turned to politics, where he followed in the footsteps of his hero, Democrat Andrew Jackson. Although a slaveholder himself, Johnson detested the wealthy planters who dominated Southern politics and economic power. As he moved up the political ladder from local to state to national office, Johnson became known as a champion for the ordinary white Southern yeoman farmer.

When the CIVIL WAR broke out, Johnson had for three years been the U.S. senator from Tennessee. A decided Unionist, he followed the U.S. flag, the only member of Congress's upper house from a seceded state to remain loyal. Labeled a traitor throughout the South, he was hailed as a hero in the North. The UNION ARMY captured Nashville and occupied SECESSIONIST western Tennessee in March 1862. Shortly afterward, ABRAHAM LINCOLN appointed Johnson to serve as the state's wartime governor.

Johnson worked hard to restore his state to the Union, something that was made more difficult because the Confederates controlled eastern Tennessee. By summer of 1863 Johnson endorsed EMANCIPATION and supported strongly Lincoln's efforts to end SLAVERY in the border states. Due to Johnson's persistence, in January 1865 a Tennessee state convention approved the ABOLITION of slavery, and the voters quickly ratified the measure.

In 1864 the Republicans (temporarily renamed the American Union Party) wished to attract War Democrats by placing Andrew Johnson, the popular Unionist, on the ticket with Lincoln. The party won handily, and Johnson was inaugurated as vice president on March 4, 1865. Feeling ill on inauguration day, Johnson fortified himself with several glasses of whiskey before his speech. The result was a rambling, incoherent tirade that embarrassed all who witnessed it. Johnson created a more favorable impression when, after Lincoln's death early in the morning of April 15, he took the oath of office at the Kirkwood House in a dignified and calm manner. The shocking aftermath of the assassination gave Johnson a period of overwhelming support among Northern politicians and voters. He presided competently over the pursuit, capture, and trial of Lincoln's assassins and created an atmosphere of friendly relations between the executive and congressional branches as the problems of RECONSTRUCTION loomed.

"Treason must be made infamous and traitors must be impoverished," declared Johnson. RADICAL REPUBLICANS could be forgiven if they thought the new president would stand with them in implementing a harsh Reconstruction policy. They were wrong. Johnson, like Lincoln, believed that secession was illegal, and thus the rebel states were

never actually out of the Union. Johnson's vision was a harmonious "restoration," directed by the executive branch. His plan was simple. The seceded states had to ratify the THIRTEENTH AMENDMENT, nullify the secession laws, and repudiate the Confederate debt. Once those requirements were met, ELECTIONS could be held, civil governments restored, and elected officials could take their places at all levels, including the national legislature.

Johnson ignored requests from Radicals that he include suffrage for African Americans as part of the restoration plan. A typical STATES' RIGHTS Democrat, he feared the intrusion of the federal government into areas that trespassed on state sovereignty. In addition, he was a fierce opponent of black voting and civil rights measures. The fact that the dominant Republican Congress would not come into session until December 1865 meant that Johnson could push through his measures with executive decrees.

Johnson busied himself in obstructing all congressional policies designed to assist ex-slaves. In September 1865, Johnson virtually ended land redistribution to freedmen and poor white people. He ordered the FREEDMEN'S BUREAU commissioner, Gen. O. O. HOWARD, to return all confiscated lands to white Southerners who had been pardoned. Under Johnson's May 1865 plan, only rebellious Southerners who owned more than \$20,000 in taxable property had to receive a presidential pardon personally; the rest were pardoned automatically. Nearly all, more than 6,000, in need of a presidential pardon received one after a short visit with Johnson. By the end of 1865, all of the Southern states except Texas had followed Johnson's plan and applied for reentry into the Union. Johnson considered "restoration" complete.

The consequences of Johnson's acting unilaterally were deeply unsettling. Northerners reacted with horror as ex-Confederates blatantly assumed power as if there had never been a war at all. In state after state, BLACK CODES were passed, which made emancipation a dead letter. Republicans of all backgrounds in Congress supported a more stringent Reconstruction and pushed for protection of African Americans' economic and basic civil rights.

In December, the hostility between the executive and the legislative branches deepened when the "restored" Southern congressmen arrived in the Capitol to take their places in the Senate and House chambers. The newly elected officials included four ex-Confederate generals, eight colonels, six ex-cabinet members, and the Confederacy's vice president, ALEXANDER H. STEPHENS. Congress refused to seat the Southerners, in effect rejecting presidential Reconstruction. The best both sides could hope for now was a serious session of compromise. Johnson, however, refused to negotiate with the Republicans on Reconstruction.

In early 1866, Congress passed two bills, one extending the Freedmen's Bureau and the other the CIVIL RIGHTS ACT OF 1866. Johnson vetoed both bills. Congress would later override his vetoes, and the bills became law. Even the most moderate Republicans moved into alignment with the Radical Republicans (so-named for their support of the freedmen) after Johnson's policies had rendered emancipation and civil rights essentially meaningless.

Republicans implemented a plan that set strict requirements for states reentering the Union. These requirements mandated military occupation for all Confederate states (with the exception of Tennessee) until a state convention recognized freedmen's rights to citizenship and all the other provisions of the FOURTEENTH AMENDMENT and ended the racially discriminatory Black Codes. Eventually, Congress even called for African-American male suffrage. Johnson vetoed nearly every bill but was again overridden nearly every time.

Johnson, who thought he enjoyed the support of most Northerners, fought hard for his restoration plan. He still controlled the military, which was responsible for carrying out congressional Reconstruction. As commander in chief, he appointed politically conservative, pro-Southern officers to military posts in the South. This further alienated his few supporters left in Congress. Increasingly, his pronouncements were controversial. Terrible race riots in Memphis and New Orleans in the spring and summer of 1866 belied Johnson's assurances that conditions in the South were returning to normal. Congress further turned against the president.

Before the 1866 congressional elections, Johnson undertook a controversial speaking tour known as the "Swing around the Circle." His goal was to rally voter support for his policies. Instead, Johnson's speeches were divisive, rude, and often confrontational. He received much negative publicity, and many in the crowds booed his appearances. Gossips whispered that the president had been drunk for much of the tour. Drunk or not, the tour was a disaster at the polls, and a large, "veto-proof" Republican majority was returned to Congress.

In March 1867, the House and Senate passed the Tenure of Office Act over Johnson's veto. The act required Johnson to obtain the Senate's approval before dismissing any of his cabinet members. It was designed to protect Secretary of War EDWIN M. STANTON, a leftover from Lincoln's cabinet and a Radical Republican. Citing his executive powers, Johnson suspended Stanton in August 1867 without the Senate's consent. After much political wrangling, the House impeached Johnson in February 1868 for committing high crimes and misdemeanors in office, the first ever impeachment in U.S. history. However, the Senate failed to convict him by one vote. Vindicated but powerless, John-

son did not accomplish anything of significance for the rest of his term.

In 1868 the Democrats chose Horatio Seymour to run for president against ULYSSES S. GRANT. Johnson was quite bitter over his treatment in WASHINGTON, D.C., and refused to attend Grant's inauguration. Andrew Johnson retired to Tennessee but reentered politics, returning to the U.S. Senate in 1875. He served for only a few months before his death on August 31, 1875.

### **Johnston, Albert Sidney** (1803–1862) *Confederate general*

At the beginning of the CIVIL WAR, Albert Sidney Johnston was perhaps the Confederacy's most renowned and well-respected soldier. Johnston was born in Washington, Kentucky, on February 2, 1803, to John and Abigail Johnston. He was appointed to the UNITED STATES MILITARY ACADEMY AT WEST POINT from Louisiana and graduated eighth in the class of 1826. Johnston served at Sackett's Harbor, New York, in 1826; with the Sixth Infantry at Jefferson Barracks, Missouri, in 1827; and as regimental adjutant in the Black Hawk War. He married Henrietta Preston in 1829 and resigned his commission in 1834 due to her grave illness. After Henrietta's death in 1836, he went to the Southwest and fought for Texas's independence. This appointment resulted in a duel with Felix Huston, the man he replaced. Due to an injury suffered in the duel, however, Johnston was unable to take his new post. On December 22, 1838, he was appointed secretary of war for the Republic of Texas by President Mirabeau B. Lamar. In 1840 Johnston returned to Kentucky, where, on October 3, 1843, he married Eliza Griffin, a cousin of his first wife. They returned to Texas to settle at China Grove Plantation in Brazoria County.

During the Mexican-American War Johnston served as colonel of the First Texas Rifle Volunteers and then served with W. O. Butler as inspector general at Monterrey, Mexico. Johnston reentered the regular army in 1849 and by 1855 had risen to the rank of colonel. In 1857 he was promoted to brigadier general.

When the Civil War began, Johnston returned to the army as a Union brigadier general in command in California, but when his "home state" of Texas seceded from

the Union, he resigned from the U.S. Army and joined the Confederacy. JEFFERSON DAVIS placed him in command of the western theater as a full general. As commander of this department, his area of responsibility was massive, extending from the Appalachian Mountains in the east to the Indian Territory in the west. When Fort Henry and Fort Donelson were lost in February 1862, Johnston was forced to retreat from Kentucky and most of Tennessee. Johnston joined forces with Gen. PIERRE GUSTAVE TOUTANT BEAUREGARD and massed in Corinth, Mississippi, where he planned to launch a surprise attack on the UNION ARMY in Tennessee.

Early on the morning of April 6, 1862, Johnston assaulted ULYSSES S. GRANT's army at its camp on Pittsburg Landing on the Tennessee River. The two-day BATTLE OF SHILOH, named for a small church near the landing, had begun. As hoped, Johnston's attack caught the Federals completely by surprise. However, momentum was lost when raw recruits paused to loot the overrun Union encampments, but by late morning Johnston believed victory was his. "We are sweeping the field," he told Beauregard, "and I think we shall press them to the river." But the Federals held the Confederate forces for a time at what became known as the "Hornet's Nest." There was also hard fighting in a peach orchard, where Johnston himself led the final charge that drove the Union defenders out of it. While directing operations at Shiloh, Johnston was hit in the leg by a bullet that severed his femoral artery. Johnston had sent his surgeon to tend to a group of wounded Union prisoners, and he bled to death for lack of medical attention. He was temporarily buried in New Orleans, but his remains were later transferred to Texas for burial in the state cemetery in Austin.

—Arthur E. Amos

### **Johnston, Joseph E.** (1807–1891) *Confederate general*

A career soldier, Gen. Joseph Eggleston Johnston was one of the top military commanders for the Confederacy. For him, the CIVIL WAR was alternately marked by failure and success. His predisposition toward defensive warfare placed him at odds with President JEFFERSON DAVIS, and his critics attacked him for wasting many opportunities for Confederate victory. Like many of his contemporaries, Johnston's postwar years were spent in justifying his wartime record and casting doubt on the record of his many detractors.

Johnston was born on February 3, 1807, into a distinguished family in Prince Edward County, Virginia. His

father, Peter Johnston, served in the American Revolution, and his mother was a niece of Patrick Henry. Educated at the UNITED STATES MILITARY ACADEMY AT WEST POINT, he graduated in good standing with the class of 1829. Commissioned as a second lieutenant, Johnston participated in the Black Hawk War of 1832, the Seminole War of 1836–37, and the Mexican-American War of 1846–48. From the 1830s to the eve of the Civil War, Johnston compiled an excellent record as a topographical engineer in the Southwest, a lieutenant colonel of the U.S. First Cavalry, and quartermaster general of the U.S. Army, a position he resigned from in 1861 to join the Confederate forces.

The highest ranked officer from the "old army," Johnston was appointed brigadier general by President Jefferson Davis. Along with PIERRE GUSTAVE TOUTANT BEAUREGARD, Johnston directed the Confederate victory at the FIRST BATTLE OF BULL RUN in July 1861. The victory was marred shortly thereafter by a bitter argument over Johnston's ranking in the Confederate military hierarchy. He believed that he should be ranked first, but President Davis disagreed, and Johnston was placed fourth. This was the first of many personal and professional disagreements between the two proud and stubborn men, much to the detriment of the Confederate armies in the western theater.

In the spring of 1862, Johnston was given the task of defending RICHMOND against the Northern invasion led by his former Mexican-American War comrade, GEORGE B. MCCLELLAN. In late May, Johnston was severely injured during the Battle of Seven Pines, and the command of the main CONFEDERATE ARMY was given to Gen. ROBERT E. LEE. Johnston resumed his field career in December, commanding the Confederate forces in Tennessee and Mississippi. Expected to defend a huge amount of land against the Federals, Johnston assumed a defensive stance whenever possible. For his bloodless approach to war and more, Johnston's men loved him as few other generals. "In appearance," an observer remarked, "he is small, soldierly and graying." To his superiors, Johnston appeared arrogant, affecting a superior attitude about all things military. Jefferson Davis also considered himself a military expert and deferred to no one except Robert E. Lee, whose record of victory was second to none. Davis was especially overbearing in his dealings with the western generals, and Johnston in particular.

When the Mississippi citadel of Vicksburg fell in July 1863, Johnston was blamed for his apparent slowness in supporting John Pemberton's beleaguered forces. Davis and the press criticized Johnston's cautious nature harshly after the surrender of Vicksburg, and he was temporarily relieved of his command for failing to stem the Union advance.

Davis could not afford to retire a competent and respected general like Johnston for long, however. Decem-

ber of 1863 found him in charge of the Army of Tennessee after BRAXTON BRAGG lost Chattanooga to the Federals. This time, Johnston faced WILLIAM T. SHERMAN in the ATLANTA CAMPAIGN of the spring and summer of 1864. Leaving Dalton, Georgia, under heavy pressure from Sherman, Johnston executed a textbook series of backward maneuvers until he entrenched just outside of Atlanta. Once again, Davis, impatient with Johnston's timid generalship, removed him from command. His replacement was the feisty Texan JOHN BELL HOOD, whose willingness to do battle with Sherman's troops led to defeat and the surrender of Atlanta on September 2, 1864. By now the master of thankless tasks, Johnston squared off against Sherman again in February 1865 in the Carolinas campaign. Johnston surrendered the Army of Tennessee to Sherman on April 26, 1865.

Johnston's postwar career was more successful. A prosperous businessman in railroad and insurance, he also dabbled in politics as a congressman from Virginia (1878–80). Johnston, who published his memoirs in 1874, was a popular speaker at VETERANS reunions throughout the South. He also was invited on a regular basis to speak to Northern veterans organizations, where he spread a message of reconciliation and harmony between the sections. At 84, he became a tragic symbol of reunion when, after serving as a pallbearer at Sherman's funeral on a cold wintry day, he caught pneumonia. Shortly thereafter, on March 21, 1891, Johnston died at his home in WASHINGTON, D.C.

### Joint Committee on the Conduct of the War

Formed in December 1861, the congressional Joint Committee on the Conduct of the War (CCW) held the broadly interpreted power to inquire into the conduct of the Northern war effort through the investigation and examination of military persons and maneuvers. The CCW began in obscurity in the months following the FIRST BATTLE OF BULL RUN but remained in existence for the length of the CIVIL WAR, making a name for itself through its harassment of Gen. GEORGE B. MCCLELLAN and its efforts to influence the military policies and appointments of President ABRAHAM LINCOLN. The committee was successful as a conduit for the ideology of RADICAL REPUBLICANS and as a tool for advancing their agenda. While the committee's overall impact on the course of events is questionable, it did impair

the conduct of the war effort by threatening to investigate any senior military leader who failed either to achieve results in the field or to share its strongly pro-Union, abolitionist sentiments.

Following the disastrous Union defeat at the First Battle of Bull Run and the subsequent loss at Ball's Bluff, Senator Zachariah Chandler of Michigan introduced a resolution in the Senate to create a joint committee with the House of Representatives to probe the causes for these military catastrophes. The resolution passed in both chambers without significant debate, and the respective leaders of Congress appointed the following members to the committee: Senator Chandler (R-Mich.), Senator BENJAMIN WADE (R-Ohio), Senator ANDREW JOHNSON (D-Tenn.), Representative GEORGE W. JULIAN (R-Ill.), Representative Moses Odell (D-N.Y.), Representative John Covode (R-Pa.), and Representative Daniel Gooch (R-Mass.). The president of the Senate selected Wade as chairman, and the CCW initiated its first investigation in January 1862. The 38th Congress reappointed the committee, adding Republican Benjamin F. Loan of Missouri. Loan, previously a brigadier general of the state militia, was the only member to possess any viable military experience throughout the committee's existence.

Over the course of the Civil War, the committee's scope included not only the Battles of Bull Run and Ball's Bluff but also the BATTLES OF FREDERICKSBURG, Fort Fisher, and the Crater, as well as the atrocities committed by Confederate soldiers at FORT PILLOW. While the CCW and its supporters in Congress made sure that the scope of its mission statement remained broad, the overall agenda of the committee's members remained narrow throughout its tenure. Led in name and spirit by the Radical Republicans Wade, Chandler, and Julian, the committee sought to place a definitive spin on their investigations, and by war's end the CCW had earned a deserved reputation for doggedly pursuing their partisan goals. These men held very strong abolitionist beliefs and felt that the war effort required an aggressive approach regarding SLAVERY and the Confederacy. As a result, they used the committee's powers in numerous attempts to influence both the use and the leadership of the UNION ARMY.

Beginning with the investigation of Bull Run and Ball's Bluff in January 1862, the CCW established a pattern that defined its procedures until its disbandment in June 1865. First, in their attacks on Brig. Gen. Charles P. Stone and General McClellan, the Radical Republicans expressed their dissatisfaction with West Point military men and, more importantly, with Democratic officers. By examining Stone in secret without allowing him representation and subsequently influencing his military arrest and solitary confinement, the members of the CCW also displayed a willingness to use extralegal means to accomplish their

goals. Finally, as evidenced by their meetings with Lincoln and their calls for military activity against the Confederacy in the early months of 1862, Wade and his cohorts revealed their desire to influence the way in which Lincoln and his generals chose to direct the Union war effort.

Committee members steadfastly believed that Union superiority in numbers should result in Northern victories, despite much evidence to the contrary. Equally problematic, they were apparently ignorant of the advantage that rifled muskets and cannon afforded to enemy defenses, and they attributed the lack of aggressive tactics of Union commanders to either timidity or treasonable sentiments. McClellan was the most obvious target of CCW ire, but GEORGE GORDON MEADE also became an object of their wrath. President Lincoln and ULYSSES S. GRANT came under CCW pressure to relieve subordinates that committee members deemed unreliable. Even the victorious Gen. WILLIAM T. SHERMAN felt the sting of CCW displeasure for negotiating surrender terms with Gen. JOSEPH E. JOHNSTON that many members judged too lenient; he was forced to renegotiate them. Conversely, the committee provided political cover to military incompetents whose sentiments were clearly pro-Republican and antislavery, helping such men to maintain their positions long after they had demonstrated unfitness for command.

From 1862 to 1865, the machinations of the CCW remained barely hidden beneath their investigative actions. While the initial inquiries into Ball's Bluff and Bull Run targeted particular officers negatively, the committee's report on Fredericksburg sought to bolster the reputation of Gen. AMBROSE E. BURNSIDE in an effort to indirectly end McClellan's military career. Similarly, the conclusions reached by Wade and his colleagues on Fort Fisher supported the actions of one of their favorites, Gen. BENJAMIN FRANKLIN BUTLER, a man who had not found similar support in the White House. The committee at times even went beyond the scope of its mission statement, and Wade and Chandler in particular often besieged Lincoln in their efforts to push for a more aggressive military strategy.

Yet not all of the CCW's investigations focused on the failures of various Union military endeavors. It also exposed corruption in military contracts and facilitated reform. Further, the CCW's reports on Fort Pillow and on Union prisoners of war highlighted some of the atrocities of the war that the Northern public may not have been completely aware of. Their investigation of the inhumane treatment of black soldiers and military prisoners brought the CCW's focus squarely on the Confederacy's conduct of the war and provided the evidence the Radical Republicans needed for pursuing a strict RECONSTRUCTION of the South. By demonstrating the cruelty of the rebels in warfare, the CCW

hoped to destroy the hopes of those individuals, including Lincoln, who sought to create a harmonious plan for the reunion of the two warring sides.

Over a period of approximately three and a half years, the CCW compiled an impressive record of investigations and reports. Its members vociferously presented their opinions and conclusions on military strategy, military appointments, and the plans for the Reconstruction that would follow the war. Their impact on the Northern war effort and on Lincoln's policies cannot be neatly summarized. While their attacks eventually influenced the president's dismissal of McClellan, the general's record in the field also played a significant role. In their fervent support of abolition, the CCW prodded the administration toward declaring EMANCIPATION. However, their contempt for West Point and Democratic officers also led the committee to promote several officers, such as Butler and JOSEPH HOOKER, long after they had proven themselves liabilities in battle. And in the last year of the war, the CCW also found itself unable to force Lincoln to dismiss Grant or Meade. In the end, the Joint Committee on the Conduct of the War served as a strong voice of the Radical Republicans and their agenda throughout the Civil War, and Lincoln could never completely ignore its influence.

**Jomini, Antoine-Henri, baron de** (1779–1869)  
*soldier, military strategist*

Antoine-Henri, baron de Jomini was a widely read military theorist whose textbook on strategy is believed to have influenced many generals in the American CIVIL WAR. Born in Payerne, Switzerland, he served in the French army under Napoleon and in the Russian army under both Alexander I and Nicolas I. His books on the campaigns of Frederick the Great of Prussia and Napoleon Bonaparte of France were used throughout the Western world to promote an increasingly scientific curriculum of military education.

At the UNITED STATES MILITARY ACADEMY AT WEST POINT, an entire generation of cadets, many of whom

would become officers on both sides of the Civil War, absorbed Jomini's scientific approach to strategy. At the heart of Jomini's theory of warfare was the idea that war should be contained on the battlefield and its violence limited whenever possible. This led to an emphasis on a war of maneuver rather than battle, something that was particularly notable in the campaigns of Union general GEORGE B. MCCLELLAN.

Historians are still debating how powerful Jomini's ultimate influence on Civil War strategy was, but it is certain that his writings informed the military TACTICS AND STRATEGY of both Union and Confederate armies.

## journalism

The CIVIL WAR played a critical role in changing the role of journalism and journalists in American society, but the stage was set for change well before the guns thundered at FORT SUMTER, SOUTH CAROLINA, in 1861. The newspapers of the early 19th century bore little resemblance to their modern counterparts. Largely supported by political groups and expensive subscriptions, their circulations were usually limited to a few thousand people or less. Content was mostly composed of highly partisan editorial opinion addressing the topics of the day. Coverage of current events was limited and was generally buried on the inside pages of the paper.

This began to change in the 1840s, thanks in part to innovations in technology. The most important new development was the TELEGRAPH. Previously, news of faraway events could take days, weeks, or even months to travel to the cities of the United States. The telegraph reduced this time significantly. The Mexican-American War, fought from 1846 to 1848, became the first American war where a person living in NEW YORK CITY or PHILADELPHIA could stay largely up-to-date on events as they occurred. In addition to the telegraph, new types of printing presses and new printing techniques dramatically increased the speed with which copies of newspapers could be produced while reducing costs, allowing publishers to reach a much broader audience each day.

Technological innovations are only a part of the story, however. A significant portion of the credit for reinventing the American newspaper belongs to James Gordon Bennett, perhaps the greatest innovator in the history of journalism. Bennett founded the *New York Herald* in 1835 and served for decades as its publisher and editor. Bennett disdained the papers of his day as elitist, and he made it

his goal to attract as many readers as possible. To start, he charged only two cents for a copy of his paper, and eventually he reduced the cost to one penny. At a price that low, daily newspapers could fit within the budget of almost all Americans.

The *Herald's* coverage was also designed to stimulate readership. While Bennett did not dispense with opinion pieces, he moved them inside the paper and instead used the front page exclusively for news. Bennett based his choice of coverage on what he thought would interest the largest number of people, which often meant that the most sensational stories grabbed the headlines. Because news-gathering was expensive, Bennett formed a partnership with other New York papers to share costs, and thus the Associated Press was born. Bennett also developed entirely new areas of coverage. His boxing stories made the *Herald* the first newspaper in the country to have a sports section. Bennett also incorporated daily coverage of the stock market into the *Herald*, even coining the terms “bull” and “bear” market.

Thanks to these and numerous other innovations, the *Herald* became the most widely read newspaper in America, with a circulation in excess of 100,000 by the start of the Civil War. However, despite this success, papers outside of New York largely avoided adopting Bennett's model prior to 1860. Editors in Chicago, Philadelphia, and other smaller cities throughout the country either were not confident that a paper like Bennett's could work for them, or they did not have the resources that New York papers had. This all changed with the Civil War. Americans demanded up-to-the-moment news coverage, and they bought the papers that would provide it. This compelled newspapers across the nation to make news the centerpiece of their papers, the way Bennett had, thus rendering opinion-centered papers obsolete.

Indeed, the period from 1861 to 1865 was so significant in the history of journalism that it is sometimes referred to as the “news revolution,” because at the same time that the Civil War was reshaping the face of journalism, newspapers were helping to reinvent warfare. The Civil War has been called the first modern war. It may not have been so in all regards, but it was modern in the fact that the HOMEFRONT and the war front were intimately connected. Newspapers played an integral role in developing and maintaining that connection.

More than 200 correspondents roamed the various theaters of the war, and reporters were on hand from the beginning to witness every major engagement of the conflict. “The ball is opened,” reported correspondent B. S. Osbon from Fort Sumter, “War is inaugurated.” Serving as a reporter during the Civil War could be a tricky and even dangerous business. Editors demanded the latest news, and if a correspondent found himself too far away from the

action, he risked losing his story or even his job to a rival reporter. This meant that reporters had to stay as close as possible to the army, which often put them in harm's way. Eight reporters were killed during the war, and numerous others were captured and detained for varying lengths of time.

The 200 reporters who covered the CIVIL WAR were joined in the field by several dozen illustrators. The technology to reproduce photographs in newspapers would not be developed until a decade after the Civil War, and so editors used woodcut carvings to provide images of the war for their readers. Illustrations were difficult and expensive to produce, and they were mostly limited to more expensive publications, particularly *Frank Leslie's Illustrated Newspaper* and *Harper's Weekly*. Despite their ten-cent price tag, however, both publications found a wide readership during the Civil War, and the circulation of each exceeded 100,000 by the end of the war. Particularly popular were the portraits of camp life drawn by Winslow Homer and the work of THOMAS NAST, both of whom were employed by *Harper's Weekly*. Nast was avowedly Republican, and his illustrations were designed to bolster Northern morale and rally support for the Lincoln administration. In this he was very successful, so much so that Lincoln remarked at the end of the war that "Thomas Nast has been our best recruiting sergeant."

The vast majority of correspondents during the Civil War worked for Northern newspapers, particularly the powerful triumvirate of New York papers: the *Times*, the *Herald*, and the *Tribune*. Southern newspapers suffered from shortages of paper and money, and so they had a much more difficult time covering the war. This is not to say that there were no Southern newspapers, however. To save money, Confederate newspapers pooled their resources and formed the Press Association of the Southern States, or PA. The PA's stories were available to almost all Southern newspapers, because the Confederate military leaders allowed use of their telegraph lines free of charge. Thanks to cost-saving measures like these, as well as a willingness to print on almost any scraps of paper that could be found, most Southern papers continued publication up to the point that their city was captured by the UNION ARMY.

Through their reporting, their editorials, and their pictures, newspapers naturally had a powerful impact on public opinion. They could influence the populace's outlook on how the war was progressing and on what should happen next. Shortly after the firing on Fort Sumter, the *New York Tribune* urged the Union army to move "On to Richmond!" The *Tribune* continued to put the slogan below its masthead until an attempt to capture the Confederate capital ended in disaster in the summer of 1862. Southern newspapers also expressed their points of view on military affairs,

regularly calling for the head of one general or another. JEFFERSON DAVIS and ABRAHAM LINCOLN were popular targets for both praise and criticism, although they generally attracted more of the latter than the former. The abuse heaped on Lincoln was particularly vitriolic. The *Herald*, for example, regularly described Lincoln as "that hideous baboon at the other end of the avenue."

Despite this mistreatment, both Lincoln and Davis understood the importance of cultivating good relations with the press. Davis knew that keeping the homefront apprised of events helped sustain morale, and he did what he could to help reporters. Lincoln wrote LETTERS to newspaper editors on a fairly regular basis, even those editors that disagreed with his policies, knowing that he was being given an opportunity to present his case to thousands of readers free of cost. Lincoln also gave special treatment to papers that supported him, favoring them with interviews and government printing contracts. For the most part, Lincoln did not take steps to suppress unfriendly newspapers.

In contrast to political leaders like Lincoln and Davis, military leaders generally had little use for reporters. It is true that an ambitious officer seeking promotion could curry favor with a reporter and perhaps earn some good coverage in return. But reporters could also do serious damage to a career by reporting and magnifying even the slightest mistakes. Early in the war, Gen. WILLIAM T. SHERMAN made a request for a larger number of troops than could possibly be provided to him. A Union official related the request to a reporter, offhandedly describing it as "crazy." The next day, headlines across the nation read "Sherman is Insane!" The ensuing publicity caused Sherman to lose his command temporarily and fostered his hatred of reporters. Similar reports of ULYSSES S. GRANT having problems with alcohol caused personal anguish and raised doubts about his professional competence. Of course, as much as Grant and Sherman resented the personal wrongs that had been done to them, they were even more concerned about reporters' ability to reveal sensitive information to the enemy. Typically, their only recourse was censorship, and Northern military leaders in particular did so regularly. On occasion, reporters were banished or arrested, and on one occasion a correspondent came within hours of being executed by an angry Union general.

Despite the military's misgivings, there would be no going back. The press had brought the realities of combat to the American people. No longer would people on the homefront be willing to support a war without being informed as to what decisions were being made and why. In the years immediately after the war, newspapers continued to have an important role in informing the public and shaping peoples' opinions. For example, newspaper reports of violence against former slaves in 1866 and 1867 rallied

support for the RECONSTRUCTION plans of the RADICAL REPUBLICANS. At the same time, revelations of corruption in newspapers, coupled with the drawings of Nast, helped to end the career of NEW YORK CITY political boss William Marcy Tweed. Due in large part to their service during the CIVIL WAR, journalists came to see themselves as having an important role in democracy, namely making certain that people were kept informed about the activities of their leaders and of their fellow citizens. As such, the “news revolution” is one of the most significant developments to come out of the Civil War.

**Julian, George Washington** (1817–1899) *politician*  
RADICAL REPUBLICAN congressman George W. Julian was born in Centreville, Indiana, on May 5, 1817. He began studying law in 1840 after teaching for several years. The law led him to the state legislature in 1845, where he served as a member of the Whig Party. In the late 1840s, Julian, attracted by the Free-Soil Party, left the Whigs and became a fervent spokesman against SLAVERY. His first term as a U.S. congressman began in 1849, and his principles made him an opponent of the Compromise of 1850. Defeated in his reelection bid because of this stand, Julian became the vice presidential candidate for the Free-Soil Party in 1852. Following FRANKLIN PIERCE’s victory, Julian remained an advocate of ABOLITION when he returned to Indiana and joined the REPUBLICAN PARTY.

Julian returned to the U.S. Congress in 1859, where his support of abolitionism made him a prominent spokesman for the Radical Republicans. He served as a member of the JOINT COMMITTEE ON THE CONDUCT OF THE WAR, and in his second term he was named the chairman of the Committee on Public Lands. Both committees represented his interests for the remainder of his years in the legislature: an aggressive war policy, a harsh RECONSTRUCTION, African-American suffrage, and a democratic homestead policy that would keep public lands out of the hands of monopolists and speculators. Following his departure from Congress in 1870, Julian again changed parties but remained reform minded. He affiliated himself with the Liberal Republicans in 1871 but ended up as a Democrat,

stumping for Samuel Tilden in 1876. In his last decades he consistently advocated land and currency reform, as well as woman suffrage.

Julian died in Irvington, Indiana, on July 7, 1899.

## Juneteenth (June 19)

“Juneteenth” is an annual African-American celebration commemorating the 1865 ABOLITION of SLAVERY in Texas.

Though cut off from the rest of the South in 1863, much of Texas remained unoccupied by Union troops until Union general Gordon Granger arrived at Galveston, Texas, 10 weeks after Lee’s surrender. On June 19, 1865, Granger issued General Order No. 3, declaring: “The people of Texas are informed that all slaves are free. This involves an absolute equality of rights of property between masters and slaves and the connection heretofore existing between them becomes that between employer and free laborer.” Thus, two and a half years after ABRAHAM LINCOLN issued the EMANCIPATION PROCLAMATION, Granger made it the law in Texas.

As word of Granger’s order spread, African Americans joined in spontaneous celebration of “Juneteenth.” Beginning in 1866, the anniversary of Juneteenth became an occasion for picnics, baseball games, family reunions, and other revelry. By the turn of the 20th century, Juneteenth celebrations also featured prayer services and oratory. Speakers typically urged celebrants to dedicate themselves to EDUCATION and spiritual uplift.

As late as the 1930s, tens of thousands of people participated in Juneteenth celebrations across Texas. With the number of former slaves dwindling, however, Juneteenth shrank in importance after World War II. The rise of public education may have also played a role; history textbooks dated the end of slavery to ABRAHAM LINCOLN’s 1863 proclamation rather than to events in Texas.

In the late 1960s, Juneteenth celebrations began again to grow as African Americans reclaimed their history. Juneteenth was prominent, for instance, on the buttons and banners Texans carried to the June 1969 Poor People’s March on WASHINGTON, D.C. As interest revived, pressure mounted to declare Juneteenth a state holiday in Texas, a goal achieved in 1980. Juneteenth has since become a national symbol of slavery’s demise, a fact marked by the 1999 publication of Ralph Ellison’s posthumous novel *Juneteenth*, set in early 20th-century Texas. Says one of Ellison’s

## 220 Juneteenth

characters, “There’ve been a heap of Juneteenths gone by and there’ll be a heap more before we’re free.”

## **Kansas-Nebraska Act (1854)**

Many historians believe that the passage of the Kansas-Nebraska Act on May 30, 1854, was the single most important event pushing the United States on the road to the CIVIL WAR. This act superseded the Missouri Compromise and undid much of the Compromise of 1850. The passage of the Kansas-Nebraska Act also had a major effect on the reconfiguration of America's political parties. It divided the DEMOCRATIC PARTY, played an instrumental role in the demise of the Whig Party, and contributed to the rise of a new, exclusively Northern and antislavery party, the REPUBLICAN PARTY. The passage of the act also triggered guerrilla fighting in Kansas.

Senator STEPHEN A. DOUGLAS of Illinois played the single most important role in the formation of the Kansas-Nebraska Act. Douglas, serving as chairman of the Senate Committee on Territories, used his position to promote the development of the western part of the United States. Douglas hoped that Western development would have a chastening influence upon the growing sectional enmities between the North and the South. Instead, it had the opposite effect.

Douglas knew that entrepreneurs could not complete a transcontinental railroad without the prior political organization of the West. In February 1853, a bill calling for the admission of Nebraska as a state passed the House. However, when Douglas brought the bill before the Senate, it failed. Douglas could not obtain Southern support for the development of Nebraska so long as the Missouri Compromise prohibited SLAVERY in the area. Douglas knew that if he incorporated the idea of popular sovereignty—of territories deciding for themselves whether to be free or slave—into the bill, he had a better chance of gaining the support of Southern Democrats.

For his first step, Douglas had to persuade four key Democrats: Andrew Butler of South Carolina, David Atchison of Missouri, and James Mason and Robert Hunter of Virginia, known collectively as the “F Street Mess” (for the

house on F Street in which they boarded while in WASHINGTON, D.C.). These four senators, like Southern Democrats in general, viewed the organization of the Kansas territory under the Missouri Compromise restrictions as a grave threat to slavery. But, in negotiation with Douglas, the F Street Mess saw an opportunity, in a modified bill of territorial organization, to strengthen slavery's position in the United States by repealing the Missouri Compromise line and instituting popular sovereignty instead.

In January 1854, Douglas inserted the language of popular sovereignty into the bill for Nebraska statehood and added the Kansas Territory to the Nebraska Territory already under consideration. Unfortunately, the idea of popular sovereignty for this region violated the Missouri Compromise, which forbade slavery north of the 36°30' line. Southern Whigs called for explicit repudiation of the Missouri Compromise. In the South, the Whigs and the Democrats were in a contest to show their dedication to slavery. Neither party could allow the other to appear to be more favorable to it, so Southern Democrats also called for the repeal of the Missouri Compromise.

Congressional debate on the Kansas-Nebraska Act revealed great concern from Northerners and many Southerners. Debates raged over the legislation. Northerners argued that the act was too vague on when a vote on slavery ought to take place. Their claim was that the longer a vote waited, the more likely it was that slavery would exist *ipso facto*. Slaveholders would bring their property with them, so as soon as Southern settlers moved in, Kansas would become a slave territory. Southerners in turn viewed the Northern reaction as yet more proof that they were under siege by Yankee abolitionists, and Northern rhetoric gave them no cause to doubt this. For instance, in October 1854 ABRAHAM LINCOLN, then an up-and-coming young Illinois lawyer, stated about popular sovereignty that “[w]hen the white man governs himself, and also governs *another* man, that is *more* than self-government—that is despotism.”

Political parties were just as angry and just as divided as individuals and interest groups over the Kansas-Nebraska Act. Several members of the Ohio congressional delegation, including Senators BENJAMIN WADE and SALMON P. CHASE, believed that the act was “a gross violation of a sacred pledge.” They implored their fellow members of Congress to vote against the act on the grounds that “[w]hatever apologies may be offered for the toleration of Slavery in the states, none can be urged for its extension into Territories where it does not exist.” Northern Whigs were upset with the act as well. They were afraid that the Kansas-Nebraska Act might resurrect the Northern Free-Soil Party that had previously caused many problems for them. Northern Whigs also believed that Southerners would take advantage of this opportunity to expand plantation slavery into the Northern United States. This was unlikely, since Southerners believed that the climate of the more northern latitudes prohibited the rise of further slave states in these parts of the West. Correspondingly, Southerners were unenthusiastic about any measure that could, under the tenets of popular sovereignty, lead to the existence of more free states.

On March 3, 1854, the Senate voted 37 to 14 in favor of the passage of the Kansas-Nebraska Act, with Southern Democrats and Whigs voting nearly in lockstep. However, in the House the story was quite different. ALEXANDER H. STEPHENS, the future vice president of the Confederacy, brought 13 Southern Whig representatives across party lines and assured the passage of the act on May 22, when the House voted 113-100 in favor of the bill.

Northern Whigs of both houses had generally opposed the bill. In fact, a large portion of the Northern Whig Party had hoped to convince Southern Whigs to oppose the bill as well. The Whigs hoped to generate a Whig “renaissance” in 1856 and perhaps even to recapture the White House. These hopes were extremely unrealistic, for they failed to take into account that for a Southern Whig to oppose the Kansas-Nebraska Act would be to commit political suicide, since voting against slavery’s interests doomed any Southern political career. Still, the Kansas-Nebraska Act energized Northern Whigs such as Abraham Lincoln to redouble their political efforts against slavery’s spread.

The response to the passage of the Kansas-Nebraska Act was violent. Proslavery and antislavery forces flooded into Kansas. Once there, they established themselves in mutually hostile communities. In 1855, amidst pitched battles that earned the period the name *BLEEDING KANSAS*, the doctrine of popular sovereignty failed its initial test when the Kansas territory held its first election. The proslavery forces were victorious, but antislavery forces refused to accept the results of the election. They claimed that proslave forces from Missouri had illegally stuffed the ballot boxes. President FRANKLIN PIERCE accepted the

proslave victory as legitimate and sent government troops into the area to restore order. Congress, however, refused to accept Kansas as a slave state. A crisis over slavery once again shook the entire nation. It was not until 1861, with the South gone from the Union, that Kansas was finally admitted to the Union as a free state.

### **Kelley, William D.** (1814–1890) *politician*

Born in PHILADELPHIA, PENNSYLVANIA, in 1814, William Darrah Kelley was a congressman who advocated racial equality in the postwar years.

When Kelley was 13, he was apprenticed to a jeweler, moving to Boston to become an enameler in 1834. His gregarious and open personality soon manifested itself as he spent his time off writing and debating the issues of his day. In 1838 he moved back to his hometown of Philadelphia and learned the law, passing the bar exam in 1841. After becoming a prosecuting attorney, he quickly rose up the ranks of Philadelphia’s legal system and was elected as a judge in 1851.

Politically, Kelley started out as a member of the DEMOCRATIC PARTY, but after the Missouri Compromise was repealed in 1854 (allowing SLAVERY to extend further than had previously been agreed), he became an influential founding member of the antislavery REPUBLICAN PARTY of Pennsylvania. His first famous speech was delivered that same year, an antislavery oration entitled “Slavery in the Territories.”

Kelley was an excellent speaker whose loud voice carried audiences along with him. He decided to capitalize on his asset, running for Congress in 1856. Although he lost, he ran again four years later and won, holding his seat for the next 20 years.

When the CIVIL WAR broke out, Kelley enlisted in the artillery, although he never saw combat. When he returned to Congress he voted for every EMANCIPATION or war-related bill that he could. He supported arming African Americans to fight for the Union, and after the war he voted for the establishment of the FREEDMEN’S BUREAU and endorsed military RECONSTRUCTION. He became well known as an advocate of black suffrage and an avowed enemy of segregation.

Kelley died in 1890, after spending many years in Congress fighting for those issues he believed in. His daughter

Florence Kelley later become well known as a reformer in her own right.

### Ku Klux Klan

A white supremacist terrorist group in the postbellum South, the Ku Klux Klan (KKK) began in May and June 1866 in Pulaski, Tennessee. Soon after its creation, the Klan had chapters in every Southern state and attracted support from all segments of Southern white society. Former Confederate officers, like Gen. NATHAN BEDFORD FORREST, who is widely believed to have been the organization's first grand wizard, helped turn the informal social-club Klan into a paramilitary force.

By 1868, the fraternal organization donned white hoods and dedicated itself to the overthrow of RECONSTRUCTION and the preservation of white supremacy. Like other vigilante groups in the region (such as the Knights of the White Camelia and the White Brotherhood), the Klan used violence to intimidate freedmen and their white supporters. Klansmen whipped and lynched Southern African Americans for any conceivable reason. All signs of African-American autonomy and power became targets for Klan activities. Klansmen burned schools and churches and lynched ministers, students, and teachers. Klansmen also attacked black sharecroppers who disputed their portions of the crop, refused to work for white employers, tried to change employers, or showed any signs of economic success.

The Klan directed most of its energy at the political sphere, especially at black politicians and other supporters of the South's REPUBLICAN PARTY. In many ways, it served as the military arm of the South's DEMOCRATIC PARTY. Klansmen whipped and often murdered African-American officeholders and local leaders for their political beliefs and actions. Hundreds of black leaders fled their homes after the beatings, and countless others withdrew from politics. Prior to the election of 1868, the Klan killed more than 200 Republican supporters in Arkansas and more than 1,000 in Louisiana. The intimidation intensified on election day. Armed mobs prevented many polls from open-

ing while others scared black voters away. In 11 counties with African-American majorities in Georgia, Klan violence prevented Republican presidential candidate ULYSSES S. GRANT from receiving any votes.

Klan terror continued after the 1868 election, provoking responses from state and federal governments. Several states made it a crime to travel in disguise, raised the penalties for mob activities, and even authorized ordinary citizens to arrest suspected Klansmen. Republican sheriffs led pos- ses and a few GOVERNORS sent militia companies to track Klansmen down. Most Southern governors, however, were reluctant to act, and when they did their efforts enjoyed little success. Even when they captured Klan members, conviction in the local courts proved impossible, as the routine killing and intimidation of jurists and witnesses prevented successful prosecutions. During Reconstruction, local prosecutors obtained no convictions in the civil courts.

Prosecutors enjoyed more success in the military courts. In 1868 and 1869, Arkansas governor Powell Clayton declared martial law in 10 counties, formed segregated militias, sent undercover agents to infiltrate the Klan, and tried and executed Klansmen in military courts. Law and order returned to the state by the end of 1869, and the state's Klan was effectively silenced. Texas governor Edmund J. Davis proceeded similarly by organizing a 200-member state police. This force arrested more than 6,000 men and effectively suppressed the Klan. The effectiveness of martial law led Klansmen in Tennessee to disband almost immediately after Governor William G. Brownlow declared martial law in nine counties.

Attempts in North Carolina to shut down the Klan proved less successful. In 1879 Governor William W. Holden responded to a wave of terror and the murder of Senator John W. Stephens by declaring martial law without the constitutional authority to do so. Holden sent white militia units, under the command of former Union officer George W. Kirk, to patrol the western counties and subdue the Klan. Kirk arrested about 100 men, but Holden backed down from his desire to try the Klansmen in military courts. The resulting trials took place in the Klan-controlled local courts and resulted in no convictions. The Kirk-Holden war crippled the state's Republican Party just prior to the legislative election of 1870. Democrats swept into power, and in 1871 they impeached and convicted Holden for illegally declaring martial law.

As the death tolls rose, Southern Republicans called on the federal government for assistance. Congress responded with a series of ENFORCEMENT ACTS. The first act, passed in 1870, allowed for the federal supervision of voting and authorized the president to appoint election supervisors with the power to bring federal charges for election fraud and voter intimidation. In January 1871, the violence initiated by the Klan reached a feverish pitch in South Carolina

when 500 masked men attacked a Union county jail and lynched eight black prisoners. In April, after several months of sustained violence, Congress issued the KU KLUX KLAN ACT. This law turned several criminal offenses (such as participating in conspiracies designed to deprive citizens

of their right to vote, hold office, or serve on juries) into federal crimes, authorized the president to use the army to enforce this and the earlier Enforcement Act, and gave him the authority to suspend the WRIT OF HABEAS CORPUS in areas under a state of insurrection. The act further gave

A Thomas Nast cartoon commenting on violence toward African Americans shows a member of the White League and a Ku Klux Klansman joining hands over a terrorized black family. (Hulton/Archive)

the courts the power to eliminate suspected Klansmen from juries.

The Enforcement and Ku Klux Klan Acts allowed Attorney General Amos Akerman and President Ulysses S. Grant to respond vigorously to the Klan. While Congress held investigative hearings and recorded the outrages that the Klan sponsored throughout the region, Grant sent several cavalry companies to shut the Klan down. Grant suspended the writ of habeas corpus in nine South Carolina counties, where federal troops arrested hundreds of suspected Klansmen and federal grand juries issued thousands of indictments. Most of those who were convicted received fines or light prison sentences, but the arrests effectively shut South Carolina's Klan down. Grant never extended the military provisions of the Ku Klux Klan Act outside South Carolina, but federal prosecutors also indicted more than 1,000 Klansmen in Mississippi and North Carolina.

The legal offensive of 1871 effectively destroyed the Reconstruction-era Klan. The Klan disappeared from American and Southern society for more than 40 years before it revived itself in a national organization in 1915 and again during the Civil Rights movement.

### **Ku Klux Klan Act** (April 20, 1871)

The Ku Klux Klan Act, also known as the third of the ENFORCEMENT ACTS, was passed by Congress on April 20, 1871, over strong objections by Democrats. The act was meant to stop white violence against freedmen in the former Confederate states. It gave the president, ULYSSES S. GRANT, the ability to stop “insurrection” by using military force or by suspending HABEAS CORPUS,

which meant he could place people in jail without charging them.

In 1866 the KU KLUX KLAN (KKK) was founded as a social club for former Confederate soldiers. The organization quickly evolved into a vigilante group that opposed freedmen's rights. The Klan often terrorized African Americans and their white sympathizers by intimidating voters, bullying politicians supportive of Radical RECONSTRUCTION, burning African-American schools and churches, and even committing murder. Because law enforcement was generally a local matter, and because local authorities in the South sympathized with the Klan's racial agenda, crimes against Republicans and freed people in the South generally went unpunished by local authorities.

When Congress convened in March 1871, Grant condemned what was happening in the South and called for action by the federal government. The act was passed in April, and habeas corpus was suspended in nine South Carolina counties in May. Hundreds of arrests were made, and an estimated 2,000 Klansmen fled the state. Eventually, federal grand juries indicted 3,000 people throughout the South, bringing the worst offenders to trial and obtaining 600 convictions.

The Ku Klux Klan Act had some impact in lessening violence in the South. However, in 1876's *UNITED STATES V. CRUIKSHANK*, the Supreme Court ruled that the act only applied to wrongdoing by state and local governments, not to acts by individual citizens. Since the Klan was not a part of the government, the Supreme Court's decision effectively meant that the Ku Klux Klan Act could no longer be used to stop the Klan. The act is thus another example of a seeming victory for the freed people ultimately being transformed into a defeat.

### ladies aid societies

With the fall of FORT SUMTER, SOUTH CAROLINA, in April 1861, women North and South responded by supplying volunteers with blankets, clothes, and food. In villages, hamlets, cities, and towns, women packed lunches, mended shirts and socks, sewed UNIFORMS and flags, and collected family quilts. Women equipped their relatives, friends, and townsmen with supplies to get them to the front, believing that the government would then take over the provisioning of the troops. But neither the United States nor Confederate governments had the military infrastructure with which to organize and equip a large army. As a result, at the beginning of the CIVIL WAR, individuals and local governments provided their own uniforms, weapons, food, and general equipment such as knapsacks, blankets, and tents. Even after the U.S. government had a system in place that combined federal production with private enterprise, there was plenty of room for the assistance of ladies aid societies.

In both the North and the South, women's efforts quickly evolved into soldiers' aid societies. The organizers had been active in benevolence work before the Civil War and transformed their groups to accommodate the soldiers, or they simply established new associations. Women wrote organization constitutions, elected officers, established dues, and created work committees to cut, sew, and pack, as well as solicit funds. Women volunteered their time and talents with the patriotic sentiment that they were doing their part for the cause. "We never knew before how much we loved our country," wrote Josephine Shaw, the sister of Col. Robert G. Shaw of the 54TH MASSACHUSETTS. A devoted volunteer, she added: "We can work though we can't enlist. It is very pleasant to see how well the girls and women do work everywhere, sewing meetings, sanitary hospitals and all." The societies provided the soldiers with comforts when well and with hospital supplies and NURSES when wounded and sick. In the North, it is estimated that more than 20,000 ladies aid societies operated throughout the war. In the South, women established more than 1,000

societies by the end of 1861, but Confederate ladies never organized on a national scale, and they faced an array of problems that doomed the smooth and continuous operation of their associations.

First, Southern ladies aid societies remained the domain of the elite ladies. This discouraged working-class women, who held the domestic skills, from participating, thus hampering society relief efforts. Southern women turned much of their time to fund-raising when they realized that many supplies needed to be purchased. Along with the basic medical and domestic goods like bandages, scissors, and Bibles, societies in Charleston, Mobile, Norfolk, and Savannah raised money for the purchase of ships. However, the Confederacy also lacked the overall resources that were available to Northern women as goods became scarce with intensifying war activities and the successful Union naval blockade of Southern ports. Southern ladies aid societies finally collapsed when the Union troops invaded the Confederacy. Federal soldiers stole the societies' supplies, thus ending their operations.

In contrast, Northern women established a national network of ladies aid societies that were able to support the troops for the duration of the hostilities. While the societies began at a grassroots level, it became apparent to several women, particularly in the East, that a more efficient system was needed to identify and locate misplaced boxes and to rationalize management to prevent the overlapping of efforts in one area and the lack of supplies in another area. Creating such an organized system, they thought, would help rather than hinder the army. Dr. Elizabeth Blackwell of New York was the first to recognize the need for organization and called a meeting for April 26, 1861, at the Cooper Union in NEW YORK CITY. She invited some of the city's most prominent women as well as Dr. Henry Bellows, the Unitarian minister of All Souls Church. Before the meeting adjourned for the day, the ladies and men present formed the Women's Central Association of Relief (WCAR). They proposed that they would "give organization and efficiency

to the scattered efforts" already in progress, that they would establish a relationship with the medical staff of the army, and a central depot for supplies, and that they would investigate the needs of the soldiers. Blackwell also began a program to train and register female nurses. In the short term, the WCAR proved to be a success. The ladies aid societies of the Northeast responded by funneling their supplies into the office of the WCAR in New York. Other women around the area who had not yet organized were inspired to establish soldiers' aid societies in their towns and began a relationship with the WCAR.

The achievements of the WCAR were somewhat overshadowed by the creation of the UNITED STATES SANITARY COMMISSION (USSC). Dr. Henry Bellows feared that the War Department's announcement that they would not accept the nursing trainees was the first of many military rejections of the WCAR. Bellows proposed that a centralized, national organization separate from the WCAR was needed to combine all of the efforts of the nation's relief associations, help the army operate the hospitals, and determine the needs of the soldiers. Bellows suggested that the new organization have government sanction but operate on private funds. On June 13, 1861, Bellows gained official authority from President ABRAHAM LINCOLN, who believed the USSC would prove to be as useful as a "fifth wheel on a coach," but who gave his approval anyway.

In Chicago, ladies like Mary A. Livermore helped establish the Northwestern Sanitary Commission, which became the main depot for Wisconsin, Michigan, Illinois, and Iowa supplies. In Cleveland, women formed the Soldiers' Aid Society of Northern Ohio. In Boston, they became known as the New England Women's Aid Association and received goods from Maine, New Hampshire, Vermont, and Massachusetts. And in Pennsylvania the Ladies Aid Society of Philadelphia received goods from around the state. All of these groups became affiliates of the United States Sanitary Commission and sent their supplies through their regional USSC channels.

The USSC and their chapters expanded their work to include sanitary inspection of camps and instruction of soldiers on matters of water supply, placement of latrines, and safe cooking methods. They provided meals, housing, and TRANSPORTATION to soldiers on furlough and nursed those who were too sick or wounded to continue. After the BATTLE OF GETTYSBURG, a grateful doctor wrote of the USSC ladies aid: "I . . . get plenty to eat and of excellent quality from the Sanitary Commission, eggs, chickens, crackers of every kind. They are doing noble work." They helped soldiers obtain their pay and also established a messenger service that employed disabled VETERANS. They maintained hospital records and helped locate wounded, captured, and dead soldiers for

the distraught parents and relatives. The ladies sustained these multifaceted programs through a variety of fund-raising activities. The most popular form was the sanitary fair, which usually lasted about two weeks and included displays, entertainment, auctions, and restaurants. The fair was the brainchild of Mary A. Livermore and Jane C. Hoge, who held a successful Chicago fair in October 1863 in which the Northwest Commission raised more than \$100,000.

In spite of these successes, the USSC never attained its goal of creating an all-inclusive national system. Other women like those who formed the Western Sanitary Commission in St. Louis and the Cooper Shop Volunteer Refreshment Saloon and the Union Volunteer Refreshment Committee, both of Philadelphia, chose to operate independent of the USSC. These groups and hundreds of smaller societies across the North contributed supplies to the USSC but maintained their independence, believing autonomous societies could better meet the needs of their local soldiers.

The USSC also vied for supplies with the UNITED STATES CHRISTIAN COMMISSION (USCC). Organized by the Young Men's Christian Associations across the North with the ideal of caring for the soldiers' spiritual needs, the USCC quickly became the USSC's arch rival. Independent societies and USCC actions frustrated men and women dedicated to the national goals of the USSC, who saw their agency as the symbol of Northern unity. Although there was much infighting among the benevolent communities of the North during the war, the ladies aid societies were able to supply troops and hospitals and consequently saved thousands of soldiers' lives.

In short, ladies aid societies, whether independent or chapters of the USSC or its Southern counterparts, were in the business of aiding the soldiers with whatever means available. Northern and Southern women volunteered their services with the call for troops in 1861, helped their causes by assisting the soldiers, and in this way became patriots of the war.

### Ladies Memorial Associations

The Ladies Memorial Associations were women's organizations established in the postwar South to honor the Confederacy. Throughout the CIVIL WAR, women of the Confederacy had volunteered their services by rolling bandages and sewing flags and UNIFORMS. In the healing process that coincided with RECONSTRUCTION, Southern women began asserting their identities and role in society as never before. After the war women who had contributed to various war support efforts began to form Ladies Memorial Associations to honor publicly soldiers who died fighting for the Confederacy, to move their remains from mass graves to individual plots, and to raise money for the construction of appropriate MONUMENTS in new cemeteries.

The first Ladies Memorial Associations arose in Petersburg, Virginia, and Columbus, Georgia, in 1866. Within a few years numerous independently operating chapters flourished across virtually the entire region. Despite the hardships of defeat and a depressed regional ECONOMY, all the chapters were remarkably successful at raising money for new memorials. Moreover, it was largely through their political agitation that Confederate Memorial Day was instituted as a formal, if regional, observance, occurring on either April 26 or May 10 (denoting Gen. JOSEPH E. JOHNSTON's surrender or Gen. THOMAS J. (Stonewall) JACKSON's death, respectively). The memorial activities of the Ladies Memorial Associations contributed to a gradual reclamation of Confederate identity. In this manner the bitter legacy of defeat was slowly transformed into a positive message of sacrifice in a just cause. This way of thinking inspired the myth of the LOST CAUSE, which the Ladies Memorial Associations helped to propagate. Conservative in spirit, the groups aimed to transmit the values they deemed essential to successive generations. Likewise, the women who held leadership positions in the associations came from elite families of the antebellum period, and through their unstinting devotion to memorialization they reaffirmed their central status in Southern society.

With the end of Reconstruction in the 1870s a new generation of Southern women assumed leadership of the Ladies Memorial Associations. A celebratory attitude replaced the previous emphasis on bereavement, but younger members continued their outreach and memorial activities. In 1894 the movement gave rise to a new organization, the UNITED DAUGHTERS OF THE CONFEDERACY (UDC), which successfully transmitted the symbolism of the lost cause into the 20th century. From a social and political standpoint, UDC was the most influential women's organization in the South in the period before World War I. It coexisted with the older Ladies Memorial Associations, and in 1900 many chapters banded together with the UDC to form the Confederated Southern Memorial Association. This combined group sponsored writing and publishing efforts to memorialize Southern

men, all the while burnishing its members' role as keepers of the Confederate tradition in the male-dominated society of their day. Like the Daughters of the American Revolution (DAR), who honored an earlier struggle, the Ladies Memorial Associations and its splinter groups were an outlet for patriotic, literary, social, and memorial activities for women throughout the South.

**Lee, Robert E.** (1807–1870) *commanding general of the Army of Northern Virginia*

West Pointer and Confederate general Robert Edward Lee was born on January 19, 1807, at “Stratford Hall,” Virginia, the fifth child of Henry “Light-Horse Harry” Lee and Ann Hill Carter Lee. His father, a Revolutionary War hero and later governor of Virginia, left home when Robert was six and never returned. With few financial resources, the family settled on a career in the army for Robert. Political connections helped secure an appointment to the UNITED STATES MILITARY ACADEMY AT WEST POINT in 1825.

Lee completed four years at the academy without any demerits and graduated second in the class of 1829. Apart from his exceptional academic record and conduct, he also exhibited qualities of leadership. Cadets referred to him as the “Marble Model,” a nickname that probably reflected some envy as well as admiration. Just under six feet tall, handsome, and with black hair and brown eyes, Lee cut a striking figure. He entered the Engineer Corps as a second lieutenant on July 1, 1829.

More than a decade and half passed before Lee saw a battlefield. Promotions to first lieutenant and captain punctuated this long stretch of peacetime service. In June 1831, Lee married Mary Anna Randolph Custis, the only daughter of George Washington Parke Custis, himself the grandson of Martha Washington. Mary Anna and Lee would share a 39-year marriage that produced four daughters and three sons. Lee took seriously the ties to Washington, which he sought to emulate throughout his life. The Confederate people later would often compare the two

Virginians, viewing Lee and his Army of Northern Virginia much as the American colonists had viewed Washington and the Continental army.

On May 13, 1846, the United States declared war on Mexico. Between March and September 1847, Lee served on the staff of Winfield Scott during a brilliant campaign from Vera Cruz to Mexico City. Lee performed exemplary service and impressed his superiors—none more so than Scott, who came away from Mexico filled with admiration for the younger officer.

In the 1850s, Lee held the superintendence of the United States Military Academy from 1852 to 1855 and later served as lieutenant colonel of the Second Cavalry in Texas. In late October 1859, he chanced to be in WASHINGTON, D.C., when JOHN BROWN attacked HARPERS FERRY. Summoned to the War Department on October 17, Lee proceeded to Harpers Ferry with a detachment of marines and the next morning captured Brown.

Robert E. Lee (National Archives)

By the time of Lee's promotion to colonel of the First Cavalry on March 16, 1861, seven southern states had seceded. Confederates fired on FORT SUMTER on April 12, and ABRAHAM LINCOLN issued a call three days later for 75,000 volunteers to suppress the rebellion. On April 18, Lee was offered command of the U.S. Army being raised to put down the rebellion. He declined with the explanation that he could not take the field against the Southern states. "Save in the defense of my native State," he wrote to Winfield Scott, "I never desire again to draw my sword."

In late April, Lee accepted appointment as major general of Virginia's state forces and shortly thereafter transferred to the CONFEDERATE ARMY. He was made a full general on August 31, 1861, ranking third in seniority among Confederate generals. Lee's first year in command, which included duty in western Virginia and along the South Atlantic coast, yielded no dramatic victories and created the impression that he was a timid commander. In early March 1862, he became military adviser to President JEFFERSON DAVIS in RICHMOND, capital of the Confederacy. On May 31 JOSEPH E. JOHNSTON, who commanded the Confederate army defending Richmond, was wounded in the Battle of Seven Pines. Lee took his place the next day, an appointment that provoked a mixed reaction. Many Confederates approved, but others doubted Lee's ability. A member of Lee's staff recalled that some Southern newspapers predicted that with Lee in charge "our army would never be allowed to fight."

Lee immediately sought to take the initiative. Reinforcements under THOMAS J. (STONEWALL) JACKSON from the Shenandoah Valley boosted his army's strength to more than 85,000. Between June 25 and July 1, Lee and GEORGE B. MCCLELLAN fought the Seven Days' Battle. The Confederates pushed McClellan's army southward, away from Richmond and toward the James River. Lee's victory was not a masterpiece. His plans had been too complicated, and the Confederates suffered more than 20,000 casualties to McClellan's 16,000. Yet Lee's first major campaign as a field commander lifted civilian spirits across the Confederacy and greatly enhanced his reputation.

Lee reorganized the Army of Northern Virginia after the Seven Days, dividing its infantry between Stonewall Jackson and JAMES LONGSTREET. The revamped army defeated Union general John Pope at the SECOND BATTLE OF BULL RUN on August 28–30, an engagement that tallied more than 9,000 Confederate and 16,000 Union casualties. Since taking command in June, Lee had restored the Confederacy's eastern military frontier to where it had been in April 1861. His decisive leadership and victories won praise from across the Confederacy. A colonel from Georgia reflected this attitude, observing on September 5, 1862, that "Genl Lee stands now above all Genls in Modern History."

After **SECOND BATTLE OF BULL RUN**, Lee decided to take the war out of Virginia and into the Union. The Army of Northern Virginia, a ragged force some 55,000 strong, crossed the Potomac on September 4–7. McClellan, reinstated after Pope's defeat, opposed Lee on September 17 in the campaign's climactic **BATTLE OF ANTIETAM**. Lee's army had suffered from severe straggling and **DESERTION** while in Maryland, leaving only about 35,000 men to face McClellan's 80,000. During a day of savage combat that ended with an uneasy standoff, more than 10,000 Confederates and 12,500 Federals fell, making Antietam the bloodiest day in U.S. history. The Army of Northern Virginia retreated to the Potomac on the night of September 18.

The Maryland campaign ended a three-month drama that had begun with the Seven Days' Battle. Although turned back at Antietam, Lee had crafted an overall Confederate success. His victories had driven major enemy forces from Virginia, raised Confederate civilian morale, sent tremors through the North, and laid the foundation for a memorable bond between himself and his soldiers.

A victory at the **BATTLE OF FREDERICKSBURG** on December 13, 1862, increased public confidence in Lee. This unusual winter campaign pitted 75,000 Confederates against more than 125,000 Union soldiers under Gen. **AMBROSE E. BURNSIDE**, who had replaced McClellan. At one point in the battle, an admiring Lee watched his **VETERANS** drive back the Federals. Turning to James Longstreet, he said in an even voice, "It is well that war is so terrible! We should grow too fond of it!" The battle claimed 12,653 Northern and 5,309 Southern casualties. Behind the lines in the Confederacy, the victory spread optimism and heightened faith in Lee.

In late April 1863 Gen. **JOSEPH HOOKER**, Burnside's successor, commenced a new Union offensive along the Rappahannock River that ended with the **BATTLE OF CHANCELLORSVILLE**. Lee had detached half of Longstreet's troops to southern Virginia, leaving him with about 60,000 men to oppose Hooker's 120,000. Lee reacted to Hooker's movements with a series of daring decisions that involved dividing his outnumbered force three times. Four days of fighting commenced on May 1, at the end of which Hooker retreated to the north bank of the Rappahannock. Utterly dominating Hooker psychologically, Lee had wrested victory from circumstances that would have undone most generals. He also lost more than 12,500 men, among them Stonewall Jackson, who died on May 10 after being wounded on the evening of May 2.

Chancellorsville uplifted the Confederate people, who made Lee their unquestioned military idol, and sent waves of disappointment rippling across the North. It also completed the process by which the Army of Northern Virginia became almost fanatically devoted to Lee. In language echoed by countless others, a Georgia soldier described

this deep attachment: "Wherever he leads they will follow. Whatever he says do, can and must be done."

The next test for Lee came on Northern soil. His army, with Longstreet back, marched northward in June 1863 numbering 75,000 men. By the end of June, Confederates had penetrated well into Pennsylvania. The greatest battle of the war opened on July 1 just west of Gettysburg. Confederates carried the field on the first day, then continued their offensive during the next two days. Fighting raged at such places as the Peach Orchard and Little Round Top on July 2, and the battle closed on July 3 with the famous Confederate attack known as Pickett's Charge. During the three days, more than 23,000 Federals and at least 25,000 Confederates fell. Many critics have pointed to the **BATTLE OF GETTYSBURG** as proof that Lee's aggressiveness sometimes overcame his better judgment. Others have argued that several subordinates performed poorly and frustrated Lee's plans. Lee typically took full responsibility for the defeat. In the wake of Pickett's Charge, he told a subordinate, "Never mind General, all this has been my fault—it is I that have lost this fight."

Nearly 10 months passed before Lee faced another serious Union offensive. In the spring of 1864, Gen. **ULYSSES S. GRANT** assumed command of operations in Virginia. His presence raised hopes among Northerners that they finally had a champion who could vanquish Lee. The Confederate people held an equally firm belief that Lee would triumph against Grant. The Army of Northern Virginia mustered about 65,000 men to face roughly 120,000 Federals in what would be called the **OVERLAND CAMPAIGN**.

Six weeks of unprecedented fury opened when Lee and Grant tested each other on May 5–6 in the **BATTLE OF THE WILDERNESS**. Two days of combat felled more than 18,000 Federals and 11,000 Confederates. Unlike previous Union generals in Virginia, Grant ignored his losses and pressed southward. The armies fought again during May 8–21 in the **BATTLES OF SPOTSYLVANIA**, piling up another 18,000 Federal and 12,000 Confederate casualties. By June 1, the armies had shifted southeast to the vicinity of Cold Harbor. More than 50,000 Federals struck Lee's well-engineered positions on June 3. Confederates lost just 1,500 men while inflicting 7,500 casualties. On June 12, Grant began a movement that fooled Lee completely. The Federals crossed the James River and hastened toward Petersburg, where on June 15–18 a series of disjointed assaults failed to take the city. Once certain that Grant had crossed the river, Lee shuttled troops to the Petersburg defenses.

The Overland campaign ended on June 18 as the armies settled into their lines around Petersburg for a siege that would last more than nine months. The final period of the war offered little good news to Lee and his army. Although many Confederates took heart at Lee's appointment as general in chief of all national forces on February 6, 1865, the

promotion came too late to have any practical effect. On March 25, Lee made a final unsuccessful attempt to break Grant's encircling grip. Federals turned Lee's right flank at the BATTLE OF FIVE FORKS a week later, and on the night of April 2–3 Confederates abandoned the Richmond-Petersburg lines.

A weeklong retreat westward from Richmond and Petersburg ensued. Lee hoped to join Joseph E. Johnston's army in North Carolina, but Grant's pursuit denied him an opening. On April 9, hemmed in by powerful Northern forces, Lee remarked, "There is nothing left me to do but to go and see General Grant, and I would rather die a thousand deaths." The war's two most famous generals met in the parlor of Wilmer McLean's home in APPOMATTOX COURT HOUSE, VIRGINIA that day. Grant extended generous terms; Lee accepted them; and the two men signed the document of surrender.

Nearly four months passed between Lee's surrender and the arrival of an offer that would define the work of his last years. In August 1865, he became president of Washington College in Lexington, Virginia. He proved to be an able educator who improved the faculty, increased the size of the student body, and broadened the curriculum by adding courses in science and engineering to the traditional offerings in classical subjects.

Plagued by various physical ailments during the post-war years, Lee was stricken on September 28, 1870, with a stroke. He lingered for two weeks, uttering an average of just one word a day, until he died peacefully on October 12.

**Letcher, John** (1813–1884) *lawyer, journalist, politician*

John Letcher was the GOVERNOR of Virginia during the CIVIL WAR. Letcher was born in Lexington, Virginia, on March 29, 1813. He attended Randolph-Macon and Washington Colleges, and he was admitted to the state bar in 1839. He also served as editor of the *Democratic Valley Star*, a reformist paper calling for an enlargement of the voting franchise and more equitable distribution of power between the eastern and western halves of the state. In 1850–51 Letcher played an important role in the Virginia constitutional convention, which adopted the liberal constitution he advocated. The following year, running as a

moderate Democrat, Letcher was elected to the UNITED STATES CONGRESS, where he urged caution and reconciliation, despite his own standing as a slave-owning Southerner. In 1859 he crowned his political career with a narrow victory over a Whig opponent for the governorship of Virginia.

Letcher took office in January 1860, argued against SECESSION, and supported Northern Democrat STEPHEN A. DOUGLAS for the presidency. After FORT SUMTER, SOUTH CAROLINA, surrendered and President ABRAHAM LINCOLN called for volunteers to the armed services, Letcher threw his full support behind the Confederacy. As head of the South's most powerful state, where most of the major battles of the eastern theater were fought, Letcher did everything in his power to accommodate President JEFFERSON DAVIS and his Confederate nationalist policies. He supported the Confederate government on divisive issues such as IMPRESSMENT, suspension of HABEAS CORPUS, and CONSCRIPTION. Although he personally believed all these policies violated STATES' RIGHTS PRINCIPLES, he pleaded with fellow Confederate governors to put aside differences in the interests of a unified war effort.

While Letcher's contributions to Confederate nationalism were indispensable, he was less successful in his efforts to control spiraling inflation and regulate the all-important salt industry. Furthermore, his willing subordination to the Confederate government alienated his own state legislature. In 1864 he stood for a seat in the CONFEDERATE CONGRESS, was defeated, and returned home. After the war Letcher was briefly detained by Federal authorities, then released. He spent the remainder of his life immersed in legal activities. He died in Lexington on January 26, 1884.

## letters

Written correspondence was an important way of communicating for 19th-century Americans. Early in the century, as the country expanded westward and people left their communities, letters were the only method of keeping in touch with their now-distant kin. Frontier settlers could read letters about the latest FASHIONS, the newest books, and the recent political controversies, as well as local gossip. Their letters would provide fascinating information to the folks back home about the pioneering experience. With the outbreak of the CIVIL WAR, the importance of letter writing was magnified tremendously. Letters became the

most important link between the volunteer soldiers and their friends and relatives back home.

The Union maintained this lifeline more easily than the Confederates. The North sustained an efficient mail service throughout the war and delivered mail to Yankee soldiers in Virginia and Tennessee within a couple of days. The U.S. Postal Service saw an unprecedented number of letters, with approximately 180,000 passing through its doors daily, as civilians and soldiers kept in touch. The South was not quite as successful. The Confederates kept letters moving as long as they could, but occupying Northern troops disrupted increasingly large segments of the railroad system and with it the postal service.

Corresponding was not always an easy task for soldiers on either side. Stationery was sparse, and soldiers wrote on any scrap of paper they could find, while regularly asking relatives to send them paper and stamps. Federal soldiers were more fortunate. Civilian organizations like the UNITED STATES CHRISTIAN COMMISSION distributed free stationery, pens, and stamps. Confederates had a more difficult time finding stationery, but they supplemented their supplies by scavenging through the knapsacks abandoned by retreating Yankees.

Writing was well worth the difficulties, however, as wartime correspondence took on new importance for both the soldiers and the civilians on the HOMEFRONT. For the civilians, letters kept them informed about the health and well-being of their kin and friends in the army. They learned about the hardships of camp life and the thrills and brutality of battle. "I do not know what is getting into me but I am getting more and more scary every fight I go into," declared a soldier from Georgia. Through these frontline reports, civilians felt connected to the cause and gained a renewed sense of patriotism.

For the soldiers, mail call was generally the brightest part of their day. "After long marches and great exposure," wrote one Union soldier who was in the Gettysburg campaign of 1863, "when you have gone through all that a man can go through, to get into camp at last and hear that a mail has come! You should see the news fly round the camp and the men's faces light up." Friends and relatives kept the soldiers connected to the home through their letters. Soldiers learned about hometown gossip of weddings, funerals, local politics, and the daily routines of their friends and families.

Letters were so prized by the soldiers that they read and reread them and literally wore them out. Soldiers found reading and writing letters to be wholesome diversions from the dullness of camp. Receiving letters could have either a good or a bad impact on the soldiers. *Not* receiving a letter from a wife drove this soldier into despair: "It seems so lonely to me not get any [*sic*] letters at all from you as I have had none of but about one for about 4 weeks.

Perhaps you are sick & cant write but a neighbor could. I feel very anxious to know what is the trouble or if you have got mad at me."

Cheerful letters could boost morale and remind the men that their friends and families loved them and supported the cause for which the soldiers fought. One wife wrote longingly to her soldier-husband: "My heart is full of love for you tonight and my earnest prayer ascends for your safety and happiness." Civilians used correspondence to keep in touch, but they also counseled and guided the soldiers. Advice was a two-way street, as married soldiers also counseled and guided their children and spouses from the camp. A Confederate from Mississippi wrote his wife: "I often ask myself whether our little Callie speaks of her Pa. Does she remember me? You must not whip her. I have a perfect horror of whipping children." Most soldiers accepted and appreciated the concern of their family.

Just as letters containing happy news could boost morale, letters filled with financial woes, family deaths, or crop problems had the opposite effect on the men. Volunteers felt torn between their duty to their country and their responsibility as breadwinners for their families. James Colwell of Pennsylvania left his wife and four small children to volunteer for the Union. Responding to her anger at his leave-taking, he tried to console her: "I feel sorry that you permit hard thoughts to possess your heart at our separation . . . I did it from a sense of right and duty . . . Now I am sure my own Annie would not wish me to come back with dishonour, and thus bring disgrace on her and our children." Receiving several hardship letters created poor morale and hurt the combat effectiveness of the troops. Confederate soldiers were most susceptible to bad news because the Yankees had invaded their homeland and devastated their ECONOMY.

Letters did not determine the outcome of the war, but historians believe that such correspondence was an essential part of an army's positive morale. Letters connected soldiers to their families who were the main base of their support and gave the men courage and conviction to fight for their cause.

**Lieber, Francis** (1798–1872) *political philosopher, academic*

Francis Lieber is regarded as father of American political science. He was born in Berlin, Prussia, on March 18, 1798. As a youth, Lieber was arrested for his political activism. After his release he studied at the Universities of Jena and Halle, earning a doctorate by 1824, but two years later his political views again offended Prussian authorities, and he was exiled to England as a subversive.

In 1827 Lieber arrived in Boston, Massachusetts, where he undertook a prolific career as a writer. Between 1829 and 1833 he edited and contributed to the 13-volume work *Encyclopedia Americana*. After relocating to PHILADELPHIA, PENNSYLVANIA, Lieber composed the constitution and regulations for Girard College in 1834. The following year he was hired as a professor of history at the University of South Carolina. He flourished in the roles of teacher and political philosopher, and the many texts he published were the first to examine systematically the political philosophy of the state. However, Lieber's strongly Unionist views and suspected abolitionism frustrated his attempts to serve as president of the university when vacancies arose in 1851 and 1854. In 1857 Lieber angrily ended his 21-year tenure at South Carolina and relocated to NEW YORK CITY, where he served as the first chair of political science at Columbia College (now Columbia University).

Lieber was considered an authority on civil-military relations, and after the CIVIL WAR broke out in 1861 his opinion became much sought after. At the behest of Gen. HENRY W. HALLECK he composed an essay clarifying the legalities of civil war and the handling of guerrillas and partisans. President ABRAHAM LINCOLN subsequently enjoined him to compile a code of war, published as *A Code for the Government of Armies* (1863). This work proved highly popular and laid the groundwork for international rules for the conduct of war and the treatment of prisoners. It was adopted by the Prussian military in 1870, and it greatly influenced the Hague Conferences of 1899 and 1907.

In addition to his duties at Columbia, Lieber served as president of the Loyal Publication Society throughout the Civil War years, composing many texts on behalf of the Union war effort. Afterward he transferred to Columbia's law school, where he helped collect and archive captured Confederate papers as evidence of potential treason by Southern leaders. He later helped found the American Social Science Association at Columbia. Lieber died in New York on October 2, 1872.

**Lincoln, Abraham** (1809–1865) *16th president of the United States*

Abraham Lincoln is widely considered the greatest president in U.S. history. As head of the REPUBLICAN PARTY, leader of the Union, and commander in chief of the largest army ever assembled to that date, Lincoln ended SLAVERY and reunited the North and South. For those accomplishments, he is called “The Great Emancipator” and the “Savior of the Union.” Lincoln's limited political experience as he assumed the presidency caused many to question his leadership abilities. Despite making mistakes, his growth as a man, as a politician, and as chief executive was remarkable. His tragic assassination just days after the South's surrender at APPOMATTOX COURT HOUSE, VIRGINIA, plunged the country into mourning and ensured his apotheosis as a martyr for the cause of freedom and union.

From the time of his death, Lincoln has been the subject of numerous paintings, books, poems, plays, and, later, movies, documentaries, and web sites. The Lincoln Memorial in WASHINGTON, D.C., is one of the most visited MONUMENTS in the country. Indeed, more books have been written about Abraham Lincoln than any other historical figure, except Jesus of Nazareth. He stands as a national and international symbol for freedom and democracy.

Lincoln's rise from a humble pioneer background to the highest office in the land began with his birth in a one-room log cabin near Hodgenville, Kentucky, on February 12, 1809. Abraham's parents, Thomas Lincoln and Nancy Hanks Lincoln, were illiterate farming folk. Thomas Lincoln was not a particularly successful farmer, but he worked hard and had ambitions for himself and his family. In 1816 Thomas and Nancy moved to the Indiana Territory, where land was cheaper and the land titles more secure than in Kentucky. Lincoln's parents had another reason to move out of Kentucky, and that was their opposition to slavery. Members of an antislavery Baptist group, they believed that going to a free-labor land would boost their chances for prosperity.

Like the children of most pioneer families, Abraham and his older sister Sarah were expected to pitch in and help on the farm. The young Abe labored side by side with his father, learning how to use the axe and the plow as they cleared the forest to build the family's simple cabin and prepare the fields for planting. Abraham grew into an unusually strong youngster who was adept at splitting rails and winning wrestling contests against older and more experienced men. His early life was marked by tragedy. Nancy Hanks Lincoln died suddenly in 1818, leaving Thomas and the children to fend for themselves for a year. Thomas Lincoln remarried widow Sarah Bush Johnston. Sarah and her three children moved in with the Lincolns and brought a measure of stability and affection to Abraham's life. He always remembered with fondness Sarah's kindly ways,

which provided a contrast to his strained relations with Thomas Lincoln. Abraham, his father complained, was “lazy” because he preferred reading books to farm chores.

As Lincoln matured, he was drawn to the life of the mind over the life of labor that was his father’s lot. A few months in a rural schoolhouse was his only “formal” EDUCATION, but Lincoln borrowed heavily from the small libraries of Pigeon Creek, Indiana. From books, he trained his mind and developed a love of language and an appreciation for rhetoric and oratory. Calculating and ambitious, Lincoln earned money in a variety of working-class jobs, including taking a flatboat loaded with produce down the Ohio and MISSISSIPPI RIVERS to sell in the market at New Orleans. He recoiled in horror at the busy slave markets of the Southern port city. In 1830 the 21-year-old Lincoln moved with his family to central Illinois. Anxious to be on his own, he set out for New Salem, Illinois, a small commercial river town. Here Lincoln made his home for the next six years, boarding with various families and working as a clerk in a store, a partner in a general store (that went bankrupt), and a postmaster, among other jobs. In New Salem, Lincoln continued his program of self-education, studying mathematics and LITERATURE (he especially loved Shakespeare) with the local schoolmaster.

Lincoln developed an enthusiasm for politics and joined the local debating society. In 1832 he participated in the Black Hawk War and was elected a captain of the militia. This brief and bloodless experience would be his only brush with the military before 1861. Lincoln ran for the state legislature in 1832 and lost. On his second try in 1834, he won handily as a member of the Whig Party. Quickly mastering the ways of the lower legislature in Vandalia, Illinois, Lincoln became a prominent member of the tiny but influential Whig faction, serving four terms in the lower house. An admirer of Henry Clay’s “American system,” Lincoln supported a national bank and government-sponsored economic development for Illinois. While serving in the legislature, Lincoln studied law with his political mentor, John Todd Stuart, a prominent Whig lawyer and resident of Springfield, Illinois. When the state capitol was moved to Springfield, Lincoln happily followed and in 1837 began his legal practice. In 1844 he formed a partnership with WILLIAM H. HERNDON. Within a decade Lincoln had established himself as a respected and prosperous lawyer.

As a young professional in Springfield, Lincoln had come a long way from his backwoods upbringing, but the rough edges were still very much present. Extremely tall, the six-foot, four-inch Abraham had a thick shock of black hair and a face that many found ugly. Lincoln often joked about his looks. In response to a critic’s attack that he was a “two-faced” politician, Lincoln responded humorously, “If I had two faces, do you think I would use this one?” He was

Abraham Lincoln (*Library of Congress*)

most comfortable within his wide circle of male colleagues, friends, and supporters in the political and legal world in which he lived and worked. They knew him as a master storyteller, a humorist and wit, and, occasionally, as someone who fell into melancholic moods. Death was a constant presence in Lincoln’s life, and in 1828 his beloved sister Sarah died in childbirth. In 1835 a young woman he was courting, Ann Rutledge, died, and Lincoln became depressed, withdrawing temporarily from his active life. A few years later, Lincoln began an on-and-off relationship with Mary Todd from a wealthy slaveholding family in Lexington, Kentucky. In 1842 Lincoln and Todd married. Two years later, the Lincolns bought their first house in Springfield, Illinois. They remained in the attractive, spacious home until they moved to the White House in 1861.

Abraham and MARY TODD LINCOLN had four sons together between 1843 and 1853: Robert Todd, Edward Dickinson, William Wallace (Willie), and Thomas (Tad). Both parents were devoted to their children and grieved deeply when the four-year-old Edward died of tuberculosis. Twelve years later, in 1862, they lost Willie to typhoid fever. The Lincolns’ marriage has been the subject of much

speculation. Evidence suggests that despite many rocky periods they loved and respected each other. Mary's high-strung nature was tested by Abraham's constant absences due to his law practice and his inattentiveness to the details of daily life, including his well-known tendency to be careless about his appearance. Yet, she provided intelligent and enthusiastic support for her husband and boosted his career through her familial and social connections.

Lincoln made his living by the law, but his true passion was for politics. In 1847 he was elected to the U.S. House of Representatives where, during a single two-year term, he was principally known for opposing the Mexican-American War and the extension of slavery. His most memorable feat in this regard was issuing the so-called Spot Resolution in January 1848, which demanded to know at precisely what spot on American territory the war began. Lincoln's antiwar sentiments ran counter to popular feelings at home, however, and he was defeated in his reelection bid that year. Lincoln returned to Springfield determined to run for higher office. In the meantime, his political career as a Whig had come to an end with the dissolution of the party in the wake of the KANSAS-NEBRASKA ACT of 1854. In 1856 Lincoln joined the Illinois Republican Party and quickly became one of its most prominent spokesmen. Two years later, when accepting the Republican Party's nomination for senator, Lincoln declared: "A house divided against itself cannot stand. I believe that this Government cannot endure, permanently, half-slave and half-free."

In 1858 Abraham Lincoln ran against STEPHEN A. DOUGLAS for the Illinois Senate seat. The campaign drew national attention. The seven Lincoln-Douglas debates set out clearly the differences between the Republican and Democratic Parties on slavery. Although Douglas captured the Senate seat, Lincoln had established for himself a modest fame as an up-and-coming Republican. After the election, he expanded his political base when he embarked on a speaking trip in the North. On February 27, 1860, Lincoln gave the brilliant COOPER UNION SPEECH in NEW YORK CITY. This speech, repeated many times in the upcoming months, explained clearly and convincingly why the federal government had the constitutional right to stop extension of slavery in the territories. Lincoln reassured the South that the Republicans did not intend to threaten slavery where it was protected, just to stop it from spreading. In May 1860, the Republican Party nominated Lincoln for president of the United States. Lincoln won the three-way election by receiving 40 percent of the popular vote and more than 60 percent of the electoral votes. Immediately, seven Southern states seceded.

By the time Lincoln was sworn into office on March 4, 1861, as the 16th president of the United States, the CONFEDERATE STATES OF AMERICA were established. Lincoln's First Inaugural Address offered a stern warning to the

rebellious states but also spoke in reassuring terms of his intention to preserve slavery in the South. After the Confederate bombardment of FORT SUMTER, SOUTH CAROLINA, on April 12, Lincoln called for 75,000 militiamen to defend the Union. No other president had ever had to face the gravity of a CIVIL WAR, and Lincoln acted quickly, and without constitutional authority, to stem the rebellion. In addition to calling the state militias to national service, Lincoln ordered a blockade of the Southern ports and suspended the writ of HABEAS CORPUS in secessionist-leaning Maryland. This action was undertaken to keep the national capital from becoming completely surrounded and cut off by enemy territory. It drew the ire of Supreme Court chief justice Roger Taney, who declared Lincoln's suspension unconstitutional. Given the gravity of the situation, however, both the president and military authorities ignored the ruling. Called a dictator for seizing war powers, Lincoln's paramount goal for the first year and a half of the war was to save the Union, with a minimum amount of bloodshed. He hoped that the seceded states would rejoin the nation and come to their collective senses once they realized the true cost of the war. This rosy and unrealistic scenario did not occur, and with the conflict dragging on, Lincoln made the decision in the summer of 1862 to emancipate the slaves as a military measure. Personally opposed to slavery and racism, Lincoln moved slowly on EMANCIPATION to keep the loyal border states within the Union and dampen the inevitable outcry that would follow the EMANCIPATION PROCLAMATION. On January 1, 1863, Lincoln signed the historic document that freed the slaves in the Confederate states in areas not occupied by Federal forces, and with a stroke of his pen he changed the war into a revolution that would forever end slavery in the United States. Moreover, he realized that the act would further deflate the chances of European military intervention on the Confederacy's behalf, particularly British intervention. The United Kingdom had fully outlawed slavery in 1834 and thus was unlikely to shed blood to preserve it in North America.

Lincoln waged the war in a steadfast and vigorous manner, always with a passion for saving the Union. He exhibited surprising skill in foreign relations and kept European nations from endorsing the Confederate nation. He became a student of military TACTICS AND STRATEGY, learning from his mistakes and the mistakes of his leading generals. As the casualty lists grew longer and the political opposition from War Democrats, COPPERHEADS, and RADICAL REPUBLICANS mounted, Lincoln was subjected to constant criticism for his policies. Even members of his own cabinet worked against him. Lincoln steered the middle course, always trying to find the compromise position and explain to the citizens and soldiers why it was important to preserve the Union, which he considered to be the

world's one hope for democracy. "This is essentially a People's contest," Lincoln declared. "On the side of the Union, it is a struggle for maintaining in the world, that form, and substance of government, whose leading object is, to elevate the condition of men—to lift artificial weights from all shoulders—to clear the paths of laudable pursuit for all—to afford all, an unfettered start, and a fair chance, in the race of life." Lincoln demonstrated the skills of a master politician and a strong and able commander in chief. His administration was necessarily primarily concerned with military matters, but he also presided over the passage of the Republican economic package in Congress, including one of the key pieces of legislation in the 19th century, the HOMESTEAD ACT of 1862.

Lincoln also displayed a keen interest in the newest military technology and was usually on hand to witness the testing of new rapid-fire carbines, rockets, and artillery that took place in the Washington, D.C., area. His approval of the latest armored, steam-powered warships for the UNION NAVY, such as the USS *Monitor*, which ushered in the new age of naval warfare, demonstrated his farsightedness. Innovations such as Gatling guns, reconnaissance balloons, rudimentary barbed wire, and extensive military use of TELEGRAPHS and RAILROADS were hallmarks of his tenure. Lincoln's willingness to accept new technologies, for whatever advantage they conferred over the Confederacy, helped spur the American military establishment toward modernity and technical proficiency. Thus a man best known for his kindly, even gentle desire to save the Union was the same person who recognized the power of the industrial revolution to make improvements in weaponry. By 1865 the American military establishment was a far cry from what it had been at the commencement of the struggle, having become quite as adept on the battlefield as its European counterparts.

As commander in chief, Lincoln strove to master strategy. Early in the war he consented to the famous "Anaconda Plan" of Gen. Winfield Scott. Part of this strategy directed Union forces to conduct a concerted drive down the Mississippi River Valley to split the Confederacy in half and then successively carve out large swaths of territory in the Southern heartland. The other part of Scott's strategy, a naval blockade of Southern ports, also met with Lincoln's approval. Scott believed that a naval blockade would strangle the Southern cotton trade and, with it, the Southern ECONOMY. Lincoln further recognized that military success was predicated upon the destruction of enemy armies, not simply the acquisition of terrain. However, a succession of incompetent senior UNION ARMY generals, such as Irwin McDowell, GEORGE B. McCLELLAN, AMBROSE E. BURNSIDE, and JOSEPH HOOKER, frustrated this goal in the all-important eastern theater before ULYSSES S. GRANT emerged as commanding general of all Union forces.

Grant shared both Lincoln's indomitable will and his strategic vision to crush the Confederacy along several fronts, and not simply to capture RICHMOND, VIRGINIA. Lincoln also approved the so-called total war as practiced by Gen. WILLIAM T. SHERMAN in Georgia and Gen. PHILIP H. SHERIDAN in the Shenandoah Valley, whereby Union armies deliberately destroyed private property to bring the Southern population to its knees. Lincoln and Grant proved an unbeatable combination for ultimate victory by United States.

By 1864, despite the great Northern victories the previous summer and spring, Lieutenant General Grant's OVERLAND CAMPAIGN did not bring final victory but, rather, more losses and stalemate. Lincoln stood loyally by Grant and prepared to suffer the political consequences of military defeat. For a while, it looked like he was going to lose the critical election of 1864. Success on the battlefield and the overwhelmingly favorable soldiers' vote returned him to the White House with a large majority. With the war's end in sight, Lincoln prepared for a mild RECONSTRUCTION that would heal the wounds of the broken nation. He also pushed hard for the passage of the THIRTEENTH AMENDMENT as a signal to all Americans that the reuniting of the North and South would also ensure the permanent freedom and civil rights of the ex-slaves, although at this stage Lincoln was more concerned with resecurating the loyalty of white Southerners. "With malice toward none; with charity for all," said Lincoln in his Second Inaugural Address on March 4, 1865. Doubtless the knowledge Americans had of Lincoln's deeply felt desire to reconcile the sections peacefully accounted for the lack of violence after his assassination on April 14 and his death early the next morning. Lincoln is buried in Springfield, Illinois.

The nature of Lincoln's death only underscored his accomplishments in life. His humanity, sagacity, and magnanimous disposition throughout the most costly war in American history have made him one of the most popular and inspiring U.S. presidents. Considering the magnitude of danger faced by the Union in 1861, it is unlikely that the nation could have survived intact in hands any less capable than his.

### **Lincoln, Mary Todd** (1818–1882) *first lady*

Wife of President ABRAHAM LINCOLN, Mary Todd Lincoln was born into a wealthy and powerful family of slaveholders near Lexington, Kentucky, in December 1818. Although the Lincolns' marriage was a loving one, Mary never succeeded in winning much popular support while she was first lady, and in the wake of her husband's assassination she descended into mental instability.

Because Mary Todd's father, a prominent Whig politician, strongly supported female EDUCATION, she enjoyed a wide ranging intellectual training unusual for girls in the 19th century. In 1839 Mary joined her sister's household in Springfield, Illinois. There, she met the young attorney Lincoln. Although Lincoln was an ambitious professional man, he lacked education and his manners were unpolished. By 19th-century Victorian standards, his behavior was occasionally rude and countrified. Nevertheless, Lincoln and Todd were married in 1842. Mary supported Abraham's political aspirations and matched his ambition with her own from the very start of their married life. As a measure of their political partnership, Lincoln exclaimed, when he first heard of his election to the presidency in 1860, "Mary, Mary, *we* are elected."

When Lincoln assumed the presidency, the White House was in disrepair, its furnishings old and shabby and its structure in need of refurbishing. Mary Todd Lincoln took it upon herself, as first lady, to make drastic improvements to the public rooms of the White House. She believed that the home represented the power of the Union and therefore that it was required to be impressive and opulent. As a result, when replacing the peeling wallpaper, worn furniture, and cheap decorations, Mary purchased goods of exceptionally high quality and cost. Although Washingtonians agreed that the White House required some renovation, some of her purchases were considered too extravagant, and she suffered criticism from a number of sources. To show off the

new rooms, Mary Todd Lincoln hosted a number of dinner parties for official Washington, and her invitations were highly prized. Socially, she was a success.

However, her tenure in WASHINGTON, D.C., was not without both tragedy and controversy. A devoted mother and wife, Mary suffered the losses of many of her family during the war, including two of her half brothers, who were Confederate soldiers. In 1862 the Lincolns lost their 12-year-old son, Willie, to typhoid fever. In spite of her position as the wife of the commander in chief, Mary was criticized by many people for her strong ties to the South. She was even accused of being a rebel spy and of passing Union secrets to the Confederates.

The greatest loss to Mary Todd Lincoln, however, was the death of her husband by an assassin's bullet on April 15, 1865. In both material and personal terms, she never recovered from his death. Abraham Lincoln had left an estate that was \$70,000 in debt from his wife's lavish spending in the White House. Mary Todd Lincoln was unable to control her spending even after her husband's death, accumulating huge debts of her own.

Unstable and grief-stricken, Mary Todd Lincoln and her son Tad sought solace in travels to Europe. When Tad died in 1871, Mary's mental condition worsened, and her final surviving son, Robert, committed her to a private mental institution outside Chicago in 1875. She remained there for four months but found it unbearable and fled to France. In 1882 Mary returned to Springfield, Illinois, where she died and was buried beside her husband at Oak Ridge cemetery.

### **literature**

For most of its existence, the United States has been among the most literate societies in the world. The generation that fought the CIVIL WAR was no exception. As such, individuals who had a message to convey to the American populace in the antebellum era turned to books, articles, and pamphlets.

By the 1850s mass-produced publications aimed at a popular audience—including magazines, books, novels, newspapers, broadsides, and pamphlets—reflected the nation's growing appetite for reading and literature. While such publications were considered lowbrow, they enjoyed circulations numbering in the tens of thousands.

In the North, antislavery writers penned countless works criticizing the “peculiar institution.” Noteworthy among them were FREDERICK DOUGLASS’s *Narrative of the Life of Frederick Douglass* and the fictional *Uncle Tom’s Cabin* by HARRIET BEECHER STOWE, the best-selling novel of its time. This seminal work was initially serialized in the *National Era* between 1851 and 1852 before finally emerging in book format. Its impact was electrifying in Northern circles, and it also appeared as a hugely successful stage adaptation. Ironically, Beecher Stowe had never visited the South herself, and she was criticized for her inaccuracies relative to Southern society. In 1853 she published *A Key to Uncle Tom’s Cabin* to support many of her assertions.

Southern writers responded with books of their own defending SLAVERY, most prominently GEORGE FITZHUGH’s books, *Sociology for the South* and *Cannibals All!* These works, and countless others, played an important role in plunging the nation into civil war. ABRAHAM LINCOLN acknowledged as much when he met Harriet Beecher Stowe during the war, greeting her by saying, “So you’re the little woman who wrote the book that made this great war.”

During the war itself the nation’s attention was occupied with the prosecution of the conflict. Nonetheless, new literary works were still produced and read, especially in the North, where the publishing industry thrived. There the dime novels that were published by Erasmus and Irwin Beadle of New York sold millions of copies to soldiers in the field. (These paperbacks were called “dime novels” because they generally sold for 10 cents.) While mediocre from a literary standpoint, they became a common and welcome fixture to help relieve the boredom of everyday camp life. Their success spawned a series of novelettes published by Sinclair Tousey in 1863, which focused on war stories for soldiers. The following year T. R. Dawley launched Dawley’s Camp and Fireside Library series. The ongoing struggle had thus found a convenient and willing market among the very contestants forced to wage it. Once the war was over, the American public was even more enthusiastic about reading. The Civil War had a tremendous impact on postwar American culture and shaped the literature created in the 35 years between Appomattox and the turn of the century.

Autobiographical accounts of the war were the most popular and ubiquitous form of literature in the years immediately after the war. Virtually every important general and political leader who survived long enough to do so penned a book or article about their experiences during the war. Between 1884 and 1887, *Century* magazine commissioned a series of personal accounts by Civil War generals entitled “Battles and Leaders of the Civil War.” The articles were widely read throughout the North and South, and

in particular the popularity of ULYSSES S. GRANT’s contribution to the series convinced him to write his lengthy *Personal Memoirs* (1885–86) just before his death. Grant’s *Memoirs* was a best-seller, as popular in the North as JEFFERSON DAVIS’s two-volume *Rise and Fall of the Confederate Government* (1881) was in the South.

The articles and books written by the leaders of the Civil War, especially the Southern leaders, reflected an important debate over the Southern war effort. The ex-Confederates justified their actions to the victorious North, and in so doing, they pleaded their case for acceptance back into mainstream American life. These writers, particularly General JUBAL A. EARLY, downplayed the role of slavery in the conflict and emphasized the virtue of Southern soldiers in general and of ROBERT E. LEE in particular. On a more vindictive note, senior generals such as PIERRE GUSTAVE TOUTANT BEAUREGARD, JOSEPH E. JOHNSTON, and JAMES LONGSTREET picked up their pen not so much to glorify the Confederacy as to attack those deemed responsible for its downfall. They blamed one another and Davis, while minimizing their own contributions to defeat. Eventually, this vision of the Civil War came to be called the LOST CAUSE, and it has exercised a great deal of influence over how Americans viewed the war up to the present day.

The books and articles written by the leaders of the war were both popular and influential. However, they were by no means the only autobiographical accounts published in the postwar years. Many COMMON SOLDIERS published histories of their regiments or personal recollections of the war. Some of these received a wide readership and are still considered classics, among them Sam Watkins’s *Co. Aytch* (1882), John Billings’s *Hardtack and Coffee* (1888), and William Fletcher’s *Rebel Private: Front and Rear* (1907). Women contributed to the body of Civil War nonfiction, some writing memoirs, others publishing the diaries they wrote during the war or during a particular battle. Prominent among them are Emma Edmonds’s *Nurse and Spy in the Union Army* (1865) and *Belle Boyd in Camp and Prison* (1865) by BELLE BOYD. The Southern standpoint was well represented by the publication of the diary of Charleston, South Carolina, resident MARY B. CHESNUT in 1905. In it she conveyed acutely detailed, lively, and opinionated observations about life in that city’s inner circles as the war progressed. It was reissued in 1949 as *A Diary from Dixie* and again in 1981 as *Mary Chesnut’s Civil War*, edited by historian C. Vann Woodward. He posited that the “diary” was actually written between 1881 and 1884 from notes assembled during the Civil War, but this does not detract from its powerful depictions of a society at war and its increasingly debilitating impact on the city’s elite. In addition, there were also a number of memoirs of slavery written by African Americans in the postwar era. Rather than emphasize the evils of slavery, they stressed the necessity

of self-reliance and independence. The best known of these accounts is Booker T. Washington's *Up from Slavery* (1901).

Novels about the Civil War were also popular. The most notable Civil War fiction of the period was written by JOHN WILLIAM DE FOREST, whose work presents warfare in a very realistic fashion that would have been unthinkable in the antebellum era. De Forest's most popular book was *Miss Ravenel's Conversion from Secession to Loyalty*. Published in 1867, the novel combines a romantic story of sectional reconciliation with vivid descriptions of the brutality of combat. Author Nathaniel Hawthorne saw a direct correlation between the war and the realist movement, arguing that the Civil War "introduced into the national consciousness a certain sense of proportion and relation, of the world being a more complicated place than it had hitherto seemed." Perhaps the best example of the "new realism" that Hawthorne described is *The Red Badge of Courage* (1895), by Stephen Crane. The novel is gripping in its terse and dramatic descriptions of human beings under fire. Crane's literary command of combat conditions is even more surprising considering he was neither a veteran nor a man who had experienced armed conflict. *The Red Badge of Courage* is regarded as an American literary masterpiece and one of the best Civil War novels ever written. The work of De Forest had a profound influence on other writers who came after him, including Ambrose Bierce, Edward Bellamy, and William Dean Howells.

Other literary movements of the postbellum era had their roots in the Civil War as well. The most notable was regionalism. Paradoxically, a war fought to reunite the nation gave Americans a heightened, highly romanticized sense of their regional differences. Western fiction became an established genre. Western authors, most prominently Bret Harte, excited readers' imaginations with images of a "Wild West" filled with endless adventure and excitement. At the same time, the South experienced a literary renaissance led by Mark Twain, arguably the most famous author in American history. Twain's career began with "The Celebrated Jumping Frog of Calaveras County" (1865) and continued through such classics as *The Adventures of Tom Sawyer* (1876), *The Adventures of Huckleberry Finn* (1884), and *A Connecticut Yankee in King Arthur's Court* (1889). Twain developed a distinctive style that reflected a number of influences, among them slave narratives, folk tales, and political satire.

By 1900 the overwhelming influence of the Civil War on American popular culture subsided as the generation that had lived through the war faded away. Nonetheless, the war had assumed a permanent place in American memory, and it continues to be a popular subject among American authors. Mississippi writer William Faulkner illustrated the long reach of RECONSTRUCTION and its consequences

in his character-driven novels *The Sound and the Fury* (1929) and *Absalom! Absalom!* (1936). Margaret Mitchell's *Gone with the Wind* (1936), Shelby Foote's *Shiloh* (1952), Michael Shaara's *The Killer Angels* (1974), and Charles Frazier's *Cold Mountain* (1997) are among the modern works on the Civil War to tally sales in the millions of copies. And, in terms of sheer volume of yearly output, military and political histories of the Civil War are exceeded only by those concerning World War II. Clearly, the war continues to resonate with Americans.

### Little Bighorn, Battle of (June 25–26, 1876)

One of the last victories by the Plains Indians over the United States, the Battle of Little Bighorn took place in southeastern Montana between June 25 and June 26, 1876. It is largely remembered as "Custer's Last Stand." Teton Sioux (Lakota), Cheyenne, and Arapaho Indians routed the Seventh Cavalry of the United States, which was under the command of Lt. Col. GEORGE A. CUSTER. The United States responded to its overwhelming defeat with a relentless military pursuit of the NATIVE AMERICANS.

The origins of the battle, which took place on the Greasy Grass River, or the Little Bighorn, lay in the refusal of many Cheyenne, Arapaho, Blackfeet, and especially Sioux bands (Hunkpapa, Oglala, Miniconjou, Sans Arcs) to be confined to reservations. The 1868 Treaty of Fort Laramie provided the Sioux a permanent reservation, guaranteed them the right to hunt buffalo in the Black Hills west of the Missouri River, and prohibited white settlements on the land. Between 1871 and 1874, however, the United States routinely violated the terms of the treaty. Surveyors charted routes through the hunting lands, and gold seekers and prospectors threatened to invade the territory. Rather than enforcing the provisions of the Treaty of Fort Laramie, the United States tried unsuccessfully to purchase the Black Hills from the Sioux.

In late 1875, the free-roaming Sioux were drawn into a war. The conflict served as a pretense to remove them from the unceded territory and open the lands to American settlement and gold prospectors. The United States

ceased enforcing the ban limiting the presence of speculators in the Black Hills, and rumors of atrocities committed by Sioux and other native buffalo hunters spread rapidly. Finally, in December 1875, the U.S. War Department ignored the Treaty of Fort Laramie and ordered all of the Sioux Indians to surrender themselves at the Dakota agencies by January 31, 1876. All of those who refused to settle on the Great Sioux Reservation in present-day South Dakota would be deemed hostile and subject to a military response.

The Native Americans, in a coalition formed by Sitting Bull, refused to accept this ultimatum, and the United States declared them hostile. In May 1876, Gen. Alfred H. Terry decided to settle the matter by ordering Custer to disperse or capture the defiant natives. Custer led 12 companies of the Seventh Cavalry, 655 soldiers in all, along with an Indian camp of mostly Sioux (with some Northern Cheyenne and Arapaho) Indians along the south bank of the river.

Upon learning that his forces had been spotted, Custer decided to attack before the warriors had time to vacate the valley. He divided his units and ordered an immediate attack. Custer sent three companies under the command of Maj. Marcus Reno across the upper ford of the river. Capt. Frederick Benteen, who was ordered to make sure that no Indians escaped, took three companies to the left of Reno. Finally, Custer himself led five companies to cross the lower ford and ordered one company to bring up the pack train.

Intended to hit the Sioux warriors from two directions simultaneously, Custer's plan deteriorated almost immediately. Major Reno crossed the river and faced an enemy significantly stronger than he expected. Recognizing that his forces were outnumbered, Reno ordered his men to retreat from the valley. The retreat turned chaotic and the native warriors killed at least 40 of Reno's soldiers. Reno's men then took a defensive position on the east side of the river on the high bluffs.

The estimated 2,000 to 3,000 Sioux warriors, including Crazy Horse, Hump, Two Moon, Gall, and Rain-in-the-Face, turned their full attention to Custer's forces that were on the northern end of the village. Custer and some of his men retreated to the top of Custer Hill, and within an hour all of Custer's 212 men were dead. Their bodies were later found in what may have been battle lines. Historians disagree about these final moments, but it remains clear that this was one of the greatest disasters in American military history.

Benteen's forces came to battle too late and ended up joining Reno four miles away from the battle. The following day, General Terry arrived from the north with reinforcements, and most of the Indian warriors withdrew to the south. It was too late. Army casualties included 263 dead and 59 wounded.

The United States responded to the defeat of Custer with an intensified effort to obtain vengeance, and by 1877 most Sioux bands either surrendered or fled to Canada. The U.S. government forced the natives to cede their claims to the Black Hills, and most Cheyenne and Sioux were confined to the reservations.

**Longstreet, James** (1821–1904) *Confederate general* Confederate general James Longstreet was born January 8, 1821, in Edgefield District, South Carolina. He grew up in Georgia, on his father's farm near Gainesville and at Westover, his uncle's Augusta cotton plantation. After his father died in 1833 and his mother moved to Alabama, the boy remained with his uncle, Augustus Baldwin Longstreet, a lawyer, STATES' RIGHTS advocate, and prominent Georgia intellectual. With an appointment from Alabama Longstreet entered the UNITED STATES MILITARY ACADEMY AT WEST POINT in 1838. Among his classmates were ULYSSES S. GRANT, Lafayette McLaws, and GEORGE E. PICKETT. Longstreet first experienced battle in the Mexican-American War and was seriously wounded at Chapultepec. After the war, he married Maria Louisa "Louise" Garland, daughter of Bvt. Brig. Gen. John Garland.

With the coming of the CIVIL WAR Longstreet opposed SECESSION. In 1861, however, he resigned his commission and traveled to RICHMOND from his western post to offer his services to the South. Despite having no connection to the state, he received command of a brigade of Virginia volunteers. While Longstreet's lack of identification with a single state would later be a political liability, in July 1861, he led his brigade well at Blackburn's Ford, winning the confidence of Gen. JOSEPH E. JOHNSTON and promotion to major general.

Longstreet suffered personal tragedy in January 1862, when three of his four living children died in Richmond of scarlet fever (two others had previously died in infancy). He performed inconsistently during the spring campaigns of 1862, skillfully commanding a rearguard action at Williamsburg on May 5 but badly bungling an attack at Seven Pines on May 31. After Seven Pines, Gen. ROBERT E. LEE replaced the seriously wounded Johnston as commander of what was now the Army of Northern Virginia. During the Seven Days' Battle, Longstreet impressed Lee with

his hard fighting, and in July he became Lee's second in command. At the **SECOND BATTLE OF BULL RUN** in late August, Longstreet counseled Lee to adopt defensive battle **TACTICS**, demonstrating the wisdom of this advice with a devastating flank assault on the attacking Federals. At the **BATTLE OF ANTIETAM** in September, Longstreet fought tenaciously, earning promotion to lieutenant general and formal command of the First Corps.

The **BATTLE OF FREDERICKSBURG** in December 1862 confirmed the advantage of holding a good defensive position. Longstreet's entrenched corps took the brunt of the Union army's futile assault on Marye's Heights while suffering only minimal casualties. Briefly commanding two detached divisions in early 1863, Longstreet rejoined Lee's army after its May victory at the **BATTLE OF CHANCELLORSVILLE**. Lee reorganized his troops into three corps following Gen. **THOMAS (STONEWALL) JACKSON**'s death. Longstreet commanded the first, Gen. **RICHARD S. EWELL** the second, and Gen. **AMBROSE P. HILL** the new third corps. In May, Longstreet (who thought the key to Confederate victory lay in the western theater) agreed with Lee's plan to invade Pennsylvania, but he urged Lee to adopt defensive tactics should a battle occur. In late June, when Lee's army came in contact with Union forces (commanded by Gen. **GEORGE GORDON MEADE**) near Gettysburg, Lee ignored his advice.

On July 1 Ewell's II Corps forced the I Corps and XI Corps of the Army of the Potomac to retreat south through the town. While the disorganized Union troops waited on Cemetery Hill for reinforcements, Ewell and his subordinate, Gen. **JUBAL A. EARLY**, hesitated to press their numerical advantage by attacking the hill. When Longstreet arrived on the field, he noted the strong position held by the newly reinforced Union troops and advised Lee to occupy a defensive position and force Meade to assume the offensive. To Longstreet's dismay, Lee indicated his intention to attack the Union army at Gettysburg the following day. Lee ordered Longstreet to use the two divisions that he had on the field to attack the Union's left on the morning of July 2. Confederate reconnaissance proved unreliable, however, and to avoid detection by the enemy Longstreet led his troops on a time-consuming countermarch. His attack, which was to have occurred simultaneously with an assault on the Union's right flank, did not begin until late afternoon. By that time, the **UNION ARMY** had extended its line south of Cemetery Ridge, and Longstreet found himself directing a frontal rather than a flank attack. His two divisions took the low ground in front of the Union position, inflicting serious damage on the Union Third Corps. Longstreet blamed his failure to occupy the high ground on lack of reinforcements and poor coordination with Lee's other two corps.

Over Longstreet's objections, Lee decided to launch a frontal assault against the Union position on July 3. Long-

street reluctantly directed the attack, which consisted of a ferocious artillery bombardment followed by a massed infantry assault, and claimed later that he would have prevented it if he had been able to do so. "Pickett's Charge" was a disaster for the **CONFEDERATE ARMY**, which lost more men and officers than it could replace.

After Gettysburg, Longstreet maneuvered himself into a western command in Gen. **BRAXTON BRAGG**'s Army of the Tennessee and directed a rout of the Union forces at the **BATTLE OF CHICKAMAUGA** on September 20, ironically employing a frontal assault. The Federals retreated to Chattanooga, where Longstreet's misjudgment of the tactical situation at the **BATTLE OF LOOKOUT MOUNTAIN** allowed the Federals to reopen their supply lines. His relationship with Bragg deteriorating, Longstreet detached his corps and laid siege to Knoxville, remaining there until April 1864.

In East Tennessee he became embroiled in bitter internecine disputes over his choice to succeed Lt. Gen. **JOHN BELL HOOD**, who had been wounded at Chickamauga, and his decision to relieve Maj. Gen. **McLaws** for poor conduct. Searching for a way to alter the Confederacy's grim prospects, he unsuccessfully proposed an invasion of Kentucky as a means of demoralizing the North and boosting opposition to President **ABRAHAM LINCOLN**'s reelection. Longstreet returned to Virginia at Lee's request and was accidentally shot by his own troops in the **BATTLE OF THE WILDERNESS** on May 6. He resumed his command in October after recuperating in Georgia from serious throat and shoulder wounds. Longstreet remained in Virginia during the rest of the Civil War and was with Lee at **APPOMATTOX COURT HOUSE**.

Controversy marked Longstreet's postwar years. In 1865 he moved to New Orleans with his family (which included four children born after 1863) and successfully entered the insurance and **RAILROAD** businesses. He soon infuriated Confederate **VETERANS** by publishing his recommendation that they cooperate with federal **RECONSTRUCTION** policies. In a move that branded him forever as a **SCALAWAG** traitor to the South, Longstreet reacted to his critics' outrage by joining the **REPUBLICAN PARTY**.

Lee's death in 1870 made the unpopular Longstreet vulnerable to false accusations. In 1872 ex-Confederate general Jubal Early launched a self-serving campaign to blame Longstreet for Lee's defeat at Gettysburg. In Early's distorted history, Lee had intended Longstreet to attack at dawn on July 2, and by failing to do so Longstreet had cost the Confederacy the battle and the Civil War. Longstreet's belligerent attempts to clear his name backfired, and his criticism of Lee's offensive battlefield tactics prompted Lee's former staff officers—who had refuted the dawn attack accusation—to charge that Longstreet's failings at

Gettysburg included deliberate slowness on July 2 and insubordination on July 3.

The “Gettysburg Series,” published in Early’s *Southern Historical Society Papers* in the late 1870s, sealed Longstreet’s lasting reputation as scapegoat and traitor, as did his acceptance of Republican patronage. Longstreet’s five articles for the *Century* magazine Civil War series criticized Jackson and Lee and inflated his own military accomplishments. A pariah in the South, he became a sought-after speaker at Northern VETERANS reunions.

Longstreet’s memoirs, published in 1894, represented his final, futile attempt to settle scores and right the wrongs he had endured. In 1897, retired and aged 76, the widowed Longstreet married a second wife, the vivacious Helen Dortch, who was less than half his age. He died on January 2, 1904, in Gainesville, Georgia. His devoted young widow spent her remaining 58 years attempting to restore his reputation.

### Lookout Mountain, Battle of (November 24, 1863)

The Battle of Lookout Mountain, also known as the “Battle above the Clouds,” was one of two (the other was the Battle of Missionary Ridge) resounding Union victories that occurred within a day of each other and that helped secure Tennessee for the Union. Gen. ULYSSES S. GRANT had come to Chattanooga with the intent of breaking the Confederate siege of that city. His ultimate success in the BATTLE OF CHATTANOOGA prompted President ABRAHAM LINCOLN to invite him to WASHINGTON, D.C., to take command of all Union armies and marked an important turning point in the war for the North.

After the defeat of Northern forces at the BATTLE OF CHICKAMAUGA in September 1863, Union general WILLIAM S. ROSECRANS had withdrawn his demoralized soldiers to Chattanooga. Meanwhile, Rosecrans’s opponent at Chickamauga, BRAXTON BRAGG, moved his men onto the heights that rose above the city of Chattanooga, from Lookout Mountain on the southwest to Missionary Ridge to the east. In Rosecrans’s view Chattanooga was beginning to look “more like a prison than a prize.” Bragg had effectively encircled the Yankees and cut off their supply lines.

Battle of Lookout Mountain, November 24, 1863 (Library of Congress)

Shortly thereafter, Lincoln replaced the incompetent Rosecrans with Maj. Gen. GEORGE HENRY THOMAS, whose bravery at Chickamauga had earned him the title “Rock of Chickamauga.” Thomas swore to Grant that he and his men would hold Chattanooga “until we starve,” and they very nearly did. Grant, who had been put in control of the new Division of the Mississippi in October 1863, called for reinforcements and moved to break the Confederate siege of Chattanooga. By mid-November 1863 Gen. WILLIAM T. SHERMAN had brought 17,000 men from the Army of the Tennessee and Gen. JOSEPH HOOKER had brought 20,000 men from the Army of the Potomac to supplement the 35,000 men in Thomas’s Army of the Cumberland.

It was clear to Grant and his subordinates that the siege on Chattanooga would have to be broken, and quickly, or the Federals would be forced to surrender. It was also clear that the Confederate position on rugged Lookout Mountain would have to be taken for Union troops to have any chance at breaking the siege. This appeared to be an impossible task, however. The formidable heights of Lookout Mountain, rising some 1,100 feet above the valley, were filled with what seemed like thousands of well-entrenched Confederates, with supporting units nearby.

On the evening of November 23 Union troops began massing underneath Lookout Mountain. Confederate major general Carter L. Stevenson wrote in code to his commander, Bragg, that he doubted his small division (numbering 2,694 on the mountain, plus cavalry and cannon) had the strength to hold off an assault. Unknown to the Confederates, the Union had broken their special code. The Union’s leaders realized that the number of Confederates holding Lookout Mountain was not nearly as great as they had imagined.

With this information Grant launched an attack upon the Confederate position on Lookout Mountain on November 24. At 8:00 A.M. Gen. Hooker directed the forces, consisting of one division from each of the Union armies taking part in the Chattanooga campaign, up the mountain. Repeated Union assaults were successful in driving the Confederates from the lofty summit, with the last Southern units withdrawing by 8:00 P.M.

An unusual feature of the battle was that a swirling mist of fog and clouds obscured much of the fighting during the day from the thousands of soldiers watching intently from the valley below. Only occasional flashes of red light penetrating the thick cover gave indication of an ongoing battle. When the clouds finally broke, Union soldiers cheered when they saw the retreating Confederates.

Early the next morning, Union soldiers swiftly climbed the now-vacant summit and planted the Stars and Stripes on the top. Union general Montgomery C. Meigs, who watched the action from Grant's headquarters, declared Hooker's attack the "Battle above the Clouds." Few who were there ever forgot the eerie experience, including Grant, who later wrote, "The Battle of Lookout Mountain is one of the romances of the war. There was no such battle and no action even worthy to be called a battle on Lookout Mountain. It is all poetry."

Casualty (killed, wounded, and captured) figures for both sides were never given precisely, only the total numbers for the Chattanooga campaign. Out of 64,165 Confederates, losses were 6,667; Union casualties were 5,824 out of 56,359 engaged.

### **lost cause, the**

The phrase *lost cause* refers to an ideology that developed among white Southerners in the last decades of the 19th century and continued through World War I. Although the South had decisively lost the CIVIL WAR, in the years after defeat, Southerners began to look back on the war years nostalgically and to celebrate them as the years of the South's greatest glory. They did so in an attempt to adjust psychologically to the realities of defeat and seek deeper meaning in a plausible justification for their actions. In view of all the rapid and radical changes experienced by the New South, it became a moral imperative for many former

Confederates to preserve, perpetuate, and exalt their antebellum past. This romanticization of the Confederacy was expressed in an outpouring of sentimental LITERATURE, memoirs, and historical accounts, as well as in numerous MONUMENTS and public ceremonies.

The first-known printed articulation of the concept was journalist Edward A. Pollard's book *The Lost Cause* (1866). In it he explained that the South was justified in dissolving what he considered a voluntary association within the federal Union. The notion gained impetus and currency during the decade-long RECONSTRUCTION period, when former Confederates began associating in various blocs and mutually supporting interest groups. Among the earliest proponents of Southern nationalism were the LADIES MEMORIAL ASSOCIATIONS, whose devotion to constructing shrines to Confederate war dead helped stimulate renewed interest in their sacrifice and the reasoning behind it. In the 1870s, a group of Virginia elites and military leaders, centered on Gen. JUBAL A. EARLY, founded such organizations as the Association of the Army of Northern Virginia and the Southern Historical Society. Through these they developed a justification for the South's defeat that glorified Southern military leaders, particularly ROBERT E. LEE, and argued that the Civil War had been lost not because of a lack of will or insufficient military acumen but simply because Southern forces had been overwhelmingly outnumbered. Defeat thus involved no shame or dishonor; in fact, the Southern cause remained a noble one, irremediably doomed from the start but for that very reason all the more heroic.

During the 1880s and 1890s the beliefs of the lost cause spread far beyond the circle of elites who had originally propounded it. The United Confederate Veterans (1889), the UNITED DAUGHTERS OF THE CONFEDERACY (1894), and the Sons of the Confederate Veterans (1896) were led by elites but included large numbers of white members from less exclusive backgrounds. Its monthly publication, the *Confederate Veteran*, was directed toward a popular audience and offered accounts of the experiences of COMMON SOLDIERS. Moreover, even white Southerners who did not belong to a lost-cause organization or subscribe to its publications participated in the general enthusiasm for the vanished Confederacy by attending the monument dedications, public ceremonies, and museums sponsored by the Daughters of the Confederacy. Yet, however many Southerners participated in lost-cause activities, the overall purpose of such activities was decidedly exclusionary. Although during the conflict itself Southerners had freely acknowledged that the Civil War was a struggle over SLAVERY, under the lost-cause scenario, the South's defense of slavery was conveniently transformed into a defense of STATES' RIGHTS.

Though the lost cause was celebrated most vehemently in the South, its effects extended well beyond the MASON-DIXON LINE. The VETERANS' reunions, which began in the

1880s, brought white veterans from both North and South together in celebration of a newly discovered camaraderie that strove to recognize both sides as somehow “right” and erased references to slavery even as black soldiers were excluded from the reunions themselves. Nor was the celebration of the Southern cause confined to commemorations of the battlefield. The novels of Thomas Nelson Page, for example, sold widely in both North and South and disseminated an escapist image of an idyllic prewar South in which masters were unfailingly benevolent and slaves unceasingly loyal.

The popularity of the lost cause portended ill for newly freed African Americans, because it embodied a virulent strain of racism that sought to exclude them from virtually all roles in society. For Southerners who embraced the notions of white supremacy and racial segregation, the lost cause became a convenient pretext to maintain racial “order” in a world without slavery. For many this entailed membership in the new KU KLUX KLAN, an organization that used violence, lynching, and other forms of intimidation to prevent blacks from participating in politics and most economic activities. After Reconstruction ended in 1877 white resentment against African Americans became codified—and, hence, politically acceptable—in the notorious “Jim Crow” laws, which endured in one form or another until the 1960s.

It is perhaps tempting to dismiss the lost cause as simply a trivial and misplaced nostalgia. However, it is also worth noting that it has had enduring political consequences. The legacy has persisted through to our own time, for example, in the continuing popularity of the novel *Gone with the Wind*, its film version (*GONE WITH THE WIND*), and similar works. Nowhere is that legacy more evident than in the ongoing struggle over the display of the Confederate flag, for it was during the years of the lost cause that what might have become merely a historical artifact was reinstated as an object of passionate devotion. And it was also in those years that the flag’s racist meanings were suppressed. Those who demand that the Confederate flag be flown above state capitol buildings as a symbol of states’ rights are heir to a century-old ideology that systematically denied what that flag meant during the Civil War itself and indeed the very reasons the war was fought at all.

### Louisiana Tigers

Renowned both for their courage and skill in battle and for their uncontrolled looting, vandalism, and violence, the Louisiana Tigers were one of the most effective and most feared Confederate battle units.

The term *Tigers* was first applied to the Tiger Rifles, a company in the First Special Battalion, Louisiana Infantry, which adopted slogans such as “Lincoln’s Life or a Tiger’s Death.” The term eventually came to refer to all of the 12,000 Louisiana Infantrymen who joined the Army of Northern Virginia in 1861. The Tigers generally operated on the very front of the offensive lines, often executing particularly dangerous and important offensive missions. The Tigers also distinguished themselves at the SECOND BATTLE OF BULL RUN/MANASSAS and the BATTLES OF SPOTSYLVANIA.

The Tigers’ reputation for courage was marred, however, by the repeated acts of violence and theft that characterized their ranks and by the high DESERTION rate within the units. The desertion rate was partly the result of the high proportion of foreign-born recruits, many of whom had little commitment to the war and a few of whom had been forced into service. The soldiers who remained, however, became infamous, especially in Virginia, for their drunkenness and rioting. On a train ride from New Orleans to RICHMOND, VIRGINIA, in 1861, for example, various Louisiana regiments, drunk on barrels of alcohol that they had smuggled onto their train, shot at livestock, broke into saloons, and destroyed property.

By 1865, the mixed reputation of the Tigers was shared by relatively few men, as the Tigers sustained some of the greatest casualty rates of the war. The Louisianans’ units had been organized and reorganized so many times that most of the Tigers felt they had lost their identity. By the time the Army of Northern Virginia surrendered at APPOMATTOX COURT HOUSE, only 373 of the original Louisiana Tigers were present.

### loyalty oaths

Although swearing loyalty to the Constitution and to the United States had always been a part of government ser-

vice, the CIVIL WAR and RECONSTRUCTION era witnessed an increased devotion to that practice as a way to determine the fidelity of both citizens and officials. The need to draw a firm line between traitor and patriot defined these actions, and during this period loyalty oaths served as a federal job requirement, a weapon of war, and an effective tool in partisan politics.

In August 1861, Congress passed legislation that prescribed a new oath for federal employees. By the middle of 1862, those working in federal positions had taken two different pledges swearing loyalty to the Union and its efforts. As the desire to identify treason grew, pensioners and postal contractors also found themselves required to avow their fidelity. In order to submit a bid on any federal contract in the summer of 1862, businessmen had to affirm their support for the United States. Wisconsin congressman John Potter headed a committee that searched for traitors in government offices, and much of the committee's work focused on those who failed to take the prescribed oath. This drive to confirm the patriotism of any person connected to the government reached its peak in June 1862. At that time, Congress debated the necessity of a loyalty oath that would include senators and would require them to swear their allegiance for the past, present, and future. Subsequently known as the "ironclad test oath," or IRONCLAD OATH, this measure failed to pass the Senate, but later became a fixture of Reconstruction.

The Northern military also played a significant role in the demarcation of loyalty among citizens and prisoners. Southern residents of Union-occupied territories dealt with restrictive conditions but received a measure of freedom as soon as they pledged their faithfulness to the cause of the Union. However, the federal administration did not regulate this system, and as a result the impact and enforcement of these oaths varied. The Northern military governments in Missouri, Louisiana, and Tennessee in particular enraged Confederate sympathizers, for in those areas men like BENJAMIN FRANKLIN BUTLER enforced the loyalty oaths with tremendous zeal. Southern citizens received relative freedom with their pledge, but ABRAHAM LINCOLN also felt strongly about the condition of prisoners of war, and he favored oaths that testified to the future fidelity of the individual as opposed to a more restrictive oath that encompassed the past. The president believed that the willingness to state allegiance definitively determined a person's loyalty. As a testament to this idea, Lincoln issued an amnesty

proclamation on December 8, 1863, that became the standard prisoner's oath for the remainder of the war. This oath required the future support of the Union effort and EMANCIPATION but also protected the individual's property, with the exception of slaves, from confiscation. Such relative leniency served as a powerful temptation for Southern soldiers and prisoners in the final years of the war.

The loyalty oath soon became an integral and controversial piece of Reconstruction policy. For both Lincoln and ANDREW JOHNSON, the oath, while important, did not need to be any more than a profession of future fidelity. For the RADICAL REPUBLICANS seeking a strict Reconstruction, the oath needed to be true to the ironclad test oath created in 1862. This struggle, especially between Johnson and the Radicals, most seriously affected the resumption of numerous federal activities in the South. In requiring federal employees to attest to their past, present, and future loyalty to the federal government, the ironclad test oath made it extremely difficult to find Southern citizens willing and able to work for the government. Treasury Secretary Hugh McCulloch, in order to fill numerous revenue positions in the South, found it necessary to hire individuals even if they could not take the oath. This action, though taken with the approval of the president and the cabinet, enraged the Radicals in Congress and set the stage for the battles over the test oath in the years that followed.

As the Republicans in Congress worked to impose their idea of Reconstruction on the president and the South, they used the ironclad oath as a tool to keep Confederate sympathizers out of Congress as well as administrative posts. When Southerners demonstrated their intransigence by electing men to Congress who could not and would not take the oath, the Radicals rallied against them and made sure that the newly elected officers were not officially seated when they arrived in the Capitol. Although the Radicals scaled back their opposition in 1870 as their political strength waned, and the ironclad oath for Southerners was repealed in 1871, members of Congress repeatedly defeated measures to remove the test-oath law. The loyalty tests remained in force until May 13, 1884.

**Mallory, Stephen R.** (1811–1873) *lawyer, judge, politician*

Lawyer, judge, U.S. senator, and secretary of the navy for the CONFEDERATE STATES OF AMERICA, Stephen Russell Mallory was born in Trinidad in 1811 and raised in Key West, Florida. His father was an engineer from Connecticut, and his mother was Irish. After briefly attending schools in Alabama and Pennsylvania, Mallory returned to Florida to study law and was admitted to the bar in 1834. His early career demonstrated an impressive record of public service. Appointed the inspector of customs, Mallory also served as town marshal and was the collector of the port at Key West in 1845. He enlisted in the Florida militia during the Seminole War of 1836–38.

Mallory's experience and excellent reputation recommended him to Florida's DEMOCRATIC PARTY, where he made a name for himself as a promising young politician. In 1850 Florida's legislature elected him to the U.S. Senate. As chairman of the Senate's Naval Affairs Committee from 1853, Mallory pushed for the construction of new warships and for the modernization of the ordnance department. He was especially interested in developing IRONCLAD vessels for the navy's use.

Mallory was a strong supporter of Southern rights during his decade-long term in WASHINGTON, D.C. He advocated SLAVERY's expansion and argued for a strict enforcement of the Fugitive Slave Act. When the SECESSION crisis gripped the country after ABRAHAM LINCOLN's election, Mallory joined with several of his Senate colleagues in trying to persuade the North to let the South go in a peaceful manner. Persuasion failed, and Florida left the Union in January 1861. Mallory resigned his Senate seat shortly thereafter and returned to his home in Pensacola.

On February 21, 1861, Mallory received word that his close friend and former fellow U.S. senator, President JEFFERSON DAVIS, had appointed him as the Confederate States' secretary of the navy. Only Mallory and John H. Reagan, postmaster general, kept their cabinet positions

throughout the war, a testament to their political skills and resourcefulness. A daunting task awaited Mallory as he assumed his duties in RICHMOND, VIRGINIA. The CONFEDERATE NAVY was practically nonexistent in 1861, possessing only 12 boats and 300 officers who had resigned from the U.S. Navy. Mallory's job was to raise a navy, build and sustain a fleet of warships, and undermine the Union blockade of the Southern coast. Through a combination of hard work, dedication, and intelligence, Mallory oversaw the successful recruitment and training of the sailors and the purchase and construction of ships abroad and in the South. Perhaps most importantly, he articulated and implemented Confederate naval strategy.

In order to break the Union blockade, Mallory got the Confederate Congress to approve the sum of \$2 million to use to purchase or build ships in Europe. At home, he urged the construction of foundries and shipyards to build ironclads. Additionally, he used commerce raiders to confuse and divert Yankee commercial ships and hoped to draw Union ships from the blockade. Mallory was in the forefront of the drive to develop and use torpedoes in naval warfare. By the end of the war, Confederate torpedoes had sunk or severely damaged 43 Union ships. Elaborate minefields prevented the Union navy from entering Charleston harbor, and delayed the capture of Mobile Bay until near the end of the conflict.

Despite these herculean efforts, the South simply did not have the industrial capacity or financial resources to produce the ships and weaponry needed to sustain a modern navy. Mallory came under heavy and constant attack in the Confederate Congress and in the press for the losses of New Orleans, Norfolk, and Memphis in 1862. Investigations cleared him of wrongdoing, but criticism continued as losses mounted. Despite ultimate failure, historians have given Mallory's stewardship of the Confederate navy high marks.

Mallory fled Richmond with the rest of the Confederate cabinet in April 1865. Captured and arrested in Georgia,

he was imprisoned at Fort Lafayette, in NEW YORK CITY, until 1866. After his release from prison, Mallory returned to Pensacola, Florida, where he resumed the practice of law. He was a bitter opponent of Radical RECONSTRUCTION and denounced African-American suffrage in many newspaper editorials. He died on November 12, 1873.

### marine corps

In modern warfare, marines are used for amphibious combat—attacks on coastal installations, raiding ships, and so forth. At the time of the CIVIL WAR, however, marines were generally used for more mundane purposes: guarding ships, maintaining discipline among sailors, and occasionally manning naval guns. They rarely participated in combat, and when they did it was in a supporting role, which is why the Union and Confederate marine corps played a minimal role in the Civil War.

At its height, the Union's marine corps numbered about 4,000 enlisted men and officers. Throughout the war, the corps was handicapped by poor leadership, because most of the best young officers in the marines had resigned and joined the Confederacy. The officers who remained were older and found it hard to adapt to the new realities of the Civil War. U.S. Marines did see some combat action, notably at New Orleans, Fort Wagner, and Drewry's Bluff. However, the majority of U.S. Marines spent the war serving aboard ships as guards and artillerymen. Over the course of the Civil War, the U.S. Marine Corps' battle casualties numbered 175 wounded and 78 killed.

The Confederate marine corps was very small, never numbering more than 500 men. For the entire Civil War, the commandant of the Confederate corps was Lloyd J. Beall, who proved to be an able leader. He also benefited greatly from the services of the 19 officers that had resigned from the Union marine corps. Despite their limited numbers, Confederate marines tended to see combat action much more frequently than Union marines. In addition to performing shipboard duty, Confederate marines fought at Hampton Roads, Drewry's Bluff, Mobile Bay, Fort Gaines, Savannah, and Charleston. A large segment of the Confederate marine corps was killed in action at the Battle of Saylor's Creek on April 6, 1865; most of the rest surrendered at APPOMATTOX COURT HOUSE, VIRGINIA a few days later.

The fact that marines, and U.S. Marines in particular, never found a clearly defined role to play during the Civil

War nearly led to the elimination of the marine corps. On several occasions the U.S. Congress considered disbanding the corps or consolidating it into the army. It was not until the 20th century that marines would come to play an important role in military TACTICS AND STRATEGY.

### marriage and family life

Marriage and family life in the mid- to late 19th-century United States represented the stability needed to anchor a dynamic and fluid society. The home represented a "haven in a heartless world" and was dominated largely by women and children. Moreover, law, custom, and social practices protected the institution of marriage and family life. Divorce was rare and difficult to obtain, and the vast majority of people were married and had children. Although the family was not strictly "political," it was considered the main foundation for sustaining the uniquely democratic republic that was the United States of America.

As market capitalism spread throughout much of the country, more and more families were drawn into commercial farming or moved into the rapidly expanding urban areas. Men and women were no longer working side by side on the farm, growing their own food, and making all or most of their necessities. Increasingly, men were characterized as rugged individualists, up-and-coming ambitious capitalists expected to succeed in the public sphere. Women, on the other hand, assumed a powerful role in the home, defined as the private sphere. They had more time now because they could buy their own and the families' clothes and many other luxuries that did not require physical labor. Women were expected to use that extra time to instruct their children in Christian morality and values. From this kind of benevolent but educative home, the children would emerge as moral upright citizens.

Thus, the economic changes that swept the country also shaped the cultural traditions of its citizens. Courtship, marriage, and the family became individualized and private to a much larger degree than had previously existed. This spirit of individualism affected marriage practices. The ideal of romantic love combined with the market system seemed to offer young men and women greater freedom in their marriage choices.

Middle-class husbands and wives viewed one another as partners in a "companionate marriage." Children were

regarded as individuals who required love, nurture, and special EDUCATION. Parents were very conscientious about child rearing and child development. The father assumed the position of sole breadwinner for the family, and the wife reared the children. Women were defined as morally superior to men and were now looked to as the guardians of civilization.

Mothers played an active role in the lives of their sons by instilling in them a moral conscience. Although the middle-class household became the domain of the mother, fathers continued to play an active role in their children's lives. Fathers were also advisers and disciplinarians, especially to their sons. The primary goal of both parents was to develop the child's conscience and his and her ability for self-government.

During an earlier period, children were trained to fear authority; in the 19th century, more indulgent and kindly parents taught their children to have the capacity for self-control but also to enjoy the fruits of their labor. Several historians have argued that with the emergence of individualism and society's new focus on personal advancement, 19th-century couples actively practiced contraception to ensure that they produced a smaller family for whom they could provide materially and emotionally.

At the same time, the family slowly lost its productive function as subsistence farming gave way to a reliance on factory-produced goods and a growing consumer ECONOMY. This change neither happened overnight nor did it occur at the same speed everywhere in the United States. Large numbers of people, including pioneer families, working-class and immigrant families in both the cities and the countryside, and slave families, had very different expectations and experiences. In general, however, middle-class marriage and family patterns were influential on every social stratum.

The small nuclear family fostered intense emotional ties between its members, especially as the line between public and private became more defined and as society and the economy became more specialized. The home became a place where mothers, fathers, and children found spiritual guidance, emotional support, and physical sustenance. The home became a place that nurtured and protected its members from a possibly immoral and definitely acquisitive world. This sentiment was summed up perfectly in one of the most popular songs of the era, "Home! Sweet Home!": "Mid pleasure and Palaces though we may roam; Be it ever so humble there's no place like home!"

**Marx, Karl** (1818–1883) *political philosopher, author* Writer and political philosopher Karl Marx offered a powerful critique of industrial capitalism and called for socialism. His ideology, known as marxism, had widespread influence both in his own era and later in communist regimes, notably in Russia and China. Less well known is Marx's short stint as a journalist covering the American CIVIL WAR.

Born in the Rhineland, (now Germany) to a comfortable middle-class family, he attended the universities in Bonn and Berlin. When he was banned from universities because of his participation in extremist political organizations, he turned to JOURNALISM. Throughout his life he wrote for and edited many different radical journals. Moving to France in the 1840s after one such journal was banned, he continued researching, writing, and working out his theories on the one hand and organizing European social movements on the other. He formed a lifelong partnership with fellow revolutionary theorist Frederick Engels. Exiled in 1849, he moved to London with his wife and children, where he lived the rest of his life.

Marx spurned religious explanations in favor of a detailed scientific system based on the material conditions of production. His work contained the idea of predictable stages. Workers, he argued, were economically exploited and morally alienated. These wrongs would lead to a class struggle and the overthrow of capitalism. In a more humane communist society, which he considered the last stage of civilization, human beings could develop their natural gifts freely in cooperation with others. A prodigious writer, his evolving ideas were published in more than 50 volumes. Among his most noteworthy books are *Communist Manifesto* (1848) and *Das Capital* (1867). His activist legacy was the First International.

Marx's work was an inspiration to U.S. anarchist and socialist groups active in the late 19th-century protest movements, such as the labor rally for the eight-hour day. Marx, who for 10 years was a foreign correspondent for the *New York Daily Tribune*, wrote trenchant essays on the political and economic causes of the Civil War as well as the military campaigns. A strong Unionist, he believed that ABRAHAM LINCOLN and the REPUBLICAN PARTY would bring a new hope for the working-class people in the United States and throughout the world. In an address to Lincoln, Marx wrote: "The workingmen of Europe feel sure that, as the American War of Independence initiated a new era of ascendancy for the middle class, so the American anti-slavery war will do for the working classes. They consider

it an earnest of the epoch to come that it fell to the lot of Abraham Lincoln, the single-minded son of the working class, to lead the country through the matchless struggle for the rescue of an enchained race and the reconstruction of a social world.”

### **Mason-Dixon Line**

The Mason-Dixon Line was the result of a 1760s survey that resolved a boundary dispute between the Penn family, the founders of the Pennsylvania colony, and the Calvert family, who founded Maryland. While the line is technically the northern boundary of Maryland, it has had greater significance as a legal and cultural divide. During the antebellum years, the line signified the division between the slave South and the free North. After the CIVIL WAR, the line continued to denote a cultural and emotional boundary between North and South.

After three generations of boundary disputes, the Penn and Calvert families hired British surveyors Charles Mason and Jeremiah Dixon, who used celestial navigation tools from 1765 to 1768 to mark a negotiated latitudinal boundary between Pennsylvania and Maryland at 39 degrees, 43 minutes, 17.4 seconds north. Once set, the Mason-Dixon Line became a significant American demarcation line.

Previously referred to by Thomas Jefferson as the geographical line that reflected a moral and political divide, the Mason-Dixon Line became the symbolic division between free states and slave states during the congressional debates over the Missouri Compromise of 1820. The line represented freedom for escaped slaves, and free African Americans and escaped slaves formed communities north of the line. As with many boundary areas, proslavery and abolitionist views existed on both sides. Slave catchers had allies in Pennsylvania, while sympathetic Maryland residents assisted runaway slaves. Especially after the Fugitive Slave Act of 1850, the area saw activity by both the UNDERGROUND RAILROAD and slave catchers.

However, the Mason-Dixon Line was not the boundary between the Union and the Confederacy. While Maryland allowed slavery and contained many Confederate sympathizers, it remained part of the Union.

After the Civil War, the Mason-Dixon Line had diminished legal significance but retained its symbolic role as the cultural division between North and South.

### **McClellan, George Brinton** (1826–1885) *Union general*

George B. McClellan, called “the Young Napoleon” during the CIVIL WAR, was known more for his organizational skills than his fighting ability or political talent. McClellan was born to a wealthy and distinguished family in Philadelphia, Pennsylvania. A brilliant student, McClellan entered the UNITED STATES MILITARY ACADEMY AT WEST POINT at the age of 15 and graduated second in his class in 1846. Like many of his classmates, McClellan served in the Mexican-American War, where he earned promotion for courage on the battlefield. In 1857 McClellan resigned his commission to accept a position as chief engineer and president of the Illinois Central RAILROAD. In this capacity, he honed his considerable skills as a businessman. He also became acquainted with his future commander in chief, ABRAHAM LINCOLN, who was working as a lawyer for the Illinois Central.

When the Civil War broke out, McClellan was appointed commander of the Department of the Ohio. Now a major general, he quickly won fame with a minor victory in West Virginia, 10 days before the Union defeat under General Irvin McDowell at the FIRST BATTLE OF BULL RUN. When Lincoln looked for replacements for the bumbling McDowell, he turned to McClellan, one of the rare heroes of the early war. Shortly afterward, the handsome and charismatic 35-year-old was given command of the armies around WASHINGTON, D.C. In November, McClellan replaced the elderly and ailing Winfield Scott as general in chief of all of the Union forces in the country. It seemed to the arrogant young general that he was destined for greatness. “I can do it all,” he said. He wrote his wife: “All tell me that I am held responsible for the fate of the nation, and that all its resources shall be placed at my disposal.” While that was true enough, personality clashes, political blunders, and bad generalship would soon dim McClellan’s bright future as the nation’s “savior.”

At first, McClellan vindicated Lincoln’s appointment. In the fall and winter of 1861 he disciplined, drilled, and organized the Army of the Potomac, the main army of the eastern theater. More than that, he instilled pride into the men under his command. Washingtonians thrilled to the parades and reviews that displayed the power of the United States. “On to Richmond!” was the cry accompanying the superbly executed marches of McClellan’s devoted men. As late summer turned to autumn and autumn to winter, however, McClellan was increasingly criticized

for inaction. Press, public, and politicians alike openly wondered if the Army of the Potomac was ever going to leave Washington to attack the CONFEDERATE ARMY in northern Virginia. Congressional investigations tarnished McClellan's reputation. A frustrated Lincoln remarked that if McClellan did not intend to use the army, he (Lincoln) wanted to borrow it.

McClellan responded by attacking his critics. In the process, he alienated many of his former supporters, including the president, whom he derided as "the original gorilla." Increasingly suspicious of his detractors, McClellan cultivated friendly politicians and reporters. A Democrat, he appointed many generals who shared his political beliefs, including the idea that the war should not be fought to end SLAVERY. These actions angered many Republicans in Congress and created friction between McClellan and Lincoln, particularly given the fact that the longer the war went on, the more EMANCIPATION was considered as a serious option.

McClellan defended his inaction, arguing that the enemy was higher in number and better prepared than his own, even when confronted with incontrovertible evidence to the contrary. He unwisely preferred to keep his strategic plans a secret and bitterly resented any political interference with what he considered purely military matters. Some of McClellan's modern biographers have even advanced the argument that he was psychologically incapable of taking decisive action.

McClellan finally presented a plan of invasion to Lincoln, and it was a good one. He envisioned one huge offensive movement to capture the Confederate capital, RICHMOND, VIRGINIA, by transporting the Army of the Potomac down the Chesapeake Bay to the tip of the Virginia Peninsula. If Richmond fell and the Confederate army was decisively defeated, the war would be over. Finally, in the spring of 1862, after many months of prodding and pushing, McClellan's army was on the move for the PENINSULAR CAMPAIGN. McClellan laid siege against the vastly outnumbered Confederates at Yorktown for a month. McClellan's unnecessary delay allowed the Southern army precious time to prepare the defense of Richmond. As always, McClellan sincerely believed that he was facing a more powerful and numerous army than his own. He constantly asked Lincoln for more men and supplies, prompting Lincoln's famous observation that "sending troops to McClellan was like shoveling flies across the barnyard—most of them never seemed to get there."

McClellan slowly but surely advanced toward Richmond and came within five miles of capturing the city. His forward movement was permanently stopped when, after the Battle of Seven Pines (May 31–June 1, 1862), ROBERT E. LEE assumed command of the Army of Northern Virginia. General Lee launched a counterattack that drove the Army of the Potomac back to the James

George Brinton McClellan (National Archives)

River in the Seven Days' Battle (June 25–July 1, 1862). Defeated but defiant, McClellan blamed his loss on the politicians in Washington who refused him the support he requested. Lincoln, disappointed by the lackluster performance of his general, ordered him back to northern Virginia to join with Gen. John Pope's new army. Lincoln also removed McClellan from his position as general in chief, replacing him with HENRY W. HALLECK. Unfortunately, Pope was far worse than McClellan and suffered one of the most humiliating defeats of the war at the SECOND BATTLE OF BULL RUN (August 29–30, 1862). Lincoln had no choice but to reappoint McClellan to rebuild the shattered remnants of the Army of the Potomac, a task he eagerly accepted.

Meanwhile, buoyed by his recent victories over the UNION ARMY, Robert E. Lee brought the war to the North when his army entered Frederick, Maryland, on September 4, 1862, prompting fears that an attack on Washington, D.C., was near. "Little Mac" slowly moved the Army of the Potomac into position between Washington and the Confederates. The audacious Lee then split his army in the face of a much larger foe and sent Gen. THOMAS J. (STONEWALL) JACKSON to capture the Union garrison at HARPERS FERRY, West Virginia. By accident, a Union soldier found a copy of Lee's official orders directing

Jackson away from the main body of the Army of Northern Virginia. This vital information was in McClellan's hands within hours. "Here is a paper," exulted McClellan, "with which if I cannot whip Bobbie Lee, I will be willing to go home." Few commanding generals have possessed such precise information about their opponents' intentions, but McClellan did not strike quickly enough to destroy portions of Lee's divided army. Another opportunity to bring the war to an end was lost. Instead, the two armies met on ground of Lee's choosing, just north of Sharpsburg, Maryland.

On the morning of September 17, the Federals attacked the Confederates along Antietam Creek, which gave the battle its name in the North. Critics then and now of McClellan's generalship on the bloodiest one-day battle in U.S. history (23,000 casualties) claim that his plan was poorly executed and that he failed to use the thousands of Union troops who were held in reserve, thus minimizing the Northern advantage in numbers. The battle was a tactical draw. Nevertheless, General Lee's invasion failed, and the Army of Northern Virginia retreated across the Potomac to its Virginia camps. The North claimed the BATTLE OF ANTIETAM as a victory, and on September 22, 1862, Lincoln issued the preliminary EMANCIPATION PROCLAMATION.

After the battle, Lincoln urged McClellan to fight aggressively against Lee. Characteristically, McClellan felt a new campaign required many more men and more supplies. Finally, in November 1862, the president relieved McClellan of his command and replaced him with Gen. AMBROSE E. BURNSIDE. After a tearful farewell to his soldiers, McClellan moved to NEW YORK CITY and never commanded an army in the field again.

McClellan remained popular with his men, and for that reason he was an attractive candidate for the DEMOCRATIC PARTY in the 1864 presidential election. Although strongly pro-Union, McClellan was tainted by the peace wing of his party, which advocated an end to the war through negotiation. Lincoln was reelected by a substantial margin, including most of the soldiers' vote. After the war, McClellan worked as the chief engineer of the New York City Department of Docks (1870–72) and later was elected governor of New Jersey. Like many other Civil War generals, McClellan published an autobiography, *McClellan's Own Story* (1887), a strong defense of his war record. He died in Orange, New York, on October 29, 1885.

### **McDowell, Irvin** (1818–1885) *Union general*

Irvin McDowell was a Union general blamed for the loss of Bull Run during the CIVIL WAR. McDowell was born in Columbus, Ohio, on October 15, 1818. He attended the Collège de Troyes in France before being admitted to the UNITED STATES MILITARY ACADEMY AT WEST POINT in 1834, where he graduated four years later ranked in the middle of his class. He served as a second lieutenant in the 1st U.S. Artillery during garrison duty along the Canadian border. McDowell next fought in the Mexican-American War (1846–48), winning a brevet promotion to captain for gallantry at the Battle of Buena Vista in February 1847. He was subsequently assigned to WASHINGTON, D.C., where for the next 12 years he performed well in staff assignments, rising to major and frequently serving as aide de camp to Gen. Winfield Scott.

After the Civil War commenced, McDowell used political connections to advance three grades to brigadier general on May 11, 1861. He then accepted command of the Department of Northeastern Virginia and began cobbling together a force composed mainly of 90-day volunteers and poorly trained militia. Despite his lack of experience in handling large numbers of troops, McDowell discharged his duties with energy and ability, and by July he possessed a scratch force of 50,000 enthusiastic citizen soldiers. With President ABRAHAM LINCOLN's prodding, on July 16, 1861, McDowell led his overconfident amateurs southward down the Warrenton Turnpike with cheers of "On to Richmond!" During the fateful encounter at the FIRST BATTLE OF BULL RUN, on July 21, 1861, McDowell attacked slowly and piecemeal, allowing the Southerners to pour in additional units and hold off the Northerners. Exhausted by a day of fighting in intense heat, the Federals wilted in the face of Confederate reinforcements and departed the battlefield in an embarrassing rout. Held up as a scapegoat for defeat, McDowell was replaced in August by Gen. GEORGE BRINTON MCCLELLAN.

When the Army of the Potomac was organized in August 1861, McDowell received command of the I Corps along with promotion to major general as of March 1862. But he played no role in McClellan's ambitious PENINSULAR CAMPAIGN because the activities of Gen. THOMAS J. (STONEWALL) JACKSON in the Shenandoah Valley convinced President Lincoln that Washington was threatened. McDowell next commanded the III Corps in the Army of Virginia under Gen. John Pope. With Pope, he was blamed for the defeat at Second Bull Run on August 29–30, 1862, and was relieved from field command. It was not until July

1864 that he transferred to the distant Department of the Pacific and then the Department of California in 1865.

After the war McDowell gradually resuscitated his reputation as a fine military administrator. He commanded the Department of the East in 1868, rising to major general in 1872. He next served four years as head of the Department of the South before returning to the Department of the Pacific in 1876. McDowell died in San Francisco on May 4, 1885, a talented but tainted wartime general.

**McLaws, Lafayette** (1821–1897) *Confederate general* Lafayette McLaws was a Confederate general. Born in Georgia, McLaws graduated from the UNITED STATES MILITARY ACADEMY AT WEST POINT in 1842. He fulfilled a long period of routine frontier assignments in the West, then served in the Mexican-American War (1846–48) before rising to the rank of captain in 1851. In 1861, after the CIVIL WAR commenced, McLaws resigned his commission to serve as colonel of 10th Georgia Infantry, rising to brigadier general in September of that year.

McLaws first experienced Civil War combat in spring 1862 as part of the defense against Gen. GEORGE BRINTON MCCLELLAN's PENINSULAR CAMPAIGN, and he saw further action at ANTIETAM and FREDERICKSBURG in September and December 1862. A respected commander, he was elevated to major general on May 23, 1863. He commanded a mixed force of Georgians, Mississippians, and South Carolinians, all of whom were disciplined to a fine fighting edge. McLaws's excellent fighting record in many battles won him warm commendations from Gen. ROBERT E. LEE. In 1863 he fought capably but without distinction at CHANCELLORSVILLE and GETTYSBURG, where his lack of initiative probably cost him a promotion to lieutenant general.

McLaws's military career hit a stumbling block in fall 1863 when he accompanied JAMES LONGSTREET's force during the Knoxville, Tennessee, campaign. He repeatedly tried to talk his superior out of an ill-advised attack on Fort Sanders, and when the assault was disastrously repulsed with heavy losses, Longstreet relieved him of command. A court of inquiry subsequently cleared McLaws of all charges, and he was next assigned troops under Gen. JOSEPH E. JOHNSTON in North Carolina. McLaws surrendered at Durham Station on April 26, 1865. He settled in Savannah, Georgia, after the war and died there on July 24, 1897, a capable but disrespected military figure.

**Meade, George Gordon** (1815–1872) *Union general* Union general George Gordon Meade was born on December 31, 1815, in Cadiz, Spain, to Margaret Butler and Richard Worsam Meade (a prominent PHILADELPHIA merchant). The ninth of 11 children, Meade spent much of his boyhood in Pennsylvania. His father's financial losses and premature death forced Meade to pursue a military EDUCATION and a career in engineering. Graduating from the UNITED STATES MILITARY ACADEMY AT WEST POINT in 1835, he served in the Seminole War, subsequently leaving the army for eight years to work as a civil engineer. Marriage (to Margaret Sergeant, the daughter of Representative John Sergeant of Philadelphia) and fatherhood prompted Meade to return to the service in 1842. With the assistance of his brother-in-law, Representative Henry A. Wise of Virginia, he was appointed second lieutenant in the Corps of Topographical Engineers, where his duties included construction of lighthouses and breakwaters.

Meade fought in the Mexican-American War (alongside fellow engineers ROBERT E. LEE and JOSEPH E. JOHNSTON), earning a brevet to first lieutenant for his work during the siege of Veracruz. In August 1861, Meade (a captain with influential political connections in his home state) received command of a Pennsylvania brigade.

Meade's brigade joined the Army of the Potomac in June 1862 for Gen. GEORGE BRINTON MCCLELLAN's ill-fated PENINSULAR CAMPAIGN. Serving in the same division as friend and fellow Pennsylvanian General John F. Reynolds, Meade fought at Mechanicsville and Gaines's Mill and was seriously wounded at Glendale, Virginia. He returned to the army in August 1862 to take charge of Reynolds's former brigade at the SECOND BATTLE OF BULL RUN, where Reynolds commanded the division. Meade inherited the division after Reynolds departed for recruiting duties and led the reserves with skill and conspicuous bravery at the September BATTLES OF South Mountain and ANTIETAM, Maryland.

In December at the BATTLE OF FREDERICKSBURG, with Reynolds now commanding the First Corps, Meade directed the reserves in a vigorous but unsupported attack on the Confederate right. Following disastrous losses in the Union attack on Marye's Heights, Gen. JOSEPH HOOKER assumed command of the Army of the Potomac and Meade took over the Fifth Corps. At the BATTLE OF CHANCELLORSVILLE in May 1863, he was among a minority of corps commanders who advised Hooker to stay and fight rather than withdraw across the Rapahannock River. Hooker,

deciding to retreat, crossed the river ahead of his men while Meade's corps covered the army's rear.

On June 28, with the Army of the Potomac on the move and preparing for battle, President ABRAHAM LINCOLN, having lost patience with generals who refused to fight, appointed Meade to replace Hooker after Reynolds had declined the promotion. Meade directed the most important campaign of his career during his first week as army commander. In early June, General Lee had marched the Army of Northern Virginia through Maryland into Pennsylvania. In pursuit, the Army of the Potomac's forward wing (commanded by Reynolds) made contact with Confederate forces on July 1, 1863, near Gettysburg. The outnumbered Federals retreated south through town and took up a defensive position on Cemetery Hill. Learning that Reynolds had been killed, Meade ignored military protocol and sent Gen. WINFIELD SCOTT HANCOCK, another Pennsylvanian, to assume field command. When he reached Gettysburg, Hancock calmly restored order to the retreating troops and secured the Union position.

Meade ordered the army to concentrate at Gettysburg. Arriving on the field around midnight on July 1, he placed his available troops in an arc that extended from Culp's Hill southeast of Gettysburg, around Cemetery Hill to its west, and south along Cemetery Ridge. Meade instructed his Third Corps commander, Gen. DANIEL E. SICKLES, a New York politician, to extend the Union line to Little Round Top, a prominent hill suitable for artillery. Hearing on the morning of July 2 that the Third Corps was not yet in position, Meade sent messages to Sickles directing him to take up his assigned line. Sickles, who erroneously believed that the slightly higher but longer rise along the Emmitsburg Road would make a better defensive position than Cemetery Ridge, ignored Meade's instructions and advanced his corps about three-quarters of a mile in front of the designated Union line. Confederate forces attacked the Union left just as Meade rode over to Sickles in person to order him back to Cemetery Ridge. The Third Corps was forced to retreat under fire while Meade hurried men from Culp's Hill to Cemetery Ridge to fill the gaps left by Sickles's ill-considered advance. The Union left secured, he then rushed men back to the right to meet a Confederate attack on Cemetery Hill. A brigade from the Fifth Corps had occupied Little Round Top in time to save it for the Union, but Sickles's mistake on July 2 cost the Third Corps dearly.

Late on July 2, Meade called a council of war among his top officers. There was no question he intended to remain at Gettysburg, but soliciting his corps commanders' opinions about the best course of action for the next day, whether offensive or defensive, left him vulnerable to later charges of weak leadership. In the event, Meade ordered a dawn attack to remove Confederate troops from the foot

of Culp's Hill, and he prepared the army for an expected enemy assault on the Union center. That assault began around 1:00 P.M. with a terrific artillery barrage followed by an impressive infantry assault. The Confederates, facing devastating artillery and rifle fire, were unable to carry the strong Union position. Meade had won a resounding victory, but he decided against an immediate counterattack, and Lee retreated south late on July 4 with the UNION ARMY in pursuit.

Lincoln was reportedly dismayed that Meade allowed Lee and his army to escape across the Potomac River, but more biting and politically motivated criticisms would follow. Disgruntled corps commanders Gen. Abner Doubleday and Gen. O. O. HOWARD complained that Meade had favored Hancock over higher-ranking officers. Meade's disloyal chief of staff, Gen. Daniel Butterfield (a Hooker partisan), falsely charged in testimony to the congressional JOINT COMMITTEE ON THE CONDUCT OF THE WAR that Meade had wanted to retreat from Gettysburg on July 1. General Sickles, motivated by the need to repair his own reputation, made outrageous claims in print and before the joint committee that moving the Third Corps to a forward position on July 2 had forced Meade to stay put, thereby saving the Union army from defeat. Stung by unwarranted attacks, Meade nevertheless retained his position as commander of the Army of the Potomac throughout the rest of the war. Changes in the Union command structure reduced his authority, however. In the spring of 1864, Lincoln selected Gen. ULYSSES S. GRANT to command all of the Northern armies. Grant chose to make his headquarters with the Army of the Potomac, an uncomfortable arrangement for Meade but one that he accepted. Meade was the nominal commander of the Army of the Potomac at the BATTLES OF THE WILDERNESS, SPOTSYLVANIA, and COLD HARBOR and during the PETERSBURG CAMPAIGN.

Following the war, Meade headed military departments in the East and South and, promoted to major general, was stationed in Philadelphia as commander of the Division of the Atlantic, where he died of pneumonia on November 6, 1872.

## Medal of Honor

A Medal of Honor is an award for valor on the battlefield. Such awards were uncommon in the U.S. military before

the CIVIL WAR and were even frowned upon in some quarters. During the Revolutionary War, a few officers were awarded medals for leadership or received decorations from foreign powers. Late in the war, when morale was flagging, George Washington created the Purple Heart to recognize bravery among his troops, but the commendation was given only three times before 1800. In later wars, officers were sometimes given brevet promotions in recognition of meritorious service or political connections, while enlisted men were occasionally awarded extra pay. Nonetheless, when the Civil War started, there was no standard means by which exemplary military service was recognized.

Shortly after the war began, several congressmen proposed creating a medal for valor in combat, but General in Chief Winfield Scott stopped their efforts because he felt that such a measure was unnecessary. Once Scott retired, however, medal proponents were able to proceed without serious opposition. Iowa senator James W. Grimes, chairman of the Senate Naval Affairs Committee, quickly moved a bill through Congress instructing that the Medal of Honor be presented to enlisted personnel in the navy and marines who “most distinguish themselves by their gallantry in action.” ABRAHAM LINCOLN signed the bill into law on December 21, 1861. On July 12, 1862, he signed a similar bill, sponsored by Massachusetts senator Henry Wilson, establishing the Medal of Honor for army enlisted personnel. A later act extended eligibility to army officers, although navy officers had to wait until World War I for inclusion.

The actual medal was designed by a private firm, Philadelphia silversmith William Wilson & Son Company, and struck by the U.S. Mint. The front of the medal was a five-pointed star depicting images of the Union defeating SECESSION. The reverse had space to be engraved with the recipient’s name and unit and date and place of action. A red, white, and blue ribbon was attached to the medal, enabling it to be worn by the recipient.

The first Medals of Honor were awarded by Secretary of War EDWIN M. STANTON on March 25, 1863, to six surviving members of ANDREWS’S RAID. The first African American to win the medal was Sgt. WILLIAM H. CARNEY of the 54TH MASSACHUSETTS REGIMENT. Lt. Tom Custer, the brother of Gen. George Armstrong Custer, was the only person to win two Medals of Honor during the Civil War. There was also one female recipient, surgeon MARY EDWARDS WALKER, whose medal was eventually rescinded in 1917 and then restored by President Jimmy Carter in 1976. A total of 1,527 Medals of Honor were awarded during and after the Civil War, five times more than any war since. Of these, 1,195 were presented to army soldiers, 307 were given to navy sailors, and 17 were presented to marines. A handful were also presented to nonmilitary personnel.

There was no corollary to the Medal of Honor in the CONFEDERATE ARMY. For a while, a “Roll of Honor” system was tried, but it failed due to lack of support in the ranks. Medals were ordered struck for the famous Stonewall Brigade, but they were never awarded. The only Confederate soldiers to actually receive decorations were 43 members of the First Texas Heavy Artillery, who were given special “Davis Guard” medals by President JEFFERSON DAVIS in recognition of their defense of the Sabine Pass in Texas in 1863.

After the Civil War, several changes were made to the Medal of Honor. It was redesigned in 1904, and eventually different versions were created for the army, the navy, and the marines, and, in 1956, the air force. The rules for awarding the Medal of Honor were clarified so as to make the award much more selective. In addition, a review board composed of five retired generals was convened in 1916 and instructed to review every Medal of Honor that had been awarded to that date. They eventually revoked 911 of them, mostly those that had been given for lesser acts of bravery not deemed worthy of America’s highest military decoration.

## medicine and hospitals

Both hospitals and medical processes were rudimentary in the 19th century. Before the CIVIL WAR, hospitals played a small role in American medical care and were generally run not by doctors but by “civic-minded” leading citizens of the community where the hospital was located. The Civil War, which brought great numbers of people together into squalid military camps and brutal combat, only served to accentuate the shortcomings of medical care in the era. The doctors who treated soldiers had received their training almost exclusively from mentors who used the antiquated methods standard in American medicine at the time. While university and college courses of instruction were on the rise, even the most prestigious schools frowned upon clinical and laboratory work.

Adding to the health challenges facing the United States was the fact that medical methodology much more closely resembled medieval practices than anything “modern.” Pharmacology was primitive and employed medicines that, in large doses, created the same symptoms as

the targeted disease. In fact, several outright poisons, such as mercury, were commonly prescribed. Modern antibiotics were unavailable, and sterilization by heat was unknown. The concept of antiseptic surgery was introduced in Europe by Joseph Lister in 1867, but it took 10 to 15 years for its practice to become generally adopted. Training by apprenticeship perpetuated methods of diagnosis and treatment that fixated on bodily fluids, methods that dated back to Aristotle. Doctors observed urine, feces, blood, and pus to determine the nature of the problem. The prevailing medical opinion was that the body sought to cure itself by excreting toxins. Thus, diarrhea, vomiting, bleeding, or secretions resulting from infection were to be encouraged or induced. It is little wonder that the soldiers of the Civil War hid all but the most dreadful maladies from physicians.

As soon as the fighting broke out in earnest in 1861, the inadequacies of the respective medical corps of both

the Union and the Confederacy became quickly and ominously evident. Clement A. Finley, the newly appointed head of the Union's Army Medical Bureau, was widely regarded as grossly incompetent. Health examinations of recruits and volunteers were not a priority, and as soon as the camps formed, the federal officials found that nearly a quarter of their men were unfit to enter battle. Samuel Preston Moore was responsible for building the Confederate Medical Department, but he was hindered by drastic shortages of supplies. Neither the Confederate national government nor the individual states had a method for commissioning physicians.

At the first major clash of the war, the **FIRST BATTLE OF BULL RUN** in July 1861, most of the doctors on both sides were regimental physicians supplied by the states, and their scant numbers left them no chance of effectively tending to the wounded. Ambulances were nearly nonex-

Civil War patients in the Armory Square Hospital, Washington, D.C. (*Library of Congress*)

istent; additionally, there was no system in place for their use. Horribly injured soldiers mostly had to fend for themselves wherever they happened to fall.

The Union created the UNITED STATES SANITARY COMMISSION in June 1861 with official duties limited to conducting investigations and providing advice. Staffed by dedicated and diligent workers, the commission quickly became vital in improving conditions in the military camps. The commission submitted a scathing report of Clement Finley and his medical bureau in September 1861 and persuaded Congress to fully reorganize the army's medical services. Dr. William A. Hammond, Finley's replacement, established an excellent working relationship with the commission. He assigned Jonathon Letterman as medical director of the Army of the Potomac. Letterman was largely responsible for initiating the structure of the Army Medical Department that existed through World War II. Of immediate importance to the men in the field was the ambulance corps, which, by the BATTLE OF ANTIETAM in September 1862, was providing vital service in the evacuation of the injured to field hospitals. Letterman also authorized the assignment of a medicine wagon to each brigade.

Dr. Samuel Moore worked from within the blockaded Confederacy to build a military medical establishment comparable with that of the Union. He developed domestic pharmaceutical resources, recruited and trained NURSES, established a systematic method for treating casualties, experimented with the manufacture of surgical instruments, and implemented a system for military evacuation and hospitalization. However, due to limited resources, his effectiveness in treating the sick and wounded fell short of his rivals in the North.

Timely treatment of wounded and sick soldiers in camp and in field hospitals was implemented widely by 1862 in many areas. Large hospitals in cities were also built. A prevailing antebellum societal opinion was that hospitals were dangerous and were to be avoided at any cost. Hospitals were considered necessary for free or low-cost care for the poor, and for teaching, research, and war, but not for the treatment of the middle or upper classes. The terrible sights and sounds that one encountered (probably similar to those of a military field hospital) greatly deterred admissions. It was believed that most diseases came from "bad air," so Civil War hospitals were designed for maximum ventilation, emulating the success of military barracks hospitals operated by Florence Nightingale during the Crimean War. Peacetime citizens of the United States considered home medical care to be safer and more comfortable, and doctors obliged.

Both the Union and the Confederacy built large temporary military hospitals that became models of organization and models for "fresh air" ideas. The disparity in the avail-

ability of resources to the North and South that marked so much of the Civil War found astounding expression in the number and quality of hospitals. The North had erected 151 hospitals by 1863 and added another 53 by the end of the war with a total capacity of nearly 137,000 beds. The Confederacy had about 150 hospitals, although the number included improvised houses and barns. RICHMOND, VIRGINIA, had the best of the Confederate facilities, including what may have been the largest military hospital ever, the 8,000-bed establishment at Chimborazo Heights. Hospital construction halted with the end of the Civil War, and the lessons learned both North and South in construction and efficiency were not to be applied for nearly two decades. In fact, the United States had only 178 hospitals in 1873, but by 1909, the number grew to 4,359.

While hospitals had promoted some great medical leaps before—for instance, anesthesia—many of those benefits were not available to soldiers in the field. For example, in 1846 William Morton first demonstrated ether as an anesthetic in surgery at Massachusetts General Hospital, but the supplies and equipment necessary to make ether were not something armies generally carried with them into the field. (Even on the HOMEFRONT, anesthesia use was circumscribed. While many physicians used anesthesia for "major" surgeries, most also refused to use it for "minor" operations.)

And while surgery without anesthesia was dreaded, a Civil War soldier's deadliest and most invincible enemy was disease. Union men actually had an almost two and a half times better chance of dying from disease than from combat; for Confederates, the chances were three to one. Contributions to a soldier's breakdown in health were many, including poor diet, bad weather, insects, and unsanitary camps. Diarrhea in its many forms, including dysentery, claimed more lives than battlefield wounds. Other chronic problems included pneumonia, bronchitis, scurvy, and "camp itch." Added to the equation were sporadic outbreaks of measles, smallpox, and malaria. Outbreaks of disease were known, especially in the earlier war years, to slow or halt entire military operations. The fate of Civil War military campaigns often hinged on the general health of the troops. ROBERT E. LEE's first field command in western Virginia experienced incessant, bone-chilling rains, and the resulting sicknesses nearly crippled his army. The putrid swamps of Chickahominy contributed typhus, diarrhea, and scurvy to the list of problems encountered by GEORGE BRINTON MCCLELLAN during his PENINSULAR CAMPAIGN. ULYSSES S. GRANT's siege of Vicksburg was considerably slowed by disease.

Alcohol, in whiskey or brandy form, was the most commonly used "cure-all." Letterman's Union medicine wagons generally tried to contain some form of anesthetic (chloroform, ether, morphine, or opium) as well as alcohol,

Typical of the Civil War era were advertisements for medicines that promised relief from pain. (Library of Congress)

asafetida, calomel, castor oil, digitalis, spirits, turpentine, and assorted acids. And even with anesthetics and drugs, many doctors were educated to believe that pain in treatment was a good thing. The 1862 *Manual of Military Surgery for the Use of Surgeons in the Confederate States Army* argued that “the lusty bawling of the wounded” during surgery was a “powerful stimulant.”

Though the Civil War did not produce any new “wonder drugs,” it gave rise to the pharmaceutical industry that eventually made tremendous contributions to the medical advances of the 20th century. Since the Union relied heavily on imported drugs, readily accessible throughout the war, the majority of the advances were made out of necessity in the South. As the Confederacy began to feel the effects of the Union blockade, it depended on medicines captured in battle

or provided by blockade-runners. Scientist-physicians were dispatched to find naturally occurring substitutes for unobtainable medicines. Francis P. Porcher subsequently discovered that green persimmon juice could be used as styptic, wood turpentine as an antiseptic, and red garden-poppies opium as an anesthetic. Joseph Le Compte used native plants to produce alcohol, silver chloride, sulfuric ether, and nitric ether. Despite the domestic alternatives, war drugs continued to run out. In the later years of the war, Confederate soldiers often endured illness, wounds, and amputations without medication.

Within the scope of the war effort were several medical advancements. Dentistry was singled out for the first time as an allied health profession. Early on, the Confederacy recognized the value of the discipline; it set up special pay for dentists serving in its ranks, gave dentists dispensations from the draft, and commissioned them to work in the medical corps. One such man commissioned was James Baxter Bean, who developed a system for immobilizing fractured jaws by use of inter-dental wiring and splinting.

The first women officers were also commissioned. The Confederacy desperately needed trained NURSES, and many women’s organizations were formed to help establish private hospitals. The Confederacy, desiring a method to ensure the quality of care in its hospitals, passed a law requiring that Confederate soldiers be treated only in hospitals directed by commissioned military officers of at least the rank of captain. Subsequently, Capt. Sally Louisa Tompkins was commissioned in September 1861, enabling her continued direction of her excellent hospital. A sign of the times, her letter of appointment from the secretary of war began, “Sir: You are hereby informed that the President has appointed you Captain in the army of the Confederate States. . . .” On the Union side, MARY EDWARDS WALKER, a physician and winner of the MEDAL OF HONOR, was commissioned in October 1864.

Modern public health was energized as specialized doctors on both sides of the lines were sent out to look for causes of disease outbreak in troops. Joseph Jones, a Confederate surgeon, was the first physician in the United States to use a clinical thermometer and one of the first to employ a microscope for clinical research.

After the Civil War the professionalization of America’s hospitals and medical profession continued. In 1873 three schools for the training of nurses were opened in the Northeast, greatly improving the care available in America’s hospitals. By the 1880s Lister’s antiseptics techniques were in use in U.S. hospitals, but they were quickly replaced by aseptic surgery practices, thus making surgical procedures safer. With these professional developments came a growth in both surgical procedures and hospital stays.

The mid-19th century saw generally slow but steady development in the medical care system in the United

States. Like all wars, the Civil War provided the dreadful conditions under which a generation of medical practitioners found invaluable clinical experience. A few decades later, aided by the work of germ theorists such as Louis Pasteur, they helped transform medical care and surgery in the United States to its modern form, and by the beginning of the 20th century, the U.S. medical EDUCATION system was standardized and professionalized, as was the hospital system.

**Memminger, Christopher G.** (1803–1888) *lawyer, politician*

Christopher Gustavus Memminger served as secretary of the Treasury of the CONFEDERATE STATES OF AMERICA. Born in Württemberg, Germany, on January 9, 1803, he was orphaned shortly after his family arrived in Charleston, South Carolina. He was raised in the household of a wealthy lawyer and graduated with honors from South Carolina College at the age of 16.

Memminger commenced a law practice in Charleston, and in 1836 he successfully stood for a seat in the state house of representatives. A moderate Democrat, he wrote forceful treatises against nullification and in favor of STATES' RIGHTS. He was appointed to chair the legislature's Committee on Finance and strove to regulate the state banking industry while also promoting hard currency fiscal practices. Memminger also distinguished himself as an advocate for educational reform, championing the expansion of public schools throughout the state.

By 1861 Memminger had decided that moderation would not help stem what he viewed as a tide of Northern interference. He served as a delegate to the provisional CONFEDERATE CONGRESS in Montgomery, Alabama, and then accepted appointment by JEFFERSON DAVIS as the Confederacy's secretary of the Treasury. Memminger's tenure as Confederate treasurer proved an unhappy one, as the new nation lacked both capital and the means of raising it. He nonetheless pushed for increased bond sales and currency restrictions to curb inflation, but he was perpetually thwarted in Congress by various states' rights factions.

Memminger's efforts to pass a comprehensive tax bill were stymied by those who opposed controlling credit at the national level.

By 1864 Confederate finances were in total chaos, although it is doubtful any other individual could have achieved a better result. Memminger left office in July 1864, roundly criticized by contemporaries. He resumed his legal practice in Charleston after the war ended. He also continued working to make free public EDUCATION available to the state's citizens, regardless of race. Memminger died in Charleston on March 7, 1888.

**Memphis, Tennessee, riot** (May 1–2, 1866)

The Memphis riot grew out of the tensions that existed between the Irish-American and African-American workers just after the war. An economically vibrant port city on the Mississippi River, Memphis was also a rowdy, crime-ridden, corrupt place. From 1861 to 1866, Memphis experienced a tremendous rise in its black population, including African-American soldiers. The soldiers were stationed in Fort Pickering, alongside former CONTRABAND camps, which by 1866 were transformed into largely black neighborhoods. The influx of black people meant job competition with the large Irish immigrant population of Memphis, a source of steady and growing resentment for the latter group.

RECONSTRUCTION policy added to the uneasy atmosphere. Federal troops were still in the city. An unrepentant white citizenry despised FREEDMEN'S BUREAU agents and teachers. The prewar Memphis governing class was stripped of its power, and Confederate veterans were denied the vote. The Irish dominated the polls and controlled all city offices, including the mayorship, the board of aldermen, and the police and fire departments. There were frequent clashes between the Irish police and freedmen in south Memphis, where most of the African Americans lived in disease-ridden shanties. Newspapers played an important role in worsening an already bad situation by printing inflammatory and racist denunciations of the newly freed African Americans: "We are to have the black flesh of the Negro crammed down our throats," ran one such editorial.

On April 30, four policemen got into a fight with a group of recently discharged black soldiers. After a night

of drinking, the soldiers roamed the streets shooting their guns, sparking fear and anger among white people. The next day, a collision between two delivery wagons attracted the attention of a large crowd of soldiers and other black men, who surged forth against the police. Soon, the situation spiraled out of control, and what little professional discipline the Memphis police previously exhibited was gone. The mayor was too drunk, and the sheriff too weak, to organize a restraining posse. Mobs of white people, including policemen and firemen, searched out and attacked helpless African Americans. What followed was a tragic race riot in which 46 black people and two white people were killed, five black women raped, and 80 people wounded. Property damage was estimated at \$130,000, and black churches, schools, and homes were looted, destroyed, and burned. Order was restored when federal troops took control of the city.

The Memphis riot had national importance. It demonstrated to the North that the civil authorities in the South would not even minimally protect black freedom. This cast a bad light on President ANDREW JOHNSON's very lenient Reconstruction program and gave power to the RADICAL REPUBLICANS in Congress, who wanted a harsher policy toward the South.

### Milliken's Bend, Battle of (June 6–7, 1863)

The Battle of Milliken's Bend was a Confederate attempt to distract the Union's drive to take Vicksburg, Mississippi. The battle ended as a tactical stalemate: While the Confederates inflicted substantial casualties, they could not stop ULYSSES S. GRANT's siege. The battle's main significance is that African-American troops played an important role in fending off the Confederate assault, demonstrating to leaders on both sides that black soldiers could indeed fight.

The Union siege of Vicksburg began on May 19, 1863. The garrison's commander, John C. Pemberton, quickly pressed the Confederate government for assistance. President JEFFERSON DAVIS agreed with Pemberton's assessment that the situation was dire and ordered trans-Mississippi commander Edmund Kirby Smith to take immediate action. Smith decided to attack Union positions near Milliken's Bend. According to Confederate intelligence reports, Milliken's Bend was being used by the UNION ARMY as a supply depot. Smith believed that the position would be an easy target because it was being guarded by convalescents and African-American troops. He gave Gen. Richard Taylor responsibility for leading

the assault. Taylor split his 4,500 troops into three groups. One brigade was sent to Milliken's Bend under the command of Gen. Henry McCulloch. Another was sent north to Lake Providence, and a third was sent south to Young's Point.

The Confederates got underway on June 6. Colonel Hermann Lieb, commander of Milliken's Bend, sensed that something was afoot and sent the 10th Illinois Cavalry and Ninth Louisiana Infantry to investigate. The men of the Ninth Louisiana were former slaves from Louisiana, Mississippi, and Arkansas and had been in the Union army for less than a month. Heavy skirmishing ensued when Lieb's soldiers encountered the Confederates, and the Federals were compelled to retreat. Lieb immediately requested support from Adm. DAVID DIXON PORTER, and two gunboats, the *Choctaw* and the *Lexington*, were dispatched.

Skirmishing continued through the night on June 6, and into the morning of June 7. When the sun rose at 5:30 A.M. the battle began in earnest. For more than an hour, the Confederates were able to push the Federals backward in bloody hand-to-hand combat. Then, at 7:00 A.M., the *Choctaw* and *Lexington* arrived, firing upon the Confederates with grape and canister shot. By 10:00 A.M. the rebels were in full retreat. This ended the Battle of Milliken's Bend, as the other prongs of the Confederate attack at Young's Point and Lake Providence failed to engage the enemy.

Confederate losses at Milliken's Bend were 44 killed, 131 wounded, and 10 missing out of 1,500 engaged. Union losses were much more substantial, 101 killed, 285 wounded, and 266 missing out of 1,061 engaged. The three AFRICAN-AMERICAN REGIMENTS at Milliken's Bend—the Ninth Louisiana, the First Mississippi Infantry, and the 13th Louisiana Infantry—suffered a casualty rate of 35 percent. The Ninth Louisiana was hit particularly hard, and 45 percent of the regiment's members were lost.

The Battle of Milliken's Bend did a great deal to convince commanders on both sides that African-American troops were battle worthy. McCulloch, the Confederate commander, remarked that his troops' attack "was resisted by the negro portion of the enemy's force with considerable obstinacy, while the white or true Yankee position ran like whipped curs almost as soon as the charge was ordered." Ulysses S. Grant also noted his belief that African-American troops had passed an important test. A month and a half later, African-American troops would once again prove themselves, this time at Fort Wagner in South Carolina.

### miscegenation

*Miscegenation* is a term that was invented in the mid-19th century to describe interracial sexual relations or marriage, usually between a black person and a white person. The practice first became a social and political issue in the early 17th century, two centuries before the CIVIL WAR, when Maryland and Virginia passed laws banning marriages between white people and people of other races. Many other states followed suit, although miscegenation laws were not always enforced.

Generally, those who opposed miscegenation, or race mixing, were most concerned with relations between white women and black men. In part, this was because a person's legal status derived from his or her mother. Thus, the child of a white woman and an enslaved African-American man was born free. Such children, free citizens despite having African blood, were perceived as a threat to the strict racial order of society. Children of enslaved African-American women and white men, on the other hand, were born slaves and thus posed no threat. Another reason that sexual contact between white men and black women was more tolerable was that it was much more common. Many of the men who owned slaves felt that it was perfectly acceptable for them to use slave women as concubines, even though it was almost invariably against the woman's will.

Prior to the 1860s, the term used to describe interracial relationships was *amalgamation*. The term *miscegenation* did not come into use until the election of 1864. David Croly and George Wakeman of the *New York World*, a Democratic newspaper, published a hoax pamphlet designed to convince people that Republicans favored interracial marriage. Their goal was to play on American fears that the Republicans were planning to overturn the racial status quo in the country. The ploy largely didn't work, although the fact that Croly and Wakeman thought it would is indicative of the state of race relations in mid-19th-century America.

After the war miscegenation became largely a Southern issue. In the 1870s most of the states in the North and West with remaining miscegenation laws repealed them, while most Southern states passed new laws with increasingly harsh penalties for interracial marriage. Republicans in Congress objected, and the laws were temporarily repealed before being put back on the books once RECONSTRUCTION was over. These laws were upheld in a series of Supreme Court decisions in the 1880s, notably *Pace v. Alabama* (1883). Meanwhile, many Southerners dispensed

with such legal niceties and simply hanged black men who were accused of sexual relations with a white woman. While the hangings eventually ceased, the attitudes behind them lasted well into the 20th century. When the Supreme Court reversed itself and declared miscegenation laws unconstitutional in *Loving v. Alabama* (1967), 16 Southern states still had such statutes on the books.

### Mississippi River

One of the distinguishing physical features of the North American continent is the Mississippi River, which neatly divides the eastern third of the landmass from the west. The place-name is a corruption of the Ojibwa Indian word for “Father of Waters,” an apt description, for the waterway drains a region of 1.2 million square miles from across 31 states. From its source at Lake Itasca, Minnesota, the Mississippi flows southward for 2,350 miles before draining into the Gulf of Mexico at New Orleans. In concert with its major tributaries, the Ohio and Missouri Rivers, it constitutes the third-largest river system in the world (after the Nile and the Amazon). This slow-moving, navigable river is a mile wide along most of its length.

In the mid-19th century the Mississippi River was a major commercial artery of the United States, serving as the country's principal north-south conduit for goods and supplies. So critical did the river prove to the midwestern ECONOMY that in 1837 the U.S. Army Corps of Engineers began a lengthy and intricate program to dredge and manage various portions of it. As late as 1852 the army received \$75,000, then an astronomical sum, to improve the five channels forming its mouth at New Orleans, Louisiana. This region constitutes a rich and complex delta system, replete with swampy watercourses known as bayous, and its shifting channels require constant clearing to remain navigable. At its northern end the river's Ohio and Missouri tributaries were invaluable conduits for westbound explorers, fur traders, and settlers. Many trading posts were established along the Mississippi, usually upon high bluffs overlooking the flood-prone waterway, and these gave rise to numerous settlements dotting the North American interior. New U.S. states were created along its banks, commencing with

U.S. gunboat *Fort Hindman*, part of the Mississippi River fleet (Library of Congress)

Louisiana (1812), Mississippi (1817), Missouri (1821), and Arkansas (1836).

Well into the 19th century, farmers in the Midwest were using simple flat-bottomed vessels known as flatboats and keels to transport their goods down the Mississippi River to New Orleans; from there these supplies often traveled on to markets along the East Coast and in Europe. The advent of steam technology allowed travel and commerce to expand upriver as well as down. As early as 1816 Henry Miller Shreve designed a steamboat especially for use in shallow waters. In it he made a record run from New Orleans to Louisville, Kentucky, in only 25 days. By 1840 the upper Midwest was becoming the nation's food belt, producing corn, wheat, and other foodstuffs in vast quantity. At this time roughly half the nation's commercial fleet plied the Mississippi's muddy waters to New Orleans and back. By 1855 paddlewheel steamboats were a conspicuous and celebrated fixture. These large and frequently opulent craft were well known—or infamous—for their casinos and a rakish, gambling clientele.

More significant still were the vast supplies of cotton and slaves delivered at New Orleans from states adjoining the Mississippi, and in short order that bustling city emerged as the nation's second-largest port, after NEW YORK CITY. In 1859–60, no fewer than 2.1 million bales of cotton were shipped down the Mississippi to New Orleans,

a record that was not eclipsed until many years after the CIVIL WAR. By depositing mile upon cubic mile of rich fluvial sediments from upstream, the river made the delta system the richest cotton-bearing region of the entire South. In the antebellum period slaves, PLANTATIONS, and stately riverfront mansions thus became characteristic features of the lower third of the Mississippi River, a region that was one of the most visible pillars of Southern affluence and power.

### Mississippi River war

The MISSISSIPPI RIVER played a critical and, some historians argue, decisive role in the CIVIL WAR. After a stalemate settled on the eastern theater in the early part of the Civil War, Union forces turned west. In 1862 troops moved toward the Mississippi River in an attempt to control the important water TRANSPORTATION route and the influential port of New Orleans. If Union forces could control the lower Mississippi, they would divide the western from the eastern Confederacy. Control of New Orleans would also block an important Southern supply line while giving the North a direct transportation link into the heart of Confederate territory. In order to make headway in the western theater, Union troops employed a two-pronged plan of attack from the north and from the south.

Union success in the western theater rested largely on cooperation between the army and navy. Before the fall of 1862, the army controlled the operation of navy riverboats. The diverse naval gunboat crews that included volunteer riverboatmen, soldiers, steamboat pilots, and engineers, among others, did not come under complete UNION NAVY control until late 1862. This strange duality of command resulted from the War Department's belief that the inland waterways lay under the army's purview. Fortunately for the Union, the army and navy commanders in the theater worked well together, and their partnership ultimately propelled the Union to victory.

The concerted Union effort to pry the Mississippi River from Confederate hands began in early 1862 at Island No. 10 and nearby New Madrid, Missouri, where Confederate forces had constructed batteries. On March 13, Federal forces under Gen. John Pope and gunboats under the command of Commodore Henry H. Foote appeared before New Madrid, and Gen. John P. McCown hastily abandoned his position. Storming Island No. 10, located in midstream, was, however, a difficult proposition, so Pope ordered soldiers to dig a canal on the opposite bank: Union warships would pass through the canal while Foote's forces continually bombarded the defenders to keep them occupied. During a rainstorm on April 4, the USS *Carondelet* ran past Confederate defenses. It was joined by the USS *Pittsburg* on the night of April 7. The Confederates, outnumbered and now cut off, Gen. William W. Mackall surrendered 3,500 men and all their equipment to Pope. Pope's well-executed victory extended Union control of the Mississippi River as far south as FORT PILLOW, TENNESSEE, only 40 miles north of Memphis.

Meanwhile, a squadron of Federal vessels, both IRON-CLAD and wooden, gathered in the Gulf of Mexico near the mouth of the Mississippi River. Under the command of Flag Officer DAVID GLASGOW FARRAGUT, the Union forces easily took control of weakly guarded Confederate forts at the Mississippi's entrance. Because the South

expected an attack from the North, their leaders left the southern Mississippi, especially New Orleans, without adequate protection. On April 18, 1862, Farragut's West Gulf Blockading Squadron took up bombardment positions off Forts Jackson and St. Philip and commenced a three-day barrage. Progress was slow, and Farragut, famously impatient, ordered his entire fleet to go past the Southern defenders in the early morning of April 24. The Federal ships and gunboats fought a running battle with several Confederate warships, all of which were sunk or captured, then ventured another 70 miles upstream before anchoring off New Orleans. Farragut went ashore on April 25, and received the city's surrender. Not only had the Union closed the Confederacy's largest port, it had also acquired a suitable base for projecting military and naval power toward the Southern interior. A major Union victory occurred. The fall of this critical financial and transportation hub was a major blow to the South. After securing New Orleans, Farragut continued to move north up the river. En route, he accepted the surrender of two other port cities, Baton Rouge, Louisiana, and Natchez, Mississippi.

With Shiloh, Tennessee, also now under Union control, Gen. ULYSSES S. GRANT moved to capture the central transportation hub of Corinth, Mississippi. Waterborne diseases such as typhoid and dysentery helped push Confederate troops out of the area and allowed Union forces to gain a hold. Rebel-held Fort Pillow was all that stood in the way of the North controlling the Mississippi River as far south as Memphis, Tennessee. On the river itself a force of Union gunboats under Capt. Charles H. Davis began threatening Confederate forces garrisoning Fort Pillow. In response, Capt. James E. Montgomery of the Confederate River Defense Fleet ordered eight armed steamers to drive them off. On May 10, 1862, the Southerners surprised Davis at Plum Run Bend, Tennessee, and in a wild melee rammed and sank the gunboats *Cincinnati* and *Mound City*. This was a rare tactical triumph for forces if the CONFEDERATE NAVY on the river. Both Union vessels were later raised and returned to service shortly afterward.

After the May 1862 fall of Corinth, Mississippi, Confederates were ordered to abandon Fort Pillow and Memphis. Montgomery's Confederate river force was to remain behind on the Mississippi to protect their withdrawal. On June 6, 1862, Union gunboats under Capt. Davis sailed downriver to capture Memphis but ran headlong into Montgomery's armed steamers and rams. Almost the entire population of the city gathered on nearby bluffs to observe the encounter that morning. In this protracted shooting and ramming contest the Confederates were gradually overwhelmed by the more numerous Union forces and the Confederate vessels were either sunk or captured. That afternoon the victorious Davis landed at Memphis and accepted its surrender from city officials. Federal naval

control now included all reaches of the Upper Mississippi River.

The South held only two influential Mississippi River ports between Union-controlled New Orleans and Memphis. One of the strongholds, Vicksburg, Mississippi (called the “Gibraltar of the Mississippi”), had the benefit of natural protection. Located atop a sheer bluff overlooking the river, direct access to the city was treacherous from water due to well-placed artillery, and the natural inland topography itself—wild terrain to the north and very wet, marshy land to the west—made approach difficult. On June 28, 1862, Farragut led his West Gulf Coats Blockading Squadron from New Orleans up the Mississippi to Vicksburg. There he observed that the city, located on a towering bluff over the river, was too high to be effectively bombarded by the fleet; he concluded that Vicksburg could only be taken by large ground forces. Nonetheless, he remained in place for 67 days and was joined by the river squadron under Davis. On July 15 the Federals were taken aback when the CSS *Arkansas*, a large Confederate ironclad, passed right through their squadron and defiantly anchored off the city.

Gen. Grant had also made an initial ground attempt to capture Vicksburg in late 1862 and early 1863. Joined by the forces led upriver by Farragut, the Union troops had tried to cut a channel to divert the Mississippi. They hoped to leave the city without a water source, but the arrival of an early summer stopped the North’s attempts. Not only did the plan to cut a new channel fail, but the river’s water line surrounding the town lowered to dangerous levels for the boats. Many Northern sailors, essentially trapped on their vessels, fell ill and died of typhoid, dysentery, and malaria. Grant and Farragut temporarily abandoned their plans to take the city on the bluff. Farragut, ill with fever, ordered his ships back to New Orleans. Naval authorities in WASHINGTON, D.C., dissatisfied with Davis’s handling of the *Arkansas*, subsequently replaced him with Farragut’s aggressive foster brother, David D. Porter.

In spring 1863, however, the North tried again. In May 1863 Grant began a drive toward Vicksburg. A combined mass of land troops and sailors moved to an area south of Vicksburg and attacked the city from the rear. This maneuver perhaps best exemplifies the splendid spirit of daring and cooperation that existed between Grant and Porter, army and navy. Northern forces lay siege to the city and wore down local residents over a six-week period. Vicksburg’s soldiers and civilians waited in vain for Confederate military help to arrive. Confederate general JOSEPH E. JOHNSTON’s army was their only hope to save the city; however, he considered his position too weak to take on the powerful UNION ARMY. Outmanned and faced with starvation, Vicksburg commander Gen. John Pemberton surrendered to Grant on July 4, 1863.

The last Confederate stronghold fell just five days later on July 9, 1863. Under the command of Union general Nathaniel P. Banks, troops laid siege to Port Hudson, Louisiana. Starving after managing to subsist on a diet of mules and rats, the outnumbered rebels in the garrison gave up when they heard about the Union victory at Vicksburg. When Banks took Port Hudson, he gained control of the rich agricultural land along Bayou Teche for the North. With the entire length of the Mississippi River under the Union flag, the Federals split the Confederacy into east and west. The division left Louisiana, Texas, and Arkansas separated from their allies. Ultimately, Union control of the Mississippi proved to be a decisive turning point in the war.

### Mobile campaign (March 17–April 12, 1865)

The Mobile campaign brought the capital of Alabama under Union control. Although the city would have been an attractive prize early in the war, its capture in April 1865 had little significance because it came after the conflict was effectively over.

Before the CIVIL WAR, Mobile was one of the most prosperous cities in the South. The only major seaport in Alabama, it exported all of the state’s cotton. Among the cities on the Gulf Coast, Mobile was second only to New Orleans in total value of exports. When the Civil War came, Mobile’s cotton trade was largely cut off by the Union’s naval blockade, but the city continued to serve a variety of other important roles. It housed a number of large hospitals, along with training camps for soldiers, and a shipyard used to construct IRONCLADS.

Although Union leaders had an eye on Mobile throughout the war, particularly after the fall of New Orleans and Vicksburg, it took until the summer of 1864 for Northern forces to move against the city. On August 5 a Union naval fleet led by Adm. DAVID GLASGOW FARRAGUT seized control of Mobile Bay. This brought an end to Confederate shipbuilding in the city and rendered the port unavailable to Southern ships trying to avoid the Union blockade. Farragut hoped that control of Mobile Bay would facilitate the quick capture of the entire city, but eight months of naval bombardment failed to drive the Confederates out of Mobile. Finally, on March 17, 1865, 20 ships and 45,000 men were ordered to undertake an offensive against the city. The Union force vastly outnumbered the 10,000 men and five boats left to guard Mobile under the command of Gen. Dabney Herndon Maury.

The Mobile campaign was a two-pronged offensive. To the south of Mobile, 32,000 troops under Gen. Edward Canby laid siege to the Spanish fort, beginning on March 27. The Confederates there, outnumbered by a margin of eight to one, held on for as long as they could but were compelled to surrender after an infantry assault on April 8. To the north of Mobile, 13,000 troops under Gen. Frederick Steele laid siege to Fort Blakely beginning on April 1. On April 9, Steele's troops were joined by most of the 32,000 men who had captured the Spanish fort, and an infantry assault was undertaken. After only 20 minutes, the Confederates holding Fort Blakely were compelled to surrender. This was the final infantry engagement of the Civil War, as Maury evacuated Mobile three days later.

Union losses for the Mobile campaign were 1,417 men killed, wounded, or missing, while Confederate losses exceeded 4,000 men. The majority of these losses occurred after the Confederate capital of RICHMOND, VIRGINIA, had fallen and the Army of Northern Virginia had surrendered, events that essentially concluded the Civil War. Union general in chief ULYSSES S. GRANT later expressed his regrets that so much blood had been shed unnecessarily, writing:

I had tried for more two years to have an expedition sent against Mobile when its possession by us would have been of great advantage. It finally cost lives to take it when its possession was of no importance, and when, if left alone, it would have within a few days fallen into our hands without any bloodshed whatever.

### **Monitor-Merrimack (Hampton Roads, Virginia)** (March 9, 1862)

The *Monitor* and *Merrimack* fought the first battle between IRONCLAD vessels at Hampton Roads, Virginia, a battle that changed the nature of naval military strategy while inaugurating a new age of naval military technology.

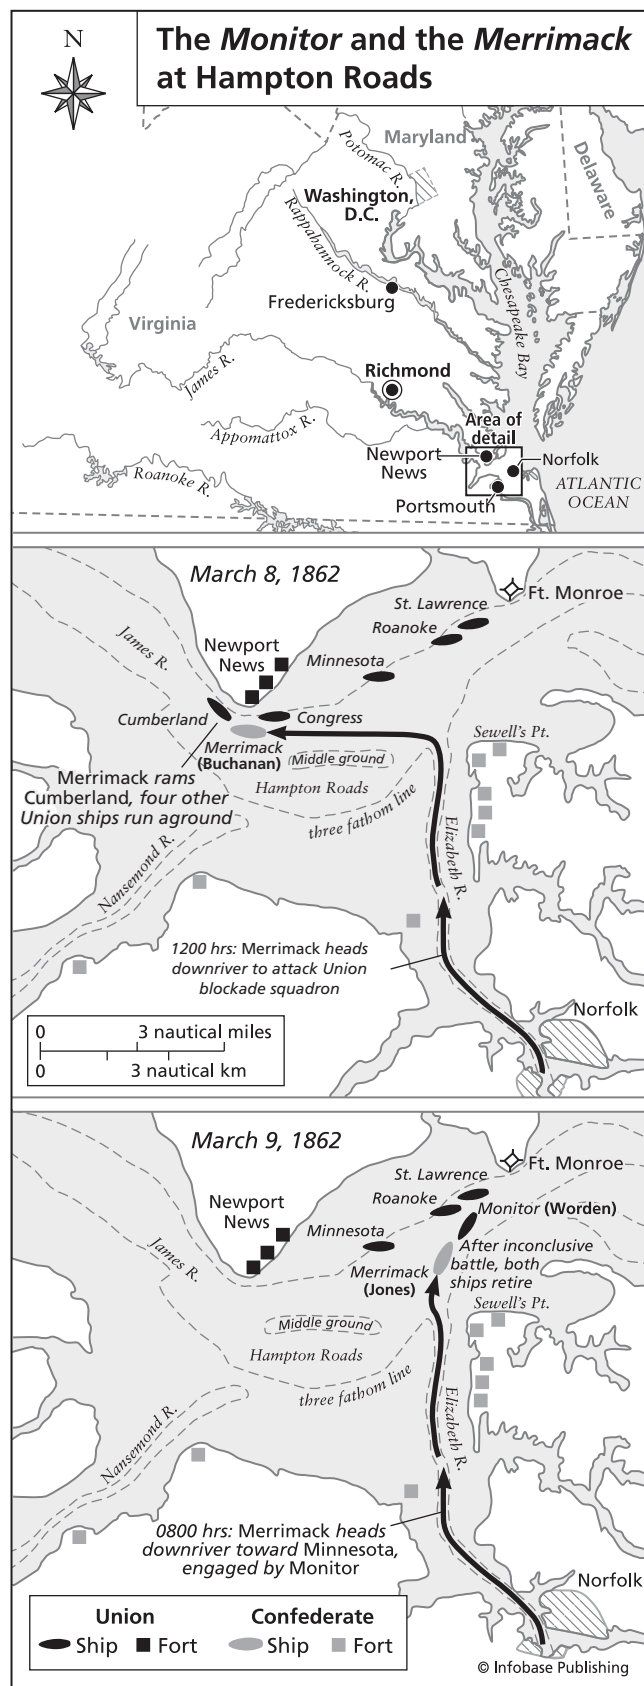

The use of ironclad technology became widespread during the French-British-Russian conflict known as the Crimean War, in which vessels, made largely immobile by the weight of heavy iron plating, had been constructed for shore bombardments. Following the Crimean War (1853–56), improvements to the technology by the British and French navies produced superior models with better seafaring capabilities. Not until the onset of the CIVIL WAR, however, did the emergent technology, developed in two radically different forms by the Union and Confederate navies, encounter full combat testing.

The UNION NAVY had the advantage of greater numbers and an industrial ECONOMY. Seeking to negate these advantages, the CONFEDERATE NAVY, under the leadership of Secretary of the Navy STEPHEN R. MALLORY, turned to the ironclad. Working from plans drawn up by John Brooke, the Confederates began to build their first ironclad using the reclaimed wooden steam frigate *Merrimack* (the common spelling *Merrimac* is an oft-repeated misspelling of the name of the original vessel), which had been abandoned by the North at the Norfolk Navy Yard. The wooden upper hull was covered with iron plating and equipped with 10 heavy guns (including four rifled guns) and, borrowing from presail warships, a ram. Rechristened the CSS *Virginia*, the ship's appearance was described as "the roof of a sunken house with a smokestack protruding from the water."

The Union navy, faced with the threat posed by the ongoing construction of the *Merrimack*, responded with the construction of its own ironclad warship. The Union vessel, developed by Swedish-born marine engineer John Ericsson, featured a dual-hulled design with extensive armor plating. With its deck located at the waterline, limiting the exposed surface area, and a cylindrical turret rising prominently from the ship's center, the USS *Monitor* was said to look like a "cheesebox on a raft." Armed with only two cannons located in its slowly rotating turret, the design of the smaller ship, at 172 feet in length to the *Merrimack*'s 275 feet, emphasized its maneuverability and defensive strengths.

In an effort to break the Union naval blockade and to reestablish strategic lines to RICHMOND, VIRGINIA, Confederate secretary Mallory sent the *Merrimack* to Hampton Roads, a harbor at the mouth of the James River. On March 8, 1862, the *Merrimack*, under the command of Capt. Franklin Buchanan, began an assault on the wooden ships of the Union naval blockade at Hampton

Roads. First attacking the *Cumberland*, the *Merrimack* encountered substantial cannon fire but sustained little damage while firing upon, then ramming and sinking the Union sloop. Turning to the frigate *Congress*, the *Merrimack* unleashed a cannon barrage that forced the Union ship to run aground and surrender, while a third Northern warship, the *Minnesota*, also ran aground. When Union troops on shore fired on the Confederate vessels accepting the surrender of the *Congress*, injuring a number of Confederates including Captain Buchanan, the captain ordered the demolition of the Union frigate. By the time darkness and low tide forced the *Merrimack* back to Norfolk, the Union had lost more than 300 men, including acting captain of the *Congress* Joseph Smith, while those Union ships not already run aground or destroyed were forced to flee the area.

The following morning, the *Merrimack*, now under the command of Lt. Catesby Jones as a result of Buchanan's injury, set out to complete the destruction of the *Minnesota*. However, the *Monitor*, having completed a perilous journey from New York during which the ship nearly sank twice, reached Hampton Roads in time to prevent the destruction of the *Minnesota*. The Union ironclad, commanded by Lt. John Worden, engaged the *Merrimack* in a four-hour battle during which each ship landed a number of direct hits on the opposing vessel at short range with little effect. Though the *Merrimack* ran temporarily aground during the battle, the *Monitor*, with only two guns firing a light powder charge, was unable to take advantage of the vulnerability. Late in the conflict, the *Monitor*'s pilothouse was hit, temporarily blinding Worden and forcing the ship to disengage, once again exposing the *Minnesota*. The *Merrimack*, however, fearing the receding tide and in need of ammunition and minor repairs, returned to the Norfolk Navy Yard, ending the battle.

Despite the prominent role of both warships in naval history as a result of their famous stalemate, neither was to enjoy a long life at sea. The *Merrimack*, forced to flee Norfolk, was unable to navigate safely up the James River and was sunk on purpose on May 10, 1862. The *Monitor*, though nimble by ironclad standards, was barely seaworthy in rough conditions and sank during a storm off Cape Hatteras on December 31, 1862.

## monuments

Honoring people, places, or events of enduring importance, monuments have long served to memorialize various aspects of U.S. history. Throughout the United States there are approximately 10,000 CIVIL WAR monuments in national parks, large cities, and small town squares. Monuments for those who fought in the American Civil War are etched in stone, cast in marble, and molded in brass across the country. Monuments provide a continuing history of the Civil War for modern-day Americans. Fraught with political and social meaning, they reveal much about the culture they represent, as well as the culture the United States has developed.

Civil War monuments and memory sites are found in cemeteries, national parks, and buildings. The town of Blakely, Georgia, boasts the “Confederate Flag Pole,” the last pole flying the Confederate flag at the end of the Civil War. Joliet, Illinois, is home to the “Civil War Bench,” which was dedicated to the city’s members of the Grand Army of the Republic. Shiloh, Tennessee, has Shiloh National

Military Park, some 4,000 acres of land that attracts nearly 400,000 visitors per year. Within Shiloh Park are thousands of stone monuments marking the place where various regiments fought. WASHINGTON, D.C.’s Farragut Square provides a scenic backdrop for a statue of Adm. DAVID GLASGOW FARRAGUT made from the propeller of his flagship the *Hartford*. While Civil War monuments obviously vary widely in type as well as design, they usually contain dates, such as days in battle, as well as lists of casualties, deaths, and those who fought, in addition to the names of the commanding officers and the date the monument was dedicated.

The money for Civil War monuments was raised by public and private sources. Washington, D.C.’s first two Civil War monuments (to Maj. Gen. John A. Rawlins and Lt. Gen. Winfield Scott, both erected in 1874) were paid for entirely by the federal government. Individual states frequently funded monuments like the Tiffany windows in the beautiful chapel at HOLLYWOOD CEMETERY in RICHMOND, VIRGINIA. VETERANS groups or women’s

associations often held fund-raising events and donation drives to raise money for statues commemorating war-related activities.

Typically, monuments began to be funded and erected around the 25th anniversary of the Civil War. Commonly, elaborate ceremonies and speeches accompanied the unveiling of a monument. At the 1908 dedication of Washington, D.C.'s monument to Gen. PHILIP H. SHERIDAN, DANIEL E. SICKLES shared with the audience his hope that the statue would "recall to those who come after us the magnitude and glory of the struggle for the preservation of the Union."

The victorious North initially dominated the commemoration of the war, while the South lagged. As time progressed, however, monuments to Confederate soldiers and leaders were designed and placed in many Southern towns and cities. Indeed, at battlefields such as Gettysburg, veterans of the Southern forces were allowed to erect monuments as early as the 1890s. In 1909 the UNITED DAUGHTERS OF THE CONFEDERACY erected a monument to Henry Wirz, commander of ANDERSONVILLE PRISON. The National Park Service at Gettysburg preserves ROBERT E. LEE's headquarters. The R. E. Lee camp of the United Confederate Veterans erected the Alexandria Confederate Memorial (Alexandria, Virginia) to honor their community's Confederate veterans.

America's Civil War monuments memorialize the struggle for the preservation of the Union and the ABOLITION OF SLAVERY, but they also honor the Confederacy's war effort. The Lincoln Memorial in Washington, D.C., and the huge General Grant National Memorial (Grant's Tomb) in NEW YORK CITY memorialize two of the Union's heroes. The cliff-sized, bas-relief equestrian figures of JEFFERSON DAVIS, THOMAS J. (STONEWALL) JACKSON, and Robert E. Lee at Stone Mountain, Georgia, do the same for Confederate heroes. Visitors can see the Confederate soldiers' monument on a stroll through the grounds of the Texas state capitol or pause at Augustus Saint-Gaudens's memorial sculpture of the 54TH MASSACHUSETTS REGIMENT on Boston Common.

Thus, the United States has preserved memories of the Civil War from both sides of the battle lines. This type of evenhanded commemoration reflects a general belief that both sides fought with equal valor during the war while it ignores the more divisive implications such as slavery and the legacy of racism. The verse by Reverend Randolph McKim, a Civil War veteran, on the Confederate monument in Arlington National Cemetery sums up best the ideology behind most Civil War monuments:

Not for fame or reward  
Not for place or for rank  
Not lured by ambition

Or goaded by necessity  
But in simple  
Obedience to duty  
As they understood it  
These men suffered all  
Sacrificed all  
Dared all  
And died

In addition to the social and cultural implications tied to the meaning of these monuments, there is the question of preservation. From a simple brass statue to a sprawling national park, it is not always easy to determine how, why, and to what end a monument or memorial should be preserved. In addition, the guardians of such monuments—the federal government, and individual states—rely on the funds of taxpayers and are therefore subject to their thoughts and opinions as well. Knowing when to clean a cannon on a particular battlefield may not be such a difficult task, but deciding where to locate a visitors center and how to interpret the monuments and battlefield is much harder.

**Morgan, John Hunt** (1825–1864) *Confederate soldier* John Hunt Morgan, known for his raids behind Union lines, was born on June 1, 1825, in Huntsville, Alabama, and raised in Lexington, Kentucky. As a young man, Morgan participated in the Mexican-American War and was promoted to first lieutenant in a cavalry regiment. After the war's conclusion he became a businessman in Kentucky. However, Morgan's interests remained in the military, and in 1857 he helped organize the Lexington Rifles, a local militia group. With the outbreak of the CIVIL WAR he quickly joined the Confederate forces and was commissioned captain of a squadron of cavalry. At first it was the squadron's main duty to scout. The following year Morgan's focus shifted to raiding. At the BATTLE OF SHILOH in April 1862, he was promoted to colonel as a result of his courageous actions.

Morgan became famous for his raids throughout Kentucky and Tennessee in 1862. His first engagement began on July 4, 1862, as Union forces moved toward Chatta-

nooga. Their operation was thrown into confusion by Morgan when he led two regiments on an attack and captured a cavalry post. He went on to capture two depots and had several engagements with militia encountered along his path. Morgan then moved from town to town throughout Kentucky, all the while destroying Union supplies. He returned to Tennessee on July 22 after covering more than 1,000 miles, capturing 1,200 prisoners, and losing fewer than 100 men. Morgan's raids did much damage to Northern morale.

Morgan went on to lead many more raids throughout the war. His successes included the capture of numerous Union posts; the destruction of RAILROADS, bridges, and lines of communication; and the capture of many prisoners of war. These raids caused great damage behind Union lines and cost the Union dearly in terms of men and money. After demolishing a strong garrison at Hartsville, Tennessee, Morgan was promoted to brigadier general on December 11, 1862. Though victorious during 1862, he faced failure during the latter half of 1863. While on a raid through southern Indiana and Ohio, Morgan and most of his men were captured by Union cavalry and imprisoned for several months. General Morgan managed to escape and return to the Confederacy, but the Ohio raid was considered a reckless adventure by many Southerners and damaged Morgan's reputation.

Nevertheless, in the spring of 1864 he was placed in command of the Department of Southwestern Virginia. Six months later he received command of the forces stationed at Jonesboro, Georgia. However, when he and his men reached Greenville, Tennessee, he was surprised by the Union army and shot and killed on September 4, 1864.

### **Morrill Land-Grant Act (Agricultural and Mechanical Colleges Acts) (1862)**

The Agricultural and Mechanical Colleges Act, better known as the Morrill Land-Grant Act for its sponsor, Vermont congressman Justin Morrill, established the land-grant college system, which widened the reach of higher EDUCATION while supporting agricultural, mechanical, and military education and research.

Morrill first introduced the bill in December 1857. A largely self-educated man, Morrill conceived of the legislation as a means of addressing the declining agricultural productivity of the 1850s. Taking inspiration from the agricultural schools and colleges of western Europe and

observing the development of new technical and vocational colleges in the United States, Morrill proposed the sale of federal lands to fund the creation of colleges in each state. A founding member of the Vermont REPUBLICAN PARTY, Morrill's vision of an expanded role for the federal government in funding education met with strong opposition from legislators from the South and West, including JEFFERSON DAVIS and James Mason, who found the bill to be questionable. Mason called it "an unconstitutional robbing of the Treasury for the purpose of bribing the states." Despite the opposition, the efforts of Morrill and Ohio senator BENJAMIN WADE led to the passage of the bill in both houses. JAMES BUCHANAN, however, at the urging of Louisiana senator John Slidell and other Democrats, vetoed the bill, questioning its necessity and constitutionality.

Reintroducing the bill in December 1861, Morrill strengthened its provisions, allotting each state 30,000 acres of federal land to be sold for each member of its congressional delegation. The language of the bill continued to emphasize the development of technical and agricultural curricula, endowing in each state "at least one college where the leading object shall be, without excluding other scientific and classical studies, and including military tactics, to teach such branches of learning as are related to AGRICULTURE and mechanic arts." Motivated by the onset of war, the inclusion of military training in the provisions of the bill allowed for the development of the Reserve Officers Training Corps (ROTC), an educational program from which military officers could be drawn. Without the presence of the Southern Democratic delegation to fight the bill, it encountered comparatively little opposition and passed both houses easily, by a 32–7 vote in the Senate and a 90–25 vote in the House. President ABRAHAM LINCOLN signed the bill into law on July 2, 1862.

The parameters of the act allowed for the founding or expansion of a number of prominent American institutions of higher learning, including Ohio State University, Cornell University, Massachusetts Institute of Technology, Rutgers University, the University of Wisconsin at Madison, and the University of California system. Providing the backbone of the American state college system, the Morrill Act aided in bringing an expanded body of academic programs, including agricultural science, botany, veterinary medicine, and engineering, to a larger proportion of the American population. Offering higher education at a lower cost and employing more liberal admissions standards, the land-grant colleges improved educational access for women, the working class, and marginalized ethnic groups. The formation of Alcorn State University in Mississippi, Hampton University in Virginia, and Claflin University in South Carolina after the CIVIL WAR gave America its first land-grant colleges for African Americans, though funding

from the Morrill act continued, in general, to serve predominantly white institutions during the remainder of the 19th century.

A second Morrill act, passed in 1890 under President Benjamin Harrison, increased and solidified economic support for colleges founded under the 1862 legislation. Denying funding to states “where a distinction of race or color is made in the admission of students,” the act encouraged the development of institutions of higher education for African Americans. In doing so, however, the act allowed for the construction of separate facilities for black and white students, declaring the legitimacy of a “separate but equal” doctrine affirmed six years later in *Plessy v. Ferguson*.

The land-grant college system created by both Morrill acts has continued to have a considerable influence on American education, now including more than 100 institutions that have granted more than 20 million degrees since 1862.

**Morton, Oliver P.** (1823–1877) *lawyer, politician*

Oliver Hazard Perry Morton served as GOVERNOR of Indiana during the CIVIL WAR. Morton was born in Salisbury, Indiana, on August 4, 1823. Following the death of his mother, he was raised by two stern Presbyterian aunts, from whom he developed a tendency toward inflexibility. As a young man, Morton studied law at Miami University, Ohio, and he was admitted to the Indiana state bar in 1846.

Morton enjoyed considerable success as a district attorney, and he developed a taste for politics as a Democrat. In 1854, when the Democrats abandoned the Missouri Compromise in favor of the KANSAS-NEBRASKA ACT, Morton changed his political affiliation to the People's Party, a precursor of the Indiana state REPUBLICAN PARTY. Two years later he unsuccessfully ran for governor as a Republican, but in 1860 he was elected vice governor to Governor Henry S. Lane. Soon afterward, the state legislature appointed Lane to the U.S. Senate, and Morton succeeded him.

As governor of Indiana, Morton was a highly efficient prowar administrator and a staunch political ally of President ABRAHAM LINCOLN. He strongly supported military action against the Confederacy and raised 150,000 troops, twice the state quota, for the UNION ARMY. He also took direct action against COPPERHEADS and other dissenters. His actions prompted a backlash, however, and in the ELECTIONS of 1863 the Democrats took control of the state

legislature. Undeterred, Morton declined to call the legislature into session. Instead, he ran state affairs using money raised from private sources and loans from WASHINGTON, D.C. In 1864 Indiana voters approved Morton's forceful performance in office, voting him to another term as governor and electing a Republican legislature. He continued facilitating Indiana's significant contributions to the ultimate Northern victory.

Though felled by a stroke in 1865, Morton remained a powerful ally of RADICAL REPUBLICANS during RECONSTRUCTION. Two years later the state legislature appointed him to the U.S. Senate, where he endorsed the FOURTEENTH AMENDMENT to establish African-American suffrage. Morton continued in his senatorial capacity until 1877, when he suffered a second stroke. He died at Indianapolis on November 1, 1877.

**Mosby, John Singleton** (1833–1916) *lawyer, Confederate soldier*

Confederate colonel John Singleton Mosby was a leader of the Partisan Rangers in northern Virginia from 1863 to 1865. Originally a scout for Maj. Gen. J. E. B. STUART in the First Virginia Cavalry, Mosby successfully lobbied for his own company, which grew from nine men to as many as 1,900 before the war's end, with no less than 400 serving at one time. His guerrilla operations in Virginia were an interminable nuisance to the Union picket posts in the defensive parameters around WASHINGTON, D.C., as well as to UNION ARMY efforts in the Shenandoah Valley. He constantly diverted troops, supplies, and attention away from intended Union campaigns, often capturing forces several times larger than his own.

Born on December 6, 1833, in Powhatan County, Virginia, Mosby was a sickly child, though intelligent and well read. He attended college at the University of Virginia in Charlottesville until he was expelled and imprisoned for shooting a fellow student. While in jail, he studied law, and upon his release he practiced law in Howardsville, Virginia. In 1857 he married Pauline Clarke of Frankfort, Kentucky, and they moved to Bristol, Virginia, a year later. In December 1860 he enrolled in the state militia and became a Confederate cavalryman when Virginia seceded in April 1861.

Mosby quickly became one of Stuart's most trusted scouts, obtaining information that helped pave the way

for Stuart's raid around the Union army during the PENINSULAR CAMPAIGN of 1862. Like Stuart, Mosby was flamboyant in dress. Sporting an ostrich plume in his hat, the slight, blond cavalier wore a gray cape with bright red lining. In January 1863, Stuart permitted Mosby and a detail of nine men from the First Virginia Cavalry to begin partisan, or guerrilla, operations in Loudoun County, Virginia. The outfit officially became the 43rd Battalion of Virginia Cavalry in June 1863, and Mosby was promoted to colonel on December 7, 1864. The battalion's operations were based in Loudoun and Fauquier Counties in north-central Virginia, an area that became known as "Mosby's Confederacy."

One of the best-known exploits of Mosby's rangers was the capture of Union Brig. Gen. Edwin H. Stoughton, who was captured while sleeping in a house in Virginia, five miles inside the line of Union defense. Other successful raids include the "Great Wagon Raid" and the "Greenback Raid" in August and October 1864, respectively. The rangers also succeeded in cutting TELEGRAPH wires, halting traffic on the important B&O Railroad, and hampering Union major general PHILIP H. SHERIDAN's supply line during his Shenandoah Valley campaign. Although determined and forceful in command, Mosby and his men never lapsed into the cruel and criminal behavior that characterized other Southern guerrilla units.

Rather than surrender his command, Mosby instead disbanded his battalion on April 21, 1865. After the war he practiced law in Warrenton, Virginia, and outraged fellow Confederate VETERANS when he expressed Republican sympathies and actively supported President ULYSSES S. GRANT's 1872 reelection campaign. Grant admired his former foe and wrote, "Since the close of the war, I have come to know Colonel Mosby personally. . . . He is able and thoroughly honest and truthful."

Under President Rutherford B. Hayes, Mosby served as consul in Hong Kong and helped expose and correct the abuses of his corrupt predecessors in office. He also served in the land office in southern Nebraska and as assistant attorney in the Justice Department. In 1908 he published an impassioned defense of Stuart's actions during the Gettysburg campaign, a topic of hot debate in Confederate circles after the war. Mosby died on May 30, 1916, at the age of 82.

**Murfreesboro/Stones River, Battle of** (December 31, 1862–January 2, 1863)

The Battle of Murfreesboro (or Stones River, as it is also known) brought a much-needed victory for the North, but one that came at a high price. Following his failed invasion of Kentucky in mid-November 1862, Confederate general BRAXTON BRAGG moved his Army of Tennessee into central Tennessee, where he aimed to reclaim a large portion of that state and, in the words of President JEFFERSON DAVIS, help the Confederacy "recover from the depression produced by the failure in Kentucky." Union forces, under the command of Gen. WILLIAM S. ROSECRANS, countered this move by taking position around Nashville. Not an aggressive fighter, Rosecrans settled into resupplying and resting his Army of the Cumberland.

Rosecrans's inaction quickly ended under pressure from politicians claiming that the Union war effort was moving too slowly. The December disaster at the BATTLE OF FREDERICKSBURG and Gen. ULYSSES S. GRANT's stalled invasion of Mississippi further eroded public confidence. In response, President ABRAHAM LINCOLN and General in Chief HENRY W. HALLECK urged Rosecrans to move on the rebels. On December 26, 1862, he began a general advance on Murfreesboro. A cold rain fell on the Union soldiers as they marched south from Nashville. Sleet, fog, and icy roads continued to plague Rosecrans, but by December 29 and 30 his army began to move in on the rebel troops.

At 6:30 A.M. on December 31, Bragg launched a major attack, sending his left-most divisions forward with instructions to drive back enemy forces while turning to the right. The attack caught the Union troops off guard and overwhelmed them. Within half an hour, two Union divisions had been driven from the field, disorganized and demoralized. However, Bragg's overly complex plan caused severe confusion among his troops. Federal resistance also stiffened as Union soldiers took strong positions among the cedar glades and limestone outcroppings.

The Confederates continued to fight, however, and by noon Union forces had been pushed back into a line almost perpendicular to their original position just in front of the main line of retreat, the Nashville Pike. The line along the Nashville Pike was a strong one on a slight rise in front of largely cleared fields. Confederate attacks were thrown back by rifle and artillery fire, and the Confederate advance ground to a halt in a series of poorly coordinated assaults. After a day of resting and watching Union forces dig in, on January 2, rebel troops launched an attack on the Federals' left flank. The Confederates were beaten back, suffering heavy casualties, especially among the Kentucky units led by Gen. JOHN C. BRECKINRIDGE. On January 3 Bragg retreated to a position near Shelbyville and Tullahoma, Tennessee.

Battle of Murfreesboro, December 31, 1862 (Library of Congress)

The battle was costly. Both armies lost nearly one-third of their total forces in killed, wounded, and missing. Of the 41,400 Federal troops, 12,906 were casualties; the Rebels suffered 11,739 losses out of a total of 34,739. Union forces alone had a 31 percent casualty rate, which made Murfreesboro the war's most deadly battle when casualties were looked at in proportion to the number of troops fighting. The forced retreat of the Army of Tennessee brought a glimmer of hope to the North and diminished some of the COPPERHEAD sentiment, but it left Rosecrans's army badly crippled. For the Confederacy, Murfreesboro was terrible news. Bragg, never popular with other commanders, was even less so now. Bragg went so far as to offer to resign, but JEFFERSON DAVIS left him in control, thus setting the stage for continued divisiveness and infighting within the western CONFEDERATE ARMY.

### music

“Without music, we would have no war.” ROBERT E. LEE’s famous remark accurately depicted the important role that music played in the CIVIL WAR. Both armies drew upon a common musical heritage and common musical practices. Field music provided communication, and brass bands created some sense of home while the songs of the camp filled the empty hours and warmed hearts made cold by war. From early in the morning until late at night, music filled the air in both Northern and Southern camps.

All army units had field music: drummers and fifers for the infantry and drummers and buglers for cavalry and artillery. Under the guidance of a drum major, the field musicians learned to play and perform dozens of calls, tunes that regulated a soldier’s day and allowed officers to com-

municate on the field. Drum majors carried heavy responsibility, since drummers were the youngest members of the armies. Johnny Clem of Ohio enlisted when he was only nine years old, and Johnny Walker from Wisconsin was 12 at the beginning of his service. These youngsters became heroes, and composers sentimentalized their exploits in songs like, “For the Dear Old Flag I Die,” “The Drummer Boy of Shiloh,” and “The Little Major” with its pathetic refrain, “can you friend refuse me water, can you when I die so soon?”

The young musicians controlled the movements of the army. Beginning with “The Long Roll” and ending with “Taps after Tattoo,” field music not only signaled meals, visits to the doctor and church, and camp duties but also sent men charging into the enemy or racing away from it. “Taps,” as modern listeners know it, was created as a method of ending confusion during battle. One general told his field musicians to play a melody based on his name, “Dan, Dan, Dan—Butterfield, Butterfield,” before sounding the required call for his men. Played slowly and sweetly, the phrase became the melody most associated with military funerals.

Brass bands played a central part in community life throughout the 1850s. Because of technological advances in the 1840s, brass instruments could be played using a simpler set of fingerings, thus allowing people to learn to play with minimal training. Books of music containing parts for small bands became widely available, and musical organizations sprang up in settlements of all sizes. Local militia units hired town bands to perform during drill weekends, and they recruited the band members to join them as regimental bands following Lincoln’s call for volunteers in 1861. It is estimated that the North paid as many as 10,000 musicians as much as \$15,000,000 during the course of the war. To decrease the cost of supporting the musicians, regimental bands were discharged in July 1862, and only the best units were retained as brigade bands.

Bands varied in size and quality. The 26th North Carolina band, reputed to be the favorite of Gen. Lee, had fewer than 10 players. Post bands, like the MARINE CORPS band, could have as many as three dozen players, but field bands averaged 12 to 18 players. Some, like the band of the 1st Brigade of Wisconsin Volunteer Infantry, contained excellent musicians. Others, like that of the 6th Wisconsin Infantry, knew only one song and played that badly. One Northern band practicing near the cook tent was chased away so their music would not “spoil the meat.”

Military band books contained a wide range of music. Musicians played patriotic airs such as “Columbia, the Gem of the Ocean,” “Red, White and Blue,” “Battle Cry of Freedom,” and “The Star Spangled Banner” at recruiting events and for military parades. Hymns and dirges, including “Mother, I’ve Come Home to Die,” were used for

church services and funerals. Waltzes, polkas, schottisches, and other dances helped pass the long hours of inspection and calmed men waiting to go into battle. Most bands had a huge supply of quicksteps—marches employed when moving the army from place to place along long, dusty roads. They also had a good number of arrangements of opera songs—the musical THEATER of the day.

The most prized arrangements were those of pieces written during the Civil War. Most Northern groups had one or more versions of “John Brown’s Body” about the famed abolitionist JOHN BROWN who led the raid on HARPERS FERRY, Virginia, before the war. The song had a simple melody and the words were repetitive, so soldiers sang it endlessly. Following a long day of visiting army camps, the song stayed in the mind of JULIA WARD HOWE. In the middle of the night she awoke and wrote a new set of words for the tune and called it “The Battle Hymn of the Republic.” Very lucky bands played “Hell on the Rappahannock,” a song complete with the thunder of battle provided by drums. The piece was made famous by the 114th Pennsylvania ZOUAVES.

Other popular compositions were by Henry C. Work and George F. Root, who owned and operated publishing houses specializing in sheet music. Root’s company published both “John Brown’s Body” and “The Battle Hymn of the Republic,” and Work composed equally popular tunes including “Marching Through Georgia,” which memorialized the movement of Sherman’s army across the South near the end of the war.

As the soldiers settled in for the night, officers frequently called for their band to come out to perform a serenade, a concert of sentimental and patriotic favorites. When a band was not present, the soldiers did the honors themselves, gathering around campfires to sing songs that reminded them of home. When feeling particularly patriotic, Southerners sang “The Bonny Blue Flag,” a song that listed the names of the secessionist states. Well aware of their precarious supply system, the Confederates marched along to the strains of “Goober Peas,” a jaunty tune honoring the lowly peanut. Northerners countered with the rousing “Battle Cry of Freedom” and “We Are Coming Father Abra’m.”

The music of the Civil War came from a shared heritage. Both sides claimed songs like “America,” and both shared the beautiful hymns of the day, such as “Abide with Me,” “Old Hundredth,” and “Rock of Ages.” The song most closely associated with the Confederacy, “Dixie,” was written by a New Yorker, Daniel Decatur Emmett, and was one of ABRAHAM LINCOLN’s favorite tunes. A minister from Elkhorn, Wisconsin, composed “Lorena,” the favorite love song of Southerners. Men of one side borrowed the songs of the other side. Confederates sang, “Oh, I wish I was in the land of cotton. Old times there are not forgotten,” while Northerners intoned, “A way

down south in the land of traitors, rattlesnakes and alligators.” This shared heritage caused one of the most poignant moments of the war. On one evening at the BATTLE OF MURFREESBORO, a Union band marched down to the river’s edge and struck up a patriotic air. As they completed the tune, a Confederate band struck up a song of their own on the other side of the river. Turn after turn the two bands played through their music books. Finally, the Union band began the song “Home, Sweet Home.” Softly the Confederates chimed in. As the two bands finished, the voices of the armies encamped on either side of the river took up the strain: “Be it ever so humble, there’s no place like home.”

Southerners worked to create music that was uniquely theirs. A new national anthem, “God Save the South,” appeared in the songbooks of many Confederate units but never achieved the popularity of “Dixie.” Writers composed new words for old, familiar songs, like the French anthem “Le Marseillaise.” The old Irish tune “The Wearing of the Green” became “The Wearing of the Grey,” and the German Christmas carol, “O, Tannenbaum” served as the basis for “Maryland, My Maryland.”

“O, Tannenbaum” was not the only holiday song loved by soldiers and used by musicians. “Jingle Bells” had been written shortly before the Civil War and was sung in many winter camps. Since bands had to perform during funerals, they needed a supply of dirges. By changing just a few notes, one band used an old Latin hymn, “O Come, All Ye Faithful,” to send the dead to their final resting place. One well-loved Christmas song had its origins in the Civil War. In 1863 Henry Wadsworth Longfellow composed a poem that was set to music in 1872. “I Heard the Bells on Christmas Day” reflected Longfellow’s agony following the death of his son at Gettysburg in 1863. He began, “I heard the bells on Christmas day / Their old familiar carols play.” Rather than a song of joy, the tune first became despairing but ultimately turned hopeful: “‘There is no peace on earth,’ I said, / ‘For hate is strong and mocks the song / of peace on earth good will to men.’ / Then pealed the bells more loud and deep: / ‘God is not dead nor does he sleep; / The wrong shall fail, the right prevail / With peace on earth

good will to men.’” The men of both sides embraced the ideas of that song.

The music of the Civil War clearly reflected the multi-ethnic nature of the United States. Many popular songs were written in dialect of one sort or another. While some used the speech patterns of slaves to add a touch of authenticity or comedy to their music, others bore witness to the hopes for a better future for African Americans found in songs like “Kingdom Coming.” A few songs, such as the “Marching Song of the First Arkansas,” recorded the entry of African Americans into the armed forces of the country and declared, “We have done with hoeing cotton, we have done with hoeing corn.” Dialect songs also indicate the presence of other groups within the armies. “I Goes to Fight Mitt Sigel” recorded the experiences of one German volunteer who fought “To Save der Yankee Eagle.” The tune was a popular humorous ditty, but band books indicate that ethnicity was treated with equal respect. Songs like “Russian Hymn” were a regular part of the Civil War repertoire.

The sentimental songs of home and of shared suffering brought the two sides together again after the war. “Tenting Tonight on the Old Campground,” with the haunting refrain “many are the hearts looking for the right, to see the dawn of peace,” became a kind of generational anthem. Songs like “Tenting,” which memorialized the Civil War efforts of both the North and South, had companion pieces particular to their region like “I’m a Good Ole Rebel” proclaiming the singer’s stand on postwar politics with the line: “I won’t be reconstructed and I don’t give a damn!”

## **Nast, Thomas** (1840–1902) *political cartoonist*

Perhaps the best-known political cartoonist of the 19th century, Thomas Nast was born on September 30, 1840, in Landau, Germany. His family fled the coming revolution in Germany by immigrating to NEW YORK CITY in 1846. Although Nast demonstrated exceptional artistic talent as a very young child, he was never particularly successful academically. As a result, Nast left school and obtained a position as a student of Theodore Kaufman, a German artist working in New York.

Attracted to the new illustrated weeklies, in 1855 Nast was hired as a junior artist for *Frank Leslie's Illustrated Newspaper*. Beginning in 1858, Nast worked for *Leslie's* and other papers, producing illustrations for *Harper's Weekly* and the *New York Illustrated News*. In need of income so that he could marry, Nast accepted a position as a permanent staff illustrator with *Harper's* in 1862. Nast's first wartime assignment for *Harper's* was to draw illustrations of Union encampments. Nast surpassed his journalistic assignment, however, by illustrating not only the physical results of battle but the emotional toll of separation from loved ones and sacrifice for the nation. His illustrations prompted Union soldiers to write hundreds of LETTERS thanking him and elicited an equal number of outraged letters from Southern readers who felt Nast was unfair toward the South.

Some of Nast's most powerful cartoons of the war years were those that supported ABRAHAM LINCOLN's 1864 reelection campaign. Nast used his drawings to suggest that Lincoln's critics, who favored making peace with an undefeated South, were betraying the sacrifices of the Union dead. He also attacked the COPPERHEADS, portraying them as supporters of a country in which the Constitution was irrelevant and the immorality of SLAVERY was acceptable. Several of Nast's drawings were reprinted as campaign pamphlets by Lincoln's supporters. By the end of the war, both Lincoln and ULYSSES S. GRANT expressed their appreciation for Nast's work, which they agreed had been beneficial to both morale and recruitment.

After the war, Nast's reputation soared. His cartoons addressed every political issue of the Gilded Age, from RECONSTRUCTION through the presidential campaign of Theodore Roosevelt. Although his cartooning continued, Nast's relationship with *Harper's Weekly* did not. By 1872, his strained relationship with the influential editor George William Curtis had become so widely publicized that at least one rival cartoonist made it the subject of his own work. Nast left *Harper's* in 1886 and attempted, unsuccessfully, to launch his own magazine.

Nast is best known for several drawings that established two enduring images of American life. His CIVIL WAR-era drawings of a fat, jolly Santa Claus provided a face for the American vision of Santa as a benevolent emissary of consumerism, while his 1870 drawing of a Democratic donkey and 1874 creation of a Republican elephant established the political iconography of America's two major parties. Nast's two most important political goals were the reelection of Grant for a second term and the destruction of the Tammany Hall political machine in New York City. Both goals were met by 1872, when Nast drew a melancholy cartoon suggesting that his career was over because there was nothing left to attack. This proved premature, as Nast went on to address IMMIGRATION, the Catholic Church, the Irish, the presidential campaign of James G. Blaine, and the Progressives.

Nast's work provides an interesting window into the contradictions of Gilded Age politics. On the one hand, he championed Reconstruction, opposed Southern vigilante racism, and vilified the anti-Chinese violence of railroad workers. On the other hand, he drew vicious images of African Americans, Irish immigrants, and Catholics, many of whom he portrayed as only barely human. He was capable of great compassion for suffering but could be petty and bigoted in his approach to the lives of the poor and oppressed. Although he abandoned the REPUBLICAN PARTY briefly over its selection of Blaine as a presidential candidate, for most of his life Nast was a committed supporter of the Republicans and of their presidents. His work

on behalf of Theodore Roosevelt prompted the new president to offer Nast a consulship in Guayaquil, Ecuador, in 1902, which Nast accepted because virtually every investment he had ever made had failed. The consular position offered a guaranteed income that Nast hoped would help his family. Instead of a tranquil sinecure, however, Guayaquil proved deadly: Nast died from yellow fever within six months and was buried in Ecuador.

## National Labor Union

Founded in Baltimore, Maryland in 1866, the National Labor Union (NLU) was the first nationwide association of trades unions in American history. Following the CIVIL WAR, unions made tremendous gains in terms of numbers and political strength. This upsurge led to the first “congress” of all labor organizations, held in Baltimore in August 1866. The result was the formation of the National Labor Union, which first consisted of 77 delegates representing some 60,000 workers. It established a program that called for all workers to join trade unions to have “an equal voice with the employer,” the granting of public lands to settlers only (as opposed to business interests), the abolition of contract labor, the establishment of cooperative workplaces (as opposed to wage labor), and most importantly the establishment nationwide of the eight-hour day. Within a span of a few short years, the NLU represented 640,000 workers.

William Sylvis, the president of the Iron Molders’ International Union, was elected president of the NLU in 1867 and helped shape it into an influential national organization. Sylvis was a hardworking leader who sought an end to the system of wage labor that was rapidly taking hold in the country. He also advocated increased involvement of people of color and women in the unionization process. Sadly, his early death at age 41 in 1869 left the labor movement bereft of one of its ablest leaders.

Because employers were largely successful in foiling the effort for a national eight-hour day, the NLU began to focus more on political reform and in 1872 formed the National Labor Reform Party. Unfortunately, the nominee Judge David Davis declined to run. The panic of 1873 the following year plunged the United States into a depression, which put unions on the defensive. This

depression sounded the death knell for the NLU, which soon collapsed.

## national military parks

National military parks commemorate CIVIL WAR battlefields and are owned and administered by the federal government. The impetus to establish national military parks was an outgrowth of a larger movement in the late 19th century to preserve large swaths of the American wilderness through governmental action. The first military connection to what ultimately emerged as the National Park Service occurred in 1886: U.S. cavalry units were assigned to patrol the Yellowstone region of Wyoming, Idaho, and Montana, which had been established as the first national park in 1872. As more national parks were established in the late 19th century, additional military personnel were assigned to their maintenance and administration. (This in turn gave rise to the military-style UNIFORMS and hats of today’s National Park Service rangers.) By the 1890s Americans were ready to set aside lingering resentments in order to establish national military parks in honor of Civil War dead, regardless of which uniform they had worn. Before the close of the 19th century the federal government had created two national MONUMENTS; a national historic site; a national memorial; and five national military parks, each of which has a national cemetery.

The first of the national military parks, the Chickamauga and Chattanooga National Military Park, was established on August 19, 1890, to commemorate the bloodiest engagement of the western theater. It consists of 8,106 acres straddling the border between Georgia and Tennessee. On August 30, 1890, it was followed by the Antietam National Battlefield. The site of the bloodiest single day in American military history, it covers 3,244 acres and attracts 270,000 visitors annually. Next was the Shiloh National Military Park, established on December 27, 1894. Set on 3,963 acres in southwest Tennessee, it marks the first large-scale, bloody encounter of the Civil War. The most famous Civil War site, Gettysburg National Military Park, came fourth. Created February 11, 1895, the 5,733-acre park includes the site where ABRAHAM LINCOLN delivered the GETTYSBURG ADDRESS. It is one of the most popular tourist attractions in the entire nation: Millions of visitors from around the world have trod its celebrated hills and ridges and paid their respects to its fallen. The century’s final addition was Vicksburg National Military Park,

founded February 21, 1899, to commemorate one of the war's most decisive Union engagements. Its 1,625 acres are littered with 1,325 historic monuments, cannon, and a fully restored Union gunboat, and its National Military Cemetery is the final resting ground for more than 17,000 Civil War VETERANS—more than are interred at ARLINGTON NATIONAL CEMETERY.

The first five national military parks were originally placed under the control of the War Department, while civilian-oriented sites were administered by the Department of the Interior. The National Park Service itself was created by Congress in 1916, and the numerous national military parks were formally transferred to its jurisdiction on August 10, 1933. Since that period four distinct categories have been adopted for locales designated as historical—national military park, national battlefield, national battlefield park, and national battlefield site—although the National Park Service does not differentiate among them from a preservation or management standpoint. Today there are no fewer than 70 battlefield and military sites associated with the Civil War, greatly expanded from the original five founded toward the end of the 19th century. Carefully groomed and maintained for the benefit of posterity, these parks serve to raise national awareness of the Civil War.

### National Woman Suffrage Association

To secure voting rights and fair treatment for women, ELIZABETH CADY STANTON, Susan B. Anthony, and others formed the National Woman Suffrage Association (NWSA) in 1869.

Women had gathered to secure the vote long before 1869 and the founding of the NWSA, most notably at the 1848 Women's Rights Convention at Seneca Falls, New York. During that time, women had gained the support of male advocates of temperance and ABOLITION. Nevertheless, after the CIVIL WAR, abolitionists—eager to pass the FIFTEENTH AMENDMENT to the Constitution—excluded a woman's right to vote from consideration. This effectively forced the leaders of the woman suffrage move-

ment to form their own organization, which soon split into two camps.

The National Woman Suffrage Association, headquartered in New York, represented the more radical branch, which rejected the Fifteenth Amendment because it granted voting only to freedmen. Besides working to secure voting rights through a new constitutional amendment, the NWSA fought to correct unfair practices used against women in the workplace and courtrooms. The NWSA sought reforms in divorce laws, child custody, property rights, college admissions, and wages for female workers. The NWSA published a newspaper, *Revolution*, outlining their positions.

Six months after the NWSA's founding, in November 1869, Lucy Stone and other former colleagues of Stanton and Anthony formed the less radical American Woman Suffrage Association (AWSA). The founders of the AWSA supported the Fifteenth Amendment and concentrated their efforts on securing the vote for women, paying scant attention to other social issues. The division between these two branches of the women's rights movement would hamper feminist advances in law and society for decades.

In 1890, after much negotiation, both organizations merged to become the National American Woman Suffrage Association. Stanton, who had been the first president of the NWSA, served as first president of the new organization.

Although the Civil War did not, in and of itself, delay the achievement of female suffrage or equal rights, the Fifteenth Amendment divided the women's rights movement so drastically that it remained at odds for almost 30 years.

### Native Americans

Despite nearly a century of negative experiences in dealing with U.S. government institutions, Native Americans actively participated in the American CIVIL WAR. More than 20,000 Native Americans fought in the war within the Union and Confederate armies, their reservations were turned into battlefields, and their homes and property were often destroyed. In some nations as many as one in four soldiers died from battle wounds. As soldiers, Native Americans fought in lesser known battles in the trans-Mississippi West as well as in the eastern theater at the BATTLES

OF SECOND BULL RUN, ANTIETAM, and THE WILDERNESS, the PETERSBURG CAMPAIGN, and SHERMAN'S MARCH THROUGH GEORGIA. As nations, the conflict provided new opportunities to pursue long-standing goals, and it also reinvigorated long-standing political divisions. In the end, however, the Civil War resulted in the further dispossession of lands and the further deterioration of self-rule.

At the Civil War's outset most Native Americans proclaimed their neutrality. Recognizing that the United States was preoccupied with the war, they took the opportunity to chase unwanted Christian missionaries and American agents out of their territories. Others hoped that the war would weaken the ability of the United States to further dispossess them of their lands. As the Civil War continued, at least for many Indians, neutrality became less possible and desirable. Rather than something to avoid, the Civil War became an opportunity to protect their self-interests.

When federal agents abandoned the Indian Territory in 1861, many Native Americans were receptive to Confederate agents and the alliances and offers of protection that they proposed. In summer 1861 the Confederacy had treaties with various Indian nations, including the Five Civilized Tribes (Choctaw, Chickasaw, Creek, Cherokee, and Seminole), as well as the Caddo, Osage, Quapaw, Seneca, Shawnee, and Wichita. The Confederacy also had alliances with some Indians who lived within the South. The Catawba nation in South Carolina, for example, enthusiastically supported the Confederacy, with nearly all of its eligible men enlisted.

The decision to support the Confederacy did not merely result from an attachment to SLAVERY. Although several Indian nations had sizable slave populations, their alliances with the Confederacy were also based on other needs. The Confederacy promised that it would assume all federal obligations to Native nations, guaranteed Indian self-determination, offered to protect the nations from invasion, allowed Indians to define citizenship for themselves, and asked for Indian representatives in the Confederate Congress. Such terms convinced Native Americans in the desirability of an alliance and the subsequent providing of troops for Confederate defenses. Other issues convinced individual Indians to participate. The CONFEDERATE ARMY offered EMPLOYMENT, often paid a bounty to those who enlisted, and provided an opportunity to prove in war one's manly virtue.

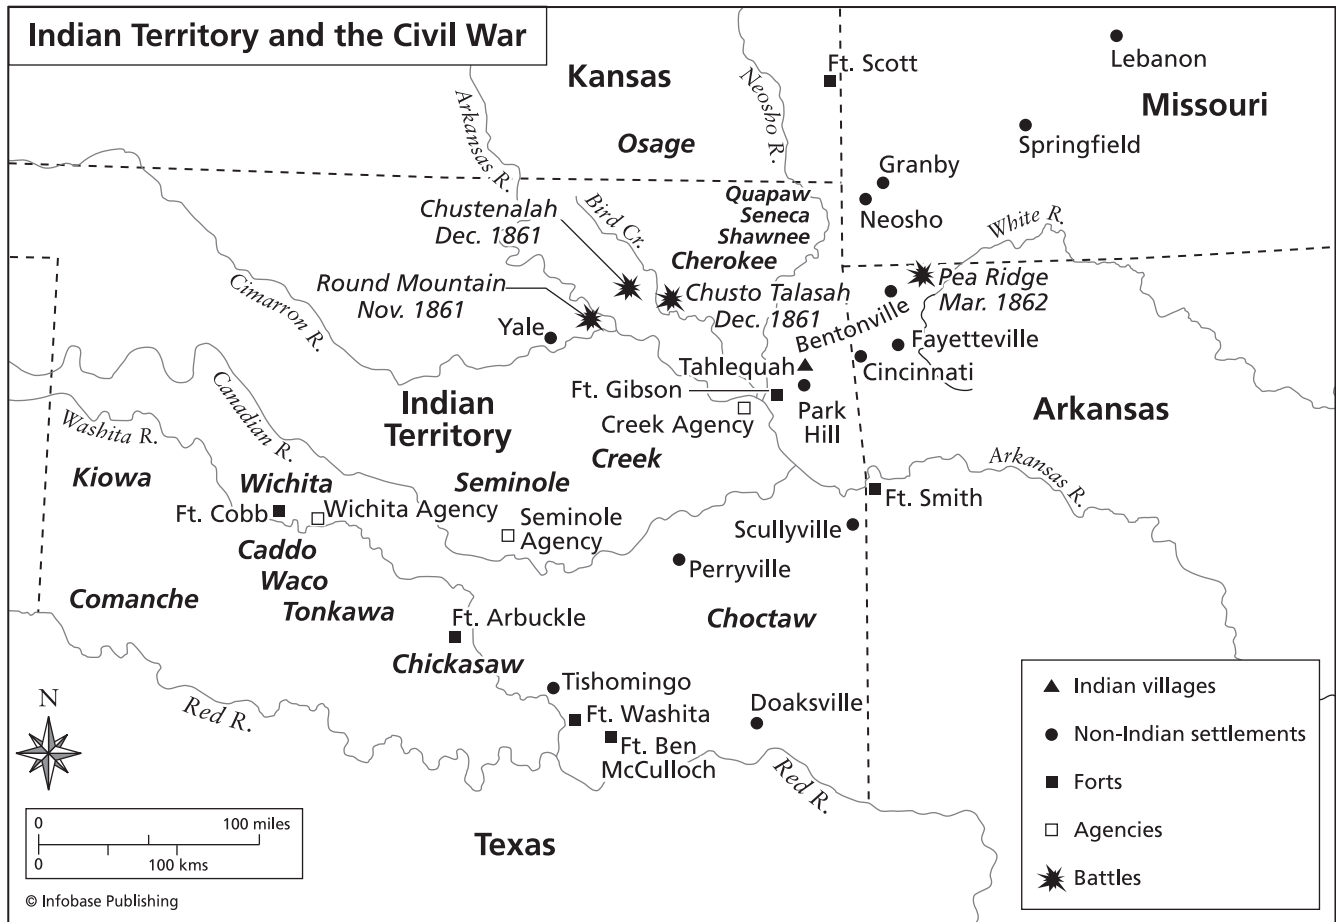

Other Native Americans pursued their self-interests by supporting the United States. By 1862, for example, 170 of the 201 men eligible for service in the Delaware Nation had enlisted in the UNION ARMY. Although the Delaware later signed a treaty of amity with the Confederacy, most Delaware Indians continued to support the Union war effort, especially as scouts. The Ottawa and Ojibwa Indians kept their distance from the war for its first two years. In

1863, however, they began to enlist in the "First Michigan Sharpshooters." Some Indians who remained in the Southeast, especially the Pamunkey in Virginia and the Lumbee in North Carolina, used the Civil War to further resist attempts by Southern states to limit tribal sovereignty. By joining the Union army, they sought to protect their communities and voice their opposition to the racist policies of their Southern neighbors. Throughout the war, Pamunkey men served as pilots on federal boats and Lumbee soldiers served as guerrilla warriors, especially as WILLIAM T. SHERMAN's men marched through the Carolinas. Other Union supporters left their nations and enlisted in the army as individuals. Seneca Indian ELY S. PARKER, for example, became adjutant general in the Union army and assistant to Gen. ULYSSES S. GRANT.

The alliances with the Confederacy resulted in the formation of four Native American regiments. The regiments, which originally comprised nearly 5,000 members of the Five Civilized Tribes, fell under the command of Col. Douglas Cooper. Later in the war, soldiers from the other Indian nations joined the regiments, and the number of Confederate Indians in the western theater alone surpassed 10,000. Even as the regiments were formed, however, dissent within the nations continued. Tribal leaders signed treaties but did not have the power to enforce compliance within the nations. As a result, the Confederate Indian regiments focused much of their efforts on the Civil War atmosphere within Native communities, especially within the Cherokee Nation.

By late 1861 the Confederate Indians had forced most supporters of neutrality in the Indian Territory to flee to Kansas. With the supporters of neutrality temporarily out of the way, several regiments of Confederate Indians joined Union troops in a series of battles. Their participation, however, magnified the distrust between Indian and white soldiers in both Confederate and Union camps. In several instances, especially after the BATTLE OF PEA RIDGE, Native troops found themselves accused of scalping and committing other "savage" atrocities.

In June 1862, most of the Native American REFUGEES in Kansas abandoned their stance of neutrality. They formed two Union regiments, invaded the Cherokee Nation, and captured the capital of Tahlequah and Fort Gibson. As a result, the Union gained the allegiance of many former Confederate Cherokee. The Confederate Cherokee forced the Union supporters to withdraw back to Kansas, and the Civil War in the Indian Territory continued. The following year, at the Cowskin Prairie Council, the pro-Union Cherokee denounced the Confederate Cherokee, invalidated their treaty with the Confederacy, abolished slavery, and elected a new chief, Thomas Pegg. That spring, with the support of federal troops, they went back on the offensive. They forced the Confederates out

of the Cherokee Nation and recaptured Fort Gibson and Tahlequah. Later that summer, federal troops destroyed a munitions depot in the Choctaw Nation and then captured Fort Smith, Arkansas.

The final year of the Civil War was its most destructive for Native Americans in the western theater. Union and Confederate sympathizers burned homes, slaughtered and stole livestock, and destroyed other forms of property. Guerrilla-style raids destroyed supply lines, and members of both armies took vengeance on each other.

Although Parker, the Seneca aide to Grant, drafted Confederate general ROBERT E. LEE's surrender on April 9, 1865, the Civil War did not immediately end for Native Americans. Three months later, on July 14, the Chickasaw and Caddo finally surrendered. In the months that followed, the United States punished the Native nations for their alliance with the Confederacy. The Five Civilized Tribes were forced to surrender much of their lands, grant a right-of-way through their territories to American RAILROAD companies, accept U.S. territorial governments within their lands, and, of course, abolish slavery.

After the Civil War, even those Native Americans who supported the Union found themselves punished. In the early years of RECONSTRUCTION, Indian nations of the West were the focus of attention of the U.S. Army. As more settlers moved west to make homestead claims or mining strikes, Native Americans were pushed farther and farther to the fringes of the U.S. territory. American hunters tapped into a new FASHION craze, the buffalo robe, and slaughtered the majority of the herds on the American plains, thus decimating a crucial Native resource. The battles and relocations subsequent to the BATTLE OF LITTLE BIGHORN in 1876 and the Nez Perce War of 1877 set the standard of postwar Indian settler and government relations.

## nativism

The flourishing of American nativism, or anti-immigrant sentiment, accompanied the great wave of Irish and German immigrants to American shores in the 1830s and 1840s. For the first time in the history of the nation, many of these newcomers were not middling- or upper-class Protestants but working-class Roman Catholics. Spawned in large part by the anti-Irish sentiments of English arrivals a generation earlier, nativist feeling in the United States took on a particularly anti-Catholic cast. As the church expanded both in number and in its acquisition of property, and as the new arrivals clustered together in crowded urban enclaves, anxious nativists blamed immigrants for the growing problems of the cities. In some quarters, it was even felt that Catholics posed a threat to America's sovereignty. Some nativists feared a Catholic conspiracy to establish a beachhead in the United States and deliver the country to papal rule.

As early as 1830, nativist publications such as *The Protestant* began to appear. These were followed by the formation of nativist societies, such as the New York Protestant Association. Encouraged by anti-Catholic speeches of famous ABOLITIONIST minister Lyman Beecher and tracts denouncing Catholicism written by Samuel F. B. Morse, nativism grew and occasionally erupted into violence. In the summer of 1834, for example, a nativist mob stormed and burned the Ursuline Convent in Charlestown, Massachusetts. By 1835 a nativist political party, the Native American Democratic Association, appeared in NEW YORK CITY. Although internal divisions caused the party to collapse, less than a decade later a more powerful nativist party, the American Party, appeared and permanently altered the existing political system. The American Party was more commonly known as the Know-Nothings Party because of party members' tendency to answer questions about the organization with the phrase, "I know nothing."

Coupled with an economic depression and increased competition for housing and jobs, the Know-Nothings appealed to artisans and merchants who hoped to stop the flow of immigrants. The party offered an alternative to what the public perceived as the Catholic-controlled DEMOCRATIC PARTY. Whigs, too, were seen as being too friendly to immigrants, and the Know-Nothings were particularly successful at converting Whigs to their cause. The primary agenda of the Know-Nothings consisted of diminishing or even eliminating the power of the immigrant voter by extending the naturalization period to 21 years.

The Know-Nothings only fielded a candidate in one presidential election. In 1856 they nominated former president Millard Fillmore to run against JAMES BUCHANAN, the Democratic nominee, and John C. Frémont, nominee of the newly formed REPUBLICAN PARTY. In losing to Buchanan, Fillmore attracted 22 percent of the vote and won eight electoral votes. Ultimately, however, the Know-Nothing agenda proved less compelling than Republican

arguments about the spread of SLAVERY. Shortly after 1856, the Know-Nothing Party disbanded. Although the Know-Nothing movement did not achieve its goal, it did provide the final blow to the faltering WHIG PARTY and furthered the nation's growing sectional division.

## New Orleans, Battle of (April 18–25, 1862)

A great Union victory of the CIVIL WAR occurred with the surrender of New Orleans on April 25, 1862. Control of the MISSISSIPPI RIVER was a major Union objective, and the capture of New Orleans was a crucial part of that control. During the 1850s New Orleans ranked as one of the Confederacy's most important cities. Not only did it lie at the mouth of a major supply and TRANSPORTATION route, it was also a major banking city. When New Orleans fell, the North gained more than just strategic geographic control.

As part of a two-pronged plan to gain control of the Mississippi River, Union Flag Officer DAVID GLASGOW FARRAGUT led a squadron of IRONCLADS and wooden vessels from the Gulf of Mexico to the mouth of the Mississippi. A veteran of the War of 1812 and the Mexican-American War, the 60-year-old Farragut drew upon extensive military experience. Confederate forces, who wrongly assumed that the attack on New Orleans would come from the area north of the city, inadequately defended the forts guarding the entrance to the Mississippi River.

Union ships, however, did not get through without a fight. Confederate garrisons opened fire with approximately 90 guns; the ships responded with twice as much firepower. Southern gunboats attempted to sink Union naval vessels but succeeded only in sinking the Union's *Varuna*. Confederates also tried to use fire as a weapon. Tugboats pushed flaming rafts toward Union ships and into the path of moving vessels.

In one and a half hours, all but four of the Union vessels managed to get past the one-mile area near the two forts and quickly traveled upriver to New Orleans. Thirty-seven Union men died in the initial battle and another 147 were wounded. Although they suffered fewer human losses, the Confederate garrisons ultimately mutinied and surrendered to Union forces.

As Farragut's men moved into New Orleans, an angry armed mob met them. Other rebel supporters burned bales

of cotton. Despite this, the large guns of the Northern military easily subdued the largely civilian population of the Southern city. Union control was quickly established even though New Orleans' mayor refused to surrender. Federal leaders responded by raising the Union flag over city hall.

On May 1, 1862, Maj. Gen. BENJAMIN FRANKLIN BUTLER led a fresh army of 15,000 troops to occupy New Orleans for the remainder of the war. The Union thus gained control of the Confederacy's largest and most international city. In coming months, Farragut used New Orleans as a base to launch successful campaigns against Baton Rouge, Louisiana, and Natchez, Mississippi, which further secured Union control of the Mississippi River.

The capture of New Orleans proved easier than maintaining peace. Many New Orleans citizens refused to recognize Butler and the UNION ARMY as their rulers. Upper-class women, in particular, went out of their way to be rude and disrespectful to the Federals. In retaliation, just two weeks after the city surrendered, Butler issued

an order that equated these women with prostitutes. An uproar ensued, and for this and other reasons, the controversial Butler was reassigned. Nevertheless, Union control of New Orleans and large parts of Louisiana benefited the Union cause and made a war hero of Farragut.

See also MISSISSIPPI RIVER WAR.

### New Orleans, Louisiana, riot (July 30, 1866)

The New Orleans riot in 1866 was one of several postwar civil disturbances that demonstrated to the North that white ex-Confederates were not accepting of Unionism and

Battle of New Orleans, April 18–25, 1862 (Library of Congress)

EMANCIPATION. Immediately after the CIVIL WAR ended, Northerners had turned their sights to governing the South. Angered by the refusal of the Louisiana legislature to grant African-American men the right to vote, and spurred by the enactment of BLACK CODES, RADICAL REPUBLICANS reconvened the Louisiana constitutional convention of 1864. Approximately 200 African-American Civil War VETERANS joined the 25 white delegates who arrived in New Orleans for the convention. This show of support by African Americans upset white former Confederates who felt that Louisiana would fall out of Southern white control and into the hands of freedmen and Northerners.

On July 30, 1866, the ex-Confederates and local residents along with New Orleans police attacked both the white delegates and African-American supporters. Although they raised white flags of surrender, delegates and supporters were shot as they fled the convention proceedings. In all, the fighting injured 100 persons. Rioters also killed 34 African Americans and three Northern white Radical Republicans. Witnesses remembered the riot being as violent as some of the Civil War battles in which they had participated. Although federal troops were called in to mediate the conflict, they arrived too late to help.

The New Orleans riot became an important benchmark for Northerners, illustrating the necessity of a firm RECONSTRUCTION policy. Along with the establishment of Black Codes, the disturbance helped Radical Republicans win a decisive victory in the November 1866 election.

## New York City, New York

By the middle decades of the 19th century, New York had become the biggest, wealthiest, and noisiest city in the United States. One observer exclaimed after a visit to the city that it “always kills me—dazzles, dizzies, astonishes, confounds, and overpowers poor little me.” New York City, then as now, was the financial capital of the country.

In 1850, a dozen years after the arrival of the first transatlantic steamer out of Great Britain, New York City was already handling half of U.S. imports and one-third of its exports. Railways developed extensively during the 1850s, so that the city was handling more rail tonnage than PHILADELPHIA, PENNSYLVANIA, and Baltimore, Maryland, combined. The extensive

trafficking of goods created an upsurge in the banking business; 600 of the nation’s 700 commercial banks maintained permanent accounts in New York to facilitate international transactions. Attracted by investment capital, hundreds of brokerage houses opened in New York City in the 1850s, helping to pull the stock market out of a depression.

Other ventures, such as insurance, prospered as well. Seventy-one of the 95 New York City insurance companies existing in 1860 had been established in the previous decade. New York became the fastest growing manufacturing center in the world. In 1855 one of every 15 people employed in U.S. manufacturing worked on Manhattan Island.

Manhattan also became the nation’s information center. As terminus of the first transatlantic TELEGRAPH transmission in 1858, New York City celebrated its position as a link between Old and New Worlds. The city’s telegraph system was used to link police stations, to coordinate train schedules, and to set security prices for the nation via the Stock Exchange. New York’s journalists became particularly dependent on the telegraph. They used it to collect news and other information, and in the process they transformed their newspapers.

The booming city was home to both major national political parties, who headquartered in New York City to have easy access to campaign contributors and organizational talent. Of course, local politics were also important in New York. William Tweed embarked on a fateful political career in 1851. By 1869 he had risen through New York City political channels to effectively control the city and the state. If corruption reigned with Tweed’s “machine,” so did reform movements flourish. Tweed’s downfall in the early 1870s was accomplished with the help of reformers and crusading newspaper reporters.

Great wealth and great poverty dominated New York City’s landscape. The lavish mansions of families like the Astors and the Vanderbilts were built on the most stylish street in America, Fifth Avenue. FASHION was set in New York, where fancy hotels boasted 500 rooms and restaurants hired French waiters. THEATERS flourished between Union and Madison Squares along Broadway. Department stores also graced Broadway Street, and middle- and upper-class women shopped on the so-called Ladies’ Mile in the afternoons.

New York City was the place where the most influential newspapers were published; it was also the center of the book, journal, and magazine publishing industry. By 1860 New York dominated newspaper publishing, producing more than 37 percent of the nation’s publishing revenue with only 2 percent of the population.

Monumental cultural institutions such as the Metropolitan Museum of Art and the American Museum of Natural History were established in the late 1860s and 1870s to

enlighten and bring pleasure to those so inclined. Beautiful Central Park, the largest open-space park in the country, assumed its modern form just after the CIVIL WAR.

New York's ECONOMY was tightly bound to Southern cotton. The Civil War interrupted this commerce, and in 1861 New York experienced a panic. Democratic mayor Fernando Wood, known as a champion of workingmen, advocated a neutral position for the city. Wood abandoned his suggestion in the wave of patriotic fervor after FORT SUMTER, SOUTH CAROLINA. In fact, the mayor authorized loans to equip Union recruits and to care for their dependents.

Many of the famed Union ethnic regiments originated in New York City. Later, the city was the site of the NEW YORK CITY DRAFT RIOTS that broke out in July 1863, the most deadly civil riot in the country's history. Overall, New York City quickly recovered from its loss of revenues from the South. The city's industrial output nearly outpaced that of the entire Confederacy. The exuberance continued after the war as New York City's growth and development exceeded every other city in the United States.

Alongside the power and the glory, however, was the reality of a teeming mass of immigrants whose lives were restricted to hard work and poverty. New York City was the entry to the vast majority of 19th-century immigrants; three of four European immigrants between 1840 and 1860 entered the country through Castle Island in the Port of New York. More than 3 million immigrants arrived in New York City over that period, but only one of every six remained in the metropolitan area. Still, that meant an increase of 750,000 inhabitants.

Out of sight and mind to comfortable New Yorkers, Irish Americans and members of other ethnic groups built the infrastructure—trains, subways, bridges, and skyscrapers—that sustained New York's remarkable economic growth to the end of the 19th century. The Irish settlements with long muddy streets and little wooden shacks offered a stark contrast to the ostentatious display of wealth in affluent neighborhoods. Homeless children lived in slums alongside the beggars, drifters, thieves, and prostitutes of the most notorious and crime-ridden wards (local government units) of New York.

Even for the wealthy, New York City streets had a distinctly unpleasant side, as manure from the endless parade of horse-drawn carriages, streetcars, and delivery wagons was deposited by the ton on the streets, the odor pervasive. Despite its drawbacks, New York City became the magnet for ambitious people from all over the country and, indeed, the world.

### New York City draft riots (July 13–17, 1863)

Between July 13 and July 17, 1863, a massive social disturbance wracked NEW YORK CITY. The draft riots resulted in more than 100 deaths and the destruction of numerous city structures, making this event the most deadly urban revolt in American history up to that time. The riots also revealed social divisions within metropolitan society in the 19th century, as political and racial tensions exploded in a single week of mayhem.

In March 1863 the Republican-controlled government passed the Conscription Act, a piece of legislation that made all men aged 20 to 35 and all unmarried men between 35 and 45 eligible for the draft. By this time, the CIVIL WAR was not going well for the North. Tensions between Northern Democrats and Republicans over the conduct and continuance of the conflict were increasing throughout the Union. The telegraphic press reported horrific stories of gory violence daily. There was a sense of uncertainty over the aims and possible outcome of the Civil War.

Engraving depicting a scene from the New York City draft riots (Library of Congress)

The unpopularity of the conflict was compounded by the Conscription Act. Perhaps the most distressing aspect of the act was a commutation clause that allowed draftees to pay \$300 to avoid service. This was seen by many poor white people as evidence of a common sentiment: This was a rich man's war but a poor man's fight. Many poor Democrats felt that the wealthy Republican elite was intent on carrying out a war while avoiding combat themselves.

A racial dimension exacerbated the tension. The Conscription Act was the latest in a series of Republican actions that were increasingly unpopular among many white Northerners. The EMANCIPATION PROCLAMATION, carried out several months earlier, was seen as threatening to working-class white people, who feared the competition of Southern black workers migrating into their cities. The Conscription Act itself declared that all "citizens" must register, and in 1863 this excluded African Americans, which contributed to the racist notion that white people were being unfairly sent to fight for a party that catered specifically to African Americans. Most white people at this time considered black people to be inferior to them, and lower-class white people felt threatened by the intrusion and social ascent (slight as it might have been) of African Americans. One distressed Anglo-American noted that "[they] say that [poor white people] are sold for \$300 whilst they pay \$1,000 for negroes."

The pressure created by racial hatred and working-class anxiety exploded in violence in New York City on Monday, July 13, 1863. Four hours before the draft was to begin there, hundreds of workers went on strike as a form of protest, meeting at Central Park for an antidraft rally. This was followed by a mass of people marching in a parade to the draft office carrying "No Draft" placards. Soon, things turned violent.

The first acts of violence were relatively minor. A few telegraph poles were cut down, and a hardware store was broken into and the axes inside stolen. Events quickly escalated, however, as Irish women used crowbars to uproot railroad tracks and small crowds of men attacked police officers. By noon, business had halted and the draft office had been burned to the ground.

The draft riots continued for the next four days, resulting in an unprecedented level of destruction and carnage. Police and firemen were violently attacked as symbols of hated authority. Because of this, they could not do their jobs as buildings burned and other people were assaulted. Rioters also focused their vengeance toward issues unrelated to the draft. Representatives of the Republican elite, symbols of pro-Union patriotism, and the city's population of African Americans were all targets. Pro-Republican and pro-abolitionist newspaper buildings were burned down as well as those used as federal government offices. The homes of noted abolitionists were ransacked, forcing some

to flee to the homes of sympathetic friends outside the city. American flags were even torn down, and some crowds shouted hurrahs for JEFFERSON DAVIS, the president of the Confederacy.

African Americans soon found themselves victims of the mobs. Blacks were harassed and assaulted by violent groups of white people. Any African American caught in the streets by the mob quickly found his or her life in danger. Some African Americans were lynched, their bodies afterward mutilated. A black orphanage was even set aflame. In all, 11 African Americans perished during the riotous week.

The draft riots ended after Union troops, detached from nearby Gettysburg, Pennsylvania, were mobilized to stop the unrest. Once the soldiers arrived in New York, they met with the crowd head-on and occasionally exchanged fire with them. Eventually, some 6,000 soldiers occupied the city. By Friday, July 17, the riots were suppressed and order reigned once again.

In addition to the 11 African Americans killed, two police officers, eight soldiers, and 84 white rioters died during the draft riots. Countless others were wounded. The damage to property was about \$1.5 million. The draft resumed again on August 19, but the New York City Council voted to hire substitutes for all those drafted in order to avoid another riot.

Historians have shown that the draft riots actually consisted of two phases. The first phase lasted from Monday morning through the early afternoon of the same day. This phase was marked by rioters who conceived of the violence as a demonstration of resistance against Republican leaders and what was seen as an unfair law. These rioters felt unjustly targeted by the Conscription Act and more specifically by the Republicans in power.

The second phase started Tuesday morning with the burning of Republican-related buildings. On this day, the most vicious assaults on African Americans began to occur, and the original leaders of the draft protest disappeared from the scene. Some of the people involved in the first day's protests even tried to stop the violence, though with little success. By mid-week the turmoil had reached its peak.

Largely carried out by working-class Americans (though not necessarily the poorest citizens) against those perceived to threaten their interests, the draft riots reveal much about racial, class, and political divisions in the North in the mid-19th century. The attacks on African Americans by large mobs of Irish-Catholic immigrants reflected older tensions resulting from the influx of black laborers into areas of unskilled labor that the marginalized Irish-American population struggled to control. Earlier in the same year, shipping companies had employed black laborers to break a longshoreman's strike of largely Irish workers

in New York, causing uneasiness within the Irish-American community.

The draft riots can also be understood as a means of comprehending the impact of the Civil War on 19th-century urbanites. Different groups of poor immigrants competed for jobs and political power in New York City during this time, and the riots illustrate one of the ways that working people expressed their grievances over conditions that they felt were oppressive. The targets of worker grievances, namely buildings of the Republican-dominated government and local African Americans, were representative of perceived threats to the independence and livelihood of many poor white people.

After the riots, fears of social upheaval remained a constant threat for many years. A book on the subject referred to the “volcano under the city” that could erupt at any time.

## nurses

The great medical demands of the CIVIL WAR accelerated the development of the nursing profession in America. While the first official nursing school was not opened until 1872, many on-the-job courses of training were available in medical relief and support during the war.

For the Union, Dr. Elizabeth Blackwell and Louisa Lee Schuyler helped form the Ladies (later “Women’s”) Central Relief Committee shortly after the war began. The committee’s many duties included identifying the army’s nursing needs, creating a bureau for examining and registering nurses, and coordinating medical relief efforts. The committee later participated in the successful petition sent to President Abraham LINCOLN for the UNITED STATES SANITARY COMMISSION. The earliest nurses training program in the country was begun in NEW YORK CITY under the auspices of the Women’s Central Relief Committee. Also, early in the war the Union appointed Dorothea Dix, a mental-health activist, to supervise a federal office. Dix attempted to set qualifications for becoming a nurse (to discourage young glory seekers), but others like New Jersey’s Cornelia Hancock and the famed CLARA BARTON saw the great need for volunteer care and bypassed official channels. Dix’s power was diminished in 1863 when Surgeon General William Hammond authorized male surgeons to make staff assignments for nurses.

In the Confederacy, Juliet Opie Hopkins operated a makeshift hospital in RICHMOND, VIRGINIA, from the outset of the war, and the government hired paid female nurses in 1862. Slaves also participated in menial nursing work, often assisting the volunteer white nurses who were their owners. The majority of the nurses (about 60 percent) during the Civil War were men. Injured and ill soldiers were detailed as nurses as soon as they were mobile, serving until they recovered sufficiently to return to their units. However, some civilian men volunteered as nurses, such as poet WALT WHITMAN, who worked in hospitals in WASHINGTON, D.C.

Women who served as nurses had to overcome many obstacles and performed hard work under horrendous conditions. One barrier was the overwhelming societal concern with modesty and virtue; for instance, one potential nurse from Alabama inquired whether “young ladies” would be expected to dress abdominal wounds or witness amputations. Mothers who wished to become nurses had to send their children to relatives, hire housekeepers, or bring their children along out of economic necessity. Many women were pressed into nursing duties in or near their homes at major battle sites. Such was the case for the Northern women of Sharpsburg, Maryland, and Gettysburg, Pennsylvania, and the Southern women of Vicksburg, Mississippi, Atlanta, Georgia, and countless other places.

Civil War nurses performed a wide range of tasks, many of them custodial. They constantly strove for cleanliness, tending hospital wards, washing ambulances, cleaning wounds, and bathing soldiers. They distributed food and medicine, and sometimes their duties extended to cooking and laundry. Women who were slaves, CONTRABAND, or working class were relegated exclusively to such menial tasks. A runaway from South Carolina, SUSIE KING TAYLOR, who became regimental laundress for the 33rd U.S. Colored Troops, exemplified how roles often expanded; she cleaned weapons, cared for horses and livestock, nursed soldiers with smallpox and typhoid, and taught them to read and write.

Nurses often were expected to help the wounded write home or to read LETTERS aloud when soldiers proved unable. In fact, nurses sometimes acted as unofficial religious counselors at the request of dying soldiers, administering last rites or accepting conversions. Some nurses claimed the role of recruiter, often convincing convalescent soldiers to switch allegiances. Women nurses added a degree of humanitarianism, refusing to give up on dying soldiers when doctors declared their injuries untreatable, standing in the way of amputations when they felt them unnecessary, or just by providing words and deeds of kindness and sympathy.

The typical female nurse in the Civil War was white, middle class, and single or widowed. Women hired as

nurses in the North made \$12 per month with a daily ration, and cooks and laundresses made \$6 to \$10 per month. Confederate nurses received better pay, as much as \$40 per month, but they had less buying power due to inflation and shortages. In all, approximately 30,000 women performed nursing work during the Civil War. By the end of the war, many hundreds of women, having served four years or more, could claim to be war VETERANS. The U.S. government in 1892 finally granted a monthly pension to nurses (excluding cooks and laundresses) who could prove at least six months of service. In the postbellum period, some of the women with war experience continued their important nursing roles or entered nursing administration or related medical fields. Many others took their newfound confidence into EDU-

CATION, JOURNALISM, social activism, or governmental work.

**Oates, William C.** (1833–1910) *lawyer, politician, Confederate soldier*

Lawyer, Confederate officer, and politician, William Calvin Oates was born on November 30, 1833, in Pikes County, Alabama. His parents, William and Sarah Oates, were poor farmers in the southeastern Alabama frontier. The first of eight children, William had little EDUCATION and was reared in a strict environment that stressed RELIGION and hard work. After a period of youthful rebellion, William settled down in Abbeville in Henry County and worked as a teacher, lawyer, and political activist in the state's DEMOCRATIC PARTY. In 1860 Oates opposed SECESSION, but after FORT SUMTER, he volunteered enthusiastically and raised his own company, the Henry Pioneers.

Captain Oates's company joined the 15th Alabama Volunteer Regiment, which fought with the Army of Northern Virginia in most of the major battles of the eastern theater. Oates, a large, bearded man who took to military life easily, was considered a good officer by his men. By the time he arrived on the Gettysburg battlefield on the afternoon of July 2, 1863, he was the lieutenant colonel of the 15th Alabama, part of Evander Laws's brigade in JOHN BELL HOOD's division and attached to JAMES LONGSTREET's corps. Ordered with his brigade to attack the far left of the Union line at a small hill named Little Round Top, Oates shouted, "Forward, men, to the ledge!" The battle raged back and forth for more than an hour, with the 15th Alabama retreating after the famous bayonet charge of the 20th Maine. Oates fought in several other notable battles and lost his arm to an injury in Petersburg in August 1864.

After the war, Oates returned to Abbeville, determined to rebuild the South. Affectionately called "the one-armed hero of Henry County," Oates established a successful law practice and was elected to the state legislature. He worked hard to reestablish the Democratic Party in Alabama during RECONSTRUCTION. Not a racial progressive, he nevertheless detested the KU KLUX KLAN's methods, preferring

nonviolent means of subverting the African-American vote. In the 1880s and 1890s, Oates served in the U.S. Congress, where he developed a reputation as an excellent legislator, always supportive of Southern interests. In 1894 Oates was elected and served two years as governor of Alabama. He spent the last years of his life giving speeches at VETERANS' reunions and writing his memoirs. William C. Oates died in Montgomery, Alabama, in 1910.

**Olmsted, Frederick Law** (1822–1903) *landscape architect, writer*

Landscape architect and author Frederick Law Olmsted was born April 26, 1822, in Hartford, Connecticut. Olmsted rose to prominence with his designs for New York's Central Park, Boston's Emerald Necklace, and the 1893 World's Columbian Exposition. In addition to his landscape work, Olmsted was a journalist and an administrator.

After leaving home and school at the age of 18, Olmsted embarked on a varied career path. During the 1850s, at the urging of *New York Daily Times* editor Henry J. Raymond, Olmsted traveled the southern United States, gathering information and writing essays on SLAVERY and the South. These essays were later published in a series of volumes: *A Journey in the Seaboard Slave States* (1856), *A Journey through Texas* (1857), and *A Journey in the Back Country* (1860). The essays were highly critical of the slave South, and Olmsted made unflattering comparisons with the free-labor system in the North. Olmsted went on to pursue JOURNALISM as a career until 1857, when he was appointed as superintendent of NEW YORK CITY's Central

Park, still in the planning process. While working as superintendent, Olmsted and architect Calvert Vaux submitted a design for Central Park. Their plan, called “Greensward,” was selected as the park’s ultimate plan.

Desiring to contribute to the Union war effort, Olmsted took a leave of absence in 1861 to serve as executive secretary of the UNITED STATES SANITARY COMMISSION (USSC). The commission acted as a citizen advisory and investigative board that supplemented the Army Medical Bureau. Eventually, the commission became a political power, advocating health-care reforms. As part of its services, the commission aided soldiers in various capacities, including providing medical supplies, inspecting and supplying military hospitals, and recruiting NURSES. Olmsted served for two years with the USSC and then moved to California.

In 1865 Olmsted returned to New York and his work with Vaux. As the champion of the “City Beautiful Movement,” Olmsted aimed to create city parks as oases of calm and harmony for people of all classes. Olmsted, both in partnership with Vaux and on his own, designed city parks in Buffalo, New York; Chicago; and Boston. The 1893 World’s Fair in Chicago showed off new industrial forms and included a “dream city” based on his architectural plans. In addition to city parks, Olmsted designed community developments, such as Riverside, Illinois (a Chicago suburb), some individual homes, and parts of Stanford University and the University of California, Berkeley.

Olmsted’s own architectural landscaping philosophies and design ideas left marks not only in the cities in which he built parks but also in those where his followers worked. For example, an Olmsted disciple built San Francisco’s Golden Gate Park. Olmsted changed the way Americans viewed architecture and the urban world. He died on August 28, 1903.

### Orphan Brigade (1861–1865)

Orphan Brigade is one of several names, including Kentucky Brigade and First Kentucky Brigade, for the Kentucky infantry brigade that served primarily with the Confederate Army of Tennessee. The origin of the name *Orphan Bri-*

*gade* is not certain. By one account, Gen. JOHN C. BRECKINRIDGE (a division commander whose command included the Kentucky Brigade) coined the name after a disastrous attack at the BATTLE OF MURFREESBORO in which the brigade’s commander Roger W. Hanson died. Riding among the survivors, he reportedly exclaimed, “My poor orphan brigade! They have cut it to pieces!” Most likely, however, the name emerged during the postwar period, reflecting the VETERANS’ memories of being cut off from home throughout the war. The name was popularized after 1882 by *Southern Bivouac* magazine.

The brigade was created during the summer and fall of 1861 and consisted of pro-Confederate Kentuckians from no less than 32 counties. Prevented by their state’s neutrality to organize within Kentucky, these units gathered in two camps of instruction (Boone and Burnett) near Clarksville in northern Tennessee, where they were formed into four infantry regiments, three artillery batteries, and a squadron of cavalry. For most of its service, the brigade consisted of the Second, Fourth, Fifth, Sixth, and Ninth Kentucky infantry regiments and Robert Cobb’s battery of artillery. Roughly in this form, the brigade fought at Fort Donelson; Shiloh; the summer 1862 defense of Vicksburg; Murfreesboro; Jackson, Mississippi; Chickamauga; Missionary Ridge; and the ATLANTA CAMPAIGN. Virtually destroyed during the summer 1864 campaign in Georgia, the Kentucky Brigade was reorganized as mounted infantry under Confederate cavalry commander JOSEPH WHEELER and helped resist SHERMAN’S MARCH THROUGH GEORGIA. During the last months of the war, the Kentuckians operated in west-central South Carolina and east Georgia. Five hundred men, of an original 4,500, officially surrendered at Washington, Georgia, on May 6–7, 1865.

Following the CIVIL WAR, former members of the brigade made significant contributions to Kentucky public life. A partial list of positions held by brigade veterans includes many state legislators, U.S. district attorneys, superintendents of public instruction, one GOVERNOR, three cabinet members, six militia leaders, two state supreme court justices, four congressmen, a mayor of Louisville, and one nominee for vice president of the United States.

### Ostend Manifesto (1854)

The Ostend Manifesto was a statement prepared in 1854 by U.S. ministers to Great Britain, France, and Spain meeting in Ostend, Belgium. The statement recommended that the United States either buy the island of Cuba from Spain or, if Spain refused to sell, take the island by force.

While most of the rest of Latin America had gained its independence in the revolutions of the 1810s and 1820s, Cuba had remained a Spanish colony. The island's value to Spain was in its sugar PLANTATIONS. Worked by 400,000 African-Cuban slaves, the plantations produced one-third of the world's sugar, with considerable profit both for planters and the Spanish government.

Advocates of U.S. expansionism had set their sights on Cuba as early as the 1810s. For these Americans, Spanish control was an affront to the independence movements

that had swept the Western Hemisphere between 1776 and 1830. Some also argued that Cuba, a mere 90 miles from Florida, might at some future date pose a threat to United States security. The greatest enthusiasm for Cuba came from pro-slave Southerners, who saw the island as a stepping stone toward U.S. control of a "golden circle" of SLAVERY extending around the entire Caribbean Sea and Gulf of Mexico. All these views were summed up by a contributor to *De Bow's Review*, who in 1850 declared, "[T]he possession of Cuba is indispensable. . . . Call it the lust of dominion, the relentlessness of democracy, the passion for land and gold, or the desire to render our interior impregnable by commanding the keys of the Gulf—the possession of Cuba is still an American sentiment."

With U.S. victory in the Mexican-American War, expansionists insisted that the United States annex Cuba.

This political cartoon singles out James Buchanan, U.S. minister to Britain, for his role in the Ostend Manifesto controversy. (Library of Congress)

In 1848 President James K. Polk offered Spain \$100 million for the island, earning an angry Spanish rejection. In 1849, 1850, and 1851, FILIBUSTERING expeditions were organized to drive the Spanish from Cuba. Some senators criticized Southern “marauding” from U.S. shores, but Southerners such as Louisiana senator Pierre Soule defended the expeditions.

When President FRANKLIN PIERCE appointed Senator Soule his minister to Spain, Soule immediately set out to negotiate Cuba’s purchase on behalf of the United States. However, Soule’s blusters, threats, and blunt diplomacy angered Spanish government officials. In the wake of Soule’s failure, Pierce’s secretary of state, William Marcy, instructed JAMES BUCHANAN, U.S. minister to Britain, and John Mason, U.S. minister to France, to discuss the matter with Soule. The three met in the Belgian city of Ostend in October 1854 and soon drafted a statement that they then sent home to the United States.

The ministers argued first that U.S. purchase of Cuba would prevent the island from falling into the hands of stronger European powers and more deadly potential enemies than Spain. In addition, they painted a bleak picture of a Cuba torn by slave revolts and creating an “Africanized” republic that would present a challenge to the United States. “We should . . . be unworthy of our gallant forefathers,” they wrote, “should we permit Cuba to . . . become a second St. Domingo [Haiti], with all its attendant horrors to the white race, and suffer the flames to extend to our own neighboring shores, seriously to endanger or actually to consume the fair fabric of our Union.” Outside U.S. control, Cuba represented an “unceasing danger, and a permanent cause of anxiety and alarm.”

Buchanan, Mason, and Soule depicted Cuban white people as desperate for liberation from the “extreme oppression” of Spain’s “corrupt, arbitrary, and unrelenting” colonial government. They also noted that Spain had proven too weak to halt the illegal importation of slaves from Africa. This, they claimed, was a job only the United States could accomplish. In seizing Cuba, the ministers argued, the United States would be advancing the cause of human rights.

Published throughout the United States and Europe, the Ostend message, called a “manifesto” by its detractors, failed to persuade Spain. The Spanish government, far from being intimidated into selling Cuba, opened discussions with potential European allies to defend Cuba against U.S. attack. At home, antislavery activists used the manifesto to justify the creation of the new REPUBLICAN PARTY and defeat Southern efforts to extend its “slaveocracy” into Latin America.

With the Ostend Manifesto shaping up as a disaster for U.S. foreign relations and for the DEMOCRATIC PARTY, Secretary of State William Marcy disavowed the entire statement, blamed Soule for the debacle, and forced his resignation as minister to Spain.

Though the United States made no further effort to acquire Cuba during the 1850s, the Democratic Party supported annexation of Cuba until the eve of the CIVIL WAR. In 1898 the United States went to war against Spain over Cuba. As a result of the Spanish-American War, Cuba won its independence; however, U.S. involvement in Cuban affairs continued well into the 20th century.

### Overland campaign (May–June 1864)

The Overland campaign was part of the wide-ranging Union effort to win the war after the stunning victories of the summer and fall of 1863. When the approximately 120,000-strong Army of the Potomac (versus ROBERT E. LEE’s 65,000-man Army of Northern Virginia) crossed the Rapidan River in Virginia in the first week of May 1864, it carried with it the high hopes of a war-weary Northern people for a quick end to the seemingly endless conflict. A weakened South, low in both materiel and morale, could not possibly withstand the mighty numbers and logistical power of the two major Northern armies gathered in Virginia and Tennessee. They were poised to strike and destroy under the direction of Gen. ULYSSES S. GRANT and WILLIAM T. SHERMAN, the victors of Shiloh, Vicksburg, and Chattanooga and heroes of the Union’s western armies.

At least that was the common wisdom in early 1864. Despite the optimism, there was much reason to be suspicious of an easy victory, as President ABRAHAM LINCOLN and General Grant knew all too well. Experience had demonstrated that superior numbers and overwhelming industrial power did not translate into winning the war, at least not without the kind of military leadership that would bring decisive victory on the battlefield. Leadership was particularly deficient in the hard-luck Army of the Potomac, the Union’s principal military unit in the eastern theater, despite its recent (and only) clear-cut victory at Gettysburg under the command of Gen. GEORGE GORDON MEADE. That is why Grant, by this time commander of all Union forces, chose to personally accompany the eastern army and direct its operations, even at the risk of confusing the chain of command. Gen. Lee was a formidable foe, and his soldiers had bested their opponents in many battles fought in 1862 and 1863 on some of the same ground across which the Army of the Potomac was now marching. Grant’s plan for victory was simple and straightforward: Force the Army of Northern Virginia out into the open and defeat them in battle, then “On to Richmond.” With other Union armies also on the attack, the war could be over shortly, if all went well.

All did not go well, however. The movements of the Overland campaign brought with it the dramatic unraveling of the Union strategy against Lee. Grant's attempt to move swiftly through a thick patch of overgrown brush and trees known locally as the Wilderness (May 5–6) was foiled as Lee adeptly blocked his way and forced a battle, which resulted in a tactical victory for the rebel defenders. The two-day BATTLE OF THE WILDERNESS resulted in 18,000 Union and 11,000 Confederate casualties. A shock for Lee came when Grant refused to pack up and go home, as so many Union commanders had done before him.

Grant moved south from the Wilderness and brought his army to Spotsylvania Court House, where Lee's men were waiting behind a line of strong earthworks. The BATTLES OF SPOTSYLVANIA raged back and forth for several days. The Confederates fought off repeated Union assaults behind a defensive position known as the "Mule Shoe." On May 12 the Federals broke through a part of Lee's formation, but the Southerners stood their ground for 22 hours of fighting in what came to be called the "Bloody Angle." On May 18, after many days of constant fighting, Grant turned southeast again, but Lee continued to thwart the UNION ARMY's thrusts toward RICHMOND, VIRGINIA, at North Anna River (May 23–27), Totopotomoy Creek (May 26–30), and Bethesda Church (May 30).

The spring of 1864 was one of Lee's finest moments, when he switched from his favored aggressive style to a more defensive approach, thus prolonging the life of the Confederate nation. Weakened by illness, handicapped by the deaths and injuries of Gens. JAMES LONGSTREET, RICHARD S. EWELL, AMBROSE P. HILL, and J. E. B. STUART, and faced with a much larger opponent, Lee and his army adapted brilliantly. He knew that the Confederacy's best hopes rested on a failure of Northern will to carry on the war, once the high cost of these battles was widely known. Lee hoped Lincoln would lose the presidency and that a Democratic administration favorable to Southern independence would bring the participants to a conference table. The stakes were high, indeed.

Thus, decisions made by both Grant and Lee (and backed fully by their presidents) turned the war into a relentless, exhausting, horrific experience for the soldiers. Cold Harbor, the misnamed tiny crossroads town deep in rural Virginia, is a case study of the new style of warfare. The BATTLE OF COLD HARBOR, the last fight of the Overland campaign, began on the morning of June 3, with 59,000 well-entrenched Confederates facing 109,000 Fed-

erals across a seven-mile front. The assault was a disaster, and before the end of the day, Grant stopped the fighting. The details of the carnage retain their power to shock and sadden. Grant's massive frontal assault on entrenched Confederate lines failed miserably. That terrible day saw some 7,000 Union casualties compared with less than 1,500 for the rebels, shattered three Union corps, and lent truth to the anguished memories of a Southern soldier who wrote, "It was not war, it was murder."

Grant and Lee's movements across the countryside of Virginia came to an end when Grant ordered the Army of the Potomac to cross the James River and head for Petersburg, the vital rail center of the Confederacy. There, he would stay for 10 months before the fall of Richmond.

The costs of the Overland campaign were huge. For 40 days, Grant had waged a war of attrition in a series of battles that resulted in 60,000 Union losses against approximately 35,000 Confederate. Both sides, however, were determined to prevail and, even in those dark months, found the will to continue fighting. Undeniably, the costs of the war escalated dramatically in 1864, and, undeniably, Ulysses S. Grant, called "the butcher" after Cold Harbor, played a large role in that escalation, as did Robert E. Lee. But the bigger picture must be kept in mind, and that bigger picture is neatly summed up by Gen. Horace Porter, of Grant's staff, who described his superiors' attitude after June 3: "General Grant, with his usual habit of mind, bent all his energies toward consummation of his plans for the future." The Overland campaign, though wasteful and bloody, brought Lee's army to a state of immobility, backed up against Petersburg and Richmond. In the end, Grant's plans, fully endorsed by Lincoln, were consummated, as the armies he commanded successfully defeated the Confederates, restored the Union, and brought (although imperfectly realized) freedom to 4 million slaves.

**Pacific Railroad Act** (July 1, 1862)

By the 1840s the United States had grown to be a bicoastal nation. Cheap land and gold fever had sparked a westward exodus of Americans that would continue through the end of the century. When traveling by horse or horse-drawn wagons, the trip was long and arduous, with harsh terrain, a punishing climate, and sometimes hostile NATIVE AMERICAN tribes. A better mode of TRANSPORTATION was needed, not only to facilitate migration but also to speed the exchange of manufactured goods and the movement of soldiers and military equipment.

The obvious solution to most Americans was a railroad that would connect the West to the East. RAILROADS had come to the United States in the early part of the 19th century, and by the late 1840s new track was being laid at a brisk pace in the eastern part of the country. On December 9, 1852, the Pacific Railroad of Missouri (or P.R.R.M) made its first trip, in the process becoming the first railroad to travel west of the MISSISSIPPI RIVER. At that point, many Americans sensed that the construction of a transcontinental railroad was imminent.

It was not to be, however. As early as 1832, Congress had begun considering the possibility of building a transcontinental railroad, and invariably plans were stalled by political bickering. Some congressmen were skeptical that a transcontinental railroad could even be built. Included among the naysayers was powerful Senator Daniel Webster, usually a firm advocate of internal improvements. There was also little agreement about how such a project would be paid for—with government money, private capital, or a combination of both. The primary issue of contention, however, was the route that the proposed railroad would follow. Southern leaders and congressmen, led by JEFFERSON DAVIS, argued that the railroad should travel through the South. Northern leaders and congressmen, led by STEPHEN A. DOUGLAS, argued that the railroad should travel through the North. Congress appropriated \$150,000 for a survey of four possible routes with hopes of resolving

the problem, but the results of the survey indicated major problems with each of the possible routes, and so the stalemate remained.

The turmoil surrounding the plans for a transcontinental railroad would not be resolved for nearly a decade. Two key developments finally allowed Congress to agree on a plan for action. First, the Southern states left the Union. Second, two independent engineers named Theodore Judah and Grenville Dodge presented complete surveys of a Northern route for the railroad that was not nearly as problematic as other routes that had been considered. With a viable route all mapped out, and no substantial opposition, Congress passed the Pacific Railroad Act, signed into law by President ABRAHAM LINCOLN on July 1, 1862. The act granted two charters, one to Grenville Dodge's employers, who would take the name Union Pacific, and one to Theodore Judah's employers, who would be known as the Central Pacific. The roads' charters granted 10 miles of land for each mile of track laid, plus loans of \$16,000 a mile for rail laid on plains, \$32,000 a mile for land in the Great Basin, and \$48,000 a mile for land in the mountains. The two roads were supposed to meet, though the location where they would do so was not specified.

Although everything was in place for work on the transcontinental railroad to begin, little progress was made over the course of the next four years, because the CIVIL WAR tied up most of the nation's available capital and manpower. In 1866, however, construction began in earnest. The Central Pacific, utilizing mostly Chinese labor, built eastward from Sacramento, California. The Union Pacific, utilizing mostly VETERANS and German and Irish immigrant labor, started in Omaha, Nebraska, and built westward. Constructing the railroad was difficult, dangerous work. In particular, laying tracks through the Rocky Mountains required dynamiting and removing countless tons of rock, all at the expense of dozens of workers' lives.

After three years, the railroads were nearly complete, and the government decreed that they should meet at Promontory Point, Utah. On May 8, 1869, representatives of the Central Pacific and Union Pacific laid the last rails and hammered in the final spikes. The railroad was complete. Americans took pride in the accomplishment, many believing that the country had fulfilled its “Manifest Destiny” to conquer the North American continent. The Pacific Railroad Act also set a precedent for cooperation between government and private business. Over the course of the next three decades, the federal government would grant 116 million acres in land and would advance \$64 million in loans to western railroads. With so much assistance from the government, trans-Mississippi railroad mileage grew from the five miles built in 1852 by the P.R.R.M. to 72,000 miles in 1890. By 1893 there were five different railroads stretching from the Atlantic to the Pacific.

### **panic of 1857**

During the Kansas controversy of 1857, as the dispute over SLAVERY grew more tense, a financial crisis struck the United States. Many northern businessmen and workers blamed the economic slide on the Tariff Act of 1857, in which a Southern and Democratic controlled Congress had lowered duties on imported goods to their lowest rates in nearly 50 years. Before the panic struck in 1857, the United States had enjoyed more than a decade of general economic growth and prosperity. RAILROADS, textiles, AGRICULTURE, and manufacturing all flourished during these years. The number of banks in the country doubled within only a few years in the 1850s, and the prices of stocks and bonds also rose. Some of this expansion was a result of the Crimean War (1854–56), during which western European nations lost access to Russian agricultural products and turned to the United States to make up the difference.

As was the case with previous economic crises, the problems in 1857 were partially international in their origins. Much of America's economic growth was fueled by investment from Europe, especially Britain. The price of American stocks and bonds in 1856 and 1857 began to decline as European nations began to sell off their interests

in the United States to pay for their involvement in the Crimean War and other international ventures.

As a result, American banks lost part of their assets, and some enterprises, especially in textiles, suspended operations. The economic good times of the previous decade had encouraged much speculation and borrowing, and much of the growth was fueled by paper money. A run on banks by nervous depositors resulted in the banks calling in loans to pay off their customers with specie. Before long a general panic began to sweep the nation, sped along by a relatively new communications system, the TELEGRAPH, which quickly relayed the increasingly grim financial news around the country.

As with previous panics in 1819 and 1837, the panic of 1857 saw factory shutdowns, business failures, a steep decline in prices, and a rapid increase in unemployment. In 1857 many railroads, an increasingly important part of the national ECONOMY, went out of business. In several cities there were demonstrations and marches by the unemployed, and one crowd in New York City menaced a federal customhouse on Wall Street that had \$20 million in its vaults. Fears of widespread unrest and disorder were unfounded, however. The panic was relatively short-lived and not as severe as it might have been. One thing that did result was a religious revival in which many people, especially in the North, gathered at prayer meetings to reflect on the immorality of extravagant living, believed by some to have contributed to the crisis.

Coming as it did during a tense moment in the growing sectional crisis over slavery, the panic of 1857 had political implications as well. The new REPUBLICAN PARTY blamed the national's financial troubles on the Democrats, especially the Southerners who had been most responsible for lowering the TARIFFS. The Republicans pledged to work for higher tariff rates, which most Northern manufacturers and workers supported. They also bid for the support of farmers by proposing a HOMESTEAD ACT by which the federal government would give 160 acres of land free of charge to people who would settle on it. These appeals helped the Republicans in the ELECTIONS of 1858 as the nation moved closer to CIVIL WAR.

—Jason Duncan

**Parker, Ely Samuel** (1828–1895) *Seneca chief, Union soldier, commissioner of Bureau of Indian Affairs*

Seneca Indian chief, adjutant general in the U.S. Army, and commissioner of the Bureau of Indian Affairs, Ely Samuel Parker was born in 1828 just outside the Tonawanda Reservation in New York. Parker attended a Baptist mission school as a child and later the Yates Cayuga Academies. Parker studied law, but his lack of citizenship (due to his NATIVE AMERICAN heritage) prohibited him from being admitted to the New York bar.

In 1846 Parker lobbied in WASHINGTON, D.C., as a representative of the Tonawanda Reservation and in 1851 became a sachem of the Iroquois (Six Nations) Confederacy. Six years later he negotiated a treaty that enabled the Tonawanda Seneca to purchase two-thirds of their reservation land back from the United States.

When the CIVIL WAR began, Parker proposed raising a New York regiment of Iroquois soldiers and offered his engineering services to the UNION ARMY. Both offers were refused. In 1863 he obtained an appointment as a captain in the UNION ARMY and soon served with Gen. ULYSSES S. GRANT at the Battle of Vicksburg. Parker later served as Grant's aide-de-camp during the 1864–65 campaign against the Army of Northern Virginia. On April 7, 1865, Parker was present at the surrender at APPOMATTOX COURT HOUSE, VIRGINIA.

After the war, Parker helped negotiate treaties with several Indian tribes, and in 1869 Grant appointed him commissioner of the Bureau of Indian Affairs. He was the first Native American to hold that office. Parker shaped the Grant administration's controversial "Peace Plan," which abolished the treaty system and advocated the assimilation and Christianization of Native peoples. In 1871 Parker resigned that commission after being accused of fraud by the U.S. Senate. He was later exonerated.

Parker moved to Fairfield, Connecticut, where he struggled as a businessman and investor. His fortune lost and political connections no longer in power, Parker finally took a position as a clerk for the NEW YORK CITY Police Board of Commissions. Parker died on August 30, 1895, of complications from diabetes.

## peace movements

Every American war has had its protesters, and the CIVIL WAR was no exception. There were a variety of reasons why people opposed the war. Some individuals rejected warfare as an immoral practice. Others were opposed to the policies being pursued by their government. Still others had simply grown tired of fighting.

There are several religious sects in the United States that object to war on moral grounds. These include the SOCIETY OF FRIENDS (Quakers), the Mennonites, and the Church of the Brethren. Members of these RELIGIONS, called conscientious objectors, have declined to participate in every American military conflict dating back to the Revolutionary War. Often, although not always, conscientious objectors were exempted from military service during

the Civil War. Most of these individuals lived in the North and thus benefited from ABRAHAM LINCOLN's sympathy for pacifists. However, there are recorded instances of conscientious objectors in North and South alike being jailed for refusing induction into the military, while numerous Quakers who refused to pay taxes to support the war had their property seized for noncompliance. Ultimately, the loss of these conscientious objectors, who comprised a tiny minority of the population, had a very nominal impact on the Union and Confederate armies.

In addition to its pacifist religious sects, the Union had a number of prominent nonreligious pacifists. Noted orators Elihu Burritt and Joshua P. Blanchard objected to the war on moral grounds. Lindley Spring wrote a pamphlet entitled *Peace! Peace!* that urged all soldiers to lay down their arms. In 1863 prominent anarchist Joshua Warren published *True Civilization, an Immediate Necessity*, in which he condemned the war as a barbarian action undertaken only for the betterment of war profiteers. The voices of these men, however, were largely ignored. In part, this was because most Americans rejected the notion that war was inherently immoral, and, in part, it was because a large number of well-known pacifists actually endorsed the Civil War. For example, the American Peace Society issued a statement outlining their position that armed action was appropriate because the Confederacy was guilty of an unlawful rebellion against authority.

The North's largest and most influential peace movement was the peace wing of the DEMOCRATIC PARTY. The Peace Democrats, derisively called COPPERHEADS by their detractors, were in the minority in the North, even in their own party. Nonetheless, under the leadership of CLEMENT L. VALLANDIGHAM, they exerted a great deal of influence among the Northern voters, particularly in Ohio, Indiana, and Illinois. Their objection to the war was based on political rather than moral grounds. They argued that the Lincoln administration was undermining the Constitution and the North's social order through its actions, especially forced CONSCRIPTION, the suspension of HABEAS CORPUS, and EMANCIPATION. Copperheads frequently worked through secret societies such as the Knights of the Golden Circle or the Sons of Liberty, both of which were active and sporadically visible throughout the midwestern states. They were known for fomenting violence against Union soldiers on leave, and in 1864 members of the Sons of Liberty were arrested and charged with plotting to form a "Northwest Confederacy" and free hundreds of Confederate prisoners at Camp Douglas, Illinois.

The Peace Democrats reached the high point of their influence in summer 1864, as the Union armies seemed to be stalemated in the field. At the Democratic convention, they were able to convince party members to include a plank in the party's platform calling for the immediate cessation of

hostilities. Gen. GEORGE BRINTON MCCLELLAN, chosen as the party's presidential nominee shortly thereafter, quickly repudiated this part of the platform. Renewed Union military successes and the reelection of Abraham Lincoln put an end to the Copperheads once and for all.

The peace movements of the South were not as prominent as in the North. Almost invariably they arose from frustration with the war and its conduct rather than from a moral objection to warfare. Given the numerous exceptions to Confederate draft laws, the loudest complaint among Southern protesters was against class privilege. Because rich plantation owners or individuals owning 20 slaves or more did not have to serve, many described the conflict as "a rich man's war and a poor man's fight." Georgia governor Joseph Brown was unalterably opposed to the practice of conscription, which he regarded as a breach of STATES' RIGHTS, and he granted more exemptions than any other Confederate state executive. His relations with President JEFFERSON DAVIS grew strained over the issue, and in November 1862 Davis dispatched Secretary of State William M. Browne to demand and secure the governor's acquiescence.

The boldest move for peace in the South occurred in 1863, shortly after the fall of Vicksburg and the BATTLE OF GETTYSBURG. North Carolina governor Zebulon Vance, who was distraught over Confederate losses and weary of the sacrifices that Southerners were being forced to make, called for a convention to bring about peace and the reunification of the states. In North Carolina, more than 100 peace meetings were held, and throughout the South more than 100,000 people joined secret peace societies. Eventually, the CONFEDERATE ARMY regained some momentum, and sentiment for immediate reunification faded away. However, secret peace societies such as the HEROES OF AMERICA continued working vigorously to undermine the Southern war effort, especially in North Carolina and southwest Virginia.

There were peace efforts on the diplomatic front as well. In July 1864 *New York Tribune* editor HORACE GREELEY asked for permission to meet with Confederate envoys at Niagara, New York; Lincoln gladly consented, but only upon making reunification and emancipation the preconditions for peace. That same month Lincoln also allowed James F. Jacques and James R. Gilmore to meet with President Davis in RICHMOND, VIRGINIA, under these same conditions, with predictable results. In February 1865 journalist Francis Blair arranged a final meeting between Lincoln, Secretary of State WILLIAM H. SEWARD, and Confederate vice president ALEXANDER H. STEPHENS, at Hampton Roads, Virginia, but talks failed when the North dismissed any notion of Confederate independence. Union military victory was now close at hand, and formal peace negotiations between the two governments ceased.

On balance, movements for peace during the Civil War had only a small influence on the conflict. Certainly, there were flare-ups of peace sentiment in both North and South, but it would be difficult to identify any meaningful impact these episodes had on the ultimate outcome of the war. The Peace Democrats came close to achieving their goals, but Union victories in late 1864 ultimately dictated that Lincoln's vision of peace would carry the day.

### Pea Ridge/Elkhorn Tavern, Battle of (March 7–8, 1862)

The Battle of Pea Ridge, Arkansas, was an important and clear-cut Union victory in which the usual numbers disparity was reversed, with 14,000 Confederates outnumbering the 11,250 Federals. Most important, the Northern victory secured the Union's hold on the border state of Missouri.

Early in 1862, Union major general Samuel R. Curtis, commander of the Army of the Southwest, was charged with driving the Confederate forces out of Missouri once and for all. The 8,000 Missourians under the command of Confederate brigadier general Sterling Price left Missouri for a safer position in northwestern Arkansas. There, Price combined his units with those of Brig. Gen. Ben McCulloch, just south of Fayetteville, Arkansas. At Fayetteville, the commander of the trans-Mississippi District, Maj. Gen. Earl Van Dorn, joined Price and McCulloch. Van Dorn was now in charge of the campaign. An aggressive general, Van Dorn wished to recapture the ground that the Confederates had lost in their hasty retreat from Missouri. He planned a surprise attack on the Federals, who had moved into Arkansas. In late February, the ration-starved rebels began their 55-mile advance toward the Union position in the middle of a winter snowstorm.

Curtis heard of Van Dorn's forward movement from his trusted scout "Wild Bill" Hickock. He immediately ordered his infantry units to concentrate on a high ground near Pea Ridge, Arkansas. Supported by artillery and cavalry, the outnumbered Union forces established a superior defensive position, and on March 6 there were a series of inconclusive skirmishes between Northern and Southern troops. Van Dorn, who was sick, directed the Confederate battle plan from an ambulance behind the lines. He wanted to destroy the enemy with a major movement against the left rear of Curtis's army, centered by Elkhorn Tavern.

The battle began in earnest on the morning of March 7. General Price attacked the Union position and was twice repulsed. The third time, he succeeded. At the other end of the line from Price, a Cherokee Indian unit under the command of Brig. Gen. STAND WATIE took on a Union division but failed to achieve any meaningful gains. The end of the first day of fighting brought a stalemate, as neither side retired from the field.

The next day's battle secured the Union victory. Curtis, confident that reports of the lack of Confederate ammunition were true, ordered Gen. Franz Sigel to attack Price's Missourians. Supported effectively by Union artillery, the Federals drove the Confederates from Pea Ridge. The rebels broke in confusion, and Gen. Van Dorn ordered a retreat to the Arkansas River. The casualties were high. The Federals lost 1,384, and the Confederates anywhere from 800 to 1,300, with 300 captured. Despite suffering greater losses, the battle was a Union victory because it achieved their desired objective. Missouri was secured for the Union until a brief, and ultimately futile, Confederate invasion was mounted in the fall of 1864.

**Pember, Phoebe Yates Levy** (1823–1913) *author, hospital administrator*

Born August 18, 1823, in Charleston, South Carolina, Phoebe Yates Levy Pember became a CIVIL WAR hospital administrator and a writer.

Phoebe Yates Levy was the fourth of seven children born to prosperous Jews Fanny Yates and Jacob Levy. In the 1850s the family moved from Charleston to Savannah, Georgia, where they stayed until 1862, when they moved to Marietta, Georgia, to escape the hardships of the war. Before the Civil War Phoebe married Bostonian Thomas Pember. After he died (July 1861) in Aiken, South Carolina, Pember returned to her family.

Pember's connections to the Southern elite led to a November 1862 offer to become chief matron of a division of RICHMOND, VIRGINIA's Chimborazo Hospital. This position made Pember the first female administrator at Chimborazo. As head of the second division (Hospital No. 2) Pember oversaw patients' care as well as housekeeping, supplies, and staff issues. She did little medical work, although during emergencies she occasionally dressed wounds. Pember's sex made her job difficult. Male physicians often interfered with her and she endured insults. Pember also had to struggle effectively to manage the hospital with inadequate supplies.

Pember remained a matron of Chimborazo until after Union officials took charge. During this chaotic period she did whatever she could to help her patients. She refused to leave the hospital until her remaining patients had died or recovered.

After the Civil War Pember recorded her experiences at Chimborazo in her memoirs, *A Southern Woman's Story*. In this book she recounted her difficulties as a hospital matron as well as harsh living conditions in Richmond, wartime inflation, and the dangers of wartime travel. She also painted a portrait of the soldiers who fought for the Confederacy.

Pember returned to Georgia after the Civil War. In later years she traveled throughout the United States and died in Pittsburgh on March 4, 1913. She was buried in Savannah.

**Pemberton, John C.** (1814–1881) *Confederate general*

John Clifford Pemberton was the Confederate general who surrendered the strategic citadel of Vicksburg, Mississippi. Pemberton was born in PHILADELPHIA, PENNSYLVANIA, on August 10, 1814, the son of a successful businessman. He briefly attended the University of Pennsylvania before transferring to the UNITED STATES MILITARY ACADEMY AT WEST POINT in 1833. Graduating in 1837, he began his military career as a second lieutenant in the 4th U.S. Infantry.

Pemberton was in Florida for the Second Seminole War up through 1839. In 1846 he joined Gen. Zachary Taylor's Army of Occupation and served as an aide to

Gen. William J. Worth during initial phases of the Mexican-American War. The following year he transferred to Gen. Winfield Scott's army, winning brevet promotions to captain and major for gallantry at Churubusco, Molino del Rey, and Chapultepec. At the conclusion of the Mexican-American War, Pemberton was stationed at Fortress Monroe, Virginia, where he married into a prominent Southern family. Thereafter, his personal and political orientation became firmly wedded to the South. He was serving at Fort Ridgely, Minnesota, in the spring of 1861 when the rising tide of secessionism convinced him to resign his commission and offer his services to the Confederacy. His birth family roundly condemned this decision, and two younger brothers joined the UNION ARMY.

Pemberton held various regimental grades until February 1862, when he transferred to the CONFEDERATE ARMY's Department of South Carolina, Georgia, and Florida as a major general to replace Gen. ROBERT E. LEE. After he suggested that FORT SUMTER should be abandoned as next to useless, President JEFFERSON DAVIS removed him from command; however, he was soon promoted to lieutenant general and entrusted with the Department of Mississippi and East Louisiana.

Pemberton arrived in Vicksburg in November 1862 and immediately set about strengthening its defenses. But Confederate fortunes declined precipitously in spring 1863, when Gen. ULYSSES S. GRANT finally attacked by land. Grant marched his army along the west bank of the MISSISSIPPI RIVER and crossed over into Mississippi. He then routed Pemberton at the Battles of Champion's Hill and Big Black River on May 16–17, 1863, prompting Pemberton to withdraw to heavily fortified Vicksburg. The Confederates turned back two strong Union assaults but then endured six weeks of siege, closely confined and under heavy bombardment. Faced with starvation, Pemberton finally surrendered Vicksburg and 30,000 soldiers unconditionally to Grant on July 4, 1863.

Pemberton never again received a field command because Southern troops, long suspicious of his Northern roots, threatened to mutiny rather than serve under him. He therefore resigned his general's commission and spent the remainder of the war as a lieutenant colonel and ordnance inspector in RICHMOND, VIRGINIA. After the war, Pemberton tried his luck at farming in Virginia and failed. Reviled by Southerners, he relocated his family to Philadelphia in 1876. He died in Penllyn, Pennsylvania, on July 13, 1881.

### Peninsular campaign (March 17–July 1, 1862)

The winter of 1861–62 passed without significant action in Virginia. The principal Union and Confederate armies, commanded respectively by GEORGE BRINTON MCCLELLAN and JOSEPH E. JOHNSTON, remained near Manassas Junction, where they had created extensive opposing lines. McClellan, who functioned as the Union general in chief as well as commander of the Army of the Potomac, devised a plan to turn Johnston's flank by moving troops to the Rappahannock River by ship and taking Fredericksburg. That would isolate Johnston in northern Virginia, forcing him to attack McClellan in order to reach RICHMOND, VIRGINIA. McClellan delayed his plans, however, until a frustrated ABRAHAM LINCOLN finally ordered him to commence his campaign on February 22, 1862—George Washington's birthday. When that date came and went without a movement and the first days of March slipped by, Lincoln removed McClellan as general in chief.

Reduced to army command only, McClellan changed his plans when word arrived that Johnston had retreated to the Rappahannock line. On March 17 the Army of the Potomac began a larger turning movement toward Fort Monroe, situated at the tip of the finger of land between the York and James Rivers known as the "Peninsula." By the end of April, Confederate planners faced a range of threats in Virginia: The bulk of the Army of the Potomac lay on the lower Peninsula, with another 30,000 Federals under Irvin McDowell near Fredericksburg, 15,000 under Nathaniel P. Banks in the lower Shenandoah Valley, and nearly 10,000 under John C. Frémont in the Allegheny Mountains west

Union general Thomas Francis Meagher, leading the Irish Brigade at the Battle of Seven Pines, June 1, 1862. Lithograph by Currier & Ives (Library of Congress)

of the valley. Initially, only 17,000 Southern troops under John Bankhead Magruder, positioned between Yorktown and the Warwick River, were available to resist McClellan's movements on the peninsula.

The Confederates soon concentrated more of their forces near Richmond, and they mounted a diversion in the Shenandoah Valley designed to prevent reinforcement of McClellan. Johnston shifted his army to the peninsula, where he contested a slow Union advance toward the capital. Confederates gave up Yorktown on May 3 after a virtually bloodless month-long siege. They continued their withdrawal after the Battle of Williamsburg on May 5, a hard-fought action that resulted in 2,200 Union and 1,750 Confederate casualties. The port of Norfolk, with its immense naval installations, capitulated on May 9.

As the forces under Johnston and McClellan moved slowly toward Richmond, each striving to gain advantage over the other, the *IRONCLAD CSS Virginia* (popularly called the *Merrimack*), which had fought the Union ironclad *USS Monitor* to a draw in their famous duel at Hampton Roads on March 9, was destroyed on May 11. "No one event of the war," remarked Confederate ordnance chief JOSIAH GORGAS from his post in Richmond, "created such a profound sensation as the destruction of this noble ship." Heavy rains drenched the peninsula during May, adding to Confederate gloom over the loss of the *Virginia* and affording McClellan a good excuse for making little headway. The end of the month found the two armies—more than 100,000 Federals and about 70,000 Confederates—arrayed opposite one another along the Chickahominy River just east of Richmond.

Many Confederates believed Johnston was giving up too much ground without a serious fight. A North Carolina diarist had a typical reaction, pointedly contrasting THOMAS J. (STONEWALL) JACKSON's accomplishments in the Shenandoah Valley with Johnston's performance: "Jackson . . . is the only one of our generals who gives the enemy no rest, no time to entrench themselves. Matters before Richmond look gloomy to us outsiders. McClellan advances, entrenching as he comes. Why do we allow it?"

The situation at Richmond looked grim for the Confederates by the end of May. Having retreated to within about five miles of the capital, Johnston understood that he must deliver a blow. He and McClellan had remained relatively inactive during much of Jackson's SHENANDOAH VALLEY CAMPAIGN, but the Confederates could retreat no further without reaching the defensive works of Richmond and engaging in a siege that inevitably would favor McClellan. At the end of May, Johnston detected an opening. McClellan's army was divided by the Chickahominy River, with two corps isolated south of its rain-swollen banks. Johnston attacked the exposed portion of the Union host on May 31 in the Battle of Seven Pines (also called Fair Oaks). The

only full-scale engagement between McClellan and Johnston on the peninsula, Seven Pines lasted two days. Poor coordination, a confused grasp of local terrain, and other factors plagued the Southern army in a contest that ended in tactical stalemate. More than 6,000 Confederates and 5,000 Federals fell in the two days, and the Southern commander Johnston suffered a severe wound in the chest. On June 1 JEFFERSON DAVIS named ROBERT E. LEE to succeed Johnston. Thus did the man who would become the greatest Confederate general step into the limelight.

This change of leadership occurred as George B. McClellan and his Army of the Potomac, which numbered more than 100,000 men, approached the climax of their grand offensive against the southern capital. Although Lee later achieved a towering reputation, news of his appointment provoked widespread concern across the Confederacy. A North Carolina woman gave voice to a common evaluation of Lee: "I do not much like him, he 'falls back' too much. . . ."

The next five weeks proved Lee's doubters wrong. No general exhibited more daring than the new Southern commander, who believed the Confederacy could counteract Northern superiority in numbers by seizing and holding the initiative. He spent June preparing for a supreme effort against McClellan. When Stonewall Jackson's command from the Shenandoah Valley and other reinforcements arrived, Lee's army, at 90,000 strong, would be the largest ever gathered by the South. By the last week of June, the Army of the Potomac was divided by the Chickahominy River, two-thirds of its strength south of the river and one-third north of it. Lee hoped to crush the portion north of the river, then turn against the rest. Confederates repulsed a strong Union reconnaissance against their left on June 25, opening what became known as the Seven Days' Battle and setting the stage for Lee's offensive.

Heavy fighting began on June 26 at the Battle of Mechanicsville and continued for the next five days. Lee consistently acted as the aggressor but never managed to land a decisive blow. At Mechanicsville, he expected Jackson to strike Union general Fitz John Porter's right flank. The hero of the valley failed to appear in time, however, and AMBROSE P. HILL's Confederate division launched a useless frontal assault about mid-afternoon. Porter retreated to a strong position at Gaines's Mill, where Lee attacked again on June 27. Once again Jackson stumbled, as more than 50,000 Confederates mounted savage attacks along a wide front. Late in the day, Porter's lines gave way, and he withdrew across the Chickahominy to join the rest of McClellan's army.

Jackson's poor performance, usually attributed to exhaustion verging on numbness, joined poor staff work and other factors in allowing Porter's exposed portion of McClellan's army to escape. In the wake of Gaines's Mill,

McClellan changed his base from the Pamunkey River to the James River, where Northern naval power could support the Army of the Potomac. Lee followed the retreating McClellan, seeking to inflict a crippling blow as the Federals retreated southward across the peninsula. After heavy skirmishing on June 28, the Confederates mounted light attacks on June 29 at Savage's Station and far heavier ones at Glendale (also known as Frayser's Farm) on June 30. Stonewall Jackson played virtually no role in these actions, as time and again the Confederates failed to act in concert.

By July 1 McClellan stood at Malvern Hill, a splendid defensive position overlooking the James. Lee resorted to unimaginative frontal assaults that afternoon. Whether irritated at lost opportunities or driven by his natural combativeness, he had made one of his poorest tactical decisions. As evening fell, more than 5,000 Confederate casualties littered the slopes of Malvern Hill. Some of McClellan's officers urged a counterattack against the obviously battered enemy; however, "Little Mac" retreated down the James to Harrison's Landing, where he awaited Lee's next move and issued endless requests for more men and supplies.

Casualties for the Seven Days were enormous. Lee's losses exceeded 20,000 killed, wounded, and missing, while McClellan's surpassed 16,000. Gaines's Mill, where combined losses exceeded 15,000, marked the point of greatest slaughter. Thousands of dead and maimed soldiers brought the reality of war to Richmond's residents. One woman wrote, "death held a carnival in our city. The weather was excessively hot. It was midsummer, gangrene and erysipelas attacked the wounded, and those who might have been cured of their wounds were cut down by these diseases."

The campaign's importance extended far beyond setting a new standard of carnage in Virginia. Lee had seized the initiative, dramatically altering the strategic picture by dictating the action to a passive McClellan. Lee's first effort in field command lacked tactical polish but nevertheless brought great rewards. The Seven Days saved Richmond and uplifted a Confederate people depressed by bad military news from other theaters. On the Union side, the campaign dashed expectations of victory that had mounted steadily as Northern armies in Tennessee and along the MISSISSIPPI RIVER won a string of successes. McClellan's failure also deepened Northern political divisions, clearing the way for Republicans to implement policies that would strike at SLAVERY and other rebel property. The end of the rebellion had seemed to be in sight when McClellan prepared to march up the peninsula; after Malvern Hill, few failed to see that the war would continue in a more all-encompassing manner. "We have been and are in a depressed, dismal, . . . state of anxiety and irritability," wrote a perceptive New Yorker after McClellan's retreat. "The cause of the country does not seem to be thriving just now."

The campaign also underscored the degree to which events in the Virginia theater dominated perceptions about the war's progress. Despite enormous Northern achievement in the western campaigns, most people North and South, as well as observers in Britain and France, interpreted the Seven Days as evidence that the Confederacy was winning the war. Lincoln wrote about this phenomenon in early August, complaining that "it seems unreasonable that a series of successes, extending through half-a-year, and clearing more than a hundred thousand square miles of country, should help us so little, while a single half-defeat should hurt us so much." Lincoln did not exaggerate the impact of McClellan's failure. Taken overall, the ramifications were such that the Richmond campaign must be reckoned one of the turning points of the war.

**Pennington, James William Charles** (1807–1870)  
*abolitionist, author, minister*

Noted abolitionist James Pembroke was born into SLAVERY in Queen Anne's County, Maryland. As he grew up under the oversight of an especially harsh master, he became an expert blacksmith and taught himself to read, write, and calculate. In 1827 Pembroke escaped slavery via the UNDERGROUND RAILROAD and was taken in by a Quaker (SOCIETY OF FRIENDS) family in Pennsylvania. He spent nearly three years in their employ, all the while continuing his EDUCATION. In 1830 he traveled to King County, New York, where he took the name James W. C. Pennington.

Over the course of the next three decades, Pennington achieved success in three different careers. He was a minister, serving as pastor of several different churches. Pennington was also an educator. He worked as a teacher for several years, and in 1841 he wrote *A Textbook of the Origin and History of Colored People*, one of the earliest books written on African-American history. The book emphasized the importance of black Americans' African heritage and denounced the common stereotypes of the day.

Pennington's chief fame, however, came from his work as an abolitionist. As early as 1831, he became known for his outspoken criticism of the American Colonization Society. By the mid-1830s, Pennington was working with the nation's most well-known abolitionists. Among his close friends was FREDERICK DOUGLASS, at whose wedding Pennington officiated in 1838. Pennington attended several important gatherings of abolitionist leaders, including

the Philadelphia Negro Convention in 1832 and the World Anti-Slavery Conference in 1843. In 1849 Pennington made his single most important contribution to the abolition movement, penning an autobiography entitled *The Fugitive Blacksmith*. The work was a powerful condemnation of slavery and quickly went through several printings. For most of the 1850s, Pennington traveled throughout the United States and Europe delivering antislavery speeches.

The publication of *The Fugitive Blacksmith* marked the high point of Pennington's career. Shortly before the CIVIL WAR started, Pennington's struggles with alcoholism were made public, and his reputation was destroyed. He struggled to support himself during the war, suffering a series of indignities that included being jailed for allegedly stealing a book. He died penniless in Jacksonville, Florida, a few years after the war ended.

### **Petersburg campaign** (June 1864–April 1865)

The 10-month Petersburg campaign was the longest military operation of the CIVIL WAR. From May to June 1864, Gen. ROBERT E. LEE had blocked successive attempts by Lt. Gen. ULYSSES S. GRANT to destroy the CONFEDERATE ARMY and capture RICHMOND, VIRGINIA, in the OVERLAND CAMPAIGN. Frustrated at the stalemate after the BATTLE OF COLD HARBOR in early June, Grant decided to cross the James River and seize Petersburg, Virginia, a vital communication and rail center 20 miles south of Richmond. If the UNION ARMY prevailed at Petersburg, the Confederate capital would likely fall shortly afterward.

On June 12 the Union's largest fighting force, the Army of the Potomac, left Cold Harbor and marched more than 50 miles to the James River. Waiting for them was a 2,100-foot-long pontoon bridge built by the Yankee soldiers, a triumph of engineering. By June 16 the entire Union army was on the south bank of the river. Moving swiftly, the Federals were closing in on Petersburg, a day's march away. Soldiers and officers alike wondered what they would find when they reached the city gates.

In 1860 Petersburg was Virginia's second largest city, with a population of 18,000, half of whom were black, and of these, one-third were free. Petersburg enjoyed a thriving ECONOMY. A city of cotton mills, tobacco factories, and RAILROADS, Petersburg was poised to play an important

part in the war. From the beginning, Petersburg's streets and railroad stations were clogged with soldiers and supplies. All but one of the railroads that tied Richmond with the rest of the southern and western Confederacy passed through its smaller neighbor to the south.

Not surprisingly, Petersburg, along with Richmond, was a desirable target of the Union army, and in the summer of 1862 slaves and soldiers began construction of a 10-mile line of fortifications around the city. Finished by 1863, the lines were held by a small force of 2,200 men under the command of Brig. Gen. Henry A. Wise as the Federal I Corps approached the city. Inside, the civilian population, mostly made up of women, children, and slaves, watched and worried. Already suffering from the effects of inflation, food shortages, and other inconveniences, women—black and white, upper and lower class—prepared their families for the worst.

From June 15 through June 18, the Union forces, numbering around 63,000, threatened to overwhelm the much smaller Confederate defenders. Gen. Ulysses S. Grant, the commander of all the Union armies, was supervising Maj. Gen. GEORGE GORDON MEADE's Army of the Potomac. His strategy was to take Petersburg by storm, cut off all Confederate supply lines, and confront and defeat Lee's army on the way to Richmond. Unfortunately, due to a combination of long-standing command problems within the Army of the Potomac, confused and contradictory communications between units, and the extreme battle fatigue of the men after weeks of heavy fighting, Union assaults failed to capture the Petersburg works. The Confederates quickly brought in reinforcements that made their defensive position even more formidable. Four days of fighting left the Federals with losses of 10,586 compared with 4,000 for the rebels. On June 18, Lee arrived to direct operations. Grant realized that continued frontal attacks would be useless and ordered his men to "use the spade." The siege of Petersburg had begun.

Both Grant and Lee realized the disadvantages of a long siege. Under heavy pressure to win the war quickly, Grant was aware that the success of his military career was tied to the political fortunes of his commander in chief ABRAHAM LINCOLN. At this point, only victories in the field could sustain the Republicans in the fall ELECTIONS, and during the spring and summer of 1864 all of the Union armies, east and west, were stalemated. Large parts of the North were expressing dissatisfaction with the war's costs. Lee, on the other hand, would not win a war of attrition with the enemy. Time was not on his side. The Southern population could not endure much more privation than had already been inflicted. Confederates now hoped that the war-weary Northern nation would oust Lincoln and elect a Democrat who might stop the war and accept Southern independence. Despite their misgivings, Grant and Lee

## 302 Petersburg campaign

adjusted to a type of warfare that they neither anticipated nor desired.

Grant planned to encircle Petersburg and cut off all of Lee's supply lines. He ordered his soldiers to build a trench system around Lee's 26-mile line of defensive fortifications stretching from Petersburg to Richmond. By late June the Confederates had approximately 50,000 men to 112,000 for the Union. Grant established his military headquarters at City Point, Virginia, on the James River halfway between Petersburg and Richmond. From City Point, Grant presided over a vast logistical operation that kept the supplies flowing in to the troops in the field. Whereas Union soldiers were relatively well fed, clothed and armed, the Southern soldiers suffered from hunger and other privations. As the siege wore on, as the Union shelling pounded the Southern lines and the city behind day after day, **DESERTION** among the Confederates rose and civilian morale plunged. "The vandals are still throwing shell into the city, and it is very distressing to see the women and children leaving," wrote one diarist. Thou-

sands of residents fled the city as **REFUGEES**, flooding the roads to Richmond.

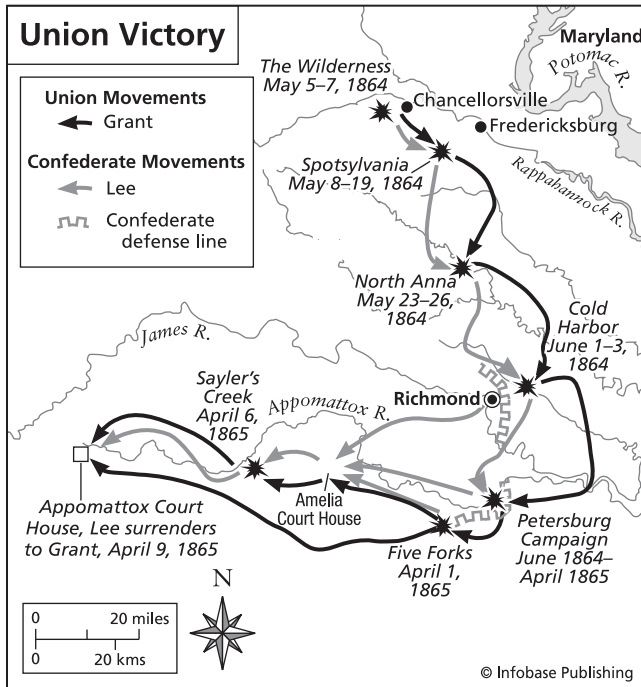

As the summer wore on, Grant's army extended their lines around the city. In addition, he sent units out to cut the major railroad connections. Lee dispatched mobile forces to stop the Union's forays, and many battles took place away from the siege area. Lee also mounted another major campaign in the Shenandoah Valley under Gen. **JUBAL A. EARLY** to draw troops away from Petersburg and Richmond. This campaign resulted in the defeat of the Confederates in the valley, and the triumph of one of Grant's best generals, **PHILIP H. SHERIDAN**.

Grant periodically ordered big attacks, such as the famous and ill-starred "Battle of the Crater," which occurred on July 30, 1864, and involved a division of African-American soldiers who performed bravely in battle in spite of poor leadership from white officers and little support. On September 1, Atlanta fell, and Lincoln's reelection was assured. The hard winter of 1864-65 brought Lee's army to the breaking point. In March 1865, a des-

Engraving showing a regiment of the XVIII Corps carrying a portion of Gen. Pierre Gustave Tontant Beauregard's line in front of Petersburg, Virginia (Library of Congress)

perate Lee launched the first big assault of the spring at Fort Stedman. Grant counterattacked with great effect. For all intents and purposes, the long siege of Petersburg was over, at the cost of 42,000 Union and 28,000 Confederate casualties.

On April 1 Union cavalry under Sheridan attacked the western end of Lee's defensive line. Lee decided to cut his losses and move southward. In doing so, he hoped to join another Confederate army in eastern North Carolina to prevent Maj. Gen. William T. Sherman's western army from combining with Grant's. On April 2 Grant ordered an assault on a weakened Petersburg line, winning the city before dawn on the next day. Richmond fell only hours later, on the morning of April 3. Shortly thereafter, Grant accepted the surrender of Lee's army at APPOMATTOX COURT HOUSE, VIRGINIA. Most of the remaining civilians of Petersburg had been evacuated to safety. The city was in ruins. One Yankee soldier remembered: "Petersburgh has been a pretty Place but it is a hard looking Place now."

## Philadelphia, Pennsylvania

Philadelphia, Pennsylvania, was a major U.S. metropolis during the antebellum period and the CIVIL WAR. Philadelphia began the 19th century as America's largest port city, but by 1810 it had been overtaken in size and commercial activity by NEW YORK CITY. However, up through the RECONSTRUCTION period, it remained a bustling center of population growth and business. By the CIVIL WAR the city's economic focus had gradually shifted from commerce to manufacturing, and Philadelphia had become one of the nation's leading beneficiaries of the industrial revolution. In 1861 Philadelphia was the world's largest textile center and an important center for iron and steel manufacturing, as well as heavy industry in the form of the Baldwin locomotive works.

The compact grid structure designed by William Penn had rapidly given way to five adjoining suburbs with semi-autonomous governance. Suburbs and city formally combined through the 1854 Consolidation Act, undertaken to mitigate growth-related public chaos and administrative disorder. The ethnic composition of the city had become increasingly diversified, with large numbers of English, German, and Irish settlers arriving daily throughout this period. Philadelphia also boasted a relatively large population of free African Americans, in excess of 20,000, who owned and operated their own churches, businesses, and other separate institutions.

Politically, the city was preponderantly Democratic and enjoyed lucrative commercial relations with the South. Abolitionism was consequently less strong there than in other parts of the North. The Battle of FORT SUMTER, SOUTH CAROLINA, in April 1861, however, brought Philadelphians strongly behind the Union cause. City Republicans founded a Union League in 1862 dedicated to preserving the country, and league members promoted patriotism and raised money and recruits for the war effort. Philadelphia's economic and industrial base shifted smoothly to producing textiles for UNIFORMS, locomotive engines and cars for army use, and numerous naval vessels for use in the Union blockade of Confederate ports. Moreover, JAY COOKE, an important city banker, provided an essential service by arranging a \$1.5 million loan from city banks to assist the Federal government.

The site of one of the largest and most lavish Sanitary Fairs (fund-raising events for the Union) in 1864, the city further distinguished itself by raising the only Federal unit named after its city of origin. The Philadelphia Brigade, consisting of the 69th, 71st, 72nd, and 106th Pennsylvania Infantries, was organized in spring 1861 and was actively engaged throughout the eastern theater. Its soldiers fought exceedingly well in the PENINSULAR CAMPAIGN and at the Battles of ANTIETAM and FREDERICKSBURG. At the BATTLE OF GETTYSBURG they held the critical right Union

flank along Cemetery Ridge; in this capacity they helped absorb the brunt of GEORGE EDWARD PICKETT's charge on July 3, 1863, taking 750 prisoners and three stands of enemy flags. Heavy casualties in this encounter led to the brigade's disbandment, but the component units fought with other formations. Two of these, the 69th and 106th Pennsylvania Infantries, served through the remainder of the war and participated in the Grand Review of troops at WASHINGTON, D.C., in May 1865.

Philadelphia remained an active center for industry, arts, and population growth throughout Reconstruction. It maintained its status as the nation's second-largest city until it was eclipsed by Chicago, Illinois, by 1890.

## photography

Through portraits of participants and battlefields, photography dramatically influenced how Americans perceived the CIVIL WAR.

Photography democratized individual portraiture. Newly enlisted soldiers sat for inexpensive studio portraits, often purchasing 2- by 4-inch *cartes de visites* to distribute to family and friends. The portrait business thrived during the war as enterprising photographers set up studios near army camps. Photographs that captured the faces of men who might never return home became prized family possessions. Soldiers carried pictures of their loved ones with them to battle as well. Family portraits gave Civil War soldiers a visual link to home that had not been available to ordinary combatants in earlier wars.

Field photographs gave Americans additional visual information about the war. The fragility of photographic equipment and the need for long exposure times and immediate processing in portable darkrooms meant that photographers recorded the aftermath of battle rather than the fighting itself. These photographs departed from romantic depictions of the battlefield and unflinchingly documented the horrors of war. In 1862 Alexander Gardner recorded a sensational series of images from the BATTLE OF ANTIETAM that showed the mutilated bodies of anonymous soldiers. Displayed in the New York studios of Gardner's employer, MATHEW B. BRADY, and published as engravings by the *New York Times* and *Harper's Weekly*, the Antietam series shocked Americans with stark evidence of the terrible human costs of battle. The public errone-

ously credited this work to Brady, a misconception he did nothing to discourage. He remains the photographer most closely identified with well-known Civil War images, even though he actually took very few of them.

In 1863, hoping to duplicate the success he had enjoyed with the Antietam series, Gardner rushed to the battlefield at Gettysburg, Pennsylvania. Gardner, who had left Brady's employ, worked with Timothy H. O'Sullivan and James F. Gibson. Together, they produced a famous series of photographs that recorded dead bodies lying on the Gettysburg field. Gardner was not averse to manipulating photographs to serve his needs. His most famous image, a dead Confederate lying in the "Devil's Den," was staged—the man had died on another part of the battlefield. Although most of the dead men in his pictures were Confederates, Gardner and the newspaper editors who purchased his images identified some of the men as Union soldiers to better illustrate the Northern narrative of battle. As with the Antietam photos, the public was fascinated.

The photographs of Antietam and Gettysburg were different from most Civil War photography. Antietam and Gettysburg were both fought in Northern states, so it was possible to get the photographers and equipment necessary for battlefield photography in place fairly quickly, within two or three days of the fighting. In most other cases, it took a week or more to get men and equipment in place, by which time most battlefields had been cleared of bodies and other signs of carnage.

The logistical difficulties of battlefield photography meant that images of everyday military life far outnumbered photographs of war dead. Americans were educated about the war by pictures of breastworks and military fortifications, field hospitals and army camps, artillery placements and railway trestles, freedmen's shanties and Confederate ruins. Capt. Andrew J. Russell, attached to the U.S. Military Railroad, documented rail lines in Virginia and was present at the BATTLES OF FREDERICKSBURG and Petersburg and at the fall of RICHMOND, VIRGINIA. His photographs included noteworthy images of black laborers who contributed to the Union war effort. George N. Barnard, a former Gardner associate attached to the chief engineer's office of the Division of Mississippi, photographed Gen. WILLIAM T. SHERMAN's 1864 campaign in Tennessee, Georgia, and South Carolina. Gardner himself documented the ruins of Richmond in 1865. He also photographed the executions of the conspirators who plotted the ASSASSINATION OF ABRAHAM LINCOLN.

Field photographs were distributed widely during and after the war in the form of inexpensive mass-produced stereographs. These popular side-by-side exposures took on a three-dimensional appearance when viewed through a handheld stereograph. For the upscale market, Gardner and Barnard each published expensive collector's editions

Dead Confederate soldier in Devil's Den at Gettysburg, Pennsylvania, 1863. Photograph taken by Alexander Gardner (1821–82) (Library of Congress)

of their work in 1866. Gardner's *Photographic Sketchbook of the War* and Barnard's *Photographic Views of Sherman's Campaign* featured large prints accompanied by patriotic captions. Americans have continued to be fascinated by Civil War photography. In 1875 the government paid Brady \$25,000 to gain exclusive title to his collection so that it could be preserved for future generations. In 1911 Francis Trevelyan Miller published his influential 10-volume *Photographic History of the Civil War*.

The proliferation of Civil War photographs was not the only story of the postwar era, however. Photographic equipment became more portable, enabling photographers to reach important locations more quickly. In the 1880s, half-tone printing was developed, enabling newspapers to print actual photographs rather than engravings. By the 1890s Americans could open their morning paper and expect to read about *and* see what had happened the day before.

Miller, *The Photographic History of the Civil War: Complete and Unabridged* (1911; reprint, Secaucus, N.J.: Blue & Grey Press, 1987).

—Amy J. Kinsel

**Pickett, George Edward** (1825–1875) *Confederate general*

Best known for his leadership of Confederate forces in a failed charge at the BATTLE OF GETTYSBURG, Gen. George E. Pickett was born into a wealthy PLANTATION family in RICHMOND, VIRGINIA, on January 28, 1825. He studied law in Illinois with his uncle and was appointed to the UNITED STATES MILITARY ACADEMY AT WEST POINT by Congressman John Stuart. Pickett was not a success at West Point, where he was graduated last out of his class of 59 in 1846.

Although many West Pointers of the 1840s served only perfunctory military service before entering civilian life, Pickett remained with the army long after graduation. He served in the Mexican-American War, where he met and became friends with Lt. JAMES LONGSTREET. Afterward, he was assigned to Company K of the Eighth Infantry on a temporary basis, a command he relinquished to Longstreet in July 1854. Pickett served under Longstreet in Texas until 1855, when he was reassigned to the Washington Territory. It would be his last post in the U.S. Army. Pickett married twice during his time in the U.S. Army. Both marriages ended with the death of his wives, although his second marriage did produce a son, James Tilton Pickett.

With the outbreak of the CIVIL WAR, Pickett resigned his commission and returned to his home state of Virginia to enlist in the CONFEDERATE ARMY. Accepted into the Gamecock Brigade as a colonel, Pickett fought at Williamsburg and Fair Oaks. In May 1862 he was wounded in the shoulder at Gaines's Mill. The combination of his fighting record and his wound brought him to the attention of Confederate leaders, who were engaged in restructuring the Army of Northern Virginia. Pickett's old friend Longstreet, then a commanding general of ROBERT E. LEE's I Corps, recommended that Pickett be appointed major general of one of the divisions. The appointment was approved, and Pickett's division of Virginians saw their first action under his leadership when they defended Confederate lines at the BATTLE OF FREDERICKSBURG.

It would be Pickett's next major action that would forever ensure his place in history. In summer 1863 Lee ventured north and engaged Union general GEORGE GORDON MEADE at Gettysburg, Pennsylvania. On the third day of a three-day battle, Union lines were reinforced on the left and right flanks but not in the center. Lee determined that the center of the line was vulnerable, and he planned an attack there—a huge display of artillery power intended to deprive the Union forces of artillery support. Once the bombardment had silenced Union guns, a massive infantry assault would charge the line. Lee assigned this task to Longstreet, who in turn selected Pickett's Virginians and Gen. Johnston Pettigrew's North Carolinians, the most rested soldiers at that point in the battle, to make the charge.

On the afternoon of July 3, 1863, what would be known afterward as Pickett's Charge got under way. The Confederate artillery bombardment had begun early in the afternoon and destroyed a few Union batteries before ammunition began to run low. Shortly after Union artillery ceased firing, and at 3:15 P.M. 13,000 Confederate infantrymen were commanded to move forward across roughly one mile of open ground. Pickett organized the attack well, but it was unsuccessful. Confederate bombardment had not inflicted enough damage on the Union guns, and close-

range artillery fire wiped out most of Pickett's men. A total of 10,000 were killed, wounded, or missing in action. Pickett withdrew with a casualty rate of more than 60 percent. When asked by Lee later that day to re-form his division, Pickett answered, "General Lee, I have no division." The failure of Pickett's charge on Union lines was an omen of other failures to come. After a modicum of success as the commander of the Department of North Carolina, Pickett returned to the Army of Northern Virginia. He bungled an engagement at the BATTLE OF FIVE FORKS during the Appomattox campaign and Lee removed him from his command the day before the surrender of the Army of Northern Virginia at APPOMATTOX COURT HOUSE, VIRGINIA.

After the war Pickett fled to Canada with his third wife, LaSalle Corbett, whom he had married shortly after the Battle of Gettysburg. Pickett left the United States because he was concerned that he might have to face charges in connection with his mistreatment of Union captives while in command in North Carolina. The khedive of Egypt offered Pickett a commission, but he refused. Shortly thereafter, President ULYSSES S. GRANT offered him a pardon and an appointment as marshal of Virginia. Pickett accepted the pardon but declined the appointment and instead worked as an agent of the Washington Life Insurance Company. Pickett strove to remedy his reputation by writing LETTERS and articles that eulogized his charge as evidence of the romantic vision and tragic dignity of the Southern cause. After his death on October 25, 1875, his wife LaSalle took up the cause of reinventing her husband's memory, producing even more written material than he had.

—Arthur E. Amos

### **Pierce, Franklin** (1804–1869) 14th president of the United States

Lawyer, soldier, and the 14th president of the United States, Franklin Pierce was born on November 23, 1804, in New Hampshire. Pierce graduated from Bowdoin College in Maine, and in 1827 he began practicing law in New Hampshire. Pierce was a staunch Democrat and a great admirer of President Andrew Jackson. His early political career was very successful. He served as a member of the New Hampshire state legislature and then in the U.S. Congress from 1833 to 1842, first as a representative and then a senator.

Pierce's political principles were those of the DEMOCRATIC PARTY he loved. He was a strong supporter of lim-

ited government, economy and efficiency in the federal budget, and STATES' RIGHTS. He was also a fierce patriot who detested the rising Northern abolitionist movement as a threat to the sectional harmony he was determined to preserve. Married and with a growing family, Pierce resigned from the Senate in 1842. He returned to New Hampshire to a thriving legal practice but remained a major force in his state's Democratic Party.

In the Mexican-American War (1846–48), President James K. Polk appointed Pierce first as a colonel and then as a brigadier general. His military career was brief and undistinguished, and he happily left the army to return to New Hampshire. Pierce was prominent in supporting the Compromise of 1850 and especially the Fugitive Slave Law, the most controversial part of the compromise. Pierce became known as a “doughface,” that is, a Northern man with Southern sympathies. His support did not go unnoticed in the South, and when the 1852 Democratic National Convention deadlocked, Southern politicians propelled Pierce's candidacy to a successful conclusion. Pierce won the presidency by a small margin.

Pierce assumed office in a period of great turmoil. His major goals were to continue the expansion of U.S. territory and to avoid sectional controversy. He achieved a limited measure of success in the former and failed miserably in the latter. Under his administration the Gadsden Purchase (1853) was negotiated, adding greatly to the nation's Southwest territory. The issue of SLAVERY, however, once again threatened the stability of the country when Senator STEPHEN A. DOUGLAS of Illinois pushed the KANSAS-NEBRASKA ACT of 1854 through Congress. The act superseded the Missouri Compromise and threw open all the territories to popular sovereignty. Soon, massive voting fraud and violent clashes between proslavery and free-labor factions demanded presidential intervention.

Pierce did not demonstrate strong leadership in handling the major crisis of his presidency. A weak, indecisive man, he favored the South over the North in Kansas and elsewhere, helping to set in motion a chain of events that led to the CIVIL WAR. By 1855 Pierce's many blunders had alienated Americans and made his renomination impossible. Pierce died in obscurity in Concord, New Hampshire, on October 8, 1869.

**Pinchback, Pinckney B. S.** (1837–1921) *politician*  
An important African-American politician of the RECONSTRUCTION era, Pinckney Benton Stewart Pinchback was

born in Macon, Georgia, to a white father and a free African-American mother. He grew up in Mississippi and Cincinnati, becoming the sole support of his mother and seven siblings after his father died in 1848. In 1862 Pinchback settled in New Orleans, where he raised a company of African-American soldiers for the UNION ARMY. Because Union policy did not allow Pinchback to command his company, he left New Orleans, returning in 1867 to participate in the reorganization of Louisiana politics. He started the Fourth Ward Republican Club and participated in the creation of the new Louisiana Constitution, championing the adoption of civil rights and EDUCATION provisions.

In 1868 Pinchback was elected state senator, and from that position he became lieutenant governor. When Governor Henry C. Warmouth was impeached in December 1872, Pinchback became acting GOVERNOR, the first black governor of any state in the United States. He held that post until November 1873, when the newly elected governor took office. By then Pinchback had been elected, simultaneously, to both a congressional and a senatorial seat in the national legislature. He chose to take his Senate seat, but the U.S. Senate refused to recognize his election, finally deciding in 1876, after almost three years of debate, not to seat him. After this defeat Pinchback served as an internal revenue agent in 1879 and became surveyor of customs for the port of New Orleans in 1881. Pinchback entered and graduated from the Straight Law School in 1885. In 1890 he organized the American Citizens Equal Rights Association. In 1892 he was a delegate to the Republican National Convention, and in 1898 he helped to unveil the FREDERICK DOUGLASS monument in Rochester, New York. He moved to WASHINGTON, D.C., in the 1890s to raise his grandson, Jean Toomer, later a Harlem Renaissance poet. Pinchback died in Washington, D.C., in 1921.

## plantations

Plantations were agrarian enterprises that employed large numbers of workers who produced crops for domestic and foreign markets. Before the CIVIL WAR, plantations primarily relied on the labor of African-American slaves who tended to a wide range of crops, including cotton, rice, and tobacco. After EMANCIPATION, SHARECROPPING and other labor systems replaced slave labor in the South, but plantations remained a part of the region's agricultural system.

In the 19th century, plantations were not confined to the American South or to slaveholding societies. Spanish

Two cotton pickers painted by William Walker (Hulton/Archive)

and Portuguese colonists ran sugar plantations in their South and Central American colonies, and English colonists used the system in Ireland and in many of their 17th- and 18th-century colonies. The ECONOMY of colonial Virginia relied heavily on tobacco plantations, while rice and indigo plantations were particularly widespread in South Carolina and the Georgia low country.

Southern plantations dramatically changed as a result of Eli Whitney's cotton gin. This machine, which appeared in 1793, drastically cut the costs of growing short-staple cotton, making it the most profitable crop available to planters. They subsequently turned to it in great numbers, and it became known as "King Cotton." The gin allowed planters, who originally grew cotton in the South Carolina and Georgia up-country, to move the crop south and west toward occupied NATIVE AMERICAN lands. The cotton kingdom further expanded after the forced removal of the southeastern Indians in the 1830s and the 1845 annexation of Texas. Cotton plantations were ultimately concentrated in what became known as the "Cotton Belt," a stretch of fertile land in Alabama, Mississippi, and Louisiana, where more than half of the nation's cotton was grown by the 1830s. South Carolina, which grew 60 percent of the crop in 1800, had fallen to

less than 10 percent on the eve of the Civil War. Although cotton was king at the start of the war, Southern planters also grew tobacco, rice, hemp, indigo, and wheat.

Not all Southern farms were plantations, and not all slave owners were planters. Plantations had large labor populations and usually specialized in one agricultural product. In order to be considered a planter, one had to own at least 20 slaves and a significant piece of land. In 1860 only about 50,000 of the 400,000 Southern slave owners were classified as planters. Wade Hampton, the largest slaveholder in 1860, owned more than 3,000 slaves who worked his Mississippi and South Carolina plantations.

Throughout the year, male and female slaves performed an endless number of tasks on Southern plantations. Crop cultivation consumed most of their time, with the harvest generally demanding the longest and hardest hours of work. African-American slaves hoed, weeded, picked, watered, reaped, and planted, often from sunup to sundown. They sometimes oversaw the labor of their fellow slaves. In slower months, slaves mended fences, cleared lands, and performed other seasonal tasks. Large plantations contained house slaves who tended to various needs of the plantation's mansion, or the "big

house.” Although not all domestic tasks were reserved for females, slave women frequently served as nursemaids, mammies, seamstresses, laundresses, and cooks for their planter masters and mistresses. In addition to slave quarters, plantations also had smokehouses, stables, barns, sheds, a chapel, and an occasional schoolhouse for white children.

The Civil War physically devastated many Southern plantations. Early in the war the Union blockade limited the South’s ability to export its raw goods. In addition, the Confederate military enlisted many white planters and overseers, leaving white Southern women to run the plantations. Although planters could sometimes avoid military duty under the Twenty-Slave Law, which exempted any white man who had 20 or more slaves under his control, only 4,000–5,000 men claimed exemptions during the war. With most white men serving in the CONFEDERATE ARMY, slaves increasingly resisted their bondage, refusing to work, wandering the countryside, and when possible, running to the safety of Union lines. A more direct devastation of Southern plantations resulted from the various invasions visited upon the South by the UNION ARMY. In particular, Union soldiers on WILLIAM T. SHERMAN’s 1864–65 march through Georgia and the Carolinas burned millions of acres of cotton and other crops, destroyed homes, broke fences and farming implements, and otherwise razed plantations in their path.

When the war ended, Southern planters struggled to rebuild. Only 180 of the more than 1,200 sugar plantations in Louisiana, for example, sold any surplus in 1865. Many plantations were sold to pay off debts. By the end of RECONSTRUCTION in 1877, however, about half of Southern plantations were once again in the hands of the families who had owned them when the war began. To compensate for the labor lost from emancipation, many postwar planters turned to sharecropping. They contracted former slaves to live on portions of the plantation that had been subdivided into family lots. Owner and sharecropper would presumably share the harvests produced, but this system resulted in a cycle of debt and hard labor for the freedpeople.

## population trends

The CIVIL WAR and RECONSTRUCTION era brought unprecedented transformation to the United States. Particularly striking was the growth of IMMIGRATION, the rise of cities, and a general population explosion.

### National Trends

In the 30 years between 1850 and 1880, U.S. population more than doubled, from 23 million to 50 million. Births within the United States account for much of the increase; families averaged three to four children in 1850, a number that had declined from that of 1790 and would continue to decline through the 20th century.

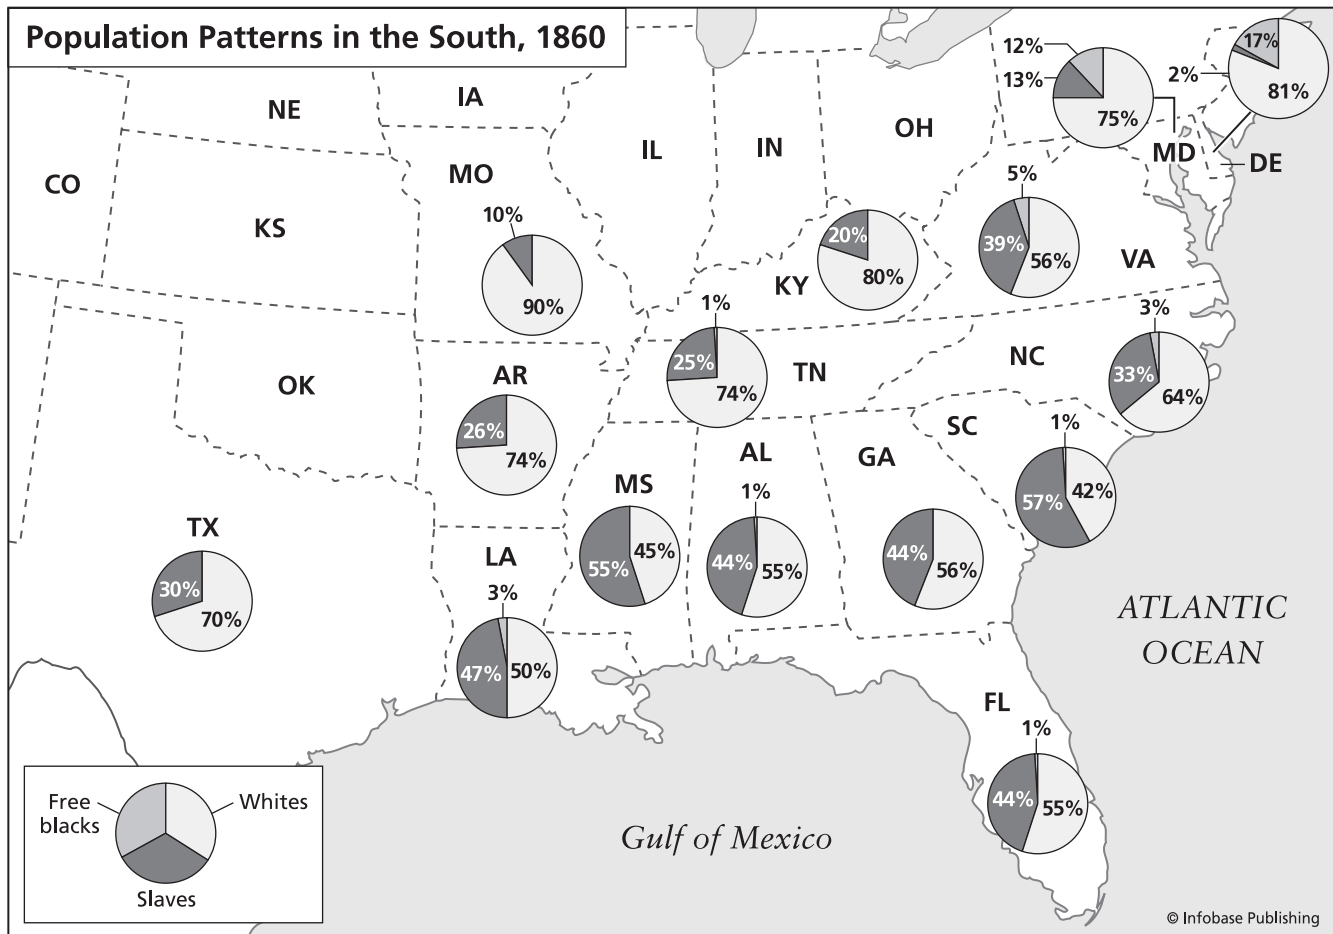

An increasing number of Americans were foreign-born. Immigrants accounted for just under 10 percent of the country’s population in 1850 but were more than 14 percent by 1880. Irish, Germans, and English accounted for most of these immigrants. While not comprising a large proportion of all immigrants, other groups were important in particular regions: Chinese in California and the Mountain West; Czechs and Slovaks (often called “Bohemians”) in Texas and the lower Great Plains; and Scandinavians in Minnesota and Wisconsin. Together, these immigrants are sometimes classified as the “old immigration,” contrasted with the “new immigration” of the 1890s through the 1920s, which included mostly Jews, Russians, Italians, Poles, Greeks, and other eastern and southern Europeans.

Immigration swelled the already growing American cities. The proportion of Americans living in urban areas almost doubled between 1850 and 1880, from 15 percent to 28 percent. This figure is a bit deceptive, however; “urban” at this time included any town with 2,500 persons or more. A better measure, perhaps, is cities containing more than 100,000 persons. There were six such cities when the Census Bureau took its 1850 census; their combined populations included just one of every 20 Americans—only 1.2 million persons. When the census takers returned in 1880, there were 20 such cities totaling 6.2 million Americans—about one in ten. The population of NEW YORK CITY alone in 1880 nearly equaled the total combined population of the six largest American cities in 1850.

There were two other notable characteristics about the people of the period: the large numbers of younger people and the lack of older ones. The average American was around 20 years old; fully a quarter of the nation’s people were under 15. Average life expectancy was about 60 years.

### Regional Issues

The urbanization, industrialization, and immigration of the mid-19th century were felt most dramatically in the Northeast and Midwest, which had a little less than 15

million people in 1850 but more than 32 million by 1880. While overshadowed by population growth in the North, shifts in the South and West would also have long-term consequences.

Southern leaders had long feared the increasing pace of Northern growth. While fully half of Americans had been Southerners in 1790, the proportion had dwindled to 33 percent by 1850. Because northern and midwestern members constituted majorities in the Senate as well as the House, Northerners could set the conditions and the pace for admission of new states from the western territories. Southern leaders realized that unless they checked growing Northern power, there would come a time—1870? 1880? 1890?—when Northerners would control the two-thirds of the House, two-thirds of the Senate, and three-quarters of the state legislators necessary to amend the Constitution and force the end of **SLAVERY**. This possibility hardened Southern attitudes toward territorial compromise in the 1850s and contributed to the outbreak of the Civil War.

The South absorbed fewer immigrants than any other part of the country, a fact directly related to the region's

reliance on slave labor before the Civil War, and after the war, the region's economic dislocation and growing reliance on **SHARECROPPING** and tenant farming. While immigration swelled the Northeast's labor pool, the postwar South relied on former slaves, with 90 percent of the nation's 6.5 million African Americans still living in the South in 1880. While African-American communities could be found in the North, these would not become large until the "great migration" of the 1940s.

The trans-Mississippi West faced different issues. The most obvious demographic fact about most western states was their skewed ratio of men to women. Mining and lumber camps disproportionately attracted young men. Indeed, 90 percent of California's 1850 population was male. While a few states, such as Oregon and Utah, attracted families, in most states, the number of women did not match the number of men until the early 20th century.

Between 1850 and 1880, migration from the eastern United States swamped indigenous **NATIVE AMERICAN** and Mexican populations. Native peoples were increasingly herded onto reservations or else killed in the wars

that were waged against them. The Mexican population of southern California was numerous and powerful enough to require that the state's constitution establish both Spanish and English as official languages. With California's white population rising rapidly over the next 30 years, the 1879 state constitution removed this provision.

**Porter, David Dixon** (1813–1891) *Union admiral*  
CIVIL WAR admiral David Dixon Porter was destined for naval service. As the son of Comdr. David Porter and Evelina Anderson Porter, he frequently joined his father on expeditions, including a mission against Caribbean pirates in 1824. In 1829 Porter joined the U.S. Navy and began his own distinguished naval career. He rose through the ranks and was promoted to commander when war broke out in April 1861.

Throughout the Civil War the UNION NAVY was given responsibility for cutting off Southern commerce, according to the “Anaconda Plan” of Gen. WINFIELD SCOTT. For the first several years of the war, Porter played an important role in making the Northern blockade a reality. Porter's most important contribution came in March 1862, when he joined his foster brother, Adm. DAVID GLASGOW FARRAGUT, in an attempt to capture the crucial Southern port of New Orleans, Louisiana. Porter commanded several mortar boats that were responsible for shelling Forts Jackson and St. Philip. When the forts fell, New Orleans was open to capture by the Northern military. The victory was a critical step in the Union's goal, ultimately successful, to control the MISSISSIPPI RIVER.

Porter's success led to his promotion in September 1862 to command of the Mississippi Squadron as acting rear admiral. In that capacity, Porter worked with Gen. ULYSSES S. GRANT and his troops to take the Confederate stronghold of Vicksburg, Mississippi, in 1862 and 1863. Porter took part in one of the first failed attempts to skirt the fortifications at Vicksburg. He led his boats on a treacherous attempt to navigate the lower Yazoo to Steele's Bayou, but the ships foundered in the narrow waters,

which were filled with trees and debris. Porter's fleet was nearly destroyed by Confederate forces, and he had to call in ground help to rescue his naval force. Ultimately, Porter redeemed himself with a daring midnight run past blazing Confederate batteries on April 16, 1863. Porter's fleet of ships successfully delivered Grant's troops to a location past the city, allowing them to march on and seize the Mississippi capital of Jackson. This cut off Vicksburg's supply lines and made the fall of the city almost inevitable.

In October 1864 Porter was promoted to command of the North Atlantic Squadron. Shortly after assuming his new command, Porter again found himself in a tough spot, this time during Gen. Nathaniel P. Banks's RED RIVER CAMPAIGN. Porter's forces just barely escaped destruction by Confederates after becoming stranded by the low water level in the Red River. Quick action by Lt. Col. Joseph Bailey and his engineering brigade was all that saved Porter and his men. Bailey designed dams along the river so as to raise the water level enough to allow Porter's ships to run the treacherous Alexandria Rapids and escape.

In the fall of 1864, Porter led the war's largest fleet of ships against Fort Fisher, the garrison that guarded the entry to Wilmington, North Carolina. Porter's first shelling attempt did little damage, but a renewed attack allowed Gen. A. H. Terry's forces to storm and seize the fort on January 15, 1865.

After the Civil War, Porter remained in the navy and was named superintendent of the UNITED STATES NAVAL ACADEMY AT ANNAPOLIS, a position he held from 1865 to 1869. While serving as superintendent, Porter helped to reform the curriculum and expand the facilities at the academy. Porter was promoted to the rank of vice admiral in 1866 and admiral of the navy in 1870. He died in WASHINGTON, D.C., on February 13, 1891.

## Port Royal, South Carolina, Experiment

The Port Royal Experiment was an attempt by abolitionists to test the transition from slave labor to a free-labor system on an isolated slave population beginning early in the CIVIL WAR. The issues that arose at Port Royal, South Carolina, included the future of cotton production, land redistribution, and the status of the freedmen. The Port Royal Experiment also served as a dress rehearsal for RECONSTRUCTION.

Port Royal was part of a series of islands along the South Carolina coast known as the Sea Islands. Separated from the mainland by rivers, creeks, and swamps, the islands proved an easy target for the U.S. Navy. In November 1861, Union naval forces captured Port Royal and the Sea Islands and used them as a coaling station for the blockading fleet. Ahead of the invading army of federal troops, white planters fled inland to seek refuge behind Confederate defenses, leaving behind 10,000 slaves. An opportunity presented itself. Here, in one of the richest cotton regions of the South and in the absence of white owners, there was a possibility of transforming slaves from an unfree labor force into free workers. If the experiment were successful, Northern values of self-reliance and pride in labor would enhance the productivity of the workers and produce higher-quality cotton more efficiently.

Northern abolitionists jumped at this chance. At the request of Secretary of the Treasury SALMON P. CHASE, Edward Pierce, an abolitionist attorney experienced in working with CONTRABAND slaves, organized a contingent of teachers, missionaries, young college graduates, and other volunteers. This group, known as “Gideon’s Band,” took on the experiment in free labor, but they also sought to educate the slaves, provide moral uplift, aid physical needs, and generally to reform Southern society.

From the beginning, African Americans had little interest in growing cotton for their new bosses. Instead, they planted subsistence crops like corn and potatoes. Ex-slaves considered picking cotton too much like slave labor. Moreover, because of the wartime disruption of the cotton ECONOMY, grain production seemed a more plausible alternative for their families. Ex-slaves wanted to use their freedom and money gained from wage labor to purchase family amenities, like new clothes. They were showing an independence of mind that unpleasantly surprised the abolitionists on the island.

A skeptical labor force was not the only problem that the Northerners faced. They underestimated the extensive management system that white planters utilized to produce a profit and failed to account for the peculiarities of the physical environment, which were ill-suited for long-staple cotton. Ironically, in their quest to prove the superiority of free labor in cotton production, the white abolitionists found themselves in the same social position as the former masters—coercing black labor. “They force men to prove they are fit to be free by holding a tyrant’s power over them,” noted Laura Towne, a teacher in the Sea Islands, somewhat sardonically. It is little wonder that cotton production at the end of the first year was substantially lower than in the prewar years.

The question of landownership had wide-ranging implications for Reconstruction. Because the white planters had

fled the Sea Island PLANTATIONS, most freedmen sought to claim the land as their own. Ex-slaves did what they could to settle the matter. Some pooled their meager resources and purchased 2,000 acres in a delinquent tax sale, but most leased the land from the federal government.

Gen. WILLIAM T. SHERMAN’s famous SPECIAL FIELD ORDER NO. 15 offered the most far-reaching land redistribution plan during Reconstruction. It designated the entire Sea Island region for black settlement on 40-acre plots. However, within a year, President ANDREW JOHNSON, in his Proclamation of Amnesty, revoked Sherman’s order and decided that all confiscated lands would be returned to their prewar owners (except those lands sold for taxes). What was most unjust for the freedpeople, besides losing land promised to them, was that they would have to work for their former masters. Many of the freedpeople just wanted to be left alone.

Notwithstanding the problems of growing long-staple cotton, naive Northern abolitionists trying to run plantations, and the betrayal of the federal government, the Port Royal Experiment failed because African Americans in the Sea Islands considered independent production and individual choices to be the hallmarks of freedom. In other words, cotton production was less important than the goal of family self-sufficiency. Though few Southern black families were ever able to become sufficient in the post-Reconstruction South, some Port Royal families did prosper because they retained ownership of their own land.

**Price, Sterling** (1809–1867) *politician, Confederate general*

Sterling Price was a Confederate general from Missouri. Born in Prince Edward County, Virginia, on September 20, 1809, Price was the son of wealthy, slave-owning planters. He attended Hampton Sidney College before accompanying his family to Missouri in 1831. There he established himself as a wealthy tobacco planter and merchant. Success whetted Price’s appetite for politics, and he served several terms as a Democrat in the state legislature before successfully standing for a congressional seat in 1844. He resigned in 1846 to partake in the Mexican-American War as colonel of the 2nd Missouri Infantry. Using his wartime service as a springboard to higher office, Price was elected GOVERNOR of Missouri from 1853 to 1857.

As the storm clouds of SECESSION grew in 1860, Price played another highly visible role as president of a state con-

vention addressing this divisive issue. He opposed secession and helped defeat the measure in a vote of 69 to 1. But the dynamic of events changed dramatically when the Union captain Nathaniel Lyon seized the pro-Southern militia at Camp Jackson on May 10, 1861. In response, Price, Governor CLAIBORNE F. JACKSON, and thousands of Missourians declared for the Confederacy. Lyon quickly chased Price's ill-armed militia out of Jefferson City, but once reinforced by Confederate forces under Gen. Ben McCulloch, Price returned in kind. He defeated Lyon at Wilson's Creek on August 10, 1861, and followed up this victory on September 20, 1861, by seizing a Union garrison at nearby Lexington, Missouri, taking 3,000 prisoners. The popular uprising that he had anticipated failed, however, to materialize, and Price gradually withdrew before a larger army under Gen. John C. Frémont.

In April 1862 Price rose to major general in the CONFEDERATE ARMY and led a division of Missourians under Gen. PIERRE GUSTAVE TOUTANT BEAUREGARD in Mississippi. There he fought effectively against Gen. WILLIAM S. ROSECRANS at Iuka on September 19, 1862, but was bested by him at the BATTLE OF CORINTH on October 3–4, 1862. Price then requested and received a transfer back across the MISSISSIPPI RIVER. In Arkansas he assembled a force of 12,000 poorly trained volunteers, and in September 1864 he once again crossed into Missouri. He waged a costly encounter at Pilot's Knob on September 27, 1864, failing to capture either the Union garrison or its arms. Losses here compelled Price to bypass St. Louis altogether, and his column was defeated and almost destroyed. He executed a hasty withdrawal back into Arkansas.

After the war Price fled to Mexico. There, in April 1865 he offered his services to Emperor Maximilian and sought to establish a colony of ex-Confederates in Mexico. Two years later illness and the collapse of the throne forced him back to St. Louis, where he eked out a marginal existence until his death on September 29, 1867.

—John C. Fredriksen

## prisons

At the start of the CIVIL WAR the U.S. Army totaled 16,000 men. Just over a year later, when troops under ULYSSES S. GRANT conquered Fort Donelson, they accepted the surrender of 15,000 prisoners in a single day. The capture of large numbers of prisoners became a common phenomenon during the Civil War, a by-product of the incredible growth in the scale of warfare at that time. Nothing in the

experience of leaders on either side prepared them for the logistics of dealing with the 650,000 men that were taken captive during the Civil War. As the war dragged on, both sides struggled to develop workable solutions, with many soldiers suffering miserably or dying as a result. Poor nutrition, overcrowded conditions, inadequate sanitation, and exposure to the elements conspired to make prison camps a haven for communicable diseases such as pneumonia, dysentery, and typhoid. These virulent diseases exacted a heavy toll in human life and suffering. The hardships engendered by prisons and captivity are among the most disgraceful dimensions of the entire conflict, with both sides to blame.

Early on, Northern authorities felt it expedient to treat Southern captives as prisoners of war rather than rebels or criminals. This policy, which entitled Southern prisoners to humane treatment and protection in accordance to the laws of war, was undertaken as much to prevent harsh reprisals against Northern captives as anything else. In 1863 the legal scholar FRANCIS LIEBER codified the correct and legal treatment of military captives in General Order No. 100, better known as the Lieber Code. This seminal document was subsequently adopted by the German Empire, but it did little to improve conditions for prisoners in the Civil War.

In the early months of the war, prisoners were sometimes exchanged informally on the authority of field commanders, whose actions were governed by custom, their sense of chivalry, and logistical constraints. When an exchange could not be arranged, soldiers were paroled. A paroled soldier agreed to remain at home or at a specified location in enemy territory, staying out of the fight until an exchange had been arranged. While it was not technically within the power of field commanders to agree to exchanges and paroles, the practice was overlooked because of the widely held belief that the war would not last long.

By the end of 1861, however, it became clear that the war was not going to end quickly. The number of men being held prisoner increased dramatically, and Confederate authorities began to press for a formal agreement on the exchange of prisoners. President ABRAHAM LINCOLN hesitated, for to enter into such an agreement would be equal to recognizing the legitimacy of the Confederate government. Eventually, he was forced to bow to public pressure from the families of prisoners, and he appointed a negotiator to meet with Confederate authorities. After several rounds of negotiations, the Confederacy's DANIEL H. HILL and the Union's John A. Dix reached agreement.

The Dix-Hill cartel, signed on July 22, 1862, was modeled after a similar agreement used during the War of 1812. By its terms, various ranks were assigned exchange "values." A noncommissioned officer was equal

in value to two privates, a second lieutenant was worth three privates, and so forth all the way up to a commanding general, who could be exchanged for 60 privates or any combination of soldiers equal in value to 60 privates. Each side was to hold its own parolees until exchanges were arranged. Thus, Union authorities were responsible for holding paroled Union soldiers, while Confederate authorities were responsible for holding paroled Confederates. The Confederates were generally allowed to wait at their homes, but captured Union soldiers were held in one of three Union parole camps: Camp Chase in Ohio, Benton Barracks in Missouri, and Camp Parole in Maryland.

The Dix-Hill cartel quickly proved to be unworkable for a variety of reasons. First of all, there was constant conflict between Union and Confederate authorities. The most common debate was over the status of prisoners—whether they had been properly exchanged or not. Both sides invariably argued that the other was returning soldiers to duty too quickly. These disputes were complicated by personal animosities that existed between officials on both sides. The relationship between Confederate commissioner Robert Ould and the Union's BENJAMIN FRANKLIN BUTLER, who temporarily oversaw prisoner exchanges for the Union before being reassigned, was particularly icy.

The Dix-Hill cartel was also problematic because its terms were highly unfavorable to the Union. In the early years of the war, there were invariably more Union prisoners than Confederate prisoners. For this reason, Union parolees were often detained for a long time while waiting for enough Confederate soldiers to be captured so that an exchange could be made. Union authorities had not planned for such long detentions, and their parole camps became dangerously overcrowded. Conditions were so bad that one superintendent of a Union parole facility noted that the soldiers would have been better off remaining in a Confederate prison.

Prison exchanges under the Dix-Hill cartel were unfavorable to the Northern war effort in another way. The Confederacy had a much smaller population than the Union. They could not replace captured soldiers. The Union, on the other hand, could replenish lost manpower. Therefore, the Union's bottom line dictated that it was better to keep captured Confederates imprisoned rather than try to exchange them. Of course, the implication of this was that many Union prisoners would be sacrificed by being allowed to remain in Confederate hands.

The Dix-Hill agreement ended with Lincoln's pledge to enlist African-American soldiers, contained within the provisions of the EMANCIPATION PROCLAMATION. The Confederacy refused to recognize black soldiers as legitimate prisoners, declaring that captured black soldiers would not be exchanged and, instead, would be enslaved.

The Lincoln administration insisted on equal treatment for black soldiers and refused to continue exchanges under any other conditions. Confederate authorities would not back down. Union authorities were already unhappy with the terms of the Dix-Hill agreement, and this provided Lincoln with a compelling reason to abandon it. Thus, in mid-1863, prisoner exchanges were suspended. While the new policy inflicted new hardship upon Northern prisoners already languishing in captivity, over the long term it put another nail in the Confederacy's coffin.

The timing of the cartel's suspension proved to be catastrophic. Some of the largest battles of the war occurred in the summer of 1863, and many men were captured. Union and Confederate authorities, already having trouble caring for the prisoners they had, were now overwhelmed. The Confederates, under the direction of Gen. John Winder, responded by opening or expanding several prison facilities, the largest of which were Libby Prison in RICHMOND, VIRGINIA, Belle Isle just outside of Richmond, Salisbury Prison in North Carolina, and the notorious ANDERSONVILLE PRISON in Georgia. The Union, under the leadership of Col. William Hoffman, followed suit with Camp Douglas in Chicago, Camp Chase in Ohio, Johnson's Island in Ohio, Elmira in New York, Camp Morton in Indianapolis, and Rock Island in Illinois.

Life in these hastily created prison facilities was generally miserable for captives. This was especially true in the prisons of the resource-strapped Confederacy, but it was true in most Union prisons as well. Shelter was often inadequate, and many men had no shelter at all. Often prisoners were not issued replacements for items of clothing that wore out, and they were forced to brave the winter months with little protection from the elements. The amount of food that captives received tended to be insufficient. Prisoners were supposed to be issued the same rations active soldiers received, but this rarely was the case. Disease was rampant, due to the crowded accommodations and malnutrition. Once prisoner exchanges ceased, captivity proved tantamount to a death sentence for many of the hapless camp residents.

Black prisoners, not surprisingly, had the worst situation of all. Often they were not afforded the opportunity to surrender but, rather, were slaughtered in cold blood. Those who did reach prisons tended to be mistreated and were generally compelled to perform menial labor. Although the Confederate government did not follow through on its threat to return them to SLAVERY, their situation was not much better than if they had been. In May 1864, following the alleged massacre of black prisoners by Confederates under Gen. NATHAN BEDFORD FORREST, public pressure required Secretary of War EDWIN M. STANTON to invoke retaliatory measures, and the already paltry rations accorded Southern prisoners were further scaled back. It

was not until January 1865 that the Confederate government finally pledged to respect African-American captives as prisoners of war and agreed to exchange them in the same manner as their white compatriots.

Prisoners did what they could to make their lives better. In officers' prisons, such as Libby Prison and Johnson's Island, men were permitted to purchase goods and receive packages from their families. Sometimes, inmates at enlisted men's prisons were afforded the same privileges. Generally, white prisoners were not expected to work, and so they had ample free time. The men read, participated in classes, played games, wrote LETTERS and diaries, made handicrafts, held religious meetings, staged plays, and did whatever else they could to relieve their boredom. Many inmates spent time making escape plans, which were occasionally successful. The largest escape occurred on February 9, 1864, when 109 Union officers traveled through an underground tunnel they had dug under Libby Prison.

Most prisoners, however, were unable to escape and were forced to endure prison life. By late 1863 the misery endured by captives on both sides became an important political issue, as both Confederate and Union authorities used stories of prisoner mistreatment as propaganda. Eventually, political pressure led to a compromise in April 1864, and the sickest prisoners on both sides were exchanged. The "living skeletons" returned by the Confederates seemed to confirm suspicions that they were deliberately mistreating prisoners. Some Northerners became determined to exact revenge on the South. Many Northern citizens blamed the soldiers' suffering on President Lincoln because he had suspended prisoner exchanges, and for a time he believed the issue would have an impact on his reelection chances.

In January 1865, when the desperate Confederates finally agreed to exchange black soldiers, Northern authorities felt that the war was in hand and that nothing was to be gained by allowing imprisoned Union soldiers to suffer any further, so they agreed to resume the exchanges. By May 1865 all prisoners on both sides had been released. Of course, for many men it was too late. Of the estimated 462,634 Confederates taken prisoner, 25,976 died, a mortality rate of 12 percent. Of the estimated 211,411 Union soldiers captured, 30,218 died in captivity, a rate of 15.5 percent. Nearly 9 percent of the men who died during the war did so in prison.

After 1865 many Northerners pressed for the punishment of those responsible for the suffering of Union prisoners, and Judge Advocate General Joseph Holt was given the responsibility of investigating the matter. His efforts to identify and apprehend the presumed guilty parties were generally unsuccessful, although he was able to see to it that Andersonville superintendent Henry Wirz was tried and executed. Wirz, who was more incompetent than he was deliberately cruel, became the only person to be executed

for war crimes during the Civil War. Meanwhile, Confederate authorities, including JEFFERSON DAVIS, argued in newspapers and books that Confederate prisons had done their best with the resources available to them. However, these apologists tended to be drowned out by the prisoners themselves, who also took pen in hand. Based on the available testimony, this was one area where the Confederacy proved unable to redeem itself after the war. The notorious Andersonville site is home to a modern museum dedicated to all those who suffered or died as prisoners, regardless of the uniform they wore or the conflict in which they served.

## prostitution

Women who engaged in sexual intercourse for money, or prostitutes, primarily worked in the urban areas during the 19th century. It is difficult to estimate with any reliability exactly how many prostitutes were working at any given time given the moral stigma associated with the profession. The best numbers available come from a study done by Dr. William Sanger, who was a well-known expert at the time. Studying prostitutes in NEW YORK CITY from 1850 to 1870, he found a steady rise in the number of women engaging in the trade, from 5,413 in 1850 to 8,750 in 1860 to 9,894 in 1870. By 1870, when he concluded his study, Sanger estimated that 2 percent of New York's women were working as prostitutes.

Prostitutes who worked in brothels, also known as "bawdy houses," "bordellos," or "bagnios," tended to be favored by the members of the upper class and by young, single middle-class men living in the city on their own.

These establishments were typically run by former prostitutes, called “madams,” and were usually fairly discreet. Brothels often served liquor and food and would sometimes entertain men for an entire weekend. Less affluent working-class men, such as sailors, could not afford such luxuries and were compelled to find prostitutes in the public places that they were known to frequent, particularly cigar stores, dance halls, and THEATERS.

The public presence of prostitutes in high-profile cities such as New York and PHILADELPHIA called forth many moral reform or antvice movements, beginning early in the 19th century and gathering momentum in the 1830s and 1840s and lasting to the end of the century. Christian ministers and middle-class women agitated against prostitutes and their customers, calling for harsher laws on the one hand and positive programs to restore the “fallen angels” away from their degraded lives on the other. Victorian notions of Christian propriety elevated the status of women based on their domesticity, purity, and piety. Obviously, the idea of young women selling their bodies for the sexual pleasure of men was deeply disturbing to many citizens. Yet in an era of growing poverty, many prostitutes felt forced to enter the trade due to financial considerations. At a time when living expenses were about \$1.50 per week for a single woman, factory and domestic jobs paid between 75¢ and \$2.00 a week. A successful prostitute, on the other hand, could earn \$50 to \$100 a week.

Political authorities in cities, responding to public outrage, regularly took steps to curtail the spread of prostitution, passing vagrancy laws or arresting any woman suspected of being a prostitute. In 1873 New York’s Committee for the Suppression of Legalized Vice was founded by prominent abolitionists and feminists, including Susan B. Anthony and Elizabeth Blackwell. These female purity reformers demanded new and strictly enforced laws against rape and prostitution.

There was opposition to these actions. Some doctors fought against antiprostitution laws, fearing they would lose business. Even some religious conservatives opposed steps taken to curtail prostitution, believing that God would punish prostitutes for their immorality by giving them sexually transmitted diseases. However, most Christian reformers believed in the redemption and reform of prostitutes and their clients.

Sexually transmitted diseases were indeed a major risk for prostitutes, particularly given the fact that some diseases, such as syphilis, could be fatal. Another problem was unwanted pregnancies. Although a number of methods of birth control, including condoms, were available, they were often unreliable or difficult to obtain. Rape was also a major concern of prostitutes, and although rape laws existed, convictions were rare. Most women worked as prostitutes for very short periods of their lives, and many came to tragic ends.

During the CIVIL WAR, prostitution increased. From 1861 to 1865, the majority of women worked as NURSES or in soldier’s aid societies, fulfilling their traditional Victorian roles as domestic nurturers. Less motherly were the thousands of prostitutes who flocked to the cities, from WASHINGTON, D.C., and RICHMOND, VIRGINIA, to the lesser-known depots, such as Keokuk, Iowa, and Sewanee, Tennessee. Most notorious were Memphis and Nashville, where prostitution was placed under military licensing to control disease, an experiment that did not outlast the war years. One private described Nashville’s red-light district: “There was an old saying that no man could be a soldier unless he had gone through Smokey Row. . . . Women had no thought of dress or decency. They said Smokey Row killed more soldiers than the war.”

Many young volunteer soldiers, away from their families for the first time, took advantage of the opportunity to drink, gamble, and consort with the kind of women that were scorned back at home. Soldiers stationed in or near cities were particularly likely to solicit prostitutes, who often walked the streets quite openly. One reporter stationed in Washington, D.C., for example, complained that the city was “the most pestiferous hole since the days of Sodom and Gomorrah.” Prostitutes sometimes traveled with the armies, as well.

Some commanders were unconcerned with the sexual behavior of their men. Generals DANIEL E. SICKLES and JOSEPH HOOKER were notoriously liberal in their attitudes about sex, although the story that the slang term *hooker* was adopted from the general’s name is not true. Most generals and junior officers were less understanding than Sickles and Hooker, however, and did what they could to limit their men’s access to prostitutes. This was due to a combination of moral concerns and practical matters—men inflicted with sexually transmitted diseases were made temporarily or permanently unavailable for duty. Despite the best efforts of Northern leadership, there were 182,482 diagnosed cases of syphilis and gonorrhea among Union soldiers during the Civil War. There is little statistical information available for Confederate soldiers, but it can be assumed that the rates of infection were similar.

**Quantrill, William Clarke** (1837–1865) *Confederate soldier*

William Clarke Quantrill was a captain of the Confederate Partisan Rangers and the infamous leader of a guerrilla band known as “Quantrill’s Raiders.” Born in Canal Dover, Ohio, on July 31, 1837, he was a schoolteacher before moving to the Kansas Territory in 1857. Bitter antagonism between abolitionists and proslavery factions characterized the Kansas of the 1850s, and Quantrill joined the proslavery “border ruffians” after a series of odd jobs in Utah and Colorado. Operating under the alias Charley Hart, Quantrill switched loyalties to “jayhawking” abolitionists in Lawrence, Kansas, where he was wanted by authorities for kidnapping and theft. His ambush of his own JAYHAWKER band at Morgan Walker’s farm in Jackson County, Missouri, however, established him firmly in the proslavery faction of the BUSHWHACKERS.

Quantrill’s growing group of followers was loosely affiliated with the Missouri State Guard commanded by Confederate Maj. Gen. Sterling Price. Quantrill’s cavalry company also participated in the Battle of Wilson’s Creek on August 10, 1861, in which the CONFEDERATE ARMY, under Brig. Gen. Ben McCulloch, defeated the Union forces under Capt. Nathaniel Lyon. Quantrill’s Raiders continued to aid the Confederate cause throughout the war, largely by keeping Union troops distracted and away from the larger Confederate armies.

Officially made a captain of the Partisan Rangers on August 15, 1862, Quantrill often referred to himself as a colonel, and his followers usually numbered from a dozen to a couple hundred. Some of the most prominent members of the band included George Todd and Cole Younger, and later William “Bloody Bill” Anderson and Frank and Jesse James. The raiders were successful in looting and burning several small towns and garrisons on the Kansas-Missouri border and in murdering Union sympathizers, military and civilian alike. They sacked the towns of Aubry, Olathe, and

Shawneetown, Kansas, and were briefly assigned to Col. Joe Shelby’s regiment in Arkansas.

The best-known exploit of Quantrill’s Raiders was the destruction of Lawrence, the center of abolitionist activity in Kansas, on August 21, 1863. Quantrill gathered a force of about 450 men, the largest guerrilla force organized at one time in the CIVIL WAR, for what is now considered the most terrible massacre of the entire war. The raiders murdered 150 men and burned and looted almost all of the town, possibly in retaliation for the forced deportation of family members and other sympathizers in Missouri, or perhaps for the deaths of female relatives who were killed when the building in which they were forcibly held collapsed.

The Raiders headed south for winter quarters, routing a small federal force in Baxter Springs, Kansas, on their way to Texas. While encamped in Mineral Creek, Texas, during the winter of 1863–64, tensions among leaders led to a breakdown in group cohesion. After returning to Missouri in April 1864, a quarrel between Quantrill and Todd resulted in Quantrill’s leaving the Partisan Rangers and Todd’s taking over the leadership. However, Quantrill, Todd, and Anderson briefly reunited to support Sterling Price’s invasion of northern and western Missouri in the summer of 1864, during which Todd and Anderson were killed in action. This last major Confederate assault in Missouri dissolved in failure, and the effectiveness of guerrilla activities decreased as well.

Quantrill led a small band into Kentucky, where Maj. Gen. John M. Palmer sent out a group of federal bushwhackers against him, led by Edwin Terrill. In an ambush at Wakefield’s farm near Bloomfield on May 10, 1865, Quantrill was disabled by a shot to the spine and was later taken to a military hospital in Louisville. He died there on June 6, 1865, and was buried in an unmarked grave. A strange series of events, however, later brought his body to rest in Canal Dover (Dover), Ohio, while the disintegrated remains of his ribs and spine were left in Louisville and his arm and shinbone were eventually buried in Higginsville, Missouri.

William Clarke Quantrill was considered to have leadership abilities, a calm disposition under pressure, and a tendency toward ruthlessness. His activities are an example of guerrilla warfare during the Civil War and illustrate the scale and nature of hostilities between proslavery and abolitionist forces in Kansas and Missouri in the 1850s and 1860s.

### race and racial conflict

Although race and **SLAVERY** were at the center of the long sectional conflict that led up to the **CIVIL WAR**, at the beginning of the war few Americans either Northern or Southern would admit that the war was about slavery. Leaders on both sides insisted that they were fighting to preserve the Constitution and to protect the rights of white citizens of the United States. Despite such statements, however, race was a central part of how Americans thought about the Civil War, and racial conflict was a key factor on the **HOMEFRONT** of both the Confederacy and the Union.

The Confederate Constitution guaranteed the rights of its citizens to own slaves and to take them into the western territories (the latter point was central to the debates and compromises of the antebellum period). It did not allow for the importation of slaves, and it held open the possibility that future states could choose not to allow slavery. There was little confusion in the South about the role of slavery in the Confederate war effort. For Southerners, the main concern was how to deal with the slaves they already had.

Most slave men and women knew that their futures depended on which side won the Civil War. Nearly 200,000 African Americans, mostly former slaves, were able to strike a blow against slavery by serving in the **UNION ARMY**. Those slaves who were unable to take refuge within Union lines sometimes broke the rules that had governed slavery for generations. They talked back to white folks, took liberties with their masters' property, and ignored restrictions on their movements. Kate Stone, a Southern plantation mistress, reported crowds of "strange Negro men" standing around Delhi, Louisiana, where her refugee family paused on their journey to Texas during the war. Although a mob of black men had reportedly robbed another party of **REFUGEES**, the men Kate saw simply stood and grinned, which "terrified us more and more." On another occasion, a company of black men actually threatened Kate and her mother with pistols. No harm came to them, but

the incident was obviously frightening for a person raised around obedient slaves. Despite incidents like these, in which slaves took advantage of the confusion and of the absence of many white men to test the boundaries of slavery, there was surprisingly little serious resistance among Southern slaves during the Civil War. No slave rebellions were reported, although in 1861 a conspiracy among slaves living near Natchez was suspected; dozens of slaves were killed and beaten as a result. This was rare, however, and a majority of slaves remained on their masters' **PLANTATIONS**, doing their jobs and waiting for whatever the end of the war would bring.

One of the most difficult questions facing the United States was the issue of slavery. Congress passed several **CONFISCATION ACTS** during the first year of the war that allowed army commanders to confiscate the property, including slaves, of Southerners loyal to the Confederacy. President **ABRAHAM LINCOLN** refused to act. Northern abolitionists wanted him to come out publicly against slavery and to make its destruction one of the official war aims of the federal government. **HORACE GREELEY**, the editor of the *New York Tribune*, urged the president to do just that in a letter published in his newspaper called "Prayer of Twenty Millions." Lincoln's famous reply was, "My paramount object *is* to save the Union, and *is not* either to save or to destroy slavery."

Lincoln's reluctance to come out against slavery was due to several factors. First of all, four slave states—Missouri, Kentucky, Maryland, and Delaware—had remained in the Union, and Lincoln did not want to anger them by taking steps against slavery. Secondly, Northern Democrats did not want to make the war to save the Union into a war to end slavery. Most soldiers in the **UNION ARMY** cared little about the issue of slavery, and most Northerners were not interested in the plight of slaves in the South. Finally, although Lincoln had hated the institution of slavery ever since witnessing it as a young man during a trip to New Orleans, the president did not believe that white people in

the United States would ever allow African Americans to receive political or social equality. He even told a group of black leaders who visited him in 1862 that it would be better if the races were separated by sending black Americans to colonies in Africa.

Lincoln did, of course, make the elimination of slavery one of the war aims of the United States with the EMANCIPATION PROCLAMATION. He issued the preliminary version of the proclamation on September 22, 1862; the “final” version went into effect on January 1, 1863. The proclamation was undertaken, Lincoln said, as a military measure. It freed no slaves in the border states or in any areas occupied by U.S. forces. It applied only to slaves living in those parts of the Confederacy still “in rebellion” against the United States. His reasoning for the proclamation was that it would encourage slaves to run away, to resist their masters, and to undermine the Confederate war effort. He also believed that bringing the issue of slavery into the war would ward off any sort of intervention by European countries like Great Britain and France, who had considered helping the Confederacy but, because their governments were officially against slavery, could not very well support a country openly fighting to preserve it.

The Emancipation Proclamation was met with a storm of protest. Democrats hated it, and in the 1862 election a number of Democrats won races for state legislatures and Congress at least partly because of Lincoln’s decision. Many white Americans opposed the recruiting of African Americans for the U.S. Army, which began late in 1862. And when New Yorkers rioted against being conscripted into the army in the summer of 1863, they made scapegoats out of African Americans, a number of whom were killed by mobs.

EMANCIPATION continued anyway, and most Northerners eventually got used to the idea. Union soldiers were even given pocket-sized versions of the Emancipation Proclamation to hand out to free African Americans and slaves. It is unknown how many read them, but wherever Union troops went in the South, slaves ran away from their masters and began their new lives as free people. When Congress passed the THIRTEENTH AMENDMENT late in the war and the states ratified it toward the end of 1865, the way was paved for all African Americans to begin the process of becoming full citizens, a result of the Civil War that few Americans would have predicted four years before. Unfortunately, the habits of the long span of U.S. history were hard to overcome, and despite the best efforts of Radical RECONSTRUCTION, racial assumptions and habits of the United States were not greatly changed by the victory of Union forces on the battlefield.

## Radical Republicans

A group of the REPUBLICAN PARTY that controlled Congress briefly in the post-CIVIL WAR period, the Radical Republicans sought a vastly changed Southern political, economic, and social world. They insisted on civil and voting rights for freedmen and opposed President ANDREW JOHNSON’s efforts to reunite the sections without forcing major changes on the former Confederate states.

Throughout the Civil War, the Republican Party enjoyed a large majority of both houses of Congress. This majority was hardly unified, however, as ideological divisions between congressional Republicans became increasingly pronounced over the course of the war. Most Republicans were satisfied with the moderate approach to the war advocated by President ABRAHAM LINCOLN. Radicals, however, such as CHARLES SUMNER, BENJAMIN WADE, and THADDEUS STEVENS, were constantly at odds with the president over the timing and pace of EMANCIPATION, the enrollment of black soldiers, and the advancement of equal rights for the freedpeople. Already frustrated over Lincoln’s slowness concerning racial progress, the Radical Republicans also clashed bitterly with the president over his lenient wartime RECONSTRUCTION policies.

As the war ended, Congress began to focus on plans for reconstructing the shattered nation. The Radicals believed that the end of the war represented an opportunity to remake Southern society into a free-labor, egalitarian, and racially just society. Senator Sumner of Massachusetts provided a clear justification for this position: He declared that the Southern states had committed “suicide” when they left the Union and thus had reverted to the status of territories. Conveniently, the control of territories fell to Congress.

Moderates such as James G. Blaine in the House and John Sherman in the Senate preferred a less revolutionary approach. They, like most Northerners, demanded that Southern citizens pledge loyalty to the Union, accept freedom for the African Americans, and provide basic protections to the freedpeople as they established their new lives.

Initially, these two views existed in a delicate balance. Congressional Republicans of all positions were willing to work with the new president, Andrew Johnson. They expected him to articulate his own reconstruction plan, and then compromise with Congress over points of disagree-

ment. Unfortunately, Johnson believed that control of the reconstruction process should be exclusively in his hands. Radical Republicans took the lead in organizing the opposition to presidential Reconstruction, with serious consequences for Johnson.

Johnson, a clumsy politician, managed to offend his most sympathetic congressional constituents, the moderate Republicans. Now they totally supported the actions of Radical Republicans, who persuaded their colleagues to refuse to seat Southern congressmen elected under Johnson's reconstruction plan. Moreover, Radicals also established the Joint Committee on Reconstruction, a platform from which they led the anti-Johnson movement.

Johnson vetoed both the FREEDMEN'S BUREAU bill and CIVIL RIGHTS ACT OF 1866. Congress passed both over his veto, signaling the final breakdown of relations between the Radicals and the president. All in the North seemed to support using the power of the federal government to ensure freedom and safety for the vulnerable population of ex-slaves. One Republican newspaper editorialized that civil rights for the freedpeople "follows from the suppression of the rebellion. . . . The party is nothing, if it does not do this the nation is dishonored . . ."

In 1867 Congress also overrode the president's veto of the RECONSTRUCTION ACTS, which divided the South into five military districts whose commanders were to exercise authority to oversee the steps of readmittance back into the Union. African Americans were to be registered to vote, while former Confederates were disqualified. Each state wishing to rejoin the Union had to ratify the FOURTEENTH AMENDMENT and to draft a new state constitution that guaranteed the citizenship rights of black people.

After the Tenure of Office Act was passed, forbidding Johnson to remove cabinet members without congressional approval, Johnson's only recourse was to remove the military commanders who did not support him. The former Confederate states were in near anarchy. This was particularly dangerous for African Americans, who were left unprotected from the fury of former Confederates.

By 1868 Congress and the president had become so estranged that the Radicals were able to bring articles of impeachment against the president. Johnson escaped conviction by one vote, and the failure of impeachment signaled the beginning of the end of the Radicals' hold on power.

The Radical Republicans lost their prominent position in the party by the election of 1868. The moderates, led by President ULYSSES S. GRANT, now had the responsibility of implementing congressional Reconstruction in the Southern states. The death of several of the Radicals' most powerful and famous leaders, especially Sumner and Stevens, contributed to the decline of the faction as well.

As the years wore on, white Southern resistance to efforts by Republicans to integrate freed people into

Southern politics and society grew stronger, not weaker. The restructuring of Southern life from outside seemed useless, and the Northern public had lost its enthusiasm for it. Instead, Northerners wanted to forget the war and welcome Southerners back into the Union.

Although some historians have judged the Radical Republicans harshly for the failure or the inadequacy of their programs, other scholars argue that it is well worth recognizing the value of the goals for which the Radicals fought. Civil rights, suffrage, and the elimination of the racial hierarchy of the South seemed within their reach. After all, few could imagine in 1860 that 4 million African Americans would be free in just a few years. African Americans had achieved legal equality by the end of Reconstruction, although social and political equality would have to wait much longer. Perhaps the most important legislation in American history passed with the aid and guidance of the Radical Republicans and was the foundation for much of the racial progress in the 20th century.

## railroads

Inspired by success in Britain, American entrepreneurs lobbied for railroad construction in the late 1820s. By the end of the 1850s total rail mileage in the United States reached 30,000 miles. The initial boom of rail building was concentrated in the Northeast and Midwest. By 1860 one could reach almost anywhere east of the MISSISSIPPI RIVER from New York in a week or less. American lawmakers championed the railroad as a triumph over nature and claimed that its growth connected remote areas to a political and economic center.

When the CIVIL WAR broke out in 1860 railroad growth continued, but largely in the Northern states. Better TRANSPORTATION links ultimately helped Union troops by providing them quicker access to supplies and a means to move fresh troops. Confederate troops were hurt by a Southern railroad system geared toward the movement of cotton and reliant on Northern industries for repair materials. In the middle of the war, Congress created two federally chartered corporations to build a transcontinental railroad. The acts granted the Central Pacific Railroad

Photograph showing a construction train on the Union Pacific Railroad (Library of Congress)

the right to build eastward beginning in Sacramento, California, and the Union Pacific Railroad the right to build westward from Omaha, Nebraska. Each corporation was given land to lay rails as well as large parcels of land on either side of the line to develop as they saw fit. While the land grants created space for new towns, they bypassed other areas and upset already settled NATIVE AMERICAN lands.

Irish immigrants, African Americans, and Civil War VETERANS worked in gangs from Omaha to build 1,086 miles of the Union Pacific. From California, a largely Chinese labor force built 689 miles of the Central Pacific over the treacherous Sierra Nevada. On May 10, 1869, the two lines met at Promontory Point, Utah. The nation's first transcontinental railroad was completed.

Whereas before the Civil War rail lines followed the pattern of settlement, afterward the rapid expansion of the railroad usually preceded and encouraged settlement. The railroad acted as a major transportation system for western settlers. Railroads also shifted economic and political power westward.

Railroad enterprises became America's first major corporations. The amount of capital needed to build a road and maintain a line led to the increased economic power of banks and investment houses. After linking the West and

East, railroads helped to focus attention on national issues, including the emerging connections between government and industry.

**Rainey, Joseph H.** (1832–1887) *politician*

Four-term congressman and well-to-do barber Joseph Hayne Rainey was born a slave in Georgetown, South Carolina. When he was a child, his family purchased its freedom and moved to Charleston.

Forced to labor on Confederate fortifications in Charleston at the beginning of the CIVIL WAR, Rainey fled to Bermuda with his wife, Susan, for the duration of the war. In 1865 he returned to South Carolina and involved

himself in REPUBLICAN PARTY politics. He represented Georgetown County at the state constitutional convention of 1868. A year later, he was appointed census taker and later served as county agent for the state land commission and brigadier general in the state militia. As a member of the state senate, Rainey had a generally conservative record. He rejected land confiscation for freedmen and endorsed a poll tax. In 1870 he was elected to Congress, the first black American to be seated in the U.S. House of Representatives.

Rainey was a member of the 41st–45th Congresses (1870–79). In the House, he was mostly known for his strident support of the ENFORCEMENT ACTS, legislation designed to protect African Americans from violent attacks by groups such as the KU KLUX KLAN. Speaking on the issue of whether the Civil War amendments necessitated the expansion of the powers of the federal government, Rainey said: “I desire that so broad and liberal a construction be placed upon its provisions as will insure the protection to the humblest citizen. Tell me nothing of a constitution which fails to shelter beneath its rightful power the people of a country.”

Rainey was defeated for reelection in 1878. After leaving Congress, he was appointed a U.S. internal revenue agent, a position he held for two years. He then moved to WASHINGTON, D.C., where he was involved in the banking and brokerage business for several years. Rainey died in Georgetown, South Carolina, in 1887.

See also KU KLUX KLAN ACT.

### **Rapier, James T.** (1837–1883) *politician*

James Thomas Rapier was an African-American politician who served during RECONSTRUCTION. Rapier was born in Florence, Alabama, on November 13, 1837, to free African-American parents. He was educated at schools in Nashville, Tennessee, and Buxton, Ontario, where his father owned property, before returning to the United States to work as a journalist and grow cotton in Maury County, Tennessee. Highly literate and an engaging speaker, Rapier first garnered public attention by addressing the Tennessee Negro Suffrage Convention at Nashville in 1865. In the following year he returned to Florence to pursue a life of public service, although Alabama was under federal Reconstruction at that time and racial animosity toward blacks was intense.

In 1867 Rapier was a delegate to the first Alabama Republican Convention, where he served as chairman of the platform committee and also as a delegate to the state constitutional convention. In this capacity he urged moderate disenfranchisement of former Confederates and equal protection for all races. In 1869 Rapier was appointed director of the FREEDMAN'S SAVING BANK in Montgomery, and he also helped organize the National Negro Labor Convention. After several years of racial hostility and unsuccessful election attempts, Rapier finally won a seat in the U.S. Congress in 1872. As congressman he argued for improvements in Alabama's waterways and also advocated a new civil rights bill. He lost his bid for reelection in 1874, however. Four years later he became collector of revenue for Alabama's second district, a position he held until 1883. In his declining years Rapier apparently gave up state governance and urged African Americans to migrate to Kansas. He died in Montgomery on May 31, 1883.

### **Ray, Charlotte** (1850–1911) *activist, lawyer, teacher*

An activist for women's rights and the first African-American woman admitted to the bar, Charlotte Ray was born in NEW YORK CITY to Rev. Charles Bennett Ray and his second wife, Charlotte Augusta Burroughs. Charles Ray, editor of the *Colored American*, was one of the most distinguished African Americans in New York. He also participated in the UNDERGROUND RAILROAD, assisting fugitives from SLAVERY. Charlotte, one of seven children, attended the Institution for the Education of Colored Youth in WASHINGTON, D.C.

After finishing school, Ray obtained a position teaching in the normal and preparatory departments at Howard University. While at Howard, Ray attended law school, earning a Juris Doctoris in February 1872. In March of that year Ray was admitted to the bar. She was the first African-American woman admitted to any bar and the first woman admitted to the bar in Washington, D.C.

Ray attempted to practice law in Washington but found that prejudice against her was too strong. In spite of Washington's long history as a haven for educated, affluent, and professional African Americans, Ray was unable to sustain her practice and was forced to find other EMPLOYMENT. Her connection with the city of her birth had been renewed when she joined the NATIONAL WOMAN SUFFRAGE ASSOCIATION of New York, and in 1879 she returned to New York to live.

Although she could not practice law, Ray used her extensive education by teaching in Brooklyn's public schools. In 1886 she met and married a man named Fraim, with whom she lived until her death from bronchitis in 1911.

### Reconstruction (1865–1877)

Reconstruction was the process of bringing the 11 seceded Southern states back into the Union. The goals of Reconstruction were twofold: to restore harmonious relations between the sections and to define and secure freedom for the ex-slaves. The term also describes the period directly after the CIVIL WAR. Until fairly recently, Reconstruction was portrayed as an evil time when ignorant and base African Americans, corrupt and greedy CARPETBAGGERS, and treacherous SCALAWAGS ruled and ruined the helpless white Southern population. According to this interpretation, only when the Southern Democratic “redeemers” recaptured the state governments from the REPUBLICAN PARTY did sanity again prevail throughout the region. The current history books present a far more positive and more complex depiction of the era. Reconstruction was a huge task that not only involved readmitting the seceded states but also reinventing a South without SLAVERY and rebuilding the Southern infrastructure that had been destroyed by the war.

The South paid a very high price for SECESSION, war, and bitter defeat. One out of every 10 white men was killed; much of the rich agricultural land in Virginia and large parts of Tennessee, Mississippi, Georgia, and South Carolina lay in ruins. Most of the South's cities and towns were burned or destroyed, including RICHMOND, VIRGINIA; Atlanta, Georgia; and Columbia, South Carolina. Thousands of black and white REFUGEES were homeless and in dire circumstances. Slavery was destroyed, and millions of human beings that had been property and capital were now free. What would that freedom entail? Economic, political, and moral questions central to the conflict had to be addressed as early as 1863. Indeed, Reconstruction unfolded in several stages: wartime Reconstruction, presidential Reconstruction, and congressional Reconstruction. The last stage was the so-called REDEMPTION of the South.

#### Wartime Reconstruction

The necessity to plan for Reconstruction began well before the end of the war. When President ABRAHAM LINCOLN's

EMANCIPATION PROCLAMATION of 1863 officially freed the slaves in the Confederate states, it set in motion a radical alteration of the American South, which would complicate the task of reuniting the nation should the North prevail. From 1861 to 1863, the major Northern goal in the war was restoration of the Union. Now, added to that was a second goal: freedom for the slaves. As is well known, every aspect of the Southern economy and society was connected with the institution of slavery. Even the majority of Southerners who did not own slaves had a deep stake in the system. They sold their crops to plantation owners and elected proslavery men to represent them in office. Ordinary white farmers also helped to enforce slave codes and aspired to own slaves themselves. Thus, Reconstruction would not only involve bringing white Confederates back to the national “family” table but also setting a place at that table for black people whose status beyond freedom was unclear.

The Emancipation Proclamation proved a powerful weapon for the Northern military cause as 180,000 black men, most of them ex-slaves, donned the Union blue. This struck a mighty blow against the Confederacy. Successful Union campaigns brought more and more Southern territory—in Louisiana, Mississippi, Tennessee, and Arkansas—under Northern military control. Lincoln wanted to reinstate loyal civilian governments as soon as possible and demonstrate to Southerners that the United States would be forgiving in welcoming back to the fold the “errant children.”

On December 8, 1863, Lincoln unveiled his Proclamation of Amnesty and Reconstruction. Lincoln based his authority to control Reconstruction on the section of the U.S. Constitution that states “that the President shall have power to grant reprieves and pardons for offenses against the United States.” The proclamation offered generous terms to individuals and a simple and easy method for citizens to reestablish local and state governments. Former Confederates who took an oath of loyalty to the Union were given amnesty. High-ranking Confederate governmental and military officials were exempted from the oath's provisions. Once 10 percent of a state's voting population in 1860 had sworn allegiance to the Union, they could write a new constitution and hold elections to establish the state government. Lincoln's one requirement was that all of the states accept emancipation.

Lincoln's “Ten Percent Plan” was based on his firm belief that, because the Southern states could not legally secede, they were never out of the Union. Lincoln, realizing that the RADICAL REPUBLICANS had a far harsher plan in mind, seized the initiative with his proclamation and proceeded to order it implemented in Louisiana. Radical Republicans in Congress, such as THADDEUS STEVENS and CHARLES SUMNER, attacked Lincoln's Ten Percent Plan. They were alarmed that the plan was too easy on the rebels

and made no provision for incorporating civil-rights protections for African Americans. Indeed, Radicals attacked Lincoln for taking rightful power away from the legislative branch. Radicals put forward the idea that the Confederacy had committed “state suicide” and had reverted to the status of territories. Since Congress had control over the process of admitting new territories to the nation, it should also control the process of readmitting the former rebel states.

Congress formulated a reconstruction program of its own with the WADE-DAVIS BILL in July 1864. The bill set high standards for reunion. It required a majority of the white male population to swear allegiance to the Constitution before they could begin the process of electing delegates to a state convention. Suffrage would be restricted to only those who had signed an IRONCLAD OATH. Wade-Davis required that the new state constitutions guarantee black citizens of the state equality under the law.

Lincoln pocket-vetoed (he refused to sign the bill, and it failed to become law) the Wade-Davis Bill in the summer of 1864. Congress responded by refusing to seat congressional delegates from Ten Percent Plan states, which by the end of the war included Louisiana, Tennessee, Arkansas, and Virginia. A standoff between the president and Congress was avoided due to Lincoln’s triumphant reelection and the feelings of harmony engendered by the Union victory in late 1864 and early 1865. At the time of his death, Lincoln anticipated working with Congress to forge a sensible compromise on Reconstruction. Doubtless, Lincoln’s skills as a politician would have avoided the disastrous conflict between the two branches of government that characterized the administration of the new president, Tennessee Democrat and former slaveholder ANDREW JOHNSON.

### ***Presidential Reconstruction, 1865–1867***

President Johnson was determined to follow Lincoln’s precedent and set the terms for Reconstruction from the White House. Congress was not in session when Johnson assumed the presidency, and he controlled Reconstruction for nearly eight months, creating a storm of protest with his actions. He granted liberal pardons to those former Confederates not covered by his amnesty proclamation of May 1865. He went on to appoint provisional GOVERNORS for any Confederate states that had not already been “reconstructed” by Lincoln. He charged those governors with convening state constitutional conventions that would adopt the THIRTEENTH AMENDMENT, nullify secession, and repudiate all Confederate war debts. Johnson did not demand that the former Confederate states accept black suffrage, and, in the end, his restored South looked very much like the antebellum South without the legal institution of slavery.

Radical Republicans were outraged, and moderate members of Congress were troubled by reports of violence against African Americans. Just as problematic was the fact that many of the former Confederates, acting defiantly, were in control of the governments of these reconstructed states. Congress pushed for guarantees of rights and freedoms for African Americans and for the imposition of harsh penalties for former Confederate officials and officers. They were also eager to oversee the establishment of a viable Republican Party in the South.

Although in late 1865 and early 1866 Radical leaders were convinced that Congress needed to take complete control of Reconstruction, the majority still hoped for a workable compromise with Johnson. The moderates were willing to keep the new governments as long as some crucial modifications were added to Johnson’s requirements. They demanded the acceptance of the FOURTEENTH AMENDMENT, which granted citizenship to African Americans, and the CIVIL RIGHTS ACT OF 1866. Johnson refused to bend. He argued that the amendment and the bill represented an unconstitutional expansion of national power over state sovereignty. Johnson vetoed the Civil Rights Act, and his veto was promptly overridden.

The language of Johnson’s veto was crude and insulting to the Republicans; clearly, he was not interested in compromise of any sort. His political incompetence pushed an increasing number of moderate Republicans into the Radical fold. The Radicals wanted to recast the South in the free-labor style and establish a Southern Republican Party with the support and the votes of the freedmen. The fall elections of 1866 had supplied the Radicals with a mandate to pursue their program. Presidential Reconstruction was dead with the solid veto-proof Republican congressional majority.

### ***Congressional Reconstruction 1867–1877***

Congress passed the RECONSTRUCTION ACTS of 1867. The acts divided up the South into five military districts, each to be temporarily governed by an appointed U.S. army general who would oversee the transition of the new states back into the Union. The acts enfranchised freed people and disenfranchised many former officials of the Confederacy. The acts also made readmission to the Union contingent on granting suffrage to freedmen and ratifying the Fourteenth Amendment.

Johnson tried to block congressional Reconstruction, but his vetoes were overridden. The deeply hostile relationship between the president and Congress ultimately resulted in Johnson’s impeachment trial. Despite avoiding conviction and removal from office by the Senate, Johnson was a lame-duck president. Congress controlled Reconstruction throughout the rest of his term in office.

and continued to hold the reins during the presidency of war-hero ULYSSES S. GRANT.

When Grant was elected in 1868, congressional Republicans believed they had a solid friend in the White House. Grant had previously sided against Johnson on matters pertaining to the reuniting of the Union, so Congress's plans for the Union seemed secure. Grant favored using the army and the federal Department of Justice to enforce Reconstruction in the South, and during his tenure in office the FIFTEENTH AMENDMENT granting suffrage to African-American men was passed.

The end of 1868 saw six former Confederate states—Alabama, Arkansas, Florida, Louisiana, North Carolina, and South Carolina—rejoin the nation under the Reconstruction Acts' requirements. In 1870, after ratifying the Fifteenth Amendment, Georgia, Mississippi, Texas, and Virginia were readmitted. Most of the above states were now under the control of the Republican Party, which governed with a biracial coalition. Southern Republicans were in power, but they faced momentous challenges in office. The Republicans needed the support of three major groups to establish a permanent presence in the Southern states. The first group comprised white Northerners that came South during the war and settled there after the war. These men were often former Union soldiers, Freedmen's Bureau agents, businesspeople, and teachers. Called carpetbaggers, they provided a solid core of leadership for the party. The second group was made of white Southerners sympathetic to the Union during the war. Scorned by many of their fellow Southerners, these "scalawags" desired a more economically progressive South that followed in the Northern footsteps. African Americans formed the third and largest group in the Republican coalition.

Under congressional Reconstruction and with the support of President Grant and the protection of the U.S. Army, freedmen joined UNION LEAGUES, voted enthusiastically, engaged in other political actions, and were elected to all levels of government throughout the South. South Carolina and Louisiana had a majority of African-American legislators, and there were 16 African Americans elected to the U.S. Congress. Most of the black officeholders were competent and intelligent men. The Republican state governments instituted positive changes during the 1870s, including introducing public school education, establishing welfare institutions, and encouraging business investment in the region. Unfortunately, corruption did taint many of the Republican administrations, an issue that the Southern Democrats used to great advantage.

### *Redemption*

The depressed Southern economy could not be revived, and the region suffered from dire poverty throughout the Reconstruction period and well beyond 1877. The

ex-slaves had hoped for land reform as well as the vote, but instead they settled for SHARECROPPING, a labor arrangement that favored the cotton planters. Meanwhile, the Republican coalition was coming apart under relentless pressure from white Democrats. Southerners railed against "Black Republicanism" and fought against "Negro rule." The KU KLUX KLAN and other terrorist organizations committed terrible acts of violence against African-American officeholders and Republican politicians and voters. The ENFORCEMENT ACTS stopped the Klan terror but could not stop the crumbling of the Republican Party and the reemergence of the Democrats. When white Southerners regained control of their state governments, they immediately removed African Americans from office and did whatever possible to deny black voters their voice in politics.

In the 1870s, both the federal government and the Northern people began to tire of the continual fight to reconstruct their former foes. Other issues, like the Indian Wars in the West and the CRÉDIT MOBILIER scandal, began to draw attention and energy away from Southern problems. The negative reactions to the panic of 1873 brought the DEMOCRATIC PARTY back to power in the U.S. Congress for the first time since before the war. By 1876 only three Republican governments remained in the South: Florida, Louisiana, and South Carolina. After the close 1876 presidential election was marred by fraud, backroom deals allowed Republican Rutherford B. Hayes to take the White House over Democrat Samuel J. Tilden. Despite the fact that the Republican Party relied on African-American votes for their power in the South, Hayes ended Reconstruction when he pulled the army out of the South. By April 1877, "redemption" was complete and all of the states of the former Confederacy were again under Democratic rule.

Was Reconstruction a success or failure? If one of the goals of Reconstruction was to restore political, economic, and social relations between North and South, then it was a success. By 1876 the nation was stable and strong. If another goal was to bring justice to the freedpeople, then it was a failure. Four million Americans were free from the bonds of slavery, but poverty and racism severely limited their freedom.

Yet, the judgment of failure should be qualified. African Americans tested the limits of freedom and found pleasure in their new family and community lives. By late 1866, for example, Charleston's African-American community had built 11 churches in the city. By 1869 the FREEDMEN'S BUREAU, a federal welfare agency, was in charge of 3,000 schools that educated more than 150,000 black children throughout the South. Half of the teachers in those schools were African Americans. Finally, the Thirteenth, Fourteenth, and Fifteenth Amendments provided the founda-

tion for the Civil Rights movement of the 1960s, when the promise of Reconstruction was fulfilled.

—Ruth A. Behling

### Reconstruction Acts (1867–1868)

The Reconstruction Acts were adopted by Congress in 1867 and 1868. These four bills laid out the terms for what would be known as congressional RECONSTRUCTION. The Reconstruction Acts were largely authored by the RADICAL REPUBLICANS and sought to remake Southern society.

When the CIVIL WAR ended, Congress was not in session. Responsibility for reconstructing the shattered nation fell upon President ABRAHAM LINCOLN and, after his death, President ANDREW JOHNSON. Johnson had used harsh rhetoric in condemning the actions of the Confederacy and its leaders, and it seemed that he might be prepared to take dramatic steps to fundamentally alter the social, political, and economic order of the South. Johnson's actions, however, revealed his conservatism. The terms of presidential Reconstruction were mild and did not force the South to change at all. Confederate leaders were promptly reelected to office, and the passage of BLACK CODES in every Southern state sought to restrict the new freedom of the ex-slaves.

When Congress met in December 1865, the Republicans had a large majority of the seats in both chambers. Initially most Congressional leaders appeared inclined to accept presidential Reconstruction, with some important modifications. The Joint Committee on Reconstruction was initially conciliatory, and its chair, William Pitt Fessenden, was in constant communication with the president. Most members of Congress ignored the Radical Republicans' plans for the South and instead passed two bills that were in harmony with the president's vision of Reconstruction. The more important of the two bills, which became known as the CIVIL RIGHTS ACT OF 1866, extended civil rights and legal equality to African Americans but made their protection the responsibility of the states.

Johnson promptly vetoed the Civil Rights Act of 1866, declaring that Congress had no business involving itself

in Reconstruction. Congressional Republicans, shocked by the president's actions, overrode his veto. The Radical Republicans gained support from their more moderate colleagues, and Congress considered the possibility of repudiating presidential Reconstruction. Nonetheless, the moderates still retained control, and they proposed the fairly conservative FOURTEENTH AMENDMENT. Like the Civil Rights Act of 1866, the Fourteenth Amendment was in essential harmony with presidential Reconstruction. Nonetheless, Johnson attacked Congress again. He traveled through the North, delivering a series of inflammatory

This Thomas Nast cartoon from the September 5, 1868, issue of *Harper's Weekly* criticizes the Democratic Party's opposition to Reconstruction legislation. Symbolizing the Democrats are caricatures of (from left) a stereotypical Irish American, former Confederate general Nathan Bedford Forrest, and financier August Belmont. The three are shown trampling a black Union veteran. (Library of Congress)

speeches that came to be known as the “Swing Round the Circle.” Meanwhile, all Southern legislatures voted overwhelmingly against accepting the Fourteenth Amendment.

The actions of President Johnson and the former states of the Confederacy played directly into the hands of the Radical Republicans. Between March 1867 and March 1868, enough moderates broke with the president to allow the Radicals to gain passage of a series of four Reconstruction Acts. The First Reconstruction Act divided the South into five military districts, with supreme authority vested in the military commanders of each district. African Americans were to be registered to vote, while leading Confederates were disqualified from holding office and disenfranchised. States desiring readmission to the Union were required to ratify the Fourteenth Amendment and to write new constitutions that guaranteed black suffrage. The latter three Reconstruction Acts expanded and clarified the terms of the first, in particular eliminating the governments that had been elected under presidential Reconstruction and disqualifying former Confederates from holding office.

The Reconstruction Acts were far more sweeping than what the moderates had initially proposed. They incorporated almost all of the measures the Radicals deemed important, and the terms were mandatory rather than voluntary. The notion of STATES’ RIGHTS was completely subverted, as state boundaries were effectively erased.

President Johnson vetoed each of the Reconstruction Acts and was overridden each time. He then tried to thwart the bills in a variety of ways—by removing military commanders who enforced the acts too strongly, by frequently challenging the authority of the law, and by trying to influence ULYSSES S. GRANT, who was in charge of all the U.S. armies. These actions increased Congress’s fury. Shortly after his veto of the First Reconstruction Act was overridden, Johnson forced Secretary of War EDWIN M. STANTON from office and replaced him with Grant. This was a violation of the Tenure of Office Act, which Congress had passed in 1867. Congressional leaders used Johnson’s violation of the law as an excuse to bring him up on articles of impeachment. He avoided conviction by one vote.

Johnson’s impeachment was the high point of the Radicals’ power. In 1868 a number of Radical leaders died or were defeated for reelection. Meanwhile, Ulysses S. Grant replaced Johnson in the White House. The impetus for action among congressional leaders had passed. By 1870 all of the former Confederate states had been readmitted to the Union under the terms of the Reconstruction Acts, and the task of making Reconstruction work would largely be left to the Republican governments in the states of the South.

## redemption

Redemption refers to the 10-year period after congressional RECONSTRUCTION, in which conservative white Southern Democrats recaptured their states from Republican rule. White Southerners were determined to reduce the political power of African Americans and white Republicans. With the aid of such institutions and organizations as UNION LEAGUES and the FREEDMEN’S BUREAU, the South’s former slaves were swiftly making inroads into American politics. Freedmen were winning elected offices on the REPUBLICAN PARTY ticket and filling government jobs on every level. The South’s political practices were changing radically in the first few years after the CIVIL WAR, and in the view of the Democrats, for the worse.

In South Carolina, the birthplace of SECESSION, by 1872 African Americans held four of the state’s five seats in Congress. The ENFORCEMENT ACTS and the KU KLUX KLAN ACT were passed by the federal government to sustain African-American political and civil rights in the South. In the early 1870s more and more Republican-dominated Southern legislatures were passing laws against discrimination in public facilities and on trains. While Reconstruction brought a capable political class of African Americans to power in the states of the old Confederacy, these successes were short-lived. White Southerners began moving to “redeem” their states by taking back control of the politics of their states and the region. The increasing state and federal push for civil and political rights stirred more vehement opposition on the part of white Southern Democrats. Many Republican ballot-box successes were met with outright violence. Murders, beatings, lynchings, tar and featherings, and the like were potential outcomes of voting or in any way taking part in the political system for the freedmen and freedwomen as well as white Republicans in the South. The KU KLUX KLAN and other secret organizations of white Southerners dedicated themselves to ending what they called “black Republicanism” or “Negro rule” in the South through violence and economic intimidation.

While outright violence tended to bring federal reactions like the Ku Klux Klan Act, the Northern states were showing signs of fatigue with Reconstruction. President ULYSSES S. GRANT made it clear that he would tolerate no outright refusals of his orders by the former Confederates, but white Southerners believed that if the South refrained from gross violations of law and custom, Grant would allow them to take back a certain degree of control over their states. With this in mind, many Southern Dem-

ocrats rejected violence in their attempt to redeem their states from Republican control. When running for governor of South Carolina in 1876, Wade Hampton declared that white Democratic candidates, like himself, wanted African-American votes and that his party was pledged to defending the “rights of the colored man.”

Despite Hampton’s moderate stance, South Carolina was a “redeemed” state in that the DEMOCRATIC PARTY had regained control of state politics. Republican Party election margins across the South began to slide by 1873. Some white Republicans in the South began to leave the party as African Americans became more and more prominent, despite the fact that white Republicans largely controlled the party in the South. Northern CARPETBAGGERS began to head home in the face of increasing violence. The Republican Party was disintegrating in the South, and that disintegration was allowing the Democratic Party to reassert control over the region.

Issues such as the economic crisis of 1873 and the Indian Wars of the Great Plains claimed Northern attention and diverted interest from “reconstructing” the former Confederacy. The “redeemers” took back power in Georgia, North Carolina, and Virginia relatively quickly. By the end of Grant’s eight years in office, all of the Republican governments of the South had disappeared except for those in Louisiana and South Carolina. While African Americans continued to vote Republican in large numbers, voting became increasingly difficult for freedmen as newly elected Democratic officials instituted measures such as poll taxes, literacy tests, and grandfather clauses to reduce black voting.

Ultimately, the Compromise of 1876, which put Republican Rutherford B. Hayes in the White House in exchange for the removal of troops from the South, proved the success of redemption. Without U.S. Army troops to enforce federal voting legislation and stop violence, most African-American voters were disenfranchised. Redemption marked a return to “politics as usual” in the South, generally with the antebellum elite in control once again. Southern African Americans, who had made so many political strides during Reconstruction, would not regain the vote until the 1960s.

### Red River campaign (1864)

A failed Union effort designed to capture Texas and the parts of Louisiana not under federal control, the Red River

campaign sought to use the river as a conduit for troops and materiel, allowing easy access to key strategic targets. The campaign was widely criticized as an opportunity to plunder that was designed to enrich its commander, Nathaniel P. Banks, a political appointee and the former governor of Massachusetts. Opposing Banks, Kirby Smith commanded the Confederate forces of the trans-Mississippi region.

The campaign began on March 14, 1864, when Banks attacked a Confederate fort located approximately 30 miles west of the junction of the Red River and the Mississippi. Union forces succeeded in destroying the fort and proceeded along the farmland of the Red River, “liberating” cotton along the way. Banks hoped to make his expedition self-financing by selling the valuable cotton. When Confederate planters heard of the Union confiscations, however, they began to burn their fields. By the time Banks reached many PLANTATIONS, the cotton he had hoped to obtain was destroyed.

Operating under Smith was Maj. Gen. Richard Taylor, son of former President Zachary Taylor. Confederate troops led by Taylor met Banks’s men on April 8 at Sabine Crossroads in the northwest corner of Louisiana, about 20 miles from the Texas border. Fighting through April 8–9, both sides suffered approximately 2,000 casualties, but the Southerners prevailed and Union forces retreated along the Red River. Federal engineers built a series of ingenious dams to transport gunboats across shallow spots. On May 13, having reached deeper waters, Union forces turned their attention to Alexandria, Louisiana, which they burned to the ground.

Confederates pursued Banks, and on May 18 Taylor attacked, pushing the Yankees to the banks of the Atchafalaya River. Taylor hoped to pin Banks against the river, forcing him to either fight or attempt to cross the dangerously swollen river. Union engineers, however, saved Banks’ units, creating a makeshift pontoon bridge across the water. Once safely on the other side, Banks moved back up the Mississippi to Vicksburg. After a short rest, he and his men were transferred by ABRAHAM LINCOLN to WILLIAM T. SHERMAN’s command in Georgia. The Red River campaign had failed to capture any significant territory and had cost many lives, needlessly.

Critics of Nathaniel Banks asserted that he had designed the entire campaign to acquire a fortune in stolen cotton. Because of these accusations, Banks never again held a battlefield command. On the Confederate side, Richard Taylor resigned his commission, accusing Kirby Smith of failing to supply enough men to destroy Banks’s army. Texas remained Confederate until the end of the war.

## refugees

Tens of thousands of Southerners were forced from their homes during the CIVIL WAR, becoming refugees from encroaching battles or Union troops. Whenever Union troops appeared, Southerners took to the road. They did so for a wide variety of reasons: Some feared they would be arrested by Union troops for their political views (in fact, sometimes men, believing they would be treated more harshly, left their wives and children behind), while others simply could not bear the thought of living under Yankee rule and headed for unoccupied portions of the Confederacy. Many departed because their businesses, farms, and PLANTATIONS had been damaged or taken over by Yankees, and they had to move in order to find ways to support their families.

Although all refugees shared in the experience of abandoning their homes and most of their possessions and of having to get used to living in strange and potentially more difficult surroundings, there were big differences in the day-to-day lives of refugees. For example, wealthy Southerners who had relatives or friends living in safer places had a “home” to go to. Poor Southerners often lacked such comfortable options. One of the most common destinations for slave owners attempting to take their human property to a safer place was Texas, where as many as 50,000 slaves were taken during the war.

Despite the vast differences in the experiences of Southern refugees, there was one experience that they all shared: Their lives were turned upside down. Kate Stone, the oldest daughter of a wealthy plantation family who lived along the MISSISSIPPI RIVER near Vicksburg, escaped with her family from the Yankees in 1863. Kate, her mother, her many brothers, and a few slaves all rode, walked, and floated their way to Delhi, Louisiana, where hundreds of frightened and suddenly impoverished refugees crowded into this little town on the road to Texas. She described the scene in her journal: “Such crowds of Negroes of all ages and sizes, wagons, mules, horses, dogs, baggage, and furniture of every description, very little of it packed. It was thrown in promiscuous heaps . . . here and there, with soldiers, drunk and sober, combing over it all, shouting and laughing.” The Stones, like most refugees of their class, endured scorching heat and bitter cold; dusty roads; sometimes-threatening groups of slaves; crowded, flea-bitten hotels; and crude food with, at best, only hunger to look forward to at the end of a hard day’s journey.

Other parts of refugees’ lives were disrupted. Leaving home made it harder to communicate with fathers, husbands,

and sons in the army. Boys and girls had to grow up quickly, taking on more responsibility and doing more work for the family. The EDUCATION of refugee children was disrupted; few schools in the Confederacy stayed open throughout the war, and refugees rarely had the money to pay private tutors for lessons. Whenever refugees moved into a new area, local residents worried that the newcomers would make food and other resources scarce for everyone; in some places, refugees were suspected of being disloyal to the Confederacy. Many refugees could take only a few possessions—the clothes they wore, a doll or toy, a treasured pet—and some lost everything they owned. Regular meals were difficult to come by, and the health of refugees suffered. Finally, with so many people moving from the countryside into towns and cities, places like RICHMOND, VIRGINIA; Atlanta, Georgia; and Charleston, South Carolina, became extremely overcrowded, unhealthy, and expensive.

Similar problems faced refugee slaves. Since masters often chose to take only the most valuable slaves with them, African-American families were disrupted, and women and young children often were left to fend for themselves. The quality of the food and medical care provided for slaves became even worse than it had been before the war. Sometimes a slave who began the war in South Carolina would be “refugeed” several times until he or she was living in Texas by the end of the war.

Although most Civil War refugees lived in the South, upon occasion Northerners were also dislocated, especially when the CONFEDERATE ARMY invaded the North. During the weeks leading up to the BATTLE OF GETTYSBURG, for instance, many white farmers became temporary refugees when they transported their livestock out of reach of the Confederates. Hundreds of African Americans living in Maryland and southern Pennsylvania—some of them fugitive slaves—fled before the rebel army, fearing that they would be captured and sold into SLAVERY back in Virginia.

For the most part, refugees were overwhelmingly Southern, and the sight of displaced families, chiefly women and children, was common on the streets and roads of the Confederacy. The existence of larger and larger refugee “communities” had great negative impacts on Confederate morale and, ultimately, on the rebel war effort as HOMEFRONT support dwindled in the face of such harsh realities and soldiers deserted to look for or after their refugee families.

## religion

During the 19th century, Christian religious ideals were the center of American life and community. A period of intense commitment to religion began in the opening years of the century (called the Second Great Awakening) and continued with varying intensity until the CIVIL WAR began. Evangelical Protestant denominations gained the most during this period, and by the 1840s the Baptist, Methodist, and Presbyterian Churches, supported by a wide variety of religious newspapers and benevolent societies, played a major role in the cultural life of the nation.

The churches' influence was broad, and many important reform-movement leaders were religiously inspired. Women, in greater numbers than men, attended and supported churches and church-related reforms. At the same time, popular ideals such as Manifest Destiny rested on the assumption that God ordained national expansion, and political orators drew heavily on the image of the United States as a nation anointed by God.

Among most Protestants there existed a broad commonality in theology, and both Northern and Southern Protestants generally supported social reform movements such as temperance, Sunday school societies, and missionary efforts at home and abroad. However, differences over SLAVERY divided the churches. During the middle century, increasing number of Northern Protestants embraced ABOLITION. Southerners responded in part by increasing evangelical outreach to the slave population (referred to by historians as "the mission to the slaves") and simultaneously building a scripture-based defense of slavery (this was particularly true of rural PLANTATION-district congregations).

During the 1840s the sectional divisions over slavery created a dramatic rift within the major Protestant churches. The Baptist split that occurred in 1845 illustrates the general contours of the denominational divisions: After more than a decade of increasing conflict between Northern and Southern Baptist leaders, tensions mounted during the early 1840s following the formation of the American Baptist Anti-Slavery Convention. In its first public statement, the convention assailed slavery as "a violation of the instincts of nature,—a perversion of the first principles of justice,—and a positive transgression of the revealed will of God."

Throughout the North, associations and individual congregations began expressing support for the convention's principles. In response, Southerners took a defensive posture and condemned what they termed "harsh and abusive epithets heaped upon us." Some advocated a cessation of mutual cooperation in areas such as missions until the "fanatical course" of the North changed, while others demanded assurances from the Triennial Convention (the denomination's national body at the time) that it permitted slavery.

Despite their conviction that slavery was an appropriate civil institution and that the abolitionists were "exceedingly mistaken in the case they have undertaken," Southern Baptists despaired of the consequences of the increasingly contentious issue. As one Georgia congregation put it, "The threatened dissolution of the fellowship betwixt the North and South would be an event which we would deeply deplore and as an evil not only highly injurious to the cause of religion in general but calculated to bring other evils of great magnitude in its train." The preeminent Baptist leader in Georgia, Jesse Mercer, noted that the tendency of the conflict would be "to break up all our united operations [missionary societies, publishing efforts etc.], and I seriously fear our civil Union also."

Despite such concerns and the efforts of both Northern and Southern Baptists, the conflict over slavery and abolition grew and at times was aggravated by denominational newspapers. The conflict came to a head in late 1844 when the American Baptist Home Mission Society rejected the appointment of a Georgia minister who held slaves and the Triennial Convention stated that "we can never be a party to any arrangement which would imply approbation of slavery." By early spring 1845, Virginia and Georgia Baptists called for a meeting to create a new Baptist convention composed of Southern churches. The meeting convened May 8, 1845, and by Monday, May 12, had created a purely sectional denominational structure—the Southern Baptist Convention—based primarily on the support of slavery and its attendant cultural ideals.

That same year Southern Methodists, who had also engaged in a protracted debate with their Northern brethren over slaveholders' rights to hold national positions within the church, issued a statement that justified their split with the Northern churches. They claimed that "the opinions and purposes of the church in the north on the subject of slavery, are in direct conflict with those of the south, and unless the south will submit to the dictation and interference of the north there is no hope of anything like union or harmony."

By the late 1850s, the pro- and antislavery positions of the sectional churches had helped cement the idea that each side's "peculiar society best embodied republican, Christian virtue and that the other threatened both republican liberty and Christian order." In the South, preachers searched the Scripture to justify the institution of slavery and the hierarchical notions of society that came along with it. Northern preachers, meanwhile, penned abolitionist tracts and often celebrated the liberal culture that was emerging in the cities and towns of their section. Popularly, such images of a sanctified people helped both sides wrap themselves in the garb of holy righteousness and march to war carrying swords blessed by the cross.

While many preachers of both sections abhorred the onset of violence in 1861, their eventual support for their respective section served as a major element of national identity. Union pastors often preached political messages that overtly approved of the war effort and increasingly offered a message of “unconditional loyalty” to the state. Likewise in the South, ministers and editors blurred “the distinctions between secular and sacred” and promoted patriotism based in a close connection of civil and religious authority. Many rebel preachers argued that not only was the Confederacy the protector of civil liberty and constitutional rights but that it was also the defender of religious liberty.

At the everyday level, religion provided comfort and hope for soldiers and their families who prayed for divine favor and sought the comforts of spiritual assurance. At the same time, it served as a rallying point for “slaves reaching for freedom [who] praised God for their day of Jubilee.” In both sections, religious promoters identified a remarkable opportunity to carry out missionary work within the armies. A burgeoning Southern military press played “a dynamic role in evangelizing soldiers, articulating war aims, and building morale.” Religiously inspired agencies in the North such as the Christian Commission supported the war effort by providing both physical and spiritual comforts to the soldiers in the field. Within the armies, religion was ever present. Practiced in private by pious soldiers, promoted by regimental chaplains, and celebrated in large-scale revivals, religion provided both spiritual comfort and entertainment for soldiers looking for a change from the regular camp monotony.

Following the war in the South, the complexion of religion changed dramatically. African Americans, who had worshipped alongside white people in large biracial churches before the war, deserted en masse and created separate all-black Baptist and Methodist congregations. Defeated white Southerners created a civil religion that blended Protestant rhetoric and symbols with the rhetoric and imagery of an invented Confederate tradition. This form of LOST CAUSE mythology helped Southerners defend the “essentially religious and moral values” that had been defeated in war. Northern white Protestants, while faced with what they believed to be a decline in moral values, continued to play an important role in the social-political arena in the emerging Social Gospel movement.

## Republican Party

The Republican Party was born in the middle of the national turmoil over the SLAVERY question in the 1850s. Within a few years of its establishment, the Republicans were one of the two major political organizations that governed the United States of America. From 1865 onward, Republicans proudly described themselves as the party that won the war, restored the Union, freed the slaves and guaranteed their civil rights, and brought unparalleled growth and prosperity to the country. Voters agreed, and by 1896 the Republican Party had fashioned an electoral dominance over the presidency that lasted, with only two exceptions, until 1930.

The immediate reason for the founding of the Republican Party was the controversy over the KANSAS-NEBRASKA ACT of 1854. The debate over STEPHEN A. DOUGLAS's bill set off a fierce protest over the “Nebraska Outrage” throughout the North in the spring and summer of 1854. Northern anger over slavery's possible extension into free territories sought a political outlet where none currently existed. The stability of the two-party system had been shaken with the demise of the WHIG PARTY by the mid-1850s. Some Whigs had joined the Free-Soil Party, which was dedicated to halting the spread of slavery. Meanwhile, the American, or Know-Nothing, Party, based on anti-IMMIGRATION sentiment, had become a major force in politics, winning ELECTIONS in the North and even in the South.

Many former Whigs, anti-Nebraska Democrats, and Free Soilers, however, were uncomfortable with joining a political party based on an anti-immigrant platform, also known as NATIVISM. As the protests over the Kansas-Nebraska Act grew louder and larger, the disaffected groups determined to form a new political party. Most historians agree that the first official use of the term *Republican* came on February 28, 1854, at a meeting in Ripon, Wisconsin. The name, linking the new party with the legacy of 1776, quickly gained widespread acceptance. A great number of congressmen in WASHINGTON, D.C., formally adopted the name in time for the 1854 fall elections, in which the Democrats' fortunes fell and the Republicans' rose.

The Republican Party grew rapidly in the North, and the organization swelled with former Know-Nothings and Whigs. Indeed, the Whig Party provided most of the leaders and much of the economic program for the new political entity. The controversy over slavery in the territories

continued unabated, and the Republican cause was helped by the uproar over the “little civil war” waged in BLEEDING KANSAS in 1855 and 1856. In 1856 the Republicans fielded their first presidential candidate, the western explorer John C. Frémont. “Free soil, free labor, free men, Frémont!” was the rallying cry. “Wide Awake Clubs” formed all across the Northern states, and huge rallies and parades spread the Republican message. The pro-Southern Democratic candidate JAMES BUCHANAN of Pennsylvania was the election’s victor by a comfortable margin, but the Republicans did very well, particularly in New England and in Wisconsin, Michigan, and New York.

Republicans articulated and refined their platform in the four years between 1856 and 1860. Leaders such as WILLIAM H. SEWARD of New York, SALMON P. CHASE of Ohio, and ABRAHAM LINCOLN of Illinois broadened the appeal of the party. The Republican position on slavery was borrowed almost entirely from the Free-Soil Party: The national government should restrict the spread of slavery into the territories. Most Republicans pledged to protect slavery where it existed in the South but hoped that restriction would put it on the path to ultimate extinction. The opposition to slavery embodied in the Republican program did not stem primarily from moral concerns, however. Instead, the Free-Soil argument was focused on creating and maintaining opportunities for free white labor. There were some abolitionists in the Republican ranks who saw slavery as an evil unto itself, but in general the party cared more about preserving and extending rights and opportunities for white people than it did about bringing freedom and justice to the nearly 4 million slaves living in the Southern states.

The antislavery message of the Republican Party was tied to a powerfully appealing program designed to ensure upward mobility for the ordinary men and women of the country. Free labor everywhere, according to party leaders, would guarantee the kind of dynamic capitalism that stimulated individual initiative and achievement. Republican rule meant government aid to the ECONOMY in the form of TARIFFS (a tax on imported goods), loans for transcontinental RAILROADS, a Homestead Act, a central bank, and funds for higher EDUCATION. This progressive vision would benefit farmers and urban dwellers alike. In 1862 due to the absence of Southern Democrats in the national legislature, the Republican Party enacted into law almost every single one of its economic proposals. The passage of the HOMESTEAD ACT, the PACIFIC RAILROAD ACT, and the MORRILL LAND-GRANT ACT, for example, laid the foundation for the surging postwar industrial economy.

The great enemy of economic, moral, and political progress, Republicans claimed, was the backward system of slavery and its protector, the “slave power,” which controlled the DEMOCRATIC PARTY and, through it, the

Election poster for the Republican Party presidential candidate in the election of 1860, Abraham Lincoln, and his running mate, Hannibal Hamlin (Hulton/Archive)

national government. Republicans pointed to the FUGITIVE SLAVE ACT, the repeal of the Missouri Compromise, the Kansas controversy, the caning of Senator CHARLES SUMNER of Massachusetts and the DRED SCOTT DECISION as proof for their contention that the liberties and freedom of white Americans were being seriously threatened.

The election of 1860 brought the presidency to the Republican Party. Abraham Lincoln, a moderate from Illinois, captured the nomination over more prominent and experienced, but also more controversial, leaders such as Seward, Chase, and Edward Bates of Missouri. During the summer of 1860, the Democratic Party split into Northern and Southern wings. Lincoln’s main opponent was Democrat Stephen Douglas, but there were two other candidates who ran on a Southern-only ticket. The Republican platform reiterated their Free-Soil philosophy and accused Democrats of being the party of slavery, disunion, and corruption. When the votes were counted, Lincoln’s substantial majority in the Northern states gave him the win over the other three candidates.

With Lincoln’s victory, a party based wholly on sectional interest had captured the White House, and the cost was the Union. Seven Southern states seceded shortly thereafter, believing that their liberties were threatened. They quickly established the CONFEDERATE STATES OF AMERICA. During the tense months between the end of Buchanan’s administration and Lincoln’s March inauguration, the new president formed a cabinet, tried to reassure a nervous public, and made several attempts to bring back the seceded states. All efforts at compromise foundered on Lincoln’s insistence that stopping slavery’s advance into the territories was not an issue that could be compromised.

Between 1861 and 1865, the Republican Party was responsible for waging war against the seceded states, devising plans for RECONSTRUCTION, and attending to the normal chores of national governance. Led by Lincoln and pushed by a group of RADICAL REPUBLICANS led by Sumner and BENJAMIN WADE in the Senate and THADDEUS STEVENS in the House, the Republican Party passed the legislation that made the EMANCIPATION of the slaves a reality. Republicans soon divided into factions representing conservative, moderate, and radical positions over whether a harsh or lenient reconstruction policy should be implemented. President Lincoln provided a moderating voice and struggled to make the Republican Party into a truly national entity. In 1864 the Republicans were known briefly as the “National Union Party,” and as a gesture to inclusion, the wartime governor of Tennessee, former Democrat ANDREW JOHNSON, was placed on the ticket with Lincoln.

After the defeat of the Confederacy and the ASSASSINATION OF ABRAHAM LINCOLN, congressional Republicans battled with Johnson over the right to control the process of Reconstruction in the South. The major achievements of the party include the THIRTEENTH, FOURTEENTH, and FIFTEENTH AMENDMENTS, the so-called Reconstruction amendments to the U.S. Constitution, which abolished slavery, established the criteria for federal and state citizenship and equal protection under the law, and ruled out race (but not gender) as a barrier to voting. In addition, Republicans passed other Reconstruction and civil rights acts that set up guidelines for readmitting the Southern states back into the Union.

Republicans narrowly missed removing Andrew Johnson from office in 1868, and in that same year their candidate for the presidency, ULYSSES S. GRANT, triumphed at the polls. President Grant and the Republican Party faced daunting challenges in putting a Reconstruction policy to work. They had two goals: The first was to remake the South from a slave society to a free-labor society, as close to the North as possible. The second was to protect the newly freed slaves’ rights against a hostile white population. To do this, Republicans had to control the Southern state governments and to establish a viable two-party system in the South. The Republican coalition of CARPETBAGGERS, SCALAWAGS, and African-American voters could not withstand unrelenting and violent Southern white resistance. By the early 1870s “REDEMPTION” prevailed, and the South was once again becoming a solid Democratic Party stronghold controlled by white Southerners.

As the party was failing to establish a stronghold in the South, many Republicans were anxious to recast the message of the party for the future. Called Half Breeds, and led by the dynamic James G. Blaine of Maine, they looked to strengthen the economic nationalism of their party with policies furthering the development of an urban-

industrial economy. Blaine and his supporters argued that most Americans were tired of hearing about the problems of the South and more interested in other issues like the TARIFF or monetary reform. Opposed to Blaine were the “stalwarts,” like Roscoe Conkling of New York, who, while supporting economic advancement, wished to continue to try to make the South a good place for the Republican Party.

As Grant’s administration became mired in scandals and charges of corruption, a group of disaffected “Liberal Republicans” called for civil service reform. Typical practice up to that time had been for presidents to appoint individuals to government jobs based on their party loyalty rather than their honesty or competence for the job. The Liberals wanted to end corruption in government, stop the “spoils men” from looting the treasury, and put the running of the government on an efficient and businesslike basis. This movement was led by the Missouri politician Carl Schurz, who formed an alliance with the Democratic Party in the election of 1872. Their candidate was the newspaper publisher HORACE GREELEY. Although Grant won handily, the threat to the Republican Party was clear. The chilling effects of the depression of 1873 led to a rise in support for the Democratic Party. Additionally, Northern voters turned a deaf ear to pleas from desperate Southern Republican governments fighting the KU KLUX KLAN. Northerners did not support Grant’s use of federal troops to stop Klan violence, nor were they pleased with the passage of the CIVIL RIGHTS ACT OF 1875. The House fell to Democrats in 1875, the Senate in 1879, and the presidency in 1884.

The disputed presidential election of 1876, in which Ohio Republican Rutherford B. Hayes was awarded the election over the New York Democrat Samuel Tilden, is traditionally considered the end of Reconstruction. From that point on, the Republican Party would strive to maintain its majority status by stressing broad issues of economic advancement and culturally conservative issues like prohibition, appealing to its Protestant, native-born base. The freedmen would not again receive attention from a major party until the 1930s.

**Revels, Hiram R.** (1827–1901) *Union chaplain, politician*

Born free on September 27, 1827, in Fayetteville, North Carolina, Hiram Rhoades Revels became the first African American elected to the U.S. Senate. Revels was ordained a minister in 1845 and served at several AFRICAN METHODIST EPISCOPAL CHURCHES, traveling widely and often. In 1850 Revels married Phoebe A. Bass, and they had six children.

Before the CIVIL WAR, Revels did not join or publicly support the abolitionist movement, although he later wrote that he had helped escaping slaves. Once the war started, however, Revels offered his support. He organized the first two black regiments in Maryland and a later one in Missouri. He served as a chaplain to African-American troops in the UNION ARMY, and he later worked with the FREEDMEN'S BUREAU, helping to establish schools in Mississippi. Revels's first position in government came when Mississippi governor Adelbert Ames appointed him alderman for Natchez, Mississippi, in 1868. He went on to be elected to the Mississippi State Senate.

In 1870 Revels moved onto the national political stage when the Mississippi legislature chose him to fill the remaining year of the state's Senate seat, previously held by JEFFERSON DAVIS. While in WASHINGTON, D.C., Revels championed EDUCATION issues, calling for an end to segregated schools. Revels's term ended on March 3, 1871, when he was appointed the first president of Alcorn University, the first black land-grant university in the United States. He served Alcorn from 1871 until 1874, when his support for Democrats in Mississippi resulted in his removal by the Republican governor. When the Democrats resumed control of Mississippi politics in 1875, Revels was restored to his position at Alcorn, which he held until 1882.

For the last 20 years of his life Revels served as assistant pastor of the Methodist Episcopal Church of Holly Springs, Mississippi, taught theology, and was a trustee at Rust College. He died at a church meeting on January 16, 1901.

## Richmond, Virginia

In 1860 the city of Richmond, Virginia, had grown to become the 25th largest city in the United States with a population of nearly 38,000. Located at the falls of James

River, Richmond was one of the South's most developed and bustling cities during the 19th century.

When the first shots were fired at FORT SUMTER, SOUTH CAROLINA, on April 14, 1861, Virginia had not yet seceded from the nation. As a result, the Confederacy set up its government quarters in Montgomery, Alabama. However, due to Richmond's industry as well as its role as the capital of Virginia's state government, the Confederate leaders were hopeful that Richmond would soon become the permanent capital of the CONFEDERATE STATES OF AMERICA.

A few days following Virginia's SECESSION on April 17, 1861, the Virginia convention extended an invitation to the government officials to relocate the capital to Richmond, thus making it a target for Union attack. On May 20, the Confederate government voted to move permanently the capital from Montgomery to Richmond. This vote marked the beginning of four years of change and conflict for Richmond.

Many historians argue that the Confederates made a strategic error placing their capital in Richmond, thus making it a target for Union attacks. Despite historians' views, however, the Confederates had substantial reason to place their capital in Richmond. Richmond's location, though only 106 miles from the Union's capitol in WASHINGTON, D.C., was an ideal site for the Confederate's capital. It was the home of important manufacturing concerns like the TREDEGAR IRON WORKS. Tredegar, which produced more than 50 locomotives for Southern RAILROADS between 1850 and 1855 alone, was not the only manufacturing establishment in the new capital city. Richmond had massive iron, flour, and tobacco mills in addition to its surrounding agricultural areas. Richmond was also the transportation hub of the South. Not only was it Virginia's largest port city via the James River and the Chesapeake Bay, but it was also very well connected to a number of the large cities on the Eastern seaboard due to its extensive railroads.

Richmond was the focus of the Union military strategy, characterized by the popular war cry "On to Richmond!" As a result, its citizens experienced a number of challenges. The first challenge was excessive inflation. The influx of the rebel government—officials, workers, and their families and slaves—as well as a considerable shortage of housing caused this rampant inflation. Richmond's population increased threefold to almost 100,000 by the war's end, which included a substantial number of REFUGEES. The city also held 13,000 prisoners in PRISONS such as Belle Isle, Libby Prison, and Castle Thunder. This dramatic increase put a considerable amount of strain on Richmond's municipal services such as the markets, the fire and police forces, and the public waterworks and gasworks.

The second immediate challenge faced by Richmond's inhabitants was a steep increase in crime. The significant

rise in population, the instability of the Confederate currency, and the transformation of Richmond into a crowded military town caused an increase of muggings and PROSTITUTION. In order to prevent the further rise of crime in and around the city of Richmond, martial law within a 10-mile radius of the city was declared on March 1, 1862.

In spite of the conflict that raged around the city, the general mood of Richmond remained relatively high during the first two years of the war. The citizens of Richmond did their best to aid the wounded and the sick. Numerous hospitals were established throughout the city, including Chimborazo Hospital in the Church Hill section. There were also at least 60 smaller hospitals run by the government, the state, and private institutions that were located throughout the city. At the same time, Confederate dead began filling Richmond's cemeteries: Oakwood, Shockoe, and Hollywood. Famous Confederate officers and officials such as J. E. B. STUART, GEORGE E. PICKETT, and JEFFERSON DAVIS and his family are all buried in HOLLYWOOD CEMETERY.

Most important, Richmond was the strategic target of the Army of the Potomac, and its capture became a major aim of the Northern war effort. As a result, a series of forts and trenches surrounded the city to defend it from the campaigns of the Union forces. Despite numerous threats by Union troops during the first three years of the war, ROBERT E. LEE's army was successful in pushing back the Union attack. During the spring of 1864, the Union forces finally broke their defenses and cut the city's rail lines.

By cutting these lines, both the citizens and the military in Richmond found it difficult to remain adequately supplied. This feat isolated Richmond, and its inhabitants suffered greatly during the final year of the CIVIL WAR. When Lee's lines were finally cut at the BATTLE OF FIVE FORKS on April 1, 1865, Lee alerted JEFFERSON DAVIS that Richmond must be evacuated. In response to Lee's notice, the Confederate government abandoned the city on April 2, 1865. As the government, military, and citizens of Richmond fled the city, they destroyed not only the city's supplies of tobacco and cotton but they also set fire

The ruins of Richmond, Virginia, the Confederate capital, after it was burned down by its own residents to thwart the oncoming advance of Union general Ulysses S. Grant (Hulton/Archive)

to bridges and railroads to make the city inaccessible. Due to the high winds, the fires spread throughout the city with unprecedented speed, a task that proved to be too large for Richmond's firemen to control. As a result, this evacuation fire consumed more than 800 buildings in the downtown area; Richmond literally lay in smoking ruins.

After the destruction of the Confederate capital, Lee's army did not last a week. On April 7, 1865, Gen. Lee surrendered to Gen. ULYSSES S. GRANT at APPOMATTOX COURT HOUSE, VIRGINIA. The short amount of time it took for the CONFEDERATE ARMY to surrender demonstrates how vital Richmond had been as both a place and a symbol to Lee's army throughout the four years of the Civil War.

Though Richmond was no longer the industrial and TRANSPORTATION hub of Virginia, it did remain the capital following the war. Today it serves as a living museum of the LOST CAUSE. Monument Avenue, a street lined with MONUMENTS of notable Confederate leaders, the White House of the Confederacy, and the Lee House all serve as reminders of the history of Richmond during the four years of the Civil War.

**Rosecrans, William S.** (1819–1898) *Union general, politician*

A Union general in the western theater of operations, William Starke Rosecrans was born on September 6, 1819, at his father's farm in Delaware County, Ohio.

Ranking fifth out of 51 cadets in the UNITED STATES MILITARY ACADEMY AT WEST POINT class of 1842, he remained at the academy teaching engineering and performing various military duties after graduation. During the Mexican-American War of 1846–48, he saw no combat service but instead remained in the Northeast, supervising the construction of fortifications at Newport, Rhode Island. Rosecrans resigned from the service in 1854 to embark on a career as an engineer and businessman.

Following the Confederate shelling of FORT SUMTER, SOUTH CAROLINA, Rosecrans volunteered his services and was appointed colonel of the 23rd Ohio in June 1861. Rosecrans quickly advanced and succeeded Gen. GEORGE

BRINTON MCCLELLAN in command of the Department of Ohio. In November 1861, Brig. Gen. Rosecrans defeated ROBERT E. LEE's CONFEDERATE ARMY in the Allegheny Mountains, facilitating the creation of the state of West Virginia. Assigned to the western theater in May 1862, now Maj. Gen. Rosecrans led the Army of the Mississippi in the successful Battle at Iuka (September 1862) and the BATTLE OF CORINTH (October 3–4, 1862).

Rosecrans assumed command of the Army of the Cumberland in Nashville on October 27, 1862. Marching southeast on December 26th, he confronted Confederate general BRAXTON BRAGG's Army of Tennessee near Murfreesboro on December 31. After the bloody two-day BATTLE OF MURFREESBORO, the Confederates retreated. His June 1863 Tullahoma campaign successfully drove Bragg out of Tennessee but failed to destroy the Confederate army. Crossing the Tennessee River in the beginning of September, he captured Chattanooga. However, the Confederate commander, now reinforced by troops from Virginia and Mississippi, counterattacked on September 18 at Chickamauga Creek, southeast of the city. Although Rosecrans commanded ably on September 19, he made a tactical mistake the next day, leaving a gap in his line. Bragg exploited Rosecrans's error and drove the UNION ARMY from the battlefield. Fleeing to Chattanooga ahead of his troops, Rosecrans lost the moral authority to lead his army and was relieved of his duty in October. His final active command was in the Department of Missouri in 1864.

Resigning from the service in 1867, he became minister to Mexico in 1868. Replaced by President ULYSSES S. GRANT, with whom he had a long-standing feud, Rosecrans became a resident of California. He served two terms in Congress (1880–85) and remained active in VETERANS' affairs. He died at his Redondo ranch, near Los Angeles, on March 11, 1898. His remains were transferred with full military honors to ARLINGTON NATIONAL CEMETERY in May 1902.

## rules of war

Rules of war are designed to keep war “civilized.” Generally these rules are concerned with two main issues. The first is how much force is appropriate. The second is what is a legitimate target for a warring army and what is not.

Before the CIVIL WAR the rules of war generally were not formally recorded. Instead, combatants were expected

to behave in accordance with established custom and their sense of fair play. During the Revolutionary War, for example, the UNIFORMS and tactics used by British redcoats left them highly exposed to gunfire. British commanders knew this, but they did not change their approach because they had been trained to believe that this was the polite way to fight a war. During the Civil War, many officers and soldiers continued to adhere to these unwritten rules. For example, when the Confederate ordnance department developed land mines, some Confederate commanders refused to use them because they thought them ungentelemanly.

Ultimately, however, the era of polite warfare and unwritten rules had come to an end. The Civil War was a time of transition between the limited warfare of the past and the “total war” that was to become the standard in the 20th century. Recognizing this new reality, Union leaders moved to formalize the rules of war, issuing the Lieber Code in May 1863. Prepared by legal expert and professor of political science at Columbia University FRANCIS LIEBER, the Lieber Code contained a list of 157 rules governing the conduct of Union armies and soldiers in the field. The code addressed a broad variety of topics: spies, prisoners, surrenders, noncombatants, and so forth.

The Lieber Code was not a treaty, so Confederate soldiers were not subject to its conditions. It is perhaps worth asking, then, why Union leaders would willingly place such limits on their armies. In part, they were legitimately concerned with the actions of some Union soldiers and officers. Most of the men who fought in the Civil War were not professional soldiers and so had not spent their careers being taught to behave with restraint in a time of war. As the Civil War became increasingly brutal, and as participants on both sides grew increasingly desperate, there were numerous incidents of excessive violence or violence against inappropriate targets. Such incidents undermined support for the war among Northerners and among the international

community, while often provoking violent retaliation from the Confederacy.

As the Lieber Code tried to limit the brutality of “total war” in some contexts, however, it also justified it in other contexts. Although the code placed “civilized” limits on what Union soldiers were allowed to do, it also provided broad discretionary powers for Union commanders to do what they deemed “necessary.” For example, SHERMAN’S MARCH THROUGH GEORGIA in 1864 might have been unthinkable under the informal codes of conduct in place at the beginning of the war, but it was entirely justifiable under the terms of the Lieber Code.

Ultimately, the Civil War affected the rules of war in two important ways. The transition to total war continued unabated in the post-Civil War era. The Indian Wars of the 1870s were incredibly violent. The Spanish-American and Philippine Wars also had their share of brutality, and World War I may have set a standard that will never be matched in terms of the lack of restraint shown by combatants on both sides.

At the same time, while the Civil War helped to make war more violent, it also provided a precedent for trying to address that violence, as formal and comprehensive agreements about the conduct of war became an international standard. In 1864, for example, as the Civil War was still being waged, a consortium of European powers signed the Geneva Convention. The agreement, which governs the treatment of prisoners and other conduct in war, remains in effect to the present day and has been joined by a number of other international agreements about armed conflict.

### scalawags

From the Scottish word for “rascals,” the term *scalawag* was applied to the white Southerners who cooperated with the REPUBLICAN PARTY during RECONSTRUCTION. Historians have overturned the common depiction of scalawags as no-good, poor white traitors. Indeed, the Republican Party had no chance at all to establish a presence in the South without the leadership and support of the large and diverse group of white men who allied themselves with the party of ABRAHAM LINCOLN during the years after the CIVIL WAR.

Although the scalawags ranged widely in terms of their social standing, economic background, and political loyalties, they did share common beliefs. First and foremost, they wanted the South to enjoy a progressive and prosperous ECONOMY based upon the benefits of free labor and industrialization. While the wealthier scalawags of New Orleans and Atlanta looked forward to government-sponsored subsidies and loans for RAILROAD construction and textile mills, the plain, hardworking farmers of North Carolina, Georgia, Virginia, and Texas hoped the Republicans would make good on their pledge for debt relief.

The Southern yeomanry, or small farmers, joined the Republican Party for their own reasons. Many of them had been Union supporters during the war and resented their harsh treatment by Confederate citizens and soldiers. Others wanted to help build a genuine two-party structure in the South and share in the benefits of healthy political competition. Most farmers never owned slaves and resented the prewar domination of the Southern slaveholding class. In every Southern state, they yearned to limit the power of the old guard with the help of the Republicans. The yeomanry wanted to put SLAVERY behind them and to look forward to the economic benefits of Unionism for themselves and their children. This sentiment did not mean, however, that they were in favor of social equality with the former slaves. Scalawags were not, like Northern CARPETBAGGERS, willing to make much room for the hopes and expectations of

the much larger African-American base of voters for the Southern Republican Party. Ultimately, this racism, along with corruption within the party and violent attacks from white Southerners, undermined the Republican Party's future in the South.

At the beginning of Reconstruction, Republican leadership expected the party to be established with the help of a number of very fine scalawag leaders. One example is James L. Alcorn of Mississippi. A lawyer and Whig politician before the war, Alcorn served as a brigadier general in the CONFEDERATE ARMY. Returning to Mississippi in 1865, Alcorn became a spokesman for the moderates in his state, advocating racial cooperation and a willingness to forget the bitterness of the past. Alcorn, who served both as a U.S. senator and governor during Reconstruction, decided to tie his political fortunes to the Republican Party. He believed strongly that building up a party organization within Mississippi and in the other Southern states would bring stability and prosperity so desperately needed in the region.

Like other scalawag leaders, Alcorn had to contend with factions and divisions within his state's Republican Party. If African Americans were perceived as being given too much power and prestige, then white voters would leave the party in droves. On the other hand, the freedmen made up the majority of the Republican voters, and black Republicans demanded that they receive their fair share of rewards and patronage positions. Elected governor in 1869 when Mississippi adopted a new constitution, Alcorn made impressive gains in improving life for his constituents, including the establishment of a public school system. He urged fellow Mississippians to accept and support the freedom and political (but not social) rights of ex-slaves. Unfortunately for Alcorn, intraparty rivalries, intrigues, fights, and scandals dimmed the Republican light in Mississippi as in most other Southern states by the early 1870s.

Another prominent scalawag was former Confederate general JAMES LONGSTREET. One of Lee's top generals, Longstreet joined the Republican Party immediately after

he was pardoned in 1867. Related through marriage to President ULYSSES S. GRANT, Longstreet reformed a warm friendship with Grant that had been interrupted by the war. Throughout Reconstruction, Longstreet used his prestige and high profile to urge fellow Southerners to accept and even welcome reconciliation with the North. He served in a number of important positions, including surveyor of the port of New Orleans in 1869 and U.S. minister to Turkey in 1880. Instead of helping to achieve the sectional harmony he hoped for, Longstreet became a hated symbol of the white Southern traitor and the most notorious scalawag of all.

In the end, scalawag leaders of the Southern Republican Party were defeated by the legacy of slavery and racism in their region. They were simply unprepared for the extremely hateful and violent attacks upon their party from Democrats bent on “redeeming” their states from the clutches of Republicans, as well as from politically motivated terrorist groups like the KU KLUX KLAN. By 1876 most scalawags had returned to the DEMOCRATIC PARTY, and those who stayed with the Republicans did so only to receive the occasional patronage position offered by the national government.

### science and technology

In the 1840s and 1850s industrialization in the United States accelerated. Rapid advances were made in the sciences and in technology. Americans found new and better ways to farm, to weave, to travel, and to communicate. Among the important inventions of the antebellum period were the steel plow (1837), TELEGRAPH (1837), PHOTOGRAPHY (1839), the rotary printing press (1844), and the sewing machine (1845). In the 1860s the arms industry drove many new technologies that found peacetime applications in the postwar period.

A number of new technologies would be utilized during the CIVIL WAR, forever changing the nature of warfare. For example, combat on land had to be almost entirely reinvented during the war. In the Mexican-American War of 1846–48 and other conflicts before that, troops largely used smoothbore muskets. Smoothbores are not very accurate beyond 150 yards, and so opposing armies equipped with them had to be placed very close to one another. In the Civil War, smoothbores gave way to rifled muskets. Rifled muskets have grooves on the inside of their barrels that put spin on bullets, giving them a maximum range of

about 500 yards. The rifled musket was actually invented 400 years before the Civil War, but the technology was not widely utilized because of a critical shortcoming: A bullet being fired from a rifled gun has to fit tightly within the barrel, or else the grooves will not put spin on it. Before the 1840s, the only solution to this problem was to use bullets that were exactly as large as the barrel of the gun. These bullets took a very long time to load, since they fit so snugly and they had to be forced down the barrel with a ramrod. A gun that can only be fired once every few minutes is not very useful in the heat of combat.

In 1843 a French soldier named Claude Minié finally found a way to make rifled muskets practical with the development of a bullet that he called the Minié ball. The Minié ball, which is actually conical in shape, is small enough that it can be dropped right down the barrel of a musket. Minié’s key innovation was to make his bullet hollow at one end. The expanding gases released when a musket is fired cause the Minié ball to expand and touch the sides of a rifled musket. And so, the bullet fits loosely when it is being loaded, but tightly when it is being fired. This was the critical step in making rifled muskets viable for use in combat. Another important innovation at this time was the adoption of mercury fulminate percussion caps, which replaced the inefficient flintlock mechanism of the previous century, to ignite the powder charge with vastly improved efficiency and reliability. With these innovations rifled muskets could be fired three times per minute, just as fast as smoothbore muskets.

As more lethal small arms were being invented, parallel improvements in manufacturing techniques were being developed to mass-produce them. In the late 1840s Samuel Colt established the Colt Firearms Company in Connecticut, which manufactured revolving handguns using the latest metallurgical, engineering, and die-cutting technologies. The result was not only a large volume of high-quality weapons but also a set of production techniques that could be applied to shoulder arms for the military. Thus combined, the drive for improved weaponry and the methods of the Industrial Revolution equipped large numbers of soldiers with deadly weapons in a cost-effective way.

Initially, the impact of the rifled musket on the Civil War was to inflict unheard of levels of carnage. Generals on both sides of the conflict had been trained in Napoleonic TACTICS AND STRATEGY, which emphasized frontal assaults and close proximity to the enemy. When the enemy has smoothbores and can only fire at a range of 150 yards, frontal assaults can be effective since there is only time for one volley of accurate shots. When the enemy has rifles and can begin firing at a range of 500 yards—time for two or three or four volleys—frontal assaults invite wholesale slaughter. The combination of rifled muskets and Napoleonic tactics is a primary reason, for example, that the BATTLE

The recent technological advances of the railroad and the telegraph helped military maneuvers in the Civil War tremendously. Pictured here is Gen. Herman Haupt (top right, in hat and coat), chief of military rail transport for the North. (Library of Congress)

OF ANTIETAM remains the single bloodiest engagement in American history. Quickly, bloodbaths like this forced generals to rethink their tactics. By the end of the Civil War, turning maneuvers and trench warfare were much more common.

Although the Minié ball was the most important, other new technologies also became a part of ground warfare during the Civil War. In 1861 Richard Gatling developed the first reliable machine gun. This hand-cranked device fired standard .58-caliber musket balls at a rate of 400 rounds per minute. It was employed by the U.S. Army up through the Spanish-American War of 1898. Gatling guns were used in a few Civil War engagements, most notably the siege of Petersburg. Repeating rifles, which had been developed in the 1850s, were also issued to some soldiers during the Civil War. These weapons, which utilized a smaller, pistol-caliber bullet, traded off shorter range for a higher volume of firepower. For this reason they were largely issued to cavalry

units: With them, horsemen on the ground of their choosing could offer tremendous resistance against better-armed infantrymen. The stand of Gen. John Buford's U.S. Cavalry on the first day of Gettysburg attests to the effectiveness of carbines when properly handled. Union leaders hesitated to embrace them, however, because repeaters were unreliable and because of concerns that they would encourage soldiers to waste ammunition. Land mines were developed during the war by Confederate general Joseph Rains, although they were crude and some officers refused to use them because they felt they were a cowardly form of warfare. Practical hot-air balloons, invented in 1852 by Henri Giffard, were utilized to provide aerial reconnaissance. The most prominent example occurred during the Warwick-Yorktown siege in early 1862. Two balloons, commanded by Chief Aeronaut of the Army of the Potomac T. S. C. Lowe, were used for spying on Confederate fortifications and for making maps. Although these innovations did not influence the Civil War

in a dramatic fashion, all would eventually become important tools for military leaders.

Artillery, by far the most technical of military services, also underwent a rapid transformation that closely paralleled that of small arms. Innovative ordnance engineers such as Robert Parrott and Thomas Rodman conducted extensive testing through the 1840s and 1850s, employing lighter and stronger alloys for cannon barrels to reduce their weight and endow them with improved range and reliability. The standard “12-pounder” cannon of the War of 1812 (firing a 12-pound, solid cannon ball), which weighed 3,800 pounds, thus contrasts with the Civil War “Napoleon” 12-pounder cannon, which weighed just 1,600 pounds. Like small arms, some cannon were now rifled. Rifling the bore of cannon vastly improved their accuracy and range. Moreover, such ordnance was capable of firing the first explosive shells with devastating effect against traditional masonry fortifications. On April 11, 1862, rifled cannon commanded by Gen. Quincy A. Gillmore completely destroyed the works of Fort Pulaski, Georgia, prompting its surrender after a single day’s shelling. Late in the war the Confederates also managed to import a handful of breech-loading Whitworth cannon, which added increased rates of fire to already impressive range and accuracy.

As war on land was evolving during the Civil War, so too was war at sea. In fact, the naval leaders during the Civil War moved very quickly to modernize their fleets. Both the UNION NAVY and the CONFEDERATE NAVY began the war with vastly fewer boats than they needed, and both decided to build their navies around ironclad ships. IRONCLADS, which had been used by European powers during the 1850s Crimean War, were wood vessels partially encased in iron plating. The plating made ironclads harder to maneuver but also much more difficult to sink. Ultimately, the Union was able to put 71 ironclads into service, and the Confederacy was able to commission 25. These ships played a role in many of the major naval engagements of the Civil War. Their most notable service occurred at Hampton Roads, Virginia, when the USS *Monitor* faced off against the CSS *Virginia*. Although the meeting of the *Monitor* and the *Virginia* was a draw and had little impact on the outcome of the war, it was important because it marked the first time that iron ships had faced one another in battle. The engagement of the *Monitor* and the *Virginia* made clear to both military leaders and civilians that the age of wooden ships was officially past.

Another important facet of naval technology was the screw propeller, designed and invented by Swedish engineer John Ericsson in 1837, yet only slowly adapted by the conservative naval bureaucracy. This device was an immediate improvement over existing “side-paddle” arrangements, for it offered less drag, higher speeds, and placement of the steam engine and propulsion gear below the water-

line, where it was less vulnerable to enemy fire. One major drawback with all steam-powered vessels was their ravenous appetite for coal and timber to fire up the boilers. This dependence necessitated a complete overhaul of naval logistics, and sea supply vessels were created to accompany the blockading fleets on station. Meanwhile, American naval ordnance underwent an evolution of its own at the hands of Capt. JOHN A. B. DAHLGREN. Through continuous experimentation Dahlgren realized that the pressure of a cannon charge is strongest at the rear of the gun and less at the mouth. He therefore designed heavy guns that were decidedly “teardrop” in shape, which allowed stronger charges to be used despite a great reduction in overall weight. Dahlgren’s “soda bottles,” as they were popularly known, were among the most powerful naval ordnance in the world. They were capable of throwing large explosive rounds that could demolish all but the strongest land fortifications.

Ironclads were not the only new technology utilized by the Civil War’s naval leaders. Confederate leaders in particular were willing to be creative because of their lack of resources. For example, the Confederacy utilized both torpedoes and submarines at various points during the war. Although both technologies had been used for thousands of years in one form or another, the Confederate incarnations bear a much greater resemblance to the modern version. And when the *H.L. HUNLEY* sank the USS *Housatonic* on February 17, 1864, it became the first time in the history of the world that a submarine had successfully attacked and sunk an enemy vessel.

Military engagements on both land and sea, then, were influenced by new technologies. And at the same time, technology changed the way war was conducted on a broad scale. The telegraph was one critical new tool that Civil War commanders used for logistical purposes. The telegraph had actually been available during the Mexican-American War, but it was not until the Civil War that it became critical. With the spread of the telegraph, spies could gather intelligence and quickly transmit it back to their superiors. Generals could coordinate troop movements over large areas. Politicians could have more of a hand in running the war, albeit sometimes with detrimental effects.

Just as important as the telegraph in shaping logistical planning was the railroad. The railroad had first been developed in the early 19th century, and by the start of the Civil War the nation had 30,000 miles of track, more than any other nation in the world. RAILROADS provided critical logistical support for both the CONFEDERATE ARMY and the UNION ARMY. Civil War armies were much larger than the armies that had fought in previous conflicts, and it would not have been possible to keep 50,000 men or more properly supplied if food and other necessities could not be brought to them, often from far away. Railroads were also

used to move troops over long distances, which was absolutely critical to both sides. For the Confederates, railroads helped to mitigate their shortage of manpower by allowing soldiers to be moved around to the exact spots where they were most needed. For the Union, victory may not have been possible without the railroad. The Confederacy was a very large geographical area. It could not have been conquered, perhaps, if Union troops could not have been quickly and effectively deployed throughout the region.

Technology therefore influenced every aspect of the war front. Meanwhile, the HOMEFRONT was by no means immune to the influence of new inventions. For example, the clothing needs of the Union army caused the sewing machine to be implemented throughout Northern factories during the war. Although this was a fairly small change, the move toward mechanization would become a dominant theme of the postwar era. Another important change on the homefront during the war had to do with the role of JOURNALISM in American society and in warfare. The spread of the telegraph allowed news to be collected and reported much more quickly than it ever had before. And the rotary press made it possible for enough papers to be printed to meet the demand of a news-hungry American public. Henceforth, the American populace would not be kept in the dark about the operations of the country's armies.

Equally important, if little heralded at the time, was the great influx of females into the national workforce. Work outside the home allowed many women to break free of their traditional, domestic constraints and work on a paid basis for the first time. As more and more men of draft age were removed from the labor pool, women provided a steady stream of replacement labor supporting the overall war effort. Thus the rise of factory technology increased the availability of paid work for women in the workforce, a phenomenon that would be repeated with even greater effect in World Wars I and II.

As important as new technologies were to the Civil War, it bears noting that new scientific developments did not find their way into all aspects of the conflict, even when they easily could have. The most notable failures were in the area of MEDICINE. Anesthesia was developed by an American dentist more than a decade before the war started. In the 1850s, European doctors began to speak of germ theory, stressing the importance of using clean hands and instruments to perform medical procedures. Nonetheless, these ideas were not embraced by the Civil War medical establishment. As a result, countless thousands of soldiers suffered agonizing pain while undergoing amputations, and thousands of others died of unnecessary infections.

Ultimately, the Civil War had an important role in marrying new technologies with the conduct of warfare. Rifles, machine guns, aerial reconnaissance, iron and steel ships,

and submarines would all be indispensable tools for military commanders in the late 19th and 20th centuries.

The Civil War also helped to spread technologies that would shape American life in peacetime. Mechanized factories, newspapers, railroads, and telegraphs would help to remake America's society and its ECONOMY in the postwar era. At the same time, a number of important new inventions and discoveries came about in the postbellum era, as INDUSTRIAL DEVELOPMENT gained momentum. The internal combustion engine (1875), the telephone (1876), refrigeration (1877), the phonograph (1877), and the incandescent light bulb (1879) were all invented in the two decades immediately following the Civil War.

## secession

Secession was the act by which the 11 Southern states that formed the CONFEDERATE STATES OF AMERICA withdrew from the Union. The secession crisis of 1860–61 led directly to the outbreak of CIVIL WAR. The North's victory in the war ensured that secession would no longer be a political issue of any relevance.

There is no provision for secession in the U.S. Constitution. Rather, secession was a concept that developed in response to a series of debates over the course of the antebellum era about the relationship between the states and the federal government. Which held the ultimate power? If the answer was the state, then that entity had the right to secede from the federal government if its liberties were endangered. Three events in particular from the late 18th to the mid-19th century would shape the secessionist position: the Virginia and Kentucky Resolutions of 1798, the War of 1812, and the Nullification Crisis of 1832–33.

Gen. Winfield Scott portrayed as Hercules slaying the many-headed Hydra of Southern secession. Each of the monster's seven heads represents a prominent Southern leader and a vice or crime associated with him. Lithograph by Currier & Ives (Library of Congress)

America's first party system was founded in the 1790s under the leadership of Thomas Jefferson and Alexander Hamilton. Jefferson and Hamilton had radically different ideas on the nature of government. Hamilton, a Federalist, favored a strong national government, while Jefferson, the founder of the DEMOCRATIC PARTY, was committed to the supremacy of the states. He articulated his position in the Virginia and Kentucky Resolutions of 1798, in which he invented the term *nullification* to describe a state's right to overrule the federal government. The Constitution, argued Jefferson, was a "compact," or agreement, between the states and the national government. If the compact was seriously violated by the federal government, the states could legally withdraw, or secede, from the Union.

The first time states threatened to secede was during the War of 1812. Most New Englanders were opposed to the war, largely because Great Britain was the most important market for their manufactured goods. In 1814 representatives from the states of New England held a convention in Hartford, Connecticut, to discuss their grievances. Disunion was mentioned prominently on the convention floor. Ultimately, the issue was tabled after the war's end.

The question of secession again appeared in 1832 when the federal government adopted a tariff, or tax, on imported goods that Southerners felt was far too high. This was the third time in eight years the government had adopted a tariff that was contrary to Southern interests. In response, the South Carolina legislature passed an ordinance that nullified the federal tariff and stated that if the national government enforced the collection of the tariff, South Carolina would secede. The situation was resolved with a compromise tariff that South Carolina agreed to accept. Temporarily, the storm subsided, but the nullification crisis had major long-term implications for making the Palmetto State a leader of secessionist sentiment. Most importantly, South Carolinian John C. Calhoun emerged from the crisis a powerful voice for STATES' RIGHTS and the protection of SLAVERY. Calhoun was a former nationalist who served in the House, the Senate, in the cabinet as secretary of war and secretary of state, and as Andrew Jackson's vice president. In the 1830s, he turned his formidable intelligence to constructing a rationale for ensuring the perpetuation of slavery in a Union he perceived to be increasingly hostile to the minority slaveholders. Rejecting the current two-party system, Calhoun advocated a Southern sectional party based on states' rights that would be devoted to protecting that region's "peculiar institution." Failing to persuade his fellow Southerners to abandon the Democratic Party, Calhoun became increasingly pessimistic about the fate of the South within the Union. For him, secession was a logical and legal process should it become necessary.

By the 1840s, Southerners influenced by Calhoun had developed an intellectual justification for secession. The 1850s brought constant conflict over the future of slavery. Most Southerners felt that it was important that slavery expand to the territories to sustain the balance of power between slave and free states in the federal government. Many believed that slavery should be legal everywhere in the nation, even in Northern states that had banned the institution. The majority of Northerners felt very differently. They were willing to allow slavery to remain where it already was but wanted to reserve the territories for free labor only. In response to this attitude, a small group of rabid secessionists, called FIRE-EATERS, began to advocate loudly the dissolution of the Union in order to defend and preserve slavery and states' rights. In 1860 ABRAHAM LINCOLN was elected president on a Republican platform

committed to stopping the spread of slavery in the territories. Prominent fire-eaters, such as WILLIAM LOWNDES YANCEY of Alabama, Edmund Ruffin of Virginia, and Robert Barnwell Rhett Sr. of South Carolina, saw Lincoln and the party he represented as deeply hostile to Southern slaveholding interests. Throughout the fall and winter of 1860 they worked hard to dissolve the Union. They had compelling arguments, all of which centered on the Republicans' desire to use the federal government's power to deny the property rights of Southerners.

The fire-eaters faced significant obstacles. The wealthy states of the Upper South like Virginia, Tennessee, and Kentucky were not interested in seceding. They wanted to watch and wait to see if they could forge a compromise that would be to their advantage. In the Lower South, it was not clear that the majority of nonslaveholding farmers were willing to support secession to save an institution they had no financial stake in preserving. There were also a substantial number of "cooperationists" in the lower South that favored continuing negotiations with the federal government. They argued that secession should be seen only as a last resort.

Southern radicals knew that they had to manage things very carefully or they would lose their momentum and secession would fail. The fire-eaters chose to focus their attentions on South Carolina, in hopes that the state's leaders could be convinced to secede quickly and decisively. The Palmetto State was a natural choice to lead the secession movement. It had been the home of John C. Calhoun and a center of secessionist sentiment for more than three decades. Beyond that, South Carolina's constitution was unusual in that it required the state legislature to choose presidential electors. As such, when Abraham Lincoln won the election of 1860, most Southern legislatures had adjourned for winter, but the South Carolina legislature was still in session pending the results. They immediately approved Governor William Henry Gist's call for special ELECTIONS to choose representatives for a secession convention.

South Carolina's secession elections made the state's departure from the Union a certainty. Strong opponents of secession declined to run for seats at the convention, knowing that they would be defeated. Cooperationists dismissed the convention as largely meaningless, believing that secession would only happen if a group of Southern states agreed to secede together. When the secession convention was seated on December 17, 1860, it was populated entirely by fire-eaters. A committee was appointed to draw up a secession resolution, and in short order they completed their work. The convention voted unanimously on December 20 to endorse the resolution that declared the union between the states to be "dissolved."

South Carolina's bold move gave a big boost to the efforts of fire-eaters in the other states of the Lower South.

In each state, the same basic pattern had to be followed: elections, a secession convention, and the adoption of an ordinance of secession. In no state was secession as much of a certainty as in South Carolina, and in some states the issue was hotly contested. However, the inspiration provided by the Palmetto State, as well as skillful politicking by fire-eaters, eventually convinced the rest of the Lower South to join South Carolina in seceding. By February 1, 1861, Mississippi, Florida, Alabama, Georgia, Louisiana, and Texas had called secession conventions and voted to leave the Union. On February 4 delegates from the seceded states met to begin drawing up a constitution for the new nation.

The states of the Upper South hesitated much more than those in the Lower South. Pro-Unionist sentiment, Northern commercial ties, and a much lower number of slaves made secession more problematic. For the federal government, the key to retaining the loyalty of the Upper Southern states was a noncoercive policy. Compromise between North and South was discussed and rejected, and as time dragged on, hope faded. Supplies began to run out for the small Union garrison at FORT SUMTER, SOUTH CAROLINA, located in Charleston Harbor. President Lincoln weighed his options, keenly aware that popular sentiment in the North heavily favored resupplying the fort and keeping it under the national flag.

On April 6 Lincoln went public with his decision to resupply Fort Sumter, but only with food and other necessities of survival. President JEFFERSON DAVIS could not abide by this decision, as he was well aware of the symbolic importance of allowing the North to keep possession of the fort. So, Davis decided to fire upon Sumter before the Northern ships arrived. On April 12, 1861, Confederate batteries attacked, and the Garrison surrendered two days later.

Lincoln responded to the attack on Fort Sumter with a call for 75,000 troops to put down the insurrection. At this point, the states of the Upper South had a choice between taking arms against the South and taking arms against the North. This was an easy decision to make, and shortly thereafter Virginia left the Union. Over the course of the five weeks after Fort Sumter, Arkansas, Tennessee, and North Carolina followed suit. The secession crisis had ended and the Union was dissolved. The stage was set for the bloodiest conflict in American history.

### Second Inaugural Address (March 4, 1865)

The Second Inaugural Address was the seminal speech that President ABRAHAM LINCOLN delivered upon his second inauguration, in 1865. The nation was then a far cry from what it had been at the time of his first inauguration. After four years of conflict Union armies under Gen. ULYSSES S. GRANT and WILLIAM T. SHERMAN were poised for victory.

With good news imminent the president had every reason to be celebratory. Yet Lincoln deliberately avoided voicing patriotic sentimentality, painfully aware that the perils facing the country during the postwar era would prove as daunting as those of the present. His second inaugural address was short—fewer than 700 words—but profound. The president did not linger on the looming military victory over the South, nor did he blame the South for the evils of SLAVERY, whose practice he condemned outright. Rather, he appealed to unity, Christian forgiveness, and national reconciliation, couching his message in religious terms leavened with biblical invocations. In this manner he eschewed military triumph and promoted a moral victory.

The inaugural speech, delivered before a crowd estimated at 40,000 people, lasted only seven minutes. Listeners were initially perplexed by Lincoln's low-key delivery and stark brevity. Yet the last line of the speech summarizes his administration's *raison d'être*:

With malice toward none; with charity for all; with firmness and right, as God gives us to see right. Let us strive on to finish the work we are in; to bind up the nation's wounds; to care for him who shall have borne battle, and for his widow and his orphan—to do all which may achieve and cherish a just and lasting peace, among ourselves, and with all nations.

Lincoln's words have since been regarded as among the most notable political addresses of all time. The entire speech is carved into the marble walls of the Lincoln Monument in WASHINGTON, D.C.

**Semmes, Raphael** (1809–1877) *Confederate admiral* Rear admiral for the CONFEDERATE STATES OF AMERICA, lawyer, historian, and newspaper editor, Raphael Semmes is best known for his stewardship of the famed cruiser *ALABAMA*. Born on September 27, 1809, in Charles County, Maryland, Semmes attended the Charlotte Hall Military Academy. Appointed as a midshipman in the U.S. Navy in 1826, he found time between service in the Mediterranean and Caribbean Seas to study law and was admitted to the bar in 1834.

Semmes moved from Maryland to Cincinnati, where he married and began his family of six children. He served in the Mexican-American War of 1846 and later published a popular account of the event. Semmes and his family moved to Alabama, where he had bought property. When the war began, he resigned from the U.S. Navy and offered his services to President JEFFERSON DAVIS. His first assignment was to go north and buy supplies and ammunition from stores in New England and New York. Mission accomplished, he dropped in to view President ABRAHAM LINCOLN's inauguration in WASHINGTON, D.C.

Commissioned a commander in the CONFEDERATE NAVY, Semmes outfitted the cruiser *Sumter* in New Orleans and began an 18-month stint as a commerce raider running the Yankee blockade. After great success, Semmes traveled overseas to take command of the CSS *Alabama*, one of the rebel ships built in Liverpool, England. Sleek, fast, and powerful, the *Alabama* destroyed or captured 69 vessels before it was destroyed by the Union's *Kearsarge* off the coast of France in late spring of 1864. After a dramatic rescue at sea, Semmes returned home a hero and commanded the James River Squadron until the end of the war. Semmes applied for and received a presidential pardon in May 1865, but he was arrested on piracy charges upon his return to Mobile, Alabama. Cleared of all charges, Semmes worked as a judge, a teacher, a newspaper editor, and a lawyer. An accomplished writer, he published his story, *Memoirs of Service: Afloat during the War Between the States* in 1868. Raphael Semmes died on August 30, 1877, in Point Clear, Alabama.

**Seward, William H.** (1801–1872) *lawyer, politician* Lawyer, governor, senator, and secretary of state, William Henry Seward was one of the leading Republicans of

his era. Seward was born in Florida, New York, on May 16, 1801. Graduating from Union College in 1820, he was admitted to the New York bar two years later. Son of a businessman and a county judge, Seward married a judge's daughter, Frances Miller. They settled in Auburn, New York, to raise a family. Their son, Frederick William Seward, served as his father's assistant secretary of state and close adviser during the most turbulent years of the elder Seward's career.

William H. Seward rose rapidly in New York State politics, advancing from WHIG PARTY leader in the state senate to the governor's office while still in his 30s. After his second gubernatorial term, Seward built his legal practice only to return to politics again in 1849, when he advanced to the U.S. Senate.

Seward quickly established himself as a powerful figure in Congress, one associated particularly closely with abolitionism. He is known during the 1850s for two controversial remarks. During a debate over the Compromise of 1850, Seward urged senators to ban SLAVERY in the territories entirely. Replying to Southern attacks that such a ban was unconstitutional, Seward asserted that there was a "higher law" than the U.S. Constitution.

Echoing the rhetoric of abolitionists like WILLIAM LLOYD GARRISON, Seward earned a reputation in some circles as a radical abolitionist—a reputation that would prove both incorrect and damaging to his career. Again, in a speech at Rochester, New York, Seward denigrated compromise with slave owners, declaring that North and South were engaged in an "irrepressible conflict" between two fundamentally different views of America's future.

When the Whig Party collapsed following the KANSAS-NEBRASKA ACT, Seward joined the new REPUBLICAN PARTY, instantly becoming the leading candidate for the 1860 Republican presidential nomination. But Seward's flirtation with abolitionism, still largely unpopular in the North, alienated more moderate Republicans. During the 1860 Republican Convention, Seward watched his support ebb while ABRAHAM LINCOLN's swelled. Despite the disappointment, Seward actively campaigned for Lincoln throughout the fall and accepted Lincoln's invitation to serve as secretary of state.

By 1861 Seward had been in politics for nearly 30 years. Lincoln, in contrast, had served a single term as an Illinois congressman. Seward made the mistake of assuming that the inexperienced president would gratefully rely on his seasoned cabinet member to craft the new administration's key policies. Alarmed at what he took to be Lincoln's vacillation in the face of imminent Southern rebellion, Seward sent the president his recommendations for a more robust policy. The United States, Seward suggested, ought to abandon FORT SUMTER, SOUTH CAROLINA, while arresting rebels throughout the United States.

Meanwhile, Lincoln should rally the country around the Monroe Doctrine and challenge Spanish and French meddling in the Americas.

Once at war, the people would forget their regionalism and rally to the flag. Such a policy, Seward concluded, would need a strong hand to guide it—presumably, his own. Seward misread the depth of Southern commitment to SECESSION and seriously misjudged Lincoln himself. Lincoln's reply, while cordial, made it clear that Lincoln himself would be making the decisions.

Despite the awkward start, Seward proved himself to be an essential and loyal member of Lincoln's cabinet. He promptly dispatched Charles Francis Adams, son and grandson of presidents, to counter Confederate diplomacy in London, issuing veiled (and not so veiled) threats to go to war if the British recognized the Confederacy. In one sense, these threats were little more than bluff; the United States could not have simultaneously defeated the British and the Confederacy both. However, remarked Seward to French diplomats, though the United States might lose such a war, its enemies would know they had been in a fight. Strong words, combined with more tactful diplomacy, worked. Despite their economic interest in continued cotton exports, neither British nor French governments could afford to add a protracted conflict in North America to their obligations elsewhere in the world.

William H. Seward (Library of Congress)

Seward handled three diplomatic crises with particular success. First, he persuaded French and British governments to withhold recognition from the Confederacy and to respect the Union blockade of Southern ports. Second, he forced the British to cease outfitting Southern privateers such as the *ALABAMA*, though the so-called *Alabama* claims were not settled until well after the war's end. Finally, Seward released two Confederate spies, captured from a British vessel in the *Trent* affair. Making this concession over the loud objections of congressional Republicans won Seward the respect of the British government officials, who came to see the American secretary of state as tough and shrewd—but a man with whom they could work.

At the end of the war Seward was injured in a carriage accident and was bedridden when both he and his son, Frederick, became the victims of an assassination attempt by Lewis Paine, one of the coconspirators with JOHN WILKES BOOTH. On the evening of April 14, 1865, Paine's attempt on the lives of Seward father and son failed, while Booth's ASSASSINATION OF ABRAHAM LINCOLN succeeded.

Seward recovered and remained secretary of state after Lincoln's death, crafting an American FOREIGN POLICY whose expansionism and hemispheric ambitions prefigured those of Theodore Roosevelt half a century later. Citing the Monroe Doctrine, Seward pressured Napoleon III to withdraw French troops from Mexico, where they had established an "empire" at the start of the CIVIL WAR.

Seward urged Congress to authorize the building of a canal across Panama and to annex the Danish West Indies, Hawaii, Midway, and Santo Domingo. With the exception of Midway, Congress was unwilling. Many Northerners believed that the Civil War had erupted over the disposition of territories conquered from Mexico in 1848, and most wanted national resources devoted to RECONSTRUCTION. Even so, Seward's policies, while dormant in the 1870s, would catch fire again in the 1890s.

Congress did approve one of Seward's initiatives, however, authorizing \$7 million to purchase Alaska from the Russian Empire. Seward's opponents derisively labeled the undeveloped Arctic wilderness "Seward's Folly" and "Seward's Icebox." Seward, however, correctly predicted that the region's value to the United States would not be apparent for another generation. It became so in 1898, when gold was found in the Klondike.

Seward remained loyal to ANDREW JOHNSON through the president's impeachment trial. Supporting Johnson's generous and gentle treatment of white ex-Confederates, Seward urged RADICAL REPUBLICANS to show the defeated opponents the mercy they now deserved. Seward displayed little interest in the problems faced by the freed-people. Seward had believed slavery to be wrong, but he also believed Africans to be inferior to Europeans and their subordinate status to be inevitable and natural.

These views alienated Seward from the mainstream of Republican opinion; Republican president ULYSSES S. GRANT had little use for a Johnson administration loyalist. This time, Seward's retirement from public life proved permanent. Seward died at his home in Auburn, New York, on October 10, 1872.

### **Seymour, Horatio** (1810–1886) *lawyer, politician*

Horatio Seymour was GOVERNOR of New York during the CIVIL WAR. Born in Onondaga, New York, on May 31, 1810, Seymour was educated at the Geneva Academy (Hobart College) and a military academy at Middletown, Connecticut. He gravitated toward law and gained admission to the bar in 1832 before serving as secretary to Governor William L. Marcy. A moderate Democrat, Seymour made a name for himself in various capacities before his own election as governor in 1853. Over the next seven years he initiated improvements in his state while condemning both abolitionism in the North and secessionism in the South.

In 1860 Seymour supported STEPHEN A. DOUGLAS for the presidency and, after Douglas's defeat, the CRITTENDEN COMPROMISE to end the SECESSION crisis. Relations with new president ABRAHAM LINCOLN proved stormy. Seymour resented—and resisted—the strong Federal measures imposed on states as a wartime expedient, namely, Lincoln's policies of CONSCRIPTION for acquiring manpower, suspension of HABEAS CORPUS, and EMANCIPATION of slaves. However, despite his reputation as among the most ardent Northern proponents of STATES' RIGHTS and the most conspicuous of the anti-administration governors, he championed the Union and the war. Although labeled a "COPPERHEAD," Seymour remained deeply committed to preserving the Union, and in 1862 he was again elected governor.

After the infamous NEW YORK CITY DRAFT RIOTS of July 1863, Seymour was quick to marshal state forces to restore order, but thereafter he insisted that the president keep him abreast of changes in conscription policies to avert violence. Seymour was voted out of office in 1864, and four years later his bid for the presidency was crushingly defeated by Gen. ULYSSES S. GRANT. He died in Utica, New York, on February 12, 1886.

### sharecropping

Sharecropping replaced slave gang labor after the CIVIL WAR. The cotton PLANTATIONS were cut up into small parcels, usually less than 40 acres, with the parcels farmed by free African-American families. The cotton grown by the former slaves was divided between the planter, the merchant, and the farmer. The conditions of sharecropping often brought black laborers into dependency and debt, making it difficult for them to improve their economic position in the New South.

After 1865 most freedmen worked for their former owners on a year-to-year contract. These contracts usually offered food and a small monthly stipend in exchange for working under gang labor, which was too much like SLAVERY for African Americans. They felt that freedom entitled them to break as far as possible from the world of prewar plantations. In great numbers they broke their contracts and tried to lease small plots of land to live as independent farmers. One sympathetic observer wrote: "The sole ambition of the freedman at the present time appears to be to become the owner of a little piece of land, there to erect a humble home, and to dwell in peace and security at his own free will and pleasure."

Rejecting plantation labor, the freedpeople and the plantation owners came up with a compromise, which was sharecropping. Once they settled on a parcel of land, the ex-slaves entered into credit relationships with local merchants and landowners. Over time, a relatively predictable system was established. Landowners gave freedmen the bare necessities to farm the land: seeds, tools, fertilizer, clothing, and food. In return for the use of the land, sharecroppers paid plantation owners or landlords a share of the yearly harvest, usually about half. The freedmen retained their portion of the crop to feed their families and to pay merchants (owners could also be merchants) for goods purchased on credit during the year. However, these goods were often sold at inflated prices and with high interest rates. Thus, by the end of the year the tenant generally owed so much to the landowner that the debt could not be entirely repaid. Essentially, freedmen moved from lives of chattel slavery to lives of debt peonage.

Although sharecropping was especially common among African-American freedmen, it also affected white farmers. Yeomen who sought to participate in staple crop production were themselves caught in the web of debt that merchants could spin. This situation, which divided prosperous white landowners from indebted white and black people,

created a potential racial problem for Southern leaders. The class divide between rich and poor white people held open a possibility that black and white farmers might unite politically.

Racism put an end to cross-color unity. Organizations such as the KU KLUX KLAN had formed as early as 1866, fostering white supremacy and solidarity. Because of this divide, sharecropping for white farmers proved a very different experience than for African Americans. Poverty was a serious problem, but white tenant farmers could count on the judicial system, community support, and family ties to help in their relationship with the owners.

While sharecropping prevented African Americans from enjoying the economic benefits of EMANCIPATION they had expected, it was not slave labor, and it allowed a limited amount of independence and power.

### Shenandoah Valley: Jackson's campaign (March 23–May 9, 1862)

The Shenandoah Valley held great logistical and strategic significance during the CIVIL WAR. With the Blue Ridge Mountains on the east and the more imposing Alleghenies to the west, the valley runs southwest to northeast and drops gently in its course to meet the Potomac River, which means that an individual traveling to the Potomac goes "down the valley"—an odd circumstance in a world where north is almost always "up." The premier grain-growing area in Virginia during much of the antebellum period, the valley produced a variety of agricultural products that helped sustain Confederate forces in Virginia. It also loomed large as a strategic avenue through which either side could mount a threat to the western parts of WASHINGTON D.C., and RICHMOND, VIRGINIA.

The 1862 Shenandoah Valley campaign of Gen. THOMAS J. (STONEWALL) JACKSON had its origins in Gen. ROBERT E. LEE's desire to limit the size of the Union threat against Richmond. In late April 1862 Gen. GEORGE BRINTON MCCLELLAN's 100,000-man Army of the Potomac advanced toward the Confederate capital up the Virginia peninsula between the York and James Rivers. Fifty miles north of Richmond lay another major Union force commanded by Gen. Irvin McDowell. Smaller armies under Gen. NATHANIEL P. BANKS in the lower Shenandoah Valley and Gen. John C. Frémont in the Alleghenies farther west completed the roster of Union threats in Virginia. Lee

functioned as JEFFERSON DAVIS's principal military adviser, and he wanted Stonewall Jackson, who commanded a modest force in the valley, to pin down all Federals west of the Blue Ridge; otherwise, Frémont and Banks could potentially join McDowell at Fredericksburg for an advance against Richmond in conjunction with McClellan.

Preliminary operations had commenced that March when Lee ordered Jackson to protect the valley from the 38,000-man force of Gen. Banks, an imposing task considering that the Confederates were outnumbered nine to one. But Jackson concluded, "If the valley is lost, Virginia is lost," and determined to seize the offensive and deny the initiative to the invaders. Taking 3,800 infantry and 600 cavalry, he departed his headquarters at Winchester on March 11, 1862, and encamped at Mount Jackson to check the Union reaction. Jackson observed that the advance division of Gen. James Shields occupied his former headquarters at Winchester, and at this point he decided to strike before the main force under Banks could arrive. He drove his footsore men northward, covering 41 miles in only 48 hours, and prepared to attack the following day. Unfortunately for Jackson, cavalry reconnaissance conducted by Gen. Turner Ashby had failed to discover that the bulk of Shields's men at Kernstown were sequestered in nearby woods. On March 23, 1862, the Confederates attacked Kernstown as ordered, but, badly outnumbered, they were driven back after a stiff three-hour engagement. Jackson thus lost the first engagement of his vaunted valley campaign, but he had scored an immediate strategic victory: Authorities in Washington, D.C., convinced that Confederate forces were aggressive because they had been reinforced, feared for the capital's safety and ordered Banks to remain in the vicinity with his entire force. This effectively prevented a valuable source of manpower, better deployed elsewhere, from moving for several weeks. Shortly afterward Jackson was reinforced by the arrival of Gen. RICHARD STODDERT EWELL's veteran division, which brought Confederate numbers up to 17,000 men.

Meanwhile, the Union offensive against Richmond continued unabated. For the Confederates protecting their capital, it became imperative that this Union offensive not be reinforced by Banks's force or the soldiers of Frémont, then stationed in the nearby Allegheny Mountains. Confederate authorities were also alarmed that the I Corps of Gen. McDowell at Fredericksburg, 40,000 strong, could lend its weight to McClellan's already imposing force in the peninsula. Once again, Lee indicated that Jackson's small forces should take the offensive to pin down these sizable detachments.

Jackson soon demonstrated how a resourceful commander of an inferior force could use speed and imagination to achieve great results. On May 3 he ordered half his force onto cars of the Virginia Central Railroad at Mechum's River

Station, near Charlottesville, and headed for the Allegheny Mountains. Then, following another speedy forced march, they prepared to confront a Union detachment under Gen. Robert H. Milroy. On May 8, 1862, he concentrated part of his troops at the village of McDowell, in the Alleghenies west of Staunton, Virginia, defeating the advance guard of Frémont's army and forcing its retreat into the wilds of western Virginia. Returning to the valley, Jackson marched northward and captured several hundred Federals in a minor battle at Front Royal on May 23. Two days later he won the first Battle of Winchester against Banks, driving the Federals toward the Potomac River and capturing a huge quantity of military supplies. By May 29 Jackson's troops skirmished with Federals near HARPERS FERRY, having cleared most of the lower valley of Union forces. Thus far Jackson's offensive had cost the Confederacy only 400 men, but it accounted for 3,030 Union captives, 9,300 small arms, and a huge amount of quartermaster stores—so much that Southerners derisively nicknamed their Federal adversary "Commissary Banks." Jackson's success yielded further strategic benefits when President ABRAHAM LINCOLN personally directed General McDowell's I Corps to remain near Fredericksburg to protect Washington, D.C. And in spite of tremendous odds, the Shenandoah Valley remained firmly in Confederate hands.

Near Harpers Ferry, Jackson's force occupied a vulnerable position. From Washington, Lincoln sensed an opportunity to deliver a decisive blow. He envisioned a three-pronged pincers movement to isolate Jackson in the lower valley. Frémont would march from the west, a division from McDowell's command under Gen. James Shields would move east from Front Royal, and Banks would apply pressure from the north. "I think the evidence now preponderates that Ewell and Jackson are still about Winchester," commented the president to McDowell. "Assuming this, it is, for you a question of legs. Put in all the speed you can. I have told Frémont as much, and directed him to drive at them as fast as possible." But Jackson pushed his men to the limit and, aided by incredibly slow movements by all three Union commanders, escaped the trap and marched to the southern end of Massanutten Mountain near Harrisonburg. In doing so, he drove his men to march at rates of 20 to 30 miles a day, which earned them the well-deserved moniker of Jackson's "foot cavalry." Then he defeated part of Frémont's force in the Battle of Cross Keys on June 8. The next day he turned back Shields's command in the Battle of Port Republic. Frémont and Shields soon retreated northward on both sides of Massanutten Mountain, and Jackson moved to reinforce Lee's army outside Richmond.

Jackson had accomplished his strategic goals quite effectively. He pinned down Banks and Frémont and convinced the Federals to hold McDowell at Fredericksburg, thereby denying McClellan thousands of reinforcements.

None of Jackson's battles had been a tactical masterpiece; indeed, he had struggled to win despite having superior numbers at McDowell and again at Port Republic, and Banks's soldiers had escaped from the battlefield at First Winchester with minimal damage. Still, these small victories reached a Confederate populace starved for good news from the military front and made Jackson a popular Southern hero.

Casualties in the 1862 Shenandoah Valley campaign were modest compared with the bloodier battles of the Civil War. They totaled just fewer than 5,500 Federals (more than half of whom were prisoners) and just more than 2,750 Confederates. Aside from having inflicted twice as many losses as they had sustained, the Confederates had marched 676 miles and fought four pitched battles and many skirmishes in 48 days of hard campaigning. Jackson's ability to tie down and thwart 64,000 Union soldiers with a force that never numbered more than 17,000 marks him as one of the most accomplished strategists of American military history. It certainly constitutes a striking example of strategic initiative and economy of force. Along with Lee's own success against McClellan in the PENINSULAR CAMPAIGN of that spring, events in the Shenandoah helped raise morale and renewed public faith in the Confederate cause.

### **Shenandoah Valley: Sheridan's campaign** (August 1864–March 1865)

Early in the summer of 1864, with his army entrenched at Petersburg, Gen. ROBERT E. LEE ordered troops under the command of Gen. JUBAL A. EARLY into the Shenandoah Valley. The valley was of primary strategic value to both sides. Not only did it provide an avenue of attack into Maryland for the Confederates but it also provided necessary food supplies for Gen. Lee's Army of Northern Virginia. The Confederacy had attempted to maintain a presence there since the beginning of the war, and Union efforts to drive them from the valley had proven futile. Confederate Gen. THOMAS J. (STONEWALL) JACKSON's Shenandoah Valley campaign of 1862 helped to defeat Gen. GEORGE

BRINTON MCCLELLAN's attempts to take RICHMOND, VIRGINIA, and Lee hoped Early's operations there would have a similar effect on Grant.

Underscoring the seriousness of the situation, on July 24, 1864, Early had attacked and routed Union forces assigned to harry him in the Second Battle of Kernstown. The audacious Confederates had then marched back up the valley into Pennsylvania, where their cavalry attacked and burned the town of Chambersburg. President ABRAHAM LINCOLN, apprehensive of his reelection chances that fall, feared that another serious military defeat anywhere would sink his candidacy. This political peril, coupled with a genuine military imperative to deny Confederate access, finally spurred Northern military leaders into decisive action in the Shenandoah Valley. Gen. ULYSSES S. GRANT completely revamped the four overlapping departments responsible for the Shenandoah Valley and created the Middle Military District, a new entity with its own force, the Army of the Shenandoah. Now all that was required was an aggressive and competent officer to administer it.

With Early threatening WASHINGTON, D.C., Grant united several commands into the Middle Military District under the direction of Gen. PHILIP H. SHERIDAN. Sheridan's command consisted of a newly created Army of the Shenandoah Valley, comprising the VI Corps, several brigades from the former Army of West Virginia, two divisions from Louisiana, and two divisions of Sheridan's own cavalry. Sheridan was ordered to go after Jubal Early and "follow him to the death." If Early's army could not be destroyed, then Sheridan was to drive them up the valley and prevent the Confederates from returning to the lower valley again.

Sheridan had been made aware, by both Grant and Secretary of War EDWIN M. STANTON, of the importance of success in his campaign because of the impending presidential election. As a result, Sheridan initially displayed caution in assembling his command and sparred with Early for six weeks. However, on September 19, Sheridan's 37,000 men attacked the 15,000 rebels at Winchester. The Union leader blundered badly by allowing his forces to pass through the Berryville Canyon, a narrow defile that entangled his infantry with wagon trains belonging to the VI Corps. The resulting delays enabled Early to reconstitute his force quickly and counterattack. Bloody fighting ensued, and Union forces were nearly defeated before Sheridan directed Gen. George Crook's cavalry division against the Southern left flank. Early's men resisted tenaciously but finally broke and fled through the town of Winchester. It was the first time that the vaunted II Corps, formerly commanded by "Stonewall" Jackson, had yielded a field to the enemy. Sheridan's losses, 5,000 men, were considerable and heavier than the 3,500 lost by Early. But the Confederates, still heavily outnumbered, could not make up their losses.

Early retreated to Fisher's Hill, just south of Strasburg. There his men occupied a four-mile ridge formerly dubbed "The Gibraltar of the Confederacy," although he lacked adequate manpower to garrison it. This fact was not lost on Sheridan, who arrived in force on September 22 and detached Crook's cavalry on a circuitous march around the Confederate left flank. On the following afternoon Crook suddenly burst out from his position, sweeping away the Confederate cavalry of Gen. Lunsford L. Lomax. At this precise juncture Sheridan ordered a frontal assault across the line, and the Early position dissolved under the sheer weight of Union numbers. Casualties at Fisher's Hill were relatively light, with 500 Union and 1,000 Confederates lost, but the Southerners did not completely rally until they had reached Brown's Gap, 60 miles distant.

While attempting to destroy Early's army, Sheridan also followed the second part of Grant's instructions, which was to prevent any CONFEDERATE ARMY from returning to the valley. Grant ordered that "if the war was to last another year we want the Shenandoah Valley to remain a barren waste." Sheridan added, "The people must be left nothing, but their eyes to weep over the war." Sheridan followed Grant's instructions to the letter, destroying mills and barns filled with wheat, hay, and farming implements, taking whatever provisions and stock he needed, and ruining the rest. He promised that by the time he was through, "the Valley, from Winchester up to Stanton, ninety-two miles, will have little in it for man or beast." Sheridan was true to his word, destroying the farms of Confederate sympathizers.

Lee was determined not to lose the Shenandoah Valley without a fight, and he reinforced Early's depleted forces with an infantry division and a cavalry brigade. These veteran forces vigorously pursued and harassed the withdrawing Federals until Sheridan angrily ordered his cavalry leaders to take some action. Accordingly, on October 9, 1864, the brigades of Gen. GEORGE A. CUSTER and Wesley Merritt attacked and scattered Confederate troops under Gen. Thomas L. Rossiter at Tom's Brook, taking 330 prisoners and 11 cannon and losing only 57 men. The Confederate rout went on for 26 miles and was popularly heralded as the "Woodstock Races." This marked the third consecutive rout of Confederate forces, and Union leaders dismissed the idea of further offensive action from them. On October 16, Sheridan left his army near Cedar Creek, 15 miles south of Winchester, to go to Washington, D.C., for a war conference with Gen. HENRY W. HALLECK and Secretary Stanton.

On the night of October 18, Early ordered four Confederate divisions into a position for a dawn attack on Sheridan's unsuspecting forces. With the attack, the UNION ARMY was caught completely unaware and forced into retreat. Early's soldiers, hungry and poorly equipped, broke ranks to forage the Union camp. Sheridan, camped

at Winchester on his way back from Washington at the time of the attack, arrived at the battlefield just in time. Coming across his retreating men, Sheridan quickly understood what had happened and realized that only he could restore confidence to his army. Riding among his men, hat waving, Sheridan was greeted with delight. He roused his men with such appeals as, "If I had been with you this morning this disaster would not have happened. We must face the other way; we will go back and recover our camp." On meeting a chaplain and asking him how things were at the front, the chaplain replied, "Everything is lost; but all will be right when you get there." Faced with a renewed attack by a revived Army of the Shenandoah Valley, Early's army disintegrated as it fled south ahead of the advancing Union forces. Sheridan's actions that day are generally recognized as one of the most inspired acts of personal battlefield leadership during the war. He turned a decisive defeat into a glorious victory.

Early's defeat at Cedar Creek destroyed the effectiveness of his army to operate in the Shenandoah Valley, though Sheridan's campaign continued there until March 1865. The Battle of Waynesboro marked the last encounter of the campaign, and with it Early's army was destroyed. Sheridan's success in the Shenandoah Valley meant that not only could Lee no longer threaten Washington through the valley but also that the Confederacy had lost a valuable source of food for the Army of Northern Virginia. Grant, thanks to the Sheridan campaign, could concentrate his entire force on the Richmond-Petersburg front and on bringing the war to an end without fearing a Confederate force in the Shenandoah Valley. In this respect the Shenandoah campaign of 1864 proved to be one of the most decisive of the Civil War.

**Sheridan, Philip H.** (1831–1888) *Union general*  
Union cavalry officer Philip Henry Sheridan ranked among the top three generals in the UNION ARMY along with ULYSSES S. GRANT and WILLIAM T. SHERMAN. Born in Albany, New York, to Irish immigrants, Sheridan's father was one of the workers on the National Road. His parents resettled in Ohio, where their son grew to his adult height of 5 feet 5 inches. In his youth, Sheridan was captivated by the news of soldiers and fighting in the Mexican-American

War. His early fascination with all things military prepared him for his life's work.

Sheridan graduated from the UNITED STATES MILITARY ACADEMY AT WEST POINT in 1853, ranking 34th in a class of 51. He served in the West, including California, and the first year of the CIVIL WAR found him on duty as a quartermaster captain. In spring 1862 Sheridan was appointed colonel of the 2nd Regiment Michigan Cavalry. Acquitting himself honorably in the Corinth campaign, Sheridan was described to Gen. HENRY W. HALLECK as "worth his weight in gold." Shortly thereafter, he was appointed a brigadier general.

On December 31, 1862, Sheridan displayed his leadership abilities at the BATTLE OF MURFREESBORO, where his fast thinking and hard fighting helped to prevent the total destruction of the Union forces. As a result of his actions at Murfreesboro, Sheridan was appointed a major general, taking command of the Third Division, 20th Corps, Army of the Cumberland.

For the next year Sheridan and his division continued to fight hard through the Middle Tennessee campaign, June 24–July 5, 1863, and the BATTLE OF CHICKAMAUGA, September 19–20, 1863, displaying unusual dedication. By November and the Battle of Missionary Ridge, Sheridan was in command of the Second Division, Fourth Corps, Army of the Cumberland, in the Military Division of the Mississippi under the command of Gen. Grant. The Battle of Missionary Ridge further polished Sheridan's growing reputation when his division played a major role in defeating Confederate troops. Importantly, the short, feisty Sheridan with his characteristic handlebar moustache became one of Grant's favorite generals.

After taking a brief leave of absence due to physical exhaustion, Sheridan returned to duty in March 1864, anticipating a resumption of the campaign in the west in April. Instead, he was ordered to move along with General Grant to the eastern theater. By the end of March 1864, Sheridan commanded the cavalry corps of the Army of the Potomac.

Sheridan's troops consisted of three cavalry divisions and 12 batteries of horse artillery. Included under his command were such notable officers as Brig. Gen. GEORGE A. CUSTER. Sheridan immediately invigorated the eastern infantry corps by advocating a change to an aggressive tactical force. Eagerly anticipating the opportunity to defeat the Confederate forces under the famed cavalry officer J. E. B. STUART, Sheridan was given the chance in May with the order to "go out and do it."

Taking 10,000 men, Sheridan rode out on a raid to cut ROBERT E. LEE's communications in the rear. Destroying some 20 miles of railroad and a large quantity of supplies, Sheridan reached Yellow Tavern on May 11, where Stuart waited. Outnumbering the Confederates two to one and

with rapid-fire carbines, Sheridan's forces quickly defeated Stuart's men, took a large number of prisoners, and mortally wounded Stuart. Stuart's loss to the Confederates was comparable with the loss of Gen. THOMAS J. (STONEWALL) JACKSON.

In July Grant assigned Sheridan to the command of the Army of the Shenandoah Valley with orders to destroy the Confederate forces there and eliminate the valley as a supply base for the Confederates. Sheridan achieved lasting fame by rallying his troops from certain defeat at the Battle of Cedar Creek, and by early 1865, his job in the Shenandoah Valley had been completed successfully. Sheridan then rejoined Grant on the Petersburg-RICHMOND front.

At the beginning of March, Sheridan's men engaged at the BATTLE OF FIVE FORKS, which forced Lee to abandon Petersburg. Sheridan's cavalry and three infantry corps pursued Lee vigorously, constantly probing and attacking the retreating Confederates, wearing them down. At APPOMATTOX COURT HOUSE, VIRGINIA, with Sheridan on one side and the pursuing Grant on the other, outnumbered five or six to one, Lee had no alternative but to surrender.

As Grant's right arm of destruction in the eastern theater of the war, Sheridan became associated with devastation, particularly in the Shenandoah Valley campaign, as he carried out Grant's and Sherman's total war. No matter which position he held, Sheridan's concern was always for the well-being of his men and they, in return, repaid him with loyalty and affection.

Sheridan's postwar career was controversial, eventful, and distinguished. Sheridan was placed in charge of the Fifth Military District (encompassing Texas and Louisiana) under the congressional RECONSTRUCTION ACTS. A supporter of the RADICAL REPUBLICAN version of RECONSTRUCTION, Sheridan proceeded to remove uncooperative officials, including both state GOVERNORS, and enforce fair voting processes. In doing so, he created controversy, and ANDREW JOHNSON promptly removed him from the position.

In the late 1860s, Sheridan was transferred to the Department of the Missouri, where he turned his energies to defeating the NATIVE AMERICAN nations who refused to be resettled from their traditional lands to reservations. Headquartered in Chicago, Lieutenant General Sheridan was appointed by President Grant to the commander of the Division of the Missouri. Until 1870, he directed the U.S. military actions against such Indian nations as the Cheyenne, the Apache, and the Sioux. Sheridan's one notable failure, the BATTLE OF LITTLE BIGHORN, resulted in the death of his protégé, Custer, as well as many U.S. soldiers.

Sheridan spent several years in Europe observing the Franco-Prussian War before returning at Grant's request

in 1874. The president placed his trusted subordinate in charge of Louisiana, where terrorism and violence had left the state in turmoil. Calling the White Leagues “banditti,” Sheridan crushed the resistance and brought some kind of order to bear on the volatile situation. Leaving Louisiana with charges that he overstepped his authority, Sheridan was returned to his earlier responsibilities in the West. In 1883 he was appointed general in chief of the U.S. Army and was promoted to general of the army: a four-star general, a rank previously held only by Grant and Sherman. Philip H. Sheridan died at the age of 57 in 1888 in Non-quitt, Massachusetts.

### **Sherman, William T.** (1820–1891) *Union general*

Famed and feared Union CIVIL WAR general William Tecumseh Sherman is best known for his famous “March to the Sea,” in which his western army invaded Georgia in fall 1864. A believer in a hard war but a soft peace, Sherman emerged from the Civil War an immensely popular and revered soldier among the former Union troops. Serving with distinction as general in chief of the U.S. Army until 1883, he declined the Republican presidential nomination twice, in 1872 and 1884, stating, “if nominated, I will not run; if elected, I will not serve.”

Named after the warrior Indian chief of the Ohio Confederacy, Tecumseh was born on February 8, 1820, to Charles R. Sherman, a state judge, and Mary Hoyt Sherman in Lancaster, Ohio. Charles Sherman died suddenly in 1829, leaving his wife and 11 children in poverty. Thomas and Maria Ewing, a wealthy Catholic couple with six children, adopted Tecumseh. A longtime family friend, Thomas Ewing—prominent Whig, U.S. senator, and cabinet officer—exerted a significant influence on Sherman’s life. The nine-year-old red-haired Tecumseh (called “Cump”) was baptized in the Catholic faith and given the first name of William.

At the age of 16 Sherman entered the UNITED STATES MILITARY ACADEMY AT WEST POINT. An excellent if troublesome student, Sherman graduated 6th in the class of 1840. From 1842 until 1846, Lieutenant Sherman served in the Seminole War in Florida and in South Carolina. To his disappointment, Sherman was sent to California during the Mexican-American War, missing the excitement and experience of the conflict. In California he witnessed the

transition to statehood and viewed firsthand the effects of the gold rush of 1849.

In 1850 Sherman left California and transferred to WASHINGTON, D.C. That same year, he married Ellen B. Ewing, his foster sister. The Ewings wished for Ellen and William to settle near them in Lancaster, Ohio. Ellen agreed with her parents and asked Sherman to leave the army, settle down, and take up a profession. This he refused to do for her, and it was the first of many bitter arguments between husband and wife. Stubborn and proud, Sherman was determined to prove to the powerful family who raised him, and who now welcomed him as a son-in-law, that he could be successful on his own terms.

By 1853, however, a discouraged Sherman resigned from the army to earn more money for himself and his growing family. Through personal connections, he accepted a position as a banker in San Francisco. At first, Sherman prospered and happily remained in San Francisco until 1857. Unfortunately, the ECONOMY crashed in that year, and Sherman’s bank declared bankruptcy. Other business enterprises followed in short order and ended in failure as well.

Unfit for the world of finance, Sherman became the superintendent of the Louisiana Military Seminary in 1859. Leaving SECESSIONIST Louisiana in 1861, Sherman returned to service in the UNION ARMY. His younger brother, John Sherman, had just been elected U.S. senator from Ohio and helped him obtain a commission as colonel in the regular army. He led his forces at the FIRST BATTLE OF BULL RUN in July 1861, where he was one of the few Union officers to distinguish themselves in that battle loss. Viewing the disorganized Federal retreat, he felt extremely pessimistic about the future of the Union and predicted that the war would take much longer than most people thought at the time.

In August 1861 Sherman was named brigadier general of volunteers and was sent to Kentucky as an aide to the commander of the Department of the Cumberland, Gen. ROBERT ANDERSON. Kentucky was a key state for the Union to retain, and when Sherman declared that he would need 40,000 troops for its defense or 200,000 troops for an offensive attack against rebel forces, critics called him insane. Depressed, Sherman suffered a collapse and was relieved of his duties. Sherman served briefly as an aide to Western Division commander Gen. HENRY W. HALLECK in St. Louis and then was reassigned to a training post. His prominent family successfully defended Sherman against charges of instability during this difficult period. In February 1862, Halleck put Sherman in charge of the headquarters in Paducah, Kentucky, which was under the command of Gen. ULYSSES S. GRANT.

Sherman’s military career took a sharply upward trajectory. Reassured by Grant’s calm, steadfast demeanor and

purposeful leadership style, the tall, slender Sherman had found a boss who appreciated his brilliant talents and protected him from his own worst traits. Never a modest man, Sherman admitted that he possessed more pure intellectual ability than his friend. But, he added of Grant: "He don't care a damn for what the enemy does out of his sight, but it scares the hell out of me." Truly, they were "partners in command," who would together bring the Union army its ultimate victory in the field. Sherman led a division at the BATTLE OF SHILOH in spring of 1862, and despite being surprised by the Confederate attack early on April 6, he rallied his men forcefully to win the next day.

Shiloh was a victory, but a costly and controversial one. Continued Southern resistance, even while under Northern occupation and after suffering terrible losses in battle, caused Grant and Sherman to have long conversations about the course of the war. Both decided that winning required not only the defeat of the Confederate armies but also the will of the Southern people. Sherman's experience as military governor of Memphis, Tennessee, drove home the hard lesson that Southern civilians were unrepentant. In an October 1862 letter to Grant, Sherman articulated his basic philosophy: "We cannot change the hearts of those people of the South, but we can make war so terrible that they will realize the fact that however brave and gallant and devoted to their country, still they are mortal and should exhaust all peaceful remedies before they fly to war."

Promoted to major general of volunteers and commander of the XV Corps, Sherman left Memphis for Grant's VICKSBURG CAMPAIGN during the winter of 1862. He and his troops suffered a terrible defeat at Chickasaw Bayou, Mississippi, on December 27, 1862. Sherman became convinced that Grant's plan was fatally flawed, but loyal to his friend and commander, he did everything he could to support the campaign's success. Against Sherman's advice, Grant decided to cut his supply lines and live off the land once his forces were across the MISSISSIPPI RIVER. The success of this strategy and the subsequent capture of Vicksburg on July 4 provided him with a lesson that he put to use the following year in Georgia.

Famous and celebrated in the North, Sherman's pleasure in the victory was short lived; his son, Willie, who had been visiting his father with Ellen, died from a fever contracted in camp. The pressures of war did not allow time for mourning, however. Grant was placed in charge of all the Union armies in the western theater. President Lincoln quickly approved his recommendation that Sherman succeed him as head of the Army of Tennessee. After the Union victory in the BATTLE OF CHATTANOOGA in the fall of 1863, Lincoln named Grant commander in chief of all the Union armies; Sherman again assumed Grant's former position. Grant's "total war" strategy for the spring and summer of 1864 included two vital tasks for Sherman's

William T. Sherman (Library of Congress)

western campaign: to capture Atlanta and to destroy Gen. JOSEPH E. JOHNSTON's Army of Tennessee.

Marching east, Sherman's army fought Johnston's at several notable battles, including Kennesaw Mountain on June 27, 1864, where the Union's frontal assault failed at great cost to the men. Despite several drawbacks, Sherman besieged and then captured Atlanta on September 2, assuring Lincoln's victory in the 1864 presidential election. Leaving much of Atlanta in flames, Sherman moved eastward again, marching toward Savannah, Georgia. "War is cruelty, and you cannot refine it," Sherman warned. He targeted property and morale among Confederate citizens. By waging psychological warfare, Sherman believed that he made Union victories easier to obtain with fewer casualties among both soldiers and civilians. This idea was central to his "March to the Sea." With Savannah under Union control, Sherman and his army turned northward through the Carolinas, living off the land and terrorizing the inhabitants of PLANTATIONS. Historians have found that Sherman and his men, for the most part, acted with restraint until they entered South Carolina. "The whole army is burning with an insatiable desire to wreck vengeance upon South Carolina," Sherman wrote. "I almost tremble at her fate, but feel that she deserves all that seems in store for her." The destruction of Columbia, South Carolina, by the Union forces left the city a smoking ruin.

Sherman's strategy proved a military and political triumph for the Northern war effort. Throughout the Southern countryside, Sherman and his hardened, sunburned western soldiers burned designated property and destroyed homes and towns. Thousands of slaves followed in their wake. Sherman issued SPECIAL FIELD ORDER NO. 15, which set aside confiscated land for the freed people. He did so more out of a desire to rid his army of its African-American followers than from a genuine desire to bring revolution. Indeed, Sherman opposed the EMANCIPATION PROCLAMATION and the arming of black soldiers. He was mainly concerned with preserving the order and sanctity of the Union. Despite the popular memory of Sherman's march, casualties were slight. With Union victory in hand, Sherman asserted that "the legitimate object of war is a more perfect peace."

Sherman accepted the surrender of his Confederate counterpart, Joseph E. Johnston, at Durham, North Carolina, on April 26, 1865. Sherman, acting on his understanding of Lincoln's desire to forge a generous peace, overstepped his military role in writing out the terms. The new president ANDREW JOHNSON and his secretary of war, EDWIN M. STANTON, rejected the agreement. Sherman renegotiated the surrender in a form similar to Grant's at Appomattox.

In 1869, with Grant as president, Sherman was the commanding general of the U.S. Army. He served for 14 years, presiding over the "pacification" of NATIVE AMERICAN tribes for the settlement and development of the western states and territories. Following his retirement on February 8, 1884, Sherman became one of the Gilded Age's most popular lecturers. When not speaking about his experiences, he wrote for national magazines, presenting his version of the history of the war. He published his *Memoirs* in 1875. Sherman was a passionate supporter of VETERANS' groups and often spoke at important anniversary celebrations. William T. Sherman died on February 14, 1891, in NEW YORK CITY, where he had lived since 1886. Sherman's legacy as one of the most important military leaders of the Civil War remains unchallenged.

Marszalek, *Sherman: A Soldier's Passion for Order* (New York: Free Press, 1993); William T. Sherman, *Memoirs of General W. T. Sherman* (1875; reprint, New York: Library of America, 1990).

**Sherman's March through Georgia** (November 15–December 21, 1864)

Sherman's March through Georgia, commonly referred to as the "March to the Sea," began in Atlanta in Novem-

ber 1864 and culminated in the capture of Savannah on December 21 before the troops continued toward South Carolina. During this campaign, Union general WILLIAM T. SHERMAN and his force of 60,000 soldiers marched across Georgia, living off the land and terrorizing Southern civilians. The path taken by these men was scattered with evidence of their presence—railroad ties twisted around trees, burned houses and crops, and trampled countryside.

After a four-month-long campaign to capture Atlanta, Georgia, the city was evacuated by Confederate forces on September 1, 1864. Sherman and his troops took control of the city on September 2. Sherman allowed the Southern troops to escape and focused his energy on the city. In establishing Atlanta as a command post for Union operations, Sherman issued Special Field Order No. 67 on September 8, 1864, calling for the evacuation of Atlanta's more than 1,500 civilians. Despite vehement protests from Southern officials and civilians, Sherman insisted that this evacuation was necessary for the Union's military operations. In addition, he did not want to be burdened with the protection and care of a hostile civilian population.

After several unsuccessful attempts to destroy Gen. JOHN BELL HOOD's Confederate forces, Sherman determined that the Union's best interests would be served by marching his troops across Georgia to demonstrate the power of the UNION ARMY. Sherman further proposed cutting off his own supply and communication lines and living off the countryside as he and his troops marched through Georgia. This would allow him to pursue the devastation of the Southern countryside without worrying about protecting RAILROADS and supply trains. Sherman wanted to "make Georgia howl" and to crush the Confederate civilian population's morale. Sherman received permission from Gen. ULYSSES S. GRANT and President ABRAHAM LINCOLN to proceed.

Before departing from Atlanta on November 15, 1864, Sherman and his troops burned everything of military importance in the city—depots, shops, factories, and foundries. According to Union reports, only war-related businesses and factories were destroyed by fire. However, Southern reports blamed widespread destruction of homes and personal property on Sherman's troops. Such destruction, which likely occurred in Atlanta, would continue as Union troops made their way through Georgia. Leaving Generals GEORGE HENRY THOMAS and John M. Schofield with 60,000 Union soldiers to deal with Hood's troops in Tennessee, Sherman's troops began their March to the Sea to crush civilian and material support for the Confederacy.

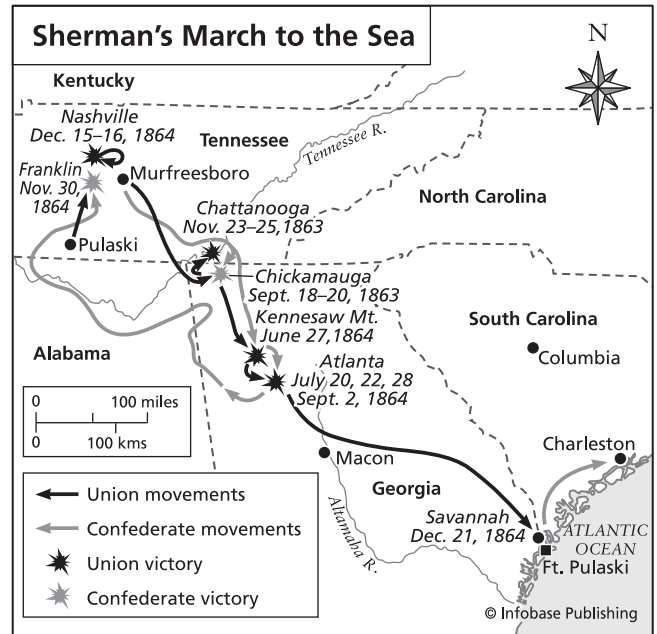

To effectively forage, destroy, and demoralize the Georgia countryside, Sherman divided his troops into two wings, a left (northern) wing commanded by Gen. Henry W. Slocum and a right (southern) wing under Gen. O. O. HOWARD's command. Although the officers and soldiers

began the 285-mile march toward Savannah with little knowledge of the plan, they confidently moved forward at Sherman's command. The route through a rich agricultural area of Georgia offered fertile opportunity for good eating and good spirits among the soldiers. In another tactical measure, Sherman spread his troops across a 60-mile path to give the Confederates the impression that they were heading for multiple places: Macon, Augusta, or Savannah. This allowed the Union forces to keep the Confederate troops spread thinly and prevented high casualties. Although there were several skirmishes as Sherman and his troops marched to the sea, Union casualties for the entire campaign numbered only 2,200. Union forces easily captured Milledgeville, Georgia's state capital, on November 23.

Sherman's troops marched from 10 to 15 miles each day, FORAGING and destroying Confederate property along the way. Reports describe a 60-mile wide swath of destruction. This, Union troops hoped, would destroy the material and moral support for the Southern war effort and bring the war to a close. Often, Union soldiers ate what they could and then destroyed whatever was left in order to keep excess supplies away from Confederate soldiers and civilians. In addition, they targeted and destroyed railroads, mills, and other places or items that supported the Confederate war effort. The Union troops became famous for their heating and twisting of railroad ties into "Sherman's neckties."

Although Sherman designated a specific group of men as foragers for the troops, the main columns and individual soldiers also searched for their own food and other spoils of war. "Sherman's Bummers," the official foragers, often seized personal property as souvenirs of their service. Women's clothes, LETTERS, linens, jewelry, silver, household furnishings, and dishes often became the spoils of war for Union soldiers. Some of these treasures were sent home to loved ones in the North, while others were dropped on the roadside as the march continued. Although Sherman officially opposed the wholesale plunder of Southern property, he rarely punished offenders and applauded the effects destruction had on the Southern civilian population.

Sherman's soldiers also freed the slaves that they encountered on Georgia PLANTATIONS and destroyed the trappings of SLAVERY, such as cotton gins, plantation houses, and agricultural equipment. Many Southern African Americans followed the Union troops, hoping to gain their freedom in the ranks of the Union army. Some served as spies for Sherman's army. Others cheered as the Union troops passed by. Although some officers were kind to the escaped slaves who followed the army, others allowed prejudiced attitudes to govern their actions. A tragic incident occurred on December 9, when Union Gen. Jeff C. Davis and his troops crossed Ebenezer Creek, closely followed by Confederate troops. Davis's 14th Corps, followed by

black escapees, crossed the creek on a pontoon bridge, and then quickly removed the bridge before the runaway slaves could do the same. Fearful of the repercussions they would face at the hands of Gen. JOSEPH WHEELER's Confederate cavalry for supporting the Union, the escaped slaves tried to cross the creek without a bridge. Many drowned or were captured by Southern troops. Neither Sherman nor Davis took responsibility for this tragedy.

The small opposition faced by the Union troops as they marched through Georgia consisted of approximately 8,000 Confederate soldiers in Gen. Joseph Wheeler's cavalry corps and Gen. Gustavus W. Smith's Georgia militia. Gen. William J. Hardee took control of Confederate troops in Georgia on November 17, 1864, but could not stop Sherman's progress through the state. Acknowledging this inability, Hardee focused his energy and forces on the protection of the shipping town of Savannah. Sherman and his troops cut through most of Georgia by December 10, and Sherman demanded the surrender of Savannah on December 17, 1864. When Hardee refused, the Union forces began a siege of the city while leaving Confederate troops free to evacuate it. Hardee and his force of approximately 10,000 men abandoned Savannah on December 21, escaping across the river to South Carolina. Sherman and his men took control of the city and its 200 artillery pieces, ammunition, and approximately 30,000 bales of cotton. On December 22, 1864, Sherman sent Lincoln a telegram, offering Savannah to the president as a Christmas present.

Once in control of Savannah, Sherman set about demonstrating to the city's residents that peaceful surrender and

return to the Union would protect Southerners from Union wrath. To contrast his treatment of residents in Savannah to that of rebellious Atlantans, Sherman opened his headquarters to whomever wanted to visit. He also allowed the local government to continue functioning and made sure that food came in to the city to feed the residents. However, despite his attempts at reconciliation with those in occupied Savannah, Sherman noted that the Southern girls still “[talked] as defiant as ever” to their captors.

From Savannah, Sherman issued SPECIAL FIELD ORDER NO. 15 on January 16, 1865, granting freedpeople full control of the sea islands as well as coastal land 30 miles inland from Charleston to Jacksonville. Sherman and his troops left Savannah on February 1, 1865, and began marching toward Columbia and Charleston, South Carolina.

### Shiloh, Battle of (April 6–7, 1862)

The Battle of Shiloh was a major Northern victory, although a costly one; it was the first battle to exhibit the staggering losses characteristic of most CIVIL WAR encounters. It secured western Tennessee for the Union and set the stage for advances into Mississippi in 1862 and 1863.

The Battle of Shiloh was the culmination of a string of Union successes in Tennessee. The February 15, 1862, Union capture of Fort Donelson on the Tennessee River resulted in an important strategic shift in the western theater of the Civil War. As the greatest tactical victory in the war to that time, it marked the emergence of ULYSSES S. GRANT as a major military leader and opened the Tennessee River to Union naval traffic, allowing for a direct invasion of the Lower South. For the Confederates, the loss represented a significant disaster. With nearly 15,000 troops captured and the center of his defensive line in southern Kentucky pierced, Confederate department commander Gen. ALBERT SIDNEY JOHNSTON was forced to withdraw more than 100 miles into the Confederate interior. Nashville, a major site of war production, was captured by the Union, and the rich grain fields and pork-raising region of Middle Tennessee was overrun. The forts defending the MISSISSIPPI RIVER north of Memphis were threatened with being cut off from behind. Union forces stood poised to strike the Confederate RAILROAD centers at Jackson, Humbolt, and Corinth, Mississippi.

This threat to the rebel heartland forced the Confederate government to reconsider its previous policy of dispersing troops over a wide geographic area in an attempt to defend the entire perimeter of the Confederacy. Within a week of Donelson's fall, President JEFFERSON DAVIS wrote that he was determined to “assemble sufficient force to beat the enemy in Tennessee, and retrieve our waning fortunes in the west.” At the end of February, the Confederate president ordered BRAXTON BRAGG, who commanded the Southern forces defending the Gulf Coast region around Pensacola, Florida, and Mobile, Alabama, to move his troops to Tennessee, where he would consolidate with Johnston's force to counter the Union threat. While this concentration of military power was unprecedented, it was not as complete as possible. Bragg sent only 60 percent of his force to Tennessee, and several large contingents of Confederate troops remained idle in Texas and Arkansas. Nonetheless, the Confederate concentration at Corinth, Mississippi, drew together just over 40,000 troops.

As the Confederates consolidated their force, conflict among the Union high command in the west temporarily slowed the Union drive south. However, by early March a large expedition force had been organized at Fort Henry. Using the Tennessee River as an invasion route, Union troops under the overall direction of Gen. HENRY W. HALLECK and spearheaded by WILLIAM T. SHERMAN's 5th Division quickly moved into southern Tennessee and established a base of operations around Savannah and Pittsburg Landing. By mid-March, five divisions of Union troops commanded by Grant had concentrated there and threatened Corinth, the site of a major Southern rail connection. Throughout the last weeks of March and into early April, the area around Pittsburg Landing mushroomed into a vast army camp containing nearly 45,000 combat troops. This force was about to be further augmented by the arrival of the Army of the Ohio under Gen. DON C. BUELL, which would give the Union forces numerical superiority over local Confederate defenders. While the army included several units that had seen combat at Fort Donelson and other smaller clashes, many of the Union troops had yet to engage the enemy. Still, confidence ran high among the rank and file who believed, as one soldier put it, “The rebellion is getting nearly played out, and I expect we will be home soon.” Generals shared this confidence. One division commander wrote, “Sesech is about on its last legs in Tennessee.” Grant himself wrote, “with one more success I do not see how rebellion is to be sustained.”

Still, problems plagued the army. The arms carried by most Union soldiers were outdated flintlock muskets that had been converted to percussion locks. These muskets were accurate to about 100 yards. Beyond that, their accuracy diminished dramatically. Sickness also plagued the army, and doctors sent thousands of sick soldiers to large

hospitals in the North, reducing the fighting capabilities of many regiments. Conflicts between top-level officers created more problems for Grant, who spent much of late March dealing with a variety of petty issues. Only one of the division commanders, Sherman, held a West Point degree. Most problematic was the choice of campsites. Located on the west side of the Tennessee River, the same side held by the Confederates, the Pittsburg Landing encampment lay open to attack. Union commanders could have moved to the other side of the Tennessee River or could have built defensive works, but they were convinced that the Southern army would never try to attack. Grant's underestimation of enemy numbers and intent harbored potentially fatal consequences for his seemingly secure Union bridgehead.

The Confederate leaders, meanwhile, prepared for an offensive that would drive the Union army back to Kentucky. However, they faced their own set of obstacles. The army that they assembled had never worked together, the staff were not coordinated, and many of the high-level officers had never commanded such large numbers of troops. Most of the regiments were undermanned, and the majority had never fired a shot in combat. Illness took a further toll on the army, and as much as 16 percent of the army was on the sick list on April 3. Arms consisted of a motley assortment of squirrel rifles, percussion muskets, flintlocks, and shotguns. Visual cues underscored the hodgepodge nature of the rebel force. Clothing bore no standard cut or fabric; as one soldier put it, "some wore uniforms, others half uniforms, some no uniforms at all." Despite these apparent weaknesses, the soldiers, citizens, and government called for quick and dramatic action to counter the Union success of the winter. Thus, Johnston prepared his army to strike what he hoped would be the decisive blow.

Faced with the knowledge that Buell's Army of the Ohio had departed Nashville and was moving to reinforce Union troops at Pittsburg Landing, Confederate commander Albert Sidney Johnston determined to attack Grant's force before a consolidation could be made. Johnston knew that if the two Northern forces combined, they would nearly outnumber his forces two-to-one. The rebels, faced with a rapidly closing window of opportunity, looked for any weaknesses in Grant's position. A March 31–April 1 reconnaissance led by Confederate General Benjamin Cheatham suggested that Grant had divided his force. Johnston's second in command, PIERRE GUSTAVE TOUTANT BEAUREGARD, concluded that "now is the moment to advance and strike the enemy at Pittsburg Landing." On the morning of April 2, the Confederate leaders began drafting a plan to move forward. Primarily drafted by Beauregard, the plan proved disastrous. The scheme included a complicated advance along two roads and a confusing deployment that placed the army's three corps in successive lines of battle. Once in line, the inexperienced troops

were to deliver an attack that would drive the Union left flank away from the Tennessee River into the bottoms of Owl Creek, where the Yankees would be compelled to surrender. Thus prepared, the Confederates marched out of Corinth on April 3, 1862.

The Confederate plan was ill suited to both the experience of the army and to the conditions in northern Mississippi and southern Tennessee. The first day's march proved a fiasco. Vague orders and mishandled communications led to clogged roads and much unnecessary marching and countermarching. Poor weather and the wretched condition of the two roads that led from Corinth to Pittsburg Landing resulted in delays and frustration. Once they neared the Union forces, chaos reigned. Johnston delayed the attack, planned for April 5, because several divisions had become entangled on the march and failed to arrive at their proper position. Furthermore, inexperienced soldiers began firing their muskets to be certain they worked. Others cheered for their generals as they rode past, and throughout the army drums beat and bugles blared. Surely, several rebel leaders thought, the element of surprise had been lost. The normally aggressive Beauregard predicted disaster for his raw troops and pleaded with his superior to call off his attack. Johnston nonetheless decided to press forward with his attack on April 6.

Despite the Confederates' inefficient march, their initial attack against Sherman's troops caught the Union forces entirely by surprise. Though warned by subordinates that a large secessionist force lay within easy striking distance, Sherman scoffed at the idea and did little to prepare his men for a fight. His reassurances led Grant to write on the evening of April 5, "I have scarcely the faintest idea of an attack (general one) being made upon us." So unprepared were the Union troops that when the rebels poured out of the woods to their south, they were cooking breakfast and getting ready for their weekly inspection.

Battle of Shiloh, April 7, 1862 (Library of Congress)

The first Confederate attacks routed both Sherman's and Prentiss's divisions. Stout resistance, however, emerged in two sections: in the Union center and on the Union left, near a small chapel named Shiloh Church. The impact of the fierce fighting that raged all along the battle line threw the Southerners' cumbersome attack formation into confusion. Many of the brigades had lost all semblance of order as the lines piled upon each other, and officers were assigned command of portions of the line without regard to corps organization. Union resistance at this point of the lines proved so dogged and its firepower so telling that Confederates dubbed it the "Hornet's Nest." No fewer than 12 direct assaults were launched and bloodily repulsed. To compound the command problems, at about 2:30 P.M., the rebel commander Johnston fell mortally wounded. Beauregard then ordered up 62 pieces of artillery, which gradually pounded the defenders into submission, and Prentiss surrendered 2,000 prisoners. However, his stand against impossible odds threw off the Confederate timetable and sowed confusion. In the end, disorganization and fatigue were obstacles to victory as insurmountable as staunch Union defenses.

Meanwhile, as the fighting increased around Pittsburg Landing, Grant arrived to take charge of the action. He ordered reinforcements from Buell's army across the Tennessee River, gave orders to the troops in the center to hold on at all costs, and issued orders to create a final defensive line near Pittsburg Landing. Surviving nearly a dozen desperate attacks against the Union center, the line held until near dark. Centered on a large concentration of artillery and bolstered by the fire of Union gunboats on the river, Grant's line at the landing proved formidable, although its strength began to dwindle by the end of the day because the reinforcements Grant had ordered never arrived. Before the line could give way, nighttime came, and Beauregard, who had assumed command upon Johnston's death, ordered a halt to the rebel advance. During this interval Union forces were further buttressed by the arrival of Gen. Lew Wallace's division, long overdue, which had taken the wrong road, then backtracked to reach the battlefield.

Beauregard felt confident that his troops would be able to break the Union line on April 7 and secure victory for the Confederacy. However, during the night, Buell's troops finally arrived. On the morning of April 7, Grant organized an attack led by three fresh divisions from Buell's army. At first successful in regaining the ground lost on April 6, the Union forces faltered as the Confederate defense stiffened, and the fight seesawed back and forth. The weight of Buell's reinforcements, however, proved overwhelming, and at about 5:00 P.M. the Confederates retreated from the field. The day's heavy fighting discouraged a Union pursuit, and the Battle of Shiloh had come to an end.

Shiloh exacted a great toll on both armies. Confederate losses were 1,723 killed, 8,012 wounded, and 959 captured or missing out of 40,335 engaged. Union losses were 1,754 killed, 8,408 wounded, and 2,885 captured or missing out of 62,682 engaged. The battle enhanced Grant's reputation as a general but also strengthened the perception of him as "Grant the butcher." After their victory at Shiloh, Grant and his troops would travel a difficult road. It would be more than a year before they would achieve their next major objective, the capture of Vicksburg, Mississippi.

**Sickles, Daniel E.** (1819–1914) *lawyer, politician, Union general*

Lawyer, politician, ambassador, and CIVIL WAR general, Daniel Edgar Sickles was born on December 20, 1819, in NEW YORK CITY to George Garrett Sickles and Susan Marsh Sickles. Sickles's father was a prominent lawyer and politician, and Daniel followed him into both careers. Sickles entered law school at New York University and was admitted to the bar in 1843.

Shortly thereafter, Sickles launched his political career, joining the New York Democratic political machine that operated out of Tammany Hall. In 1847 Sickles was elected to the New York Assembly, a position he left to serve as secretary to JAMES BUCHANAN, U.S. minister to England. After his return from England in 1855, Sickles won a seat in the New York State Senate and later in the U.S. House of Representatives, where he served from 1857 until 1861.

Sickles's political career was tarred by well-founded accusations of corruption. A national scandal erupted when the congressman shot and killed his wife's lover in cold blood on the streets of WASHINGTON, D.C. Sickles was acquitted when his legal team defended him on the grounds of "temporary insanity." In 1861 he abandoned politics for the UNION ARMY and raised the "Excelsior Brigade" in New York City. For that, he was made a brigadier

general. Promotions followed when Sickles demonstrated some military ability in the PENINSULAR CAMPAIGN and at the BATTLE OF FREDERICKSBURG. In May 1863 Maj. Gen. Sickles commanded the III Corps at the BATTLE OF CHANCELLORSVILLE, where he ordered an attack that contributed to the Union's defeat.

Sickles is best known for his infamous decision on the second day of the BATTLE OF GETTYSBURG, when he joined the Union army on the field. Without informing his commander, Gen. GEORGE GORDON MEADE, Sickles moved his corps way out in front of the rest of the Union defensive line. This salient created a serious gap that allowed the Confederates under Gen. JAMES LONGSTREET to launch a devastating attack against the Federals. A last-minute save by Gen. Winfield Scott Hancock, commander of the II Corps, prevented a rout, and the Union line held. Sickles was badly injured in the leg by a cannon ball while he was commanding his troops, and later it was amputated. The injury removed Sickles from the battlefield for the rest of the war.

Undaunted, Sickles returned to public life after the war with the vigor of a man half his age. Active in RECONSTRUCTION politics, Sickles sided with the RADICAL REPUBLICANS against the administration of President ANDREW JOHNSON. An ardent supporter of ULYSSES S. GRANT for president in 1868, Sickles was appointed to the post of minister to Spain, 1868–74. Sickles was elected in 1892 to the House of Representatives, again as a Democrat. His major legislative achievement was in securing the passage of the act that enabled the federal government to acquire the Gettysburg battlefield.

Sickles was widely criticized after the war for his actions on July 2, 1863. Characteristically, he and his supporters attacked Meade and other top generals at Gettysburg for failing to recognize the superiority of Sickles's tactics. Although the criticism persisted, Sickles's crusade influenced interpretations of Gettysburg in much of the LITERATURE of his day. Sickles also participated widely in efforts to preserve the battlefield as a historical site.

Sickles died of a cerebral hemorrhage on May 3, 1914, at age 94. He is buried at ARLINGTON NATIONAL CEMETERY.

### Singleton, Benjamin (Pap Moses) (1809–1892)

*African-American leader and pioneer*

Also known as “Pap Singleton” or “Pap Moses” for his role in the exodus of more than 25,000 freed people from the

South to western Kansas in the 1870s, Benjamin Singleton was born a slave in Nashville, Tennessee. Little is known about the first 60 years of his life. Singleton evidently escaped from SLAVERY, going first to Canada and then to Detroit, Michigan, where he opened a boardinghouse for ex-slaves. Full of optimism for African Americans after the CIVIL WAR, Singleton happily returned to Edgefield, Tennessee, in 1865 and supported his family by working as a carpenter. He quickly assumed a leadership role in the community and urged government support of black economic improvement through public schools and land reform. Singleton desired that African Americans enjoy the kind of independence that land ownership could bring—the same independence he felt was enjoyed by the white small farmers of the country. He supported President ULYSSES S. GRANT's efforts to establish the REPUBLICAN PARTY's Southern base with the help of African-American votes, because he reasoned that political power might speed up the growth of economic power. Singleton was bitterly disappointed as racism and violence gripped Tennessee and the South. “The whites had the land and the sense,” he observed, “and the blacks had nothing but freedom.”

Determined to make the most out of that freedom, Singleton became convinced that God had appointed him to lead his people out of the economic bondage of tenant farming and SHARECROPPING and the social bondage of discrimination in the postwar South. He wanted to establish autonomous all-black communities in the promised land of the West, where so many white migrants were heading in the 1860s and 1870s and where land was relatively cheap, or even free, thanks to the HOMESTEAD ACT of 1862. Kansas, the place where JOHN BROWN first came to the nation's attention in the 1850s, was Singleton's first choice for African-American migration. In 1873 Singleton took a preliminary trip to Kansas with several other interested people. Together, they formed the Edgefield Real Estate and Homestead Association. Flyers and other means of advertisement were distributed that exhorted African Americans to buy and settle on land outside the South. At first hundreds and then thousands of black people from Kentucky, Tennessee, Mississippi, and Louisiana moved west with hearts full of hope for a better future.

The most famous of the settlements was the town of Nicodemus, Kansas. Singleton himself moved west, and although he never made much money from the enterprise, he did begin a national controversy over the migration. White citizens of Kansas viewed the steady influx of African-American pioneers, named Exodusters, with alarm. So did white Southerners, who worried that the migration would drain their region of needed laborers and further depress their ECONOMY. Ultimately, there was little cause for concern because the exodus ended abruptly in the early 1880s when conditions in Kansas fell far short of expectations.

Still, the African Americans who stuck it out in the West achieved a modest success. Singleton, called the “Moses of the Colored Exodus,” became involved in black nationalist movements. He died in Topeka, Kansas, in 1892.

## slavery

Slavery is a system of labor under which individuals are compelled to serve in perpetuity with little or no compensation. Slavery has existed, in one form or another, for thousands of years. The institution first came to the English colonies in North America in the early decades of the 17th century. It was quickly limited to African Americans and more gradually came to be restricted to the South.

Life under slavery was very harsh. Slaves were generally compelled to work long days doing backbreaking labor. As adequate clothing, food, and medical attention were generally not provided to slaves, death rates were very high. The laws of most states barely acknowledged slaves, and they were denied virtually every legal privilege, including the right to bring lawsuits or testify in court trials, the right to vote, and the right to marry. Masters' power over their slaves was almost unlimited. Slaves could be sold apart from their families, denied food, raped, or whipped mercilessly. Although the murder of a slave was supposed to be illegal, such crimes were rarely punished.

Slaves actively resisted the system whenever possible. Physical confrontations between slaves and their masters were not uncommon. Occasionally, full-blown slave revolts would develop, as groups of slaves banded together with the hope of escaping en masse or punishing cruel owners. The best-known revolts were led by Gabriel Prosser in 1800, Denmark Vessey in 1822, and Nat Turner in 1831, but there were a number of others. For some slaves, escape was a more feasible and more attractive option than revolt. The most widely repeated stories of escape involve the UNDERGROUND RAILROAD, which helped slaves travel to the states of the North or to Canada.

It was difficult and risky for slaves to revolt or for an individual slave to try to escape, however. As such, passive forms of resistance were much more common. Slaves might steal extra food, fake illness, deliberately break equipment, or subvert the will of their masters and overseers in any of a hundred other ways. At the same time slaves resisted the slave system by developing a vibrant culture of their own. Slave RELIGION usually blended African and Christian beliefs, while teaching slaves that they would ultimately be delivered from bondage, if not in this life, then in the next. Slaves also had their own

unique art, MUSIC, folklore, and medical practices. Like slave religion, these things typically blended African and American influences.

By the early part of the 1800s slavery had all but disappeared from the states of the North, and some Northerners began to look southward in the hope of eliminating the institution there as well. A number of prominent Northerners came to believe that slaves should be purchased from their masters and returned to Africa. This plan came to be known as colonization, and it led to the formation of the American Colonization Society in 1816. Ultimately, however, the colonization movement was surpassed in size and importance by the ABOLITION movement, which advocated bringing slavery to an immediate end. By the end of the 1830s, the abolition movement was playing an important role in Northern politics, while at the same time increasing Southerners' sense of alienation from the North.

Although most abolitionist leaders were white, a number of ex-slaves played key roles in the movement. Slave narratives powerfully recounted the horrors of slavery for the Northern public. These included JAMES W. C. PENNINGTON's *The Fugitive Blacksmith*, WILLIAM WELLS BROWN's *Narrative of William W. Brown, an American Slave*, and FREDERICK DOUGLASS's *Narrative of the Life of Frederick Douglass, an American Slave*. In addition to penning books, Pennington, Brown, and Douglass also made tours throughout the North, delivering speeches to win converts to the abolition movement.

The antislavery arguments of abolitionists tended to focus on the immorality and inhumanity of slavery and on its negative effects on the slaves themselves. Meanwhile, a number of white Northern politicians began to develop an antislavery argument that emphasized the negative effects of slavery on white Northerners. The “Free-Soilers,” as they came to be known, were focused on the vast territories that the United States had added via the Louisiana Purchase and the Mexican-American War. Free-Soilers were content to allow slavery to remain where it already was, but they believed that it was imperative that the institution be barred in the territories, so that free white labor could continue to spread and to flourish.

As Northern abolitionist and Free-Soil sentiment grew, white Southerners felt that their way of life was under attack. A number of Southern writers defended slavery and its superiority as a system of labor. The most prominent was GEORGE FITZHUGH, who wrote a pair of pro-Southern treatises, *Cannibals All!* and *Sociology for the South*. “We have no mobs, no trades unions, no strikes for higher wages, no armed resistance to the law,” declared Fitzhugh. “We have but few in our jails, and fewer in our poor houses.” Other Southern apologists echoed Fitzhugh's sentiments. While Southerners of Thomas Jefferson's generation had

seen slavery as a “necessary evil,” Southerners of Fitzhugh’s generation came to see it as a “positive good.”

By the 1850s slavery was the dominant issue in the nation’s political discourse, with the debate often erupting into violent confrontations. In 1854 proslavery BUSHWHACKERS and antislavery JAYHAWKERS began a series of armed clashes over whether the state of Kansas would have slavery or not. The fight in BLEEDING KANSAS would last through the end of the Civil War. In 1856 CHARLES SUMNER made an antislavery speech on the floor of the Senate that focused on the Kansas question and shortly thereafter was savagely beaten by Southern representative Preston Brooks. In 1857 the Supreme Court ruled in the *DRED SCOTT DECISION* that Congress could not restrict slavery anywhere in the United States. The ruling served to inflame Northern passions while resolving nothing. By the end of the 1850s, it was clear that slavery and free labor could not continue to coexist. In 1858 WILLIAM H. SEWARD described the tension between the two labor systems as an “irrepressible conflict,” while ABRAHAM LINCOLN warned the nation that “A house divided against itself cannot stand.” In 1859 JOHN BROWN’s failed attempt to incite a slave revolt by capturing HARPERS FERRY brought the tensions between North and South to the breaking point.

As the political debate over slavery was heating up in the 1850s, the institution itself remained strong in the South. Post-Civil War Southern apologists would later claim that slavery would have died a quick natural death in the 1870s or 1880s even if the Civil War had never happened, but the evidence suggests that this was not the case. For PLANTATION owners, business was booming in the 1850s. Cotton-hungry manufacturers in the North and in Europe kept the cotton market strong, even through an 1857 recession. In the decade before the Civil War, “King Cotton” accounted for more than 50 percent of the United States’s total exports and, in 1860 alone, the South produced 2 billion pounds of cotton, with a value of \$250,000,000. Other slave-driven enterprises, including rice, tobacco, and indigo production, also did well. And although a majority of Southerners did not own slaves, they, too, continued to derive important benefits from the slave system. A strong economy made it possible for small farmers and manufacturers to sell their goods at a favorable price. Perhaps more important, all Southern whites benefited from the rigid racial hierarchy of the antebellum South that assigned a high social status to all white people and a low status to all black people.

In 1860 Republican Abraham Lincoln was elected the 16th president of the United States on a Free-Soil platform. Leaders in South Carolina decided they could not accept the results. Lincoln, they asserted, had been elected by Northern voters to bring an end to slavery. In Decem-

A slave family in South Carolina (Hulton/Archive)

ber of 1860 South Carolina seceded from the Union. It was soon followed by 10 other states, and by April 1861 the CONFEDERATE STATES OF AMERICA had been established. Slavery was the backbone of the new Confederacy. Even if the majority of the South’s white population did not own slaves, Southern economy, culture, and politics were all defined by the institution. Even the poorest of white Southerners was willing to volunteer to fight when the war started. Later in the war, however, many non-slaveholding Southerners came to resent the fact that they were being forced to fight to defend slavery, particularly while large plantation owners were exempt from the Confederate conscription, or draft.

The nature of the slave system also created other logistical problems for the Confederacy. The South’s economy was entirely tied up in slaves and land. When war came, this meant that the South lacked the money and factories needed to purchase or create war matériel. Another problem posed by the slave system was that Confederate leaders were not comfortable using the South’s 4 million slaves as soldiers. While Northern leaders depended upon the hundreds of thousands of free laborers who joined the Union ranks, the South’s inability to draw on its labor force left Confederate armies constantly undermanned.

As the Confederacy's white population fought the CIVIL WAR, the South's slaves were impacted in a number of different ways. The CONFEDERATE ARMY regularly "impressed" slaves, compelling them to do whatever labor the military needed. The backbreaking work of digging trenches and graves, building fortifications, and hauling supplies was often even worse than plantation work. For those slaves fortunate enough to avoid IMPRESSMENT, however, the Civil War generally lightened their burdens. With the absence of so many Southern men, discipline became more lax and escape became much easier.

At the same time that masters' control of their slaves was weakening, Union armies were dismantling the slave system throughout the South. In 1862 the second CONFISCATION ACT defined slaves as enemy property and allowed Union commanders to free any slaves they captured. Huge CONTRABAND camps were set up and administered by the War Department. In 1863 the EMANCIPATION PROCLAMATION went even further, declaring all slaves in the Confederate states to be free and allowing for the enlistment of African-American soldiers. Most of the 180,000 black men who ultimately served in the UNION ARMY were escapees who wanted to have a hand in bringing an end to slavery. The THIRTEENTH AMENDMENT, adopted in December of 1865, made slavery's demise official.

For many Northerners, however, the end of slavery was not enough. The REPUBLICAN PARTY, particularly the RADICAL REPUBLICAN faction, took steps to ensure the political, social, and economic equality of the freedmen. For a period of time after the war, it seemed that meaningful progress was being made. Former slaves became loyal Republican voters, and a number of them were elected to political office. Families were reunited or established, and schools for freedmen were set up throughout the South. By 1900, literacy rates among African Americans were above 50 percent. This was quite an accomplishment for a population that had been legally barred from learning to read only 35 years previous.

Such progress proved to be short lived, however. Throughout the era of RECONSTRUCTION, white Southerners were unwilling to accept African Americans as their equals. They pursued every possible means, both legal and extralegal, for returning freedmen to their former second-class status. Northerners eventually grew weary of the struggle, and by 1876 all of the former Confederate states were under the control of conservative white politicians. The freedmen were shut out of politics. Economically, the rise of the SHARECROPPING system denied African-Americans much hope of upward mobility.

Ultimately, the reliance of the South on African slave labor had a number of negative long-term consequences. The Southern economy failed to modernize in the antebellum era, and by the time the damage from the Civil War

was repaired, the economies of the former states of the Confederacy lagged far behind the rest of the country. It would take many decades for meaningful economic progress to occur. For African Americans, both inside the South and out, the legacy of the slave system was a century of racism and other forms of economic, political, and social oppression. Although important laws were adopted during Reconstruction, their promise did not begin to be fulfilled until the latter part of the 20th century.

### Society of Friends (Quakers)

The CIVIL WAR era was not only a political and social trial for the nation but a religious trial for the Society of Friends, or Quakers, in the United States. Several faiths, such as the Mennonites and Brethren, demanded pacifism of their members, but the most prominent pacifist sect in mid-19th-century America were the Friends. The Friends had come to America from England in the 17th century seeking to escape Crown persecution.

In the United States, though some Friends held slaves, most did not, and the meetings (congregations) soon came to hold that SLAVERY was incompatible with the religion's emphasis on universal brotherhood. In 1754 the Friends became the first religious group to take a stand against slavery by formally prohibiting their members from buying or selling slaves. Friends were instrumental in establishing many antislavery organizations, including the Philadelphia Anti-Slavery Society and the American Anti-Slavery Society. Friends were a majority in many abolitionist organizations by the 19th century. In particular, 40 percent of all female abolitionists were Friends, including Lucretia Mott and Angelina and Sarah Grimké. In addition to pressing for ABOLITION, Friends promoted the UNDERGROUND RAILROAD and the names of Friends safe houses circulated amongst the slave community.

Despite their antislavery sentiments, the Civil War posed a dilemma to the Friends, who were caught between their antiviolence teachings and their stalwart support of

antislavery. Even though the Union's war aims appealed to their idea of universal brotherhood, the decision to take up arms with the intent of committing violence upon fellow humans was more than most Friends could bear. For Friends, one evil could not be cured by another, and war, even in the service of a "just cause" went against the faith's fundamental tenets of nonviolence. Thus, during the Civil War, Friends became America's best-known conscientious objectors. In both the North and the South, Friends sought exemptions from military service when draft laws threatened to force them into uniform. Both Northern and Southern governments were fundamentally sympathetic to the conscientious objector's plight, but neither government would grant blanket exemptions from service for Friends. At various times, both the North and the South allowed conscientious objectors like the Friends, if drafted, to provide a substitute, pay a commutation fee, or volunteer for nonmilitary duty, such as hospital service (the Union offered the option of serving draft time in the South assisting and educating the newly freed slaves). Some Friends accepted these options as viable and provided essential services during the duration of the war.

Despite these allowances, many leaders of the Friends considered any connection with the war effort corrupt. There were, however, both regional and age splits over the war within the Society of Friends. Southern Friends (numbering roughly 10,000 at the outset of hostilities—most of whom lived in North Carolina), so long as they did not hinder the Southern war effort, found generally kindly disposed state and national officials willing to grant exemptions from service. Some Confederate leaders went so far as to concede that Friend farmers left to till their fields were as valuable to the Southern cause as any soldiers.

The Union was home to the majority of Friends, with 200,000 members in Pennsylvania, New York, New Jersey, Rhode Island, Massachusetts, Ohio, and Indiana. Of this Northern Friend population, relatively few broke with church doctrine and served in the war, but a significant number did. Generally, younger Friends volunteered or accepted military duty if drafted. Friends from the more western meetings were more likely to join the army than were their northeastern fellows. Only four of 105 Philadelphia Friends from Orthodox Meetings served in the army upon receiving draft notices, but Indiana sent approximately 1,200 Friends into military service during the course of the war.

There was considerable concern both among the soldiers and the Friends left at home about the impact that their wartime service would have on their character. It was generally expected that Friends who had supported the war would return to their meetings and formally acknowledge the error of the war, accept the responsibility for their incorrect actions, and seek forgiveness from their fellow

Friends. But while refusing to acknowledge participation in the war as wrong could be grounds for a Friend to be disowned (excommunicated) by his meeting, not all returning Quaker VETERANS saw fit to apologize for their choices. Ultimately, in gestures that showed how great the faith's internal tension over the issue of fighting against something they abhorred was, few meetings disowned unapologetic members, and in subsequent years speakers found gatherings of Friends unwilling to tolerate criticism of veterans.

After the war ended, Friends continued their efforts on behalf of freed people during RECONSTRUCTION. Friends provided essential aid, especially in EDUCATION services to the FREEDMEN'S BUREAU. The rise of REDEMPTION governments in the South greatly troubled many meetings. But despite their long-standing stance of antislavery and their work on behalf of the freed people, Friends had views similar to those of many other white Americans. Their educational interests were predicated on the idea that African Americans were primitive and backward. Eventually, like other Americans', the Friends' interest in African-American rights and concerns waned. By the latter 19th century, Friends' financial and physical commitments to working with the freed men and women dwindled in the face of rising issues of Southern governmental corruption and political issues within the Friends' own Northern communities.

### Special Field Order No. 15 (January 16, 1865)

During the CIVIL WAR, a special order issued by a commanding general had the force of law behind it. Written by Union general WILLIAM T. SHERMAN, Special Field Order No. 15 granted Southern land seized by the Union in Georgia, South Carolina, and Florida to freed slaves. It also gave African Americans complete control over this land and government assistance to develop it. Special Field Order No. 15 was, however, only a short-lived boon for the freed men and women. Special Field Order No. 15 was rescinded in 1865 by President ANDREW JOHNSON.

Sherman issued Special Field Order No. 15 on January 16, 1865, while he and his troops occupied Savannah, Georgia. Special Field Order No. 15 was the result of a January 12 meeting that Sherman and Secretary of War EDWIN M. STANTON had with 20 leaders of the city's

African-American community. The order granted freedpeople full control of the sea islands as well as of the coastal land 30 miles inland from Charleston, South Carolina, south to Jacksonville, Florida. This order helped the freed slaves who, as REFUGEES, had no place to go and no property. Specifically, Special Field Order No. 15 granted African-American heads of families 40 acres of land under “possessory title” and protection by the U.S. Congress. The purpose of Special Field Order No. 15 was to assist the freedpeople in creating self-governing and self-sustaining settlements free from the intrusion of white control.

In this revolutionary order, Sherman asserted that the African-American settlers had the opportunity to choose the land on which they would farm and to obtain government assistance in starting their agricultural settlements. To this end, Sherman promised to loan the freedpeople mules to help them work the land. Further, this order carefully laid out a description of the complete control freedpeople would have over their lives and livelihoods on the land formerly possessed by their masters. In Special Field Order No. 15, Sherman prohibited white people from any roles other than those regulated by the federal government, usually as military personnel placed on duty there. As a result, the freedpeople would have full control over their daily lives. Further, Sherman used these orders to stimulate enlistment in the UNION ARMY by guaranteeing land ownership to those freedmen who served, even if they could not immediately settle on the land.

To carry out this order, Sherman appointed Gen. Rufus Saxton as the inspector of settlements and PLANTATIONS. As such, Saxton took charge of settling the freedpeople on the land covered by Special Field Order No. 15, commonly referred to as “Sherman land.” Saxton, like other abolitionists, worried that Sherman’s order isolated and colonized the freedpeople instead of helping them. African Americans eagerly tried to take Sherman up on his promise of land. Although thousands hurried to the sea islands to claim the land promised, many were turned away as ineligible. Only male heads of households had legal claim to the land under Sherman’s orders, so freedwomen could not successfully petition for land. Even so, by June 1865, approximately 40,000 freedpeople inhabited 400,000 acres of land granted to them in Special Field Order No. 15. The U.S. government followed through with its promise of help by providing the settlers with farm tools, seeds, and advisers. On the urging of abolitionists, the government also sent missionaries and teachers to the area to help the freedpeople establish themselves.

General Field Order No. 15 helped instigate the congressional act that created a Bureau for the Relief of Freedmen and Refugees on March 3, 1865. However, postwar President Andrew Johnson rescinded Sherman’s Special

Field Order No. 15 on May 29, 1865, when he granted general amnesty to former Confederates and returned land to the former slaveholders. Those freedpeople settled on “Sherman land” lost their land ownership and returned to a life of working other people’s land.

## sports

The physical activities that Americans played or viewed for recreation evolved in the mid-19th century as the country became more industrial and urban in character. People had played sports since colonial times, but except for boxing and horse racing these activities had been largely confined to small-town and rural settings. In the early 19th century the population was preponderantly rural, with only about 6 million people, or one in five inhabitants, living in or near cities. But by the middle of the 19th century, increasing IMMIGRATION and INDUSTRIAL DEVELOPMENT had led to rapid urbanization, greater population density, and the first organized sports.

Sharp changes in public attitudes toward recreation in general promoted the sports trend. Previously sports had been viewed as a community activity at best or, at worst, a serious distraction from personal responsibilities and God. This perception changed around 1850, when Americans came to regard participation in sports, particularly team sports, as a medium for building character, expressing masculinity, and maintaining good health. The CIVIL WAR played a major role in promoting sports. Military life, given its vast stretches of inactivity in encampments, lent itself to competition among young soldiers, who engaged in foot racing, horse racing, gambling, boxing, and baseball.

No discussion of sports in antebellum and Civil War America would be complete without reference to baseball, which enjoyed immense popularity long before it was hailed as a “national pastime.” Since its questionable origin at Cooperstown, New York, in 1839—or more likely, its gradual evolution from British team sports like cricket and rounders—baseball struck a chord with young men of the Civil War generation. It was easy to play, possessed few concrete rules at the time, required a minimum of equipment, and fostered the intense physical competition that young males find so appealing. In the numerous and over-

An early game of baseball. Lithograph by Currier & Ives, ca. 1866 (Library of Congress)

crowded prisoner of war camps of the North and South, it was frequently the only form of diversion available. Many soldiers exposed to the game during the war years carried their passion for it into the postwar era. The first baseball organization of note, the National Association of Base Ball Players, was established in NEW YORK CITY as early as 1858, and the game spread in popularity into other urban and rural areas. Between 1860 and 1867 the number of amateur baseball teams in the nation rose from 50 to 202. The first professional, full-time baseball team—the Cincinnati *Red Stockings*, composed mostly of former New York City players—was created in 1869. Baseball thus became the first team sport to emerge from America's trends of modernization, industrialization, and urbanization.

Baseball's closest rival in terms of popularity was croquet, another English import, most likely for its social aspects. It required no strenuous activity to play, cultivated good manners and sportsmanship, and was one of few public venues where both sexes could meet, mingle, and compete on an equal footing. Young men and women could openly flirt and interact in the course of play without parental disapproval. Football, still in its infancy, was thought of as a recreation for upper-class and middle-class young men. It was not until 1869 that the first intercollegiate game took place, held between Rutgers and Princeton. Horse racing was another important diversion throughout this period, as it had been since colonial times. Virtually every small town and large city possessed at least one racetrack, and the rise of a railroad network allowed winning horses from around the nation to be readily transported for high-stakes competitions. Horse racing was also extremely popular among soldiers on both sides of the Civil War, since the animals were readily available in camp, especially among the cavalry, and betting was a common occurrence. Two motion-oriented sports that did not involve gambling were roller-skating and bicycle riding, both of which were introduced around the

end of the Civil War and peaked in popularity by the end of the century.

Gambling, however, was never far from the surface of many sports. A seamier form of entertainment was prize fighting, a sport much condemned for brutality and bloodshed because matches involved bare knuckles and few rules. Most cities and communities had banned this thugish entertainment, so big-name encounters were usually illegal backroom matches arranged with little notice. The illicit nature of prize fighting only enhanced its appeal for noted fighters and high-stakes wagers. Many of the most celebrated pugilists, such as John Morrissey, were either Irish immigrants or of Irish descent, and they acquired large followings among fellow immigrants. At the other end of the social spectrum, wealthy elites in coastal areas indulged in yacht racing, with commodores directing well-drilled crews in beautifully designed, expensive boats. Yachting developed a nationalist dimension as of 1851, when the first so-called America's Cup contest was held: Upstart Americans began routinely defeating their British opponents.

The period 1856–69 provided great momentum to America's national obsession with sports. It also paved the way for the professionalization and commercialization of spectator sports during the Gilded Age. Country clubs, sports columns in newspapers, and new technology such as TELEGRAPHS and telephones (which quickly spread game scores) also facilitated the rise of sports in America from incidental entertainment to multimillion-dollar industries. Overall, these developments democratized spectator sports, which became increasingly open to the working-class fans.

### Spotsylvania, Battles of (May 7–21, 1864)

The Battles of Spotsylvania represented the second phase of the OVERLAND CAMPAIGN, which had commenced when ULYSSES S. GRANT and ROBERT E. LEE first took each other's measure in fighting at the BATTLE OF THE WILDERNESS on May 5–6, 1864. After combat ended on May 6, Grant made the crucial decision to press southward, seeking to reach Spotsylvania Court House ahead of Lee and thereby cut the Confederates off from the shortest route to RICHMOND, VIRGINIA. Hard marching on the night of May 7 allowed Richard H. Anderson's Confederate corps

to reach Spotsylvania just ahead of Grant's leading units, which had wasted their advantage of marching on more direct roads.

Troops from both armies poured onto the field throughout May 8, and Union attacks failed to dislodge Confederate defenders. Lee's soldiers rapidly built a defensive line notable for its strong field entrenchments. The most memorable feature of the Confederate line was a large salient, called the "mule shoe," that emerged northward from near the center of the Southern position. Grant looked for weaknesses on May 9–11, starting heavy action in several places but gaining no decisive advantage.

At dawn on May 12, a massive Union assault commanded by WINFIELD SCOTT HANCOCK smashed through the northern arc of the mule shoe lines, threatening to cut Lee's army in half. The most desperate fighting of the entire war ensued, as the two armies struggled to control several hundred yards of Confederate earthworks, later labeled the "bloody angle," at the northwest corner of the salient. Action continued for nearly 20 hours and impressed even hardened VETERANS as uniquely hellish. "Nothing during the war has equaled the savage desperation of this struggle," reported one Northern newspaper correspondent, while a Confederate journalist wrote that fighting "roared and hissed and dashed over the bloody angle and along the bristling entrenchments like an angry sea beating and chafing against a rock bound coast."

As combat raged at the bloody angle, Lee's engineers constructed another line across the base of the mule shoe. By morning of May 13, Grant once again faced a strong Confederate position. Further Union attacks over the next five days failed to gain advantage. Repeated assaults at Spotsylvania taught Union infantrymen a bitter lesson about the power of defenders sheltered by field entrenchments, and soldiers on both sides realized that from now on the shovel would join the musket and the cannon as critical tools on all their battlefields.

Neither army could claim a clear-cut victory at Spotsylvania. More than 18,000 Federals and 12,000 Confederates had been killed, wounded, or captured in the course of reaching a tactical impasse. Grant resumed his southward movement on May 21, thereby maintaining strategic momentum and forcing Lee into the unaccustomed position of reacting to rather than dictating the action.

**Stanton, Edwin M.** (1814–1869) *lawyer, government official*

Edwin McMasters Stanton, a distinguished member of ABRAHAM LINCOLN's cabinet, was born on December 19, 1814, in Steubenville, Ohio. Stanton briefly attended Kenyon College in 1828 and then studied law. He began his career in Cadiz, Ohio. A Democrat, Stanton worked for Martin Van Buren in the presidential election of 1840. Known for his antislavery views, Stanton found it difficult but not impossible to support James Polk's expansionism in the Mexican-American War. Stanton's first wife died in 1844, leaving him a widower with two children. He later married Ellen Hutchinson, with whom he had four more children.

Stanton moved to Pittsburgh in the mid-1840s, where he developed a reputation as a dynamic and hard-hitting lawyer with an unerring instinct for his opponents' weaknesses. He often argued cases before the U.S. Supreme Court. President JAMES BUCHANAN appointed Stanton the U.S. attorney general in December 1860. After Southern SECESSION, Stanton labored long hours in his WASHINGTON, D.C., office to preserve the Union. He tried to convince the weak Buchanan to defend FORT SUMTER, SOUTH CAROLINA, while secretly meeting with WILLIAM H. SEWARD, Abraham Lincoln's secretary of state, to forge a workable compromise. Stanton remained in Washington after Lincoln's inauguration as legal consultant to Simon Cameron, the secretary of war. Stanton also became very friendly with Gen. GEORGE BRINTON MCCLELLAN, soon to be commander of the UNION ARMY. Like many Democrats during this time, Stanton expressed contempt for President Lincoln.

That negative opinion of the president soon transformed into respect and then a deep admiration. When Cameron resigned from the War Department, Lincoln replaced him with Stanton. It proved to be a brilliant appointment. Stanton threw himself into organizing the massive war and stamped every area of military effort with his immense energy, impeccable honesty, and sincere belief in Unionism. He established a viable and respectful working relationship with Congress and modernized outmoded and corrupt War Department practices. Efficiency and fairness were the standards that he tried to bring to the military departments under his control. Stanton's ability to successfully coordinate complex logistical movements became legendary.

Along the way, Stanton made many enemies with his overbearing personality. He was impatient and rude, and former friends became opponents after feeling the sting of his sarcasm. As Lincoln and Stanton pushed for a harder, wider war, both became committed to EMANCIPATION and the enlistment of African-American soldiers. By mid-1863 Stanton had switched his allegiance to the REPUBLICAN PARTY. Indeed, it was Stanton who made sure that thousands of Union soldiers could receive special furloughs so

they could return to their respective states and vote in the 1864 election. As he predicted, Lincoln won the soldier vote by a huge margin.

Stanton's position as the supervisor of internal security created controversy. From March 1862 Stanton was determined to crack down on all dissent and treason within the Northern HOMEFRONT, which was growing steadily. To ensure loyalty, Stanton expanded the suspension of the writ of HABEAS CORPUS, arrested Southern sympathizers, and created a special police force to enforce the draft laws. Late in the war Stanton pressed for the generous treatment of freedpeople and worked closely with Lincoln on RECONSTRUCTION policy. Shocked and grieving after the ASSASSINATION OF ABRAHAM LINCOLN, Stanton and the War Department took charge of the investigation. Stanton insisted that the conspirators be tried in military court and strongly favored the death penalty.

Stanton continued in his post during most of ANDREW JOHNSON's administration. His logistical skills were needed in the demobilization of the huge Union army, and his concern for the rights of freedmen and freedwomen was required to counter President Johnson's overly lenient plans for former Confederates. Increasingly, Stanton and Johnson were at odds over Reconstruction. Stanton advocated continued support for the FREEDMEN'S BUREAU and favored the FOURTEENTH AMENDMENT. He joined the RADICAL REPUBLICANS against the president. By summer 1867 Johnson, no longer confident of his secretary's loyalty, wished to remove him from the cabinet. Congress passed the Tenure of Office Act to stop Johnson from firing Stanton, but the president acted anyway, replacing him with Gen. ULYSSES S. GRANT. Johnson's violation of the Tenure of Office Act became the basis for his impeachment trial in 1868. After Johnson was acquitted, Stanton resigned from his position, confident that the fruits of the Union victory had not been wasted away and that the new nation would emerge under the control of the Republican-dominated Congress.

In 1869 President Grant appointed Stanton to the Supreme Court. He died in December of the same year, before he could take his seat.

**Stanton, Elizabeth Cady** (1815–1902) *women's rights leader, suffragist, reformer*

Born into a wealthy New York family, Elizabeth Cady Stanton became a leader of the women's movement through

her involvement with abolitionism. Unhappy with the limited role granted women by abolitionists, she played a central role in the Seneca Falls Women's Rights Convention of 1848. After the CIVIL WAR, Stanton and Susan B. Anthony led the faction of women's rights advocates that split from the abolitionists and Republicans, who placed a higher priority on the rights of freedmen than on those of women. Later, Stanton and Anthony created the first independent organization of women advocating women's suffrage.

A comfortable background did not provide full-time support for Stanton's activities on behalf of women's rights. The opposition of her father and husband and the demands of her seven children limited Stanton's role. She remained at home, writing many influential petitions and speeches while Anthony traveled to spread the message.

While advocating an expanded role for women, Stanton remained allied with the abolitionists through the Civil War. After the war, abolitionists joined with the REPUBLICAN PARTY to protect the rights of freedmen, viewing the campaign for women's suffrage as a threat to the rights of ex-slaves. Rebuffed by their former allies, Stanton and Anthony hoped that the DEMOCRATIC PARTY would adopt their cause on the basis that educated women had a greater entitlement to the vote than did "illiterate" ex-slaves. A

Elizabeth Cady Stanton (Library of Congress)

deep divide within the women's movement resulted, with those willing to postpone the vote for women until black suffrage was achieved remaining with their traditional abolitionist allies.

Stanton and Anthony became disillusioned when it became clear that Democrats were more interested in obstructing black rights than in establishing women's rights. Efforts to join with organized labor were unsatisfactory, as skilled workers did not welcome the competition of women in their fields, and class divisions separated the interests of Stanton and Anthony from those of working-class women. Unable to find a place for their movement in any established organization, they formed the NATIONAL WOMAN SUFFRAGE ASSOCIATION in 1869, which sought a constitutional amendment ensuring a woman's right to vote as the first step in establishing women's equal rights. Those who allied with the Republicans soon created the American Woman Suffrage Association, advocating only women's right to vote. The split between these two factions continued for more than 20 years. Blind and in ill health, Stanton died in New York in 1902.

## states' rights

The doctrine of states' rights was used to explain and defend the SECESSION of the Southern states during and after the CIVIL WAR. States' rights adherents put forth a strict interpretation of the U.S. Constitution of 1787. The Constitution, they argued, was nothing more than a compact between sovereign states that limited the federal government to specific powers such as the right to declare war and to conduct diplomacy. All powers and rights not expressly delegated to the national government were reserved for the states, including the right to leave the Union when one or more states determined that their liberties were threatened.

Southerners and Democrats favored a "strict" interpretation of the Constitution, allowing the federal government only the rights the Constitution set forth, therefore making all other rights the province of individual states. Whigs, later Republicans, and most Northerners favored a "loose"

interpretation, providing the federal government with the additional power of those rights that were implied.

The authority of the national government was strongly contested in any number of areas, but the conflict was especially bitter and serious over the issue of SLAVERY in the territories. As the Northern ECONOMY flourished and its population skyrocketed, Southerners became worried that their influence in Congress would diminish. If the South as a region lost its political clout, then there was a danger that slavery could be outlawed, not only in the territories but in the region itself.

After the Mexican-American War, the United States added 1.25 million square miles of new territory. Southerners believed that only the expansion of slave owners and slavery into the territories could counter the growing power of the Northern states. A large number of Northerners, however, believed that the further expansion of slavery was unthinkable because it would hinder the spread of free labor. They advanced the argument that the national Congress had the constitutional authority to ban slavery from the territories. This argument was just as vigorously rejected by Southerners who claimed that only the states, which represented the true interests of the people, held that authority.

From 1846 through 1860, Southerners repeatedly threatened secession. With ABRAHAM LINCOLN's election, the South demonstrated its belief that the fundamental institution of its society, slavery, would not be protected under a Republican administration. Citing states' rights as a guiding philosophy, the South seceded and formed the CONFEDERATE STATES OF AMERICA, with a constitution that protected state sovereignty.

Ironically, the Confederacy's survival was threatened by its devotion to the states' rights philosophy. President JEFFERSON DAVIS determined that in order to wage an all-out war for Southern independence, he would need to nationalize the military and the economy. His moves in this direction included IMPRESSMENT, CONSCRIPTION, and TAXATION. Many in his own cabinet and government opposed these measures toward centralization, but none so bitterly or with more serious consequences than the state GOVERNORS. JOSEPH E. BROWN of Georgia and Zebulon B. Vance of North Carolina were two notable examples of this opposition. They refused to share their states' supplies, men, and labor with the rest of the Confederate nation. Citing a commitment to states' rights and individualism, Brown and Vance kept back militia units for local protection, refused to collect taxes, and balked at providing soldiers for the draft. Some historians have claimed that the Confederacy "died of states' rights."

After four years of hard fighting, Northern victory in 1865 ensured that the doctrine of states' rights would never again present a serious challenge to federal power and authority.

—Lee Ashley Smith

**Stephens, Alexander Hamilton** (1812–1883) *author, politician, vice president of the Confederate States of America*

Congressman, author, and Confederate vice president, Alexander H. Stephens was born into a prosperous Georgia farming family in 1812. Small and sickly as a child, he remained fragile throughout his life. Stephens never knew his mother, who died of pneumonia a few months after giving birth. His father remarried, but at the age of 14 Stephens was left an orphan when both his father and stepmother died within a few months of each other. After his parents' death, Stephens was adopted by his uncle, who saw to it that the young man received an EDUCATION. He enrolled at Franklin College in 1828 and in 1832 graduated first in his class. After briefly working as a teacher, Stephens studied law, was admitted to the bar, and soon thereafter was elected to the Georgia state legislature. For the rest of his life, Stephens devoted himself entirely to politics. He maintained few close friendships, and he never married.

Stephens's time in the state legislature helped him develop the political philosophy that would guide him for the rest of his life. He came to identify with the Southern wing of the newly formed Whig Party, which meant that he favored federally sponsored internal improvements, government protection of SLAVERY, and compromise whenever necessary. Stephen served for six years in the legislature before deciding to run for Congress in 1843 as a Whig. He attracted national attention for his campaign speeches defending the Whig positions on the TARIFF and national bank, and he won election by a comfortable margin.

Although gravely ill for much of his first term, Stephens rapidly became an important leader of the Whig Party in Congress. In that capacity, he befriended fellow congressman ABRAHAM LINCOLN, with whom he carried on an active correspondence for two decades. Stephens worked hard for a variety of Whig causes, but he was most important in helping to secure passage of the Compromise of 1850 and the KANSAS-NEBRASKA ACT of 1854. In helping these bills to become law, however, Stephens found himself a man without a party. The Whigs collapsed in the 1850s as the Southern and Northern wings of the party became divided over the issue of slavery. Stephens operated as an independent for a short time before deciding to join the

DEMOCRATIC PARTY. He did not strongly identify with the philosophy of the party, but he felt it was a more attractive option than the Know-Nothing Party or the newly formed REPUBLICAN PARTY.

Stephens served as a Democrat in Congress for a few years but became increasingly frustrated with the infighting between Southerners and Northerners in the Democratic Party. In 1859 he finally retired from Congress in disgust and returned home to Georgia. When Abraham Lincoln was elected the next year, Stephens urged his fellow Georgians to remain with the Union and to try to find a compromise. His cooperationist pleas fell on deaf ears, however, and Georgia left the Union. Once the issue was decided, Stephens bowed to his state's wishes and became a devoted Confederate. He helped draft Georgia's SECESSION ordinance, and he played an important role at the Confederate Constitutional Convention. When it came time for the convention to choose the leaders of the new government, they selected JEFFERSON DAVIS for the presidency and Stephens for the vice presidency. The convention's goal in making these choices was to unify different factions in the South. Stephens, as a prominent cooperationist and former Whig, was a natural complement to Davis, a prominent secessionist and former Democrat. Stephens accepted the assignment and was sworn in as provisional vice president on February 9, 1861. The pair was then elected officially on November 6, 1861.

The differences in philosophy that had made Davis and Stephens an attractive political pairing quickly proved disastrous for their working relationship. Problems began to appear as early as March of 1861, when Stephens gave an address in Savannah arguing that slavery was the "cornerstone" of the Confederacy and that the main reason the war was being fought was to protect the institution. The speech directly contradicted Davis's stated position that the war was about STATES' RIGHTS. Davis was furious that Stephens was so brazenly undermining his administration, and he began to exclude Stephens from day-to-day operations of the government. Stephens and Davis continued to disagree on government policies: Stephens was strongly opposed to CONSCRIPTION while Davis was strongly in favor; Stephens advocated peace overtures while Davis insisted on fighting until independence had been achieved; Stephens favored a stiff income tax while Davis preferred to finance the war by printing money. By the middle of 1862, Stephens was being almost completely ignored by Davis, and his only remaining responsibility was to preside over the senate, where he could neither speak nor vote. Disgusted by his irrelevance, Stephens returned to Georgia, where he remained for most of the war. He did accept several special assignments, including leading unsuccessful peace delegations in 1863 and 1865. In both cases, Stephens felt he had been set up to fail, and his dislike of Davis deepened.

At the war's conclusion, Stephens was arrested and briefly imprisoned. Shortly after his release, Stephens was elected to Congress but, along with other ex-Confederates, was barred from taking his seat. Temporarily unable to participate in public life, Stephens turned his attention to writing the two-volume *A Constitutional View of the Late War Between the States*, published between 1868 and 1870. The book provided a detailed legal justification of secession and the Southern states' prewar view of their place in the Union. Shortly after Stephens finished the book, he ran for office again. By this time the political climate of the nation had changed, and he was allowed to regain his seat as a representative from Georgia. Stephens remained in Congress from 1873 until 1882, when he was elected governor of Georgia. He only served a short time before taking ill and dying in Savannah on March 4, 1883.

### **Stevens, Thaddeus** (1792–1868) *lawyer, politician*

Lawyer, congressman, and a leader of the RADICAL REPUBLICANS, Thaddeus Stevens was born in Danville, Vermont, on April 4, 1792. Son of a shoemaker who deserted his family in 1804, Stevens triumphed over the dual handicaps of poverty and a deformed foot, graduating from Dartmouth College in 1814. He immediately left New England for York, Pennsylvania, where he trained in law. First in York, then Gettysburg, and finally Lancaster, Stevens succeeded as a lawyer and as an admired state legislator in the 1820s, 1830s, and 1840s. Stevens's deserved reputation as an egalitarian began when he set aside time from his prosperous law practice to defend an increasing number of runaway slaves and to state on record his antislavery beliefs.

Stevens's political career in the Pennsylvania legislature's fractious and sometimes violent political scene paralleled the upward climb of his legal firm. He joined with the WHIG PARTY and the REPUBLICAN PARTY to advance his mixed agenda of humanitarian reform and capitalist economic development. Stevens virtually created the free public EDUCATION system in Pennsylvania, the crown jewel of his legacy to that state. A wealthy man by the time he was in his 40s, he was an enthusiastic supporter of favorable legislation for RAILROADS and banks and the owner of a number of iron mills.

Stevens also had a dark side to his personality. Sarcastic, witty, and possessing a boundless reservoir of vindictiveness toward his perceived enemies, the lifelong bachelor won the admiration but never the hearts of his loyal Pennsylvanian constituency, who sent him to Congress from the 1850s until his death. Scandals dogged Stevens from early on in his career: accusations of murder, womanizing, gambling, and other immoral acts found their way into unfriendly newspaper accounts. Many of these charges were false, and Stevens usually ignored them or challenged them in court. Stevens never refuted firmly the well-publicized accusation that Lydia H. Smith, his longtime African-American housekeeper, was also his mistress. Ultimately, Stevens's personal intrigues did not derail his political career, and few lawmakers have had such an impact on Congress as he did during the 1860s.

By 1861 Stevens in the House and CHARLES SUMNER in the Senate were leaders in advancing what would come to be called the "Radical Republican" agenda: abolish slavery, secure constitutionally guaranteed rights for ex-slaves, enroll black soldiers, and punish the Southerners harshly for their rebellion. "Free every slave," Stevens cried, "slay every traitor—burn every rebel mansion, if these things be necessary to preserve this temple of freedom to the world and to our posterity." For these sentiments, and for his harsh RECONSTRUCTION program that advanced the theory that the seceded states were conquered provinces, Stevens was singled out as the villain of Reconstruction by several generations of Southerners and by more than a few historians. In reality, Stevens was a practical politician as well as an ideologue. He made many compromises to get significant legislation such as the FOURTEENTH AMENDMENT passed by his more numerous moderate colleagues.

The "sparkplug" of the Republican Party, Stevens pushed and prodded ABRAHAM LINCOLN toward EMANCIPATION, and by 1865, the two men were working well together. It was a good thing that they did so, because Stevens occupied the chair of the all-important Ways and Means Committee. From this position, Stevens helped to finance the war. He supported strongly the Republican economic program of high TARIFFS, paper money, and railroad development. Because of his reputation as a fierce hater of SLAVERY and slave owners (Stevens was known as "the scourge of the South"), Confederates took special pleasure in burning and destroying his property when marching through the Pennsylvania countryside on their way to Gettysburg in 1863.

With the ASSASSINATION OF ABRAHAM LINCOLN, responsibility for managing the transition to peace fell on his successor, ANDREW JOHNSON. Stevens and Johnson detested each other from the start, and the years from 1865 to 1868 were the most controversial of Stevens's very controversial career. The struggle between Johnson and

Stevens was over the question of whether Congress or the executive was going to control the Reconstruction of the South. Stevens was a central figure in creating the famous Joint Committee on Reconstruction, which dominated all Southern issues. Johnson, a singularly inept politician, managed through his blunders to give the Radical Republicans the momentum they needed to impose military rule on the South and to bring impeachment proceedings against him. Stevens helped to write the articles of impeachment and was a powerful force behind the House vote to destroy Johnson.

Stevens, a passionate believer in congressional prerogative, pushed the envelope further when he unsuccessfully argued for the passage of a comprehensive land redistribution program. This example indicates that even at the height of Stevens's legislative power, he was never the "dictator" of Congress, as has been charged. Indeed, the moderate majority made it important for Stevens to compromise, and he did. In the end, however, Stevens did not reshape the South in the Northern mold, as he wished. Reflecting on his inability to impeach Johnson as well as to secure African-American economic justice, the ailing statesman declared, "My life is a failure." Stevens died in WASHINGTON, D.C., on August 11, 1868. In accordance with his will, he was buried in an African-American cemetery in Lancaster, Pennsylvania.

### Stowe, Harriet Beecher (1811–1896) author

Writer and novelist Harriet Beecher Stowe was born in 1811 in Litchfield, Connecticut, the seventh of the nine children of Roxanna Foote and the Rev. Lyman Beecher. A bright child who listened eagerly to theological discussions, Harriet attended the Litchfield Academy. Between 1824 and 1827 she attended her sister Catharine's Hartford Female Seminary, where she became first an assistant and then a teacher (1828–32). She was an avid reader and showed considerable writing talent from early on, and with the help of Catharine Beecher she was able to develop it in a systematic way. In 1832 Lyman Beecher became president of Lane Theological Seminary in Cincinnati, Ohio; Catharine and Harriet moved to Cincinnati, too, with plans to establish a college, the Western Female Institute. A true intellectual, Harriet struggled to define her life constrained by "the constant habits of self-government which the rigid forms of our society demands," as she characterized it. She attended the Semi-Colon Club, a social and literary society,

Harriet Beecher Stowe (Library of Congress)

in order to stimulate her literary efforts. In Cincinnati she met and in 1836 married Rev. Calvin Stowe, a recently widowed professor of biblical studies.

Stowe, who gave birth to seven children, began writing moral, temperance, and domestic tales for *Godey's Lady's Book* in 1839 to supplement her husband's income. Following the 1849 cholera epidemic, which claimed the life of the Stowes' infant son, the family left Cincinnati, first for Brunswick, Maine, then in 1851 for Andover, Massachusetts, where Calvin was offered the chair of Sacred Languages at the Andover Theological Seminary. Stowe published short pieces, including an outraged response to the Fugitive Slave Act. At the urging of friends and family, she resolved to use her literary talent to combat the evils of SLAVERY. She planned to write a series of sketches, published in installments in the *National Era*. "My vocation is simply that of a painter. . . . [T]here is no arguing with pictures," she wrote the editor. She drew from her personal experience with black servants, and the domestic nature of her experience sheds light on the blending of philanthropic and paternalistic attitudes toward African Americans. As a

woman she identified with oppressed black women, but as a middle-class white woman she distanced herself from them, an attitude not inconsistent with antislavery sentiments in mid-19th-century America.

Stowe studied published accounts of slavery and slave escape narratives, as well as personal accounts of people who, unlike herself, knew the South. She strove to make her picture as true to life as possible while also combining her descriptive narrative with highly charged assaults on the proslavery clergy and on public indifference. In March 1852, *Uncle Tom's Cabin* was published to immediate success. In the following years, Stowe became a regular contributor of stories and sketches to the religious antislavery organ, the *Independent*. She also published *A Key to Uncle Tom's Cabin* (1853), a documentary evidence of slavery. *Uncle Tom* became the most read book after the Bible and propelled Stowe into antislavery politics.

In 1853 she sailed for England with her husband and brother Charles to receive the antislavery petition signed by half a million women. Mindful of her reputation as a modest and private woman, Stowe delegated all public speaking to the men. Both in England and in America, she was careful to avoid alienating her natural audience and original target—women. She repeatedly disclaimed public aspirations; “the nursery and the kitchen were my principal fields of labor,” she wrote. Not having a clear and consistent stance within antislavery politics, Stowe urged cooperation between the various factions. She never allied herself with the abolitionists, whom she considered extremists. *Dred* (1856), her second antislavery novel, reflected the shortcomings of her political thinking: She could neither embrace evolutionary reform nor advocate more radical solutions. She was interested in and wrote on the reform movements of her time, often in the Beecher sermonizing tradition.

The success of *Uncle Tom's Cabin* brought material comforts to the family as well as fame to Harriet. When she met President ABRAHAM LINCOLN for the first time, he reportedly exclaimed, “So you're the little woman who wrote the book that made this great war.” Stowe's nostalgia for simpler times was consistent with mid-century ambivalence about materialism. *The Minister's Wooing* (1859) and *Old Town Folks* (1869) reflect the rural life of her childhood New England. As money disappeared fast in the Stowe household, she kept writing throughout the 1860s and 1870s, publishing more than 20 books. An intelligent and well-educated woman, Stowe's writings captured the sensibility of the native-born middle class. Harriet Beecher Stowe died on July 1, 1896, in Hartford, Connecticut.

## strikes

Strikes—the stoppage of work by laborers in reaction to grievances—were a commonplace feature of working-class resistance. By the end of the CIVIL WAR era, American workers were calling more than 400 strikes a year. Among the more notable strikes in the Civil War era were the following. (1) Lynn, Massachusetts, 1860: Shoemakers declare a strike, which quickly spreads throughout New England and involves 20,000 workers. Employers offer higher wages to strikers on the condition that they disband their union. Civil War army recruitment ultimately cripples labor organizing in Lynn. (2) Cold Springs, New York, 1864: Employees at the town's gun works walk off the job, demanding better wages. Union troops forcibly break the strike. (3) Troy, New York, 1869: Collar laundresses strike for higher wages, drawing on the support of molders and other workers in the area. Employers lock out the strikers, who then organize independent cooperatives. Employers switch to paper collars, organize a business boycott of the women's co-ops, and defeat the strikers. (4) Pennsylvania, 1873: Anthracite coal miners begin a series of strikes. The dangers of mining had been dramatized by the Avondale mine disaster (1869), which left 179 miners dead. Violence, involving corporations, unions, and the state, is particularly sharp. (5) United States, 1877: Responding to wage cuts, the Great Railroad Strike idles more than 100,000 workers and sidelines half the freight cars in the United States. Open clashes pitting state militias and federal troops against striking workers leave more than 100 dead and considerable property destroyed before the strike is crushed.

What explains this labor unrest? Clearly, INDUSTRIAL DEVELOPMENT radically altered working conditions in the United States. At the beginning of the 19th century, workshops were small. A NEW YORK CITY tailor, for instance, would cut custom suits for the neighborhood's middle-class men, employing a few journeymen who looked forward, ultimately, to establishing their own shops. By the mid-19th century, some New York tailors had begun designing “ready-mades”—garments cut to standard sizes and sold for a national market accessible by canal and RAILROADS. Derided as “slop shops,” these new firms hired low-wage, less skilled workers who could not hope to own such a business themselves.

Wages, meanwhile, rose and fell with the ECONOMY. While average earnings increased during the Civil War, so did prices. During the depression of 1873–78, daily wages sank by almost 20 percent, from \$1.40 to \$1.17. Even in good times, competition spurred employers to cut labor

costs. Industrial development allowed employers to mechanize the workplace, replacing higher-wage workers with the unskilled or firing native-born workers in favor of rural migrants, foreign immigrants, or children.

Employers also imposed new work rules designed to increase the speed, uniformity, and efficiency of production. Some industries demanded that their employees work 12- or 14-hour shifts six days a week. Many workers found this new “labor discipline” dehumanizing and humiliating, reducing them to little more than gears in a larger machine. In response, their organizations defended the “dignity of labor”: respect for worker humanity, skill, mature judgment, and familial obligations. As early as 1791, workers had demanded that work be limited to 10 hours a day. By 1860 unions were calling for an eight-hour day. In 1872, 100,000 New York City workers struck and won an eight-hour day, though their victory was to be short-lived.

Strikers were building larger labor organizations, but they achieved few lasting gains during the Civil War era. While the NATIONAL LABOR UNION (NLU) won several strikes in the late 1860s, its leadership ultimately became more interested in currency reform and party politics than in workplace issues. The Chicago-based Workingman’s Party supported labor actions in the Midwest during the 1870s. However, its affiliation with the Socialist International limited its appeal outside the industrial cities of the Northeast.

Other unions were hobbled by deep-seated ethnic and religious prejudices ingrained in their members. Employers could easily exploit the ethnic exclusivity of most unions, recruiting African Americans to break strikes called by all-white unions or importing Irish Catholics to take jobs from Anglo-American Protestants. While striking workers could draw on communal solidarity and aid, their resources were limited; those of the companies they resisted were, in the long run, far greater. A company that made a concession in one strike action could quietly build a war chest to see it through the next labor dispute, driving workers to the wall and breaking their union.

Violence played a role as well. State GOVERNORS frequently called out the National Guard to suppress larger strikes; the U.S. Army broke up strikes in 1864 and 1877. Companies hired their own security forces to intimidate and assault unions, but violence was not a monopoly of employers. Though some worker organizations insisted on nonviolence—the Troy laundresses and the Chicago Workingman’s Party, for instance—others considered it an essential tactic.

The very size and diversity of the United States also complicated efforts to organize workers’ parties. Those that did emerge, such as the Workingman’s Parties in Chicago and San Francisco, were split by factional in-fighting and accused of communist sympathies or terrorist tactics.

Despite these problems, the Civil War-period labor organizers gained valuable experience that would lay the groundwork for the union activism of the 1880s and 1890s.

### **Stuart, J. E. B.** (1833–1864) *Confederate general*

Confederate cavalry officer James Ewell Brown Stuart was born in Patrick County, Virginia, on February 6, 1833, the seventh of Archibald and Elizabeth Letcher Pannill Stuart’s 10 children. Reared in a family with excellent political and social connections but relatively modest financial means, Stuart received schooling in southwest Virginia before attending Emory and Henry College in 1848–50. He entered the UNITED STATES MILITARY ACADEMY AT WEST POINT in 1850, graduating 13th of 46 members in the class of 1854.

Commissioned a second lieutenant in the Mounted Rifles in October 1854, he later was assigned to the First United States Cavalry at Fort Leavenworth. While serving with that unit on the Kansas frontier, Stuart was promoted to first lieutenant in December 1855. By that time he had married Flora Cooke, daughter of the post commandant at Leavenworth. The couple would have three children. As a U.S. officer, Stuart saw action against the Cheyenne at Solomon’s Fork in 1857, where he received a severe wound. He also participated in peacekeeping duty in Kansas, where proslavery forces contended with abolitionists and Free Soilers, and he took part in the capture of JOHN BROWN at HARPERS FERRY in October 1859. Stuart was promoted to captain in April 1861, but he resigned his commission the next month, and he soon held the rank of colonel in the Confederate cavalry.

Stuart quickly made a name for himself as a flamboyant and effective cavalry officer. At the head of the 1st Virginia Cavalry, he led a dramatic charge at the FIRST BATTLE OF BULL RUN. Promoted to brigadier general on September 26, 1861, he performed mundane duties until mid-June 1862, when he earned renown with a daring reconnaissance that included a ride around GEORGE BRINTON McCLELLAN’s entire Army of the Potomac. Typical of the Confederates who applauded Stuart’s ride was a RICHMOND, VIRGINIA, woman who wrote of “the brilliant, dashing exploits of General ‘Jeb’ Stuart and his gallant horsemen,” who “became, from that time, famous in the annals of the

war.” Blessed with a famous nickname inspired by his initials and often described as a romantic cavalier, Stuart wore a scarlet-lined cape, boots that reached his thighs, a pair of golden spurs, a bright yellow sash, gauntlets of white buckskin, and a hat crowned with a long plume. He was promoted to major general on July 25, 1862, and given command of all cavalry in ROBERT E. LEE’s Army of Northern Virginia, a post he held for the remainder of his Confederate career.

Stuart’s colorful image sometimes overshadowed his mastery of cavalry operations. He played key roles in the SECOND BATTLE OF BULL RUN and the BATTLE OF ANTIETAM, screening Lee’s movements, gathering intelligence about the Federals, and riding around McClellan’s army again in October 1862. At the BATTLE OF CHANCELLORSVILLE, he temporarily replaced the wounded THOMAS J. (STONEWALL) JACKSON at the head of the II Corps, acquitting himself well in the brutal offensive combat on May 3, 1863. His most controversial moments came in June and July 1863. Surprised at Brandy Station, Virginia, on June 9, he barely managed to hold off aggressive Union troopers. In the following Gettysburg campaign, he failed Lee badly, losing touch with the Army of Northern Virginia and leaving his commander to move blindly into Pennsylvania.

Stuart rebounded after the BATTLE OF GETTYSBURG, rendering solid work against a vastly improved Union cavalry during the autumn of 1863 and into the spring of 1864. His troopers fought well in the opening scenes of the OVERLAND CAMPAIGN of May 1864. As Lee and ULYSSES S. GRANT engaged at the BATTLES OF SPOTSYLVANIA, Stuart moved to block a Union cavalry raid against Richmond, and he received a mortal wound at the Battle of Yellow Tavern on May 11. As he was carried from the field, Stuart showed the spirit that had made him an effective soldier. “I had rather die,” he said, “than be whipped!” He died in Richmond on the morning of May 12. When told of Stuart’s fate, Lee remarked sadly, “He never brought me a piece of false information.”

**Sumner, Charles** (1811–1874) *lawyer, politician, abolitionist*

Lawyer, reformer, and senator, Charles Sumner was a Massachusetts man by birth and a Puritan by ancestry. Sumner was born in Boston on January 6, 1811, the son of Charles Pinckney and Relief Jacobs Sumner. He received his early EDUCATION at the prestigious Boston Latin School. A bril-

liant student, Sumner graduated from Harvard College in 1830 and entered Harvard Law School in September 1831. He started practicing law in January 1834 and was admitted to the Massachusetts bar in September of that same year. From 1835 to 1837, he taught law at Harvard.

Sumner left Boston in 1837 to travel to Europe, where he intended to research the legal systems of England and France. His two and a half years abroad provided a foundation for his later contributions to FOREIGN POLICY while serving in the U.S. Senate. Sumner, a lifelong bachelor, except for a brief marriage in old age, was an admitted Anglophile and particularly enjoyed his time in London. He conquered the London social scene and gained access to the highest circles within a short period of time. While he also traveled to France, Italy, Germany, and Austria, the period in England reinforced his belief in the necessity of a strong alliance between the United States and Great Britain.

Upon his return to the United States in 1840, Sumner resumed his legal practice, albeit somewhat reluctantly. He preferred to pursue his growing interest in reform movements. The young lawyer had become very active in promoting the peace movement, penal reform, and abolitionism. His reform fervor drove him to abandon the law. Conservative Bostonians were horrified by his radical positions, and as a result Sumner was not invited to rejoin the Harvard Law School faculty.

Sumner’s public antislavery stance became well known in 1845 during the nationwide debate over the annexation of Texas. He spoke at a meeting in Boston’s Faneuil Hall and stood with other prominent Massachusetts leaders in opposing the admission of another slave state to the Union. Over the next several years, Sumner became a voice of the “Conscience Whigs” in his home state and initiated a feud with his former Harvard classmate and current senator Robert C. Winthrop. Sumner denounced Winthrop’s vote for the Mexican-American War bill in Congress, and in doing so he became even more involved in politics.

In 1848 Sumner supported the Free-Soil Party and ran on that party’s ticket for Congress. Although he failed to win the seat, his tireless efforts to create a viable Free-Soil–Democratic coalition in the Massachusetts legislature did not go unappreciated. When Daniel Webster left his Senate seat to assume the position of secretary of state, that same coalition, after a fierce struggle with the Whigs, elected Sumner to the vacant post in April 1851.

Over the next two and a half decades, Sumner established himself as a recognizable force in the halls of Congress. Incorruptible, always outspoken, and often disagreeable, he prided himself on his lofty principles. Sumner was a tall and imposing person, with a handsome and distinguished profile. Notably lacking a sense of humor, his speeches were learned and sprinkled with many classical allusions. He deserved his reputation as a great if overbear-

ing orator. Yet, Sumner possessed a moral passion that, for many, helped to define SLAVERY's evil influence. Few of his Senate colleagues found fault with his steadfast commitment to his senatorial duties. Over the course of four terms he worked tirelessly for the causes of ABOLITION and the equality and protection of freed people.

When he entered the Senate, Sumner found an assembly still recovering from the yearlong struggle over the Compromise of 1850. With emotions still raw, Sumner created a sensation with his first major speech, entitled "Freedom National, Slavery Sectional." Sumner argued against slavery in general and called for the repeal of the Fugitive Slave Act (part of the compromise). His four-hour effort described the FSA as being particularly offensive to Northern freedom-loving sensibilities. Sumner declared that because the Constitution did not recognize slavery, it could not exist where the national government maintained exclusive jurisdiction, as in the territories.

Sumner's speech raised him into the top ranks of anti-slavery politicians. Shortly thereafter, Sumner took another stand against slavery when STEPHEN A. DOUGLAS introduced the KANSAS-NEBRASKA ACT in 1854, which Sumner and many of his colleagues declared outrageous. The heated debates over the organization of the territories and the validity of popular sovereignty did not prevent the passage of the bill. Sectional tensions grew worse in the years that followed as Kansas turned into a battleground. Now a Republican, Sumner found the reports of fraudulent governments and vigilante violence alarming, and he prepared to deliver a speech denouncing what he referred to as "The Crime against Kansas." Over two days in May 1856, Sumner lashed out at the activities in Kansas, attacked the national government that allowed it to occur, and most important, castigated several of his Southern colleagues who supported this expansion of slavery.

All of his personal attacks were fierce, but his commentary directed at Andrew Butler, a senator from South Carolina, was particularly virulent. Preston Brooks, a congressman from that same state and a relative of Butler, felt it his duty to avenge this personal insult. On May 22 he entered the Senate and, finding Sumner at his desk, began hitting him repeatedly with a cane until it broke into pieces. Rendered defenseless by surprise and the confines of his desk, a weakened Sumner warded off the blows. Finally, he managed to wrench the desk from its moorings and staggered away. Although some of his colleagues rushed to his aid, many others, including Douglas, declined to enter the fray.

Brooks's caning made Sumner a martyr in the North but turned Brooks into a hero in the South. The shocking and violent act also became an electrifying issue in the political campaign in the fall of 1856. It was one more event that increased the hostility between North and South.

Charles Sumner (Library of Congress)

Although reelected to the Senate in 1857, Sumner suffered severe physical and psychological wounds that affected him for the remainder of his life. His initial recovery proved fleeting, and Sumner was unable to resume his duties in the Senate until three years had passed. He spent much of this time in Europe, where he tried various remedies to recover his health.

Sumner returned to the Senate in December 1859, and by summer 1860 he was once again a fierce critic of the "slave power." In the months that followed SECESSION, Sumner did not favor any compromise measures. Sumner developed a close friendship with MARY TODD LINCOLN and ABRAHAM LINCOLN that allowed him unusual access to the White House, even when he opposed the president's policies. When the war began, Sumner and his fellow RADICAL REPUBLICANS strongly encouraged Lincoln to emancipate the slaves. Indeed, Sumner in the Senate and THADDEUS STEVENS in the House prodded and pushed President Lincoln toward enacting laws that would bring freedom and guarantee equal rights to all African Americans.

The Massachusetts senator also served the president in another important capacity. Sumner had been selected to chair the important Committee on Foreign Relations, a post he would hold for the next 12 years. In this capacity, he used his European contacts and command of international law to excellent effect. He was an invaluable asset as a

foreign policy adviser to Lincoln, particularly in moderating the more strident rhetoric of Secretary of State WILLIAM H. SEWARD. For example, he played a large role in settling the *Trent* affair, which kept the peace with England. Sumner also worked hard and successfully to keep Great Britain neutral in the war. Afterward, Seward took a harder stance toward his beloved England. In 1869 he advocated that Britain should repay the United States for war-related costs having to do with the *ALABAMA* claims.

During and after the war, Sumner continued to press for the most advanced positions on race and the promotion of racial equality. In truth, Sumner was not the most effective leader for the cause of the freedpeople. Unwilling to compromise for the sake of principle, he often antagonized and offended his colleagues. He also became one of the strongest proponents of a hard RECONSTRUCTION policy. Sumner argued that the Southern states committed “suicide” and thus Congress, and not the president, should determine the process under which reconstruction should proceed.

Following the CIVIL WAR, Reconstruction and foreign affairs dominated Sumner’s political career. He became a bitter enemy against ANDREW JOHNSON’s lenient policies toward the South and fully supported the efforts to impeach Johnson in 1868. Unlike many other Radical Republicans, Sumner opposed the passage of the THIRTEENTH, FOURTEENTH, and FIFTEENTH AMENDMENTS, claiming that they did not go far enough to aid the ex-slave population. After his death the CIVIL RIGHTS ACT OF 1875 provided his main legislative legacy to the country.

Reelected for a fourth term in 1869, Sumner found it hard to work with the sitting president, ULYSSES S. GRANT. Grant’s failure to appoint him secretary of state infuriated Sumner and made him a thorn in the administration’s side. Sumner retained his position as chairman of the Committee on Foreign Relations during Grant’s first term, but his noisy opposition to the president’s ill-fated plans to annex Santo Domingo sealed his fate. By 1872 Grant and Sumner were no longer on speaking terms, and Sumner supported the Liberal Republican candidate, HORACE GREELEY. Failing in health, Sumner spent his last days in Congress agitating for his civil rights bill. On his deathbed Sumner spoke of the need to protect the rights of the freedpeople in the South. Charles Sumner died in WASHINGTON, D.C., on March 11, 1874.

### **Swing Around the Circle** (August–September 1866)

The “Swing Around the Circle” was an ill-fated political campaign undertaken by President ANDREW JOHNSON. Opposed by RADICAL REPUBLICANS in Congress, Johnson embarked on this campaign trail in fall 1866. His goal was to help elect Democrats who would be more favorably disposed toward his moderate brand of RECONSTRUCTION policy. Johnson’s action was unprecedented: It made him the first chief executive to campaign on behalf of congressmen. It was also considered demeaning, and many of his cabinet members had attempted to dissuade him from attempting it. But Johnson was adamant.

Not only was this the first political campaign undertaken by a sitting president; it was also the first to be conducted entirely by trains at prearranged stops. In August 1866 Johnson and his entourage began the Swing Around the Circle, so-named because the campaign took them geographically from WASHINGTON, D.C., north to NEW YORK CITY, then west to Chicago, south to St. Louis, and back east through the Ohio River Valley. But events went terribly awry from the start. Johnson’s rough-hewn, back-country style of speaking resonated unfavorably with the sophisticated, urban crowds of the regions he visited. Many in the audience heckled him, and when they did, Johnson promptly heckled them back. The entire performance was considered degrading for a president, and the presence of such luminaries as Gen. ULYSSES S. GRANT, Adm. DAVID G. FARRAGUT, and Secretary of State WILLIAM H. SEWARD in his entourage was not enough to temper this prevailing view. Worse, Johnson’s apparently drunken appearances became so rambling and incoherent that local political establishments publicly shunned him.

Johnson’s enterprise singularly failed in its purpose. The fall election witnessed Radical Republicans gaining additional seats in Congress, acquiring a virtually veto-proof majority. From that moment on, Johnson was truly a lame duck president, and largely of his own making.

### tactics and strategy

Tactics is concerned with deploying troops effectively at a local level, while strategy involves thinking more broadly. Military theorist Karl von Clausewitz provided a famous definition of the distinction between the two concerns: “Tactics is the art of using troops in battle; strategy is the art of using battles to win the war.” While the Union and Confederacy employed identical weapons and battlefield tactics, their respective strategies were governed by different wartime objectives: reunion and independence.

#### *Tactics*

The tactics used by both the Confederacy and the Union tended to be similar. Early in the CIVIL WAR, most generals’ approach to battle mirrored that of the French general Napoleon Bonaparte. Napoleon did not invent this style of warfare; he was merely its most effective practitioner. Napoleonic tactics were oriented toward offense and dramatic victories. The hallmark of Napoleonic-era warfare was the massed infantry assault, where troops would advance within range of the enemy, fire a volley, and then charge forth with bayonets to finish the job. Given the relatively low lethality of infantry weapons of the day, both cavalry and artillery also bore prominent roles, with dramatic and decisive results in the hands of a master coordinator such as Napoleon.

Napoleonic tactics were effective in the time of Napoleon, as some Civil War generals had undoubtedly learned from reading the influential works of ANTOINE-HENRI, BARON DE JOMINI. The tactics had also worked during the Mexican-American War, where many of the army commanders of the Civil War saw their first military service. However, in the 1850s, most of the world’s armies, including the army of the United States, began to use rifles. Rifles could fire bullets accurately at a range of 500 yards, compared with the 75-yard range of the smoothbore muskets used in Napoleon’s time. For the military leaders of the United States, it was not immediately clear what the impli-

cations of longer-range weapons would be. In 1855 the army issued a new tactical manual, *Rifle and Light Infantry Tactics*, by William J. Hardee. Hardee’s answer to the adoption of the rifle, in essence, was to keep using Napoleonic tactics but to go faster when doing so. The tactical consequences of such new technology were not completely appreciated at first, but caused tremendous carnage to soldiers employing it in battle from 1861 to 1865.

When the Civil War got under way, it was soon clear that the impact of rifles was going to be more substantial than anyone had anticipated. Over the first few years of the war, it became evident to commanders on both sides that the massed infantry assault was obsolete. When firing cannot begin until a range of 75 yards, only one volley can be gotten off before hand-to-hand combat begins. Charging infantry can reach their target with their ranks relatively intact. When firing begins at a range of 500 yards, on the other hand, three or four volleys can be fired before the infantry reaches its target. Under such circumstances, soldiers attempting a frontal assault are almost certain to be slaughtered. Nonetheless, the use of massed frontal assault against lines and strong points persisted throughout the war, with commensurately heavy loss of life.

The advent of the rifle had other implications as well. Cavalrymen and their horses presented easy targets for men armed with rifles. As such, cavalry was relegated to a largely supporting role during the Civil War—protecting the flanks of their armies, scouting out troop locations, pursuing defeated enemies, and sometimes dismounting to fight as infantry. Rifles also reduced the role of artillery. In Napoleon’s era, cannons would have been located along the front lines of battles. During the Civil War the ability to pick off artillerymen with rifles necessitated their removal to the rear of the battle. This relegated artillery to a largely defensive role in most engagements. But even in this capacity artillery firing canister shot or grapeshot (spherical metal balls that had the effect of a giant shotgun) and cavalry armed with rapid-fire, repeating carbines could

exact a terrible toll at close range. Cavalry enjoyed a particular renaissance as mobile infantry capable of covering vast distances, striking quickly, then moving off to safety before an enemy could react. This made cavalry units ideal raiders, and they posed a particular menace to RAILROADS.

Despite the shortcomings of the massed infantry assault, Napoleonic tactics were not entirely discarded during the Civil War. Indeed, the most famous tactical maneuver of the war, GEORGE EDWARD PICKETT's charge at the BATTLE OF GETTYSBURG, was a massed infantry assault. However, commanders preferred to use infantry charges as a last resort. Their favored alternative was the turning maneuver. This tactic was taught at the UNITED STATES MILITARY ACADEMY AT WEST POINT and had been used to great effect during the Mexican-American War by Gen. Winfield Scott. In a turning maneuver, a commander tried to attack the enemy from the side or behind, so as to avoid the bloodshed inherent in a frontal assault. Turning movements could be difficult to achieve, however, and very dangerous if they failed. The trick, from a grand tactical viewpoint, was to maneuver for advantage before coming into contact with the enemy and strike select portions of his line with overwhelming force before the enemy had time to react properly. This required experienced leaders and well-trained troops, qualities in exceedingly short supply for many months into the war.

Increased use of turning maneuvers was not the only development to come out of the Civil War. Most field commanders showed a willingness to embrace new technologies to gain a tactical advantage. The TELEGRAPH and railroads became critical tools for generals during the Civil War. Commanders also experimented with hot-air balloons, land mines, and machine guns. An even more important change during the war was the increased use of defensive warfare. Commanders soon discovered that if their troops dug trenches and built fortifications, the number of enemy troops needed to take the position generally tripled.

Whether a commander was pursuing an offensive or defensive strategy, there were only a handful of ways in which troops were commonly deployed. A line was a group of soldiers standing next to one another, generally with three or four feet between each individual. Lines could fire thick volleys of bullets, but they were highly exposed to enemy fire. A column was a formation with many ranks standing one behind the other. A 100-man column, for example, might consist of 10 ranks, each made up of 10 men. Columns could not fire nearly as many bullets, but they were less likely to be destroyed by enemy fire. Mixed formations incorporated both columns and lines. For example, 100 men might be organized into an 80-man column, with its flanks guarded by two lines of 10 men.

During battles a fairly common pattern of deployment emerged. Small groups of soldiers, called skirmishers,

would move out in front of their armies to determine if enemy troops were present and in what numbers. During or after skirmishing, the armies themselves would march into battle in columns, often as much as four miles wide. Once soldiers reached the ground they were ordered to occupy, they would form into lines, usually in pairs. A company of 100 men, for example, would have a line of 50 kneeling men, and behind them 50 standing men. The two lines would alternate their volleys to provide a constant hail of bullets. If a charge was ordered, soldiers generally tried to maintain a two-line formation as much as was possible.

After the Civil War American military commanders stopped using line and column formations, along with Napoleonic tactics. The Indian Wars of the 1870s and 1880s were largely based on defensive warfare, guerrilla tactics, and strategic raids. This trend continued into the 20th century.

### ***Confederate Strategy***

Strategically, the Confederacy had a much easier task than the Union. All the South wanted was to be allowed to secede, and so all the Confederates had to do was avoid being conquered. JEFFERSON DAVIS hoped to mirror the strategy of George Washington during the Revolutionary War, holding his ground when possible, retreating when necessary. At the same time, Davis had to make some concession to political realities. A war following Washington's example may have been strategically advisable but not necessarily popular among the voters.

Early in the war, the Confederacy used what came to be called the "cordon strategy." No Southerners wanted their states to be invaded, and so Confederate leaders spread their troops throughout the Confederacy, particularly along the nation's borders. This was despite the fact that the South enjoyed movement along interior lines of communication and could quickly shuttle troops to threatened points by rail as at the FIRST BATTLE OF BULL RUN in 1861 and the BATTLE OF CHICKAMAUGA in 1863. But the South was continually hobbled by a lack of manpower and, try as it might, it could not effectively cover every point along its extensive periphery. The disadvantage of this strategy soon became obvious—Union troops could concentrate on one position and break through with relative ease. After losses at Fort Donelson, Fort Henry, and Roanoke Island, it was clear that a new strategy was needed.

This new strategy evolved over the first few months of 1862, particularly after ROBERT E. LEE took command of the Army of Northern Virginia. Lee and Davis both favored an "offensive-defensive" strategy that had several components: First, Confederate generals would try to occupy strategically advantageous positions that the enemy would be compelled to attack, generally along the Union's lines of supply or communication. Second, key defensive points

would be defended by concentrations of troops. These troops would be shifted around as needed, taking advantage of the Confederacy's shorter interior lines. Third, Confederate armies would go on the offensive whenever an opportunity presented itself. Sometimes these offensives took the form of small raids, sometimes large-scale attacks. Jefferson Davis particularly sought to make a move when he knew that it would hurt the political fortunes of the Lincoln administration and the REPUBLICAN PARTY.

The offensive-defensive strategy effectively blended the Davis administration's strategic concerns. It allowed the Confederacy to spend most of the time on the defensive and to keep important strategic points guarded. At the same time, it had enough of an offensive component that the Southern populace's thirst for dramatic victories could be satisfied. The offensive-defensive strategy governed Confederate thinking from 1862 through the end of the war. In practice, however, this strategy entailed great risks and even greater loss. Gen. Lee's invasion of Maryland in 1862 and Pennsylvania in 1863 began spectacularly and caused infinite alarm in political and military circles in WASHINGTON, D.C., but both ended in Confederate retreats marked by staggering casualties. Simply put, the South lacked resources of every kind to carry on such offensives indefinitely.

### ***Union Strategy***

At the start of the Civil War the Union faced a much more difficult task than the Confederacy. If the North could not convince the South to return to the Union voluntarily, then the Northern armies would have to conquer an incredibly large area while destroying the populace's will to fight—in other words, to subdue and occupy a hostile landscape larger than that of western Europe. In addition, like his Confederate counterpart, President ABRAHAM LINCOLN always had to keep political concerns in mind.

The Union pursued a number of strategies early in the war, all of them intended to compel the Confederacy to return to the Union rather than to conquer the South. The first strategic plan to be proposed to Lincoln came from Union general in chief Winfield Scott. Scott's proposal was almost entirely dependent on the UNION NAVY and the use of gunboats to gain control of Confederate ports and the MISSISSIPPI RIVER. This strategy would make it difficult for the Confederacy to get the materials needed to survive and wage war, ultimately forcing the South to give up on SECESSION. Scott favored this plan because it had the potential to bring the war to an end with minimal bloodshed.

The Northern public roundly ridiculed Scott's proposal. Newspapers derisively labeled it the "Anaconda Plan," after the snake that slowly squeezes its prey to death. Although Lincoln ordered the blockade that Scott suggested, he otherwise rejected the Anaconda Plan. Lin-

coln knew that the public wanted a dramatic victory and a quick end to the war, and the Anaconda Plan could provide neither. When Gen. Irvin McDowell suggested an offensive against Confederate forces at Manassas Junction, Lincoln was receptive, and he approved the plan. The result was a humiliating defeat in the First Battle of Bull Run.

In November 1861, Winfield Scott was replaced as general in chief by GEORGE BRINTON MCCLELLAN, who quickly went to work devising his own strategic plan. McClellan proposed to focus most of his attention on Virginia and on a campaign against the Confederate capital at RICHMOND. He felt that if the city could be captured, the South's will to fight would be broken. At the same time, McClellan sent a small group of troops under HENRY W. HALLECK to try and take the Mississippi River.

McClellan spent several months building the Army of the Potomac into a formidable fighting force, but he hesitated to actually move against Virginia. After many months of inaction, Lincoln grew exasperated with his general in chief and removed him from the post. McClellan was still allowed to lead the PENINSULAR CAMPAIGN, however, when it finally got underway in spring of 1862. Ultimately, it failed. Shortly thereafter, Halleck took over as general in chief.

By the time that Halleck took responsibility for formulating Union strategy in the latter part of 1862, it was clear that the Civil War was not going to end quickly. At the same time, Lincoln had determined that EMANCIPATION would be added to the Union's war aims. From this point forward, Union strategy focused on conquering the Confederacy rather than convincing the South to return to the Union with minimal damage. Halleck, working with Lincoln, devised a plan that reversed the strategic priorities of McClellan. The Mississippi River and the liberation of eastern Tennessee became the Union's primary strategic objectives. This change in emphasis, originally planned by Gen. Scott, became one of the lynchpins of Union victory, and it culminated in the July 4, 1863, surrender of Vicksburg, Mississippi, to Gen. ULYSSES S. GRANT.

Halleck remained as general in chief for nearly two years. During his tenure the Union's goals in the west were achieved, while a number of important victories were won in the east against the Army of Northern Virginia. By the end of 1863, however, the war had become stalemated and the Northern public was growing impatient. In March 1864 Halleck was replaced by Grant.

Grant introduced wholesale changes in the UNION ARMY's approach to the war. Grant wanted to eliminate the Confederacy's ability to use interior lines to move troops to where they were needed. To accomplish this, he planned simultaneous advances on two fronts. Gen. WILLIAM T. SHERMAN would lead the western armies through Georgia

and the Carolinas, while Grant himself would lead the eastern armies through Virginia. At the same time, Grant realized that the Confederacy could not be conquered unless the populace's will to fight was drained. As such, he sought to make war on the citizens of the Confederacy, destroying crops, buildings, factories, railroads, and anything else important to the Confederate war effort. Grant's other western general, PHILIP H. SHERIDAN, was ordered to destroy the rich resources of the Shenandoah Valley. Grant's notion of "total war" was one of the innovations to come out of the Civil War, and it would come to be a hallmark of warfare in the 20th century. In this manner the North finally brought its great strategic advantages in population, TRANSPORTATION, and military numbers to bear effectively against a tottering Confederacy. The Union steamroller had taken years to gain momentum and occasioned a lengthy period of stalemate but by fall 1864 was moving toward decisive victory.

Grant's vision first came to fruition during SHERMAN'S MARCH THROUGH GEORGIA. Sherman vowed to "make Georgia howl," and he delivered on the promise. Sherman's armies cut a swath of destruction through the heart of Georgia. The campaign featured the capture of Atlanta, an event that secured Lincoln's reelection to the presidency. After completing his activities in Georgia, Sherman went on to conduct a similarly devastating campaign in the Carolinas. Sheridan's Shenandoah campaign proved even more destructive to the Confederacy's survival because it robbed the South of its most productive breadbasket. Destruction of the Southern agrarian infrastructure was so extensive that crop production fell below Civil War levels until World War I, five decades hence.

The war that Grant waged in the east was not as destructive as Sherman's campaigns, but it was effective nonetheless. There the vaunted Army of the Potomac confronted the equally redoubtable Army of Northern Virginia in a series of bloody, inconclusive clashes. In little over a month's campaigning Grant had lost 50,000 men, nearly one-third of his force; Lee's casualties, while fewer, constituted a greater proportion of his smaller force. Grant remained unfazed by the carnage and invariably tried slipping around Lee's flank and inching closer to RICHMOND, VIRGINIA, the Confederate capital. Lee, having no recourse but to follow and protect the capital, inevitably surrendered the strategic initiative to the North. Hereafter, Grant chose the place and time of attacks along the extensive Petersburg-Richmond defensive line. Dwindling Confederate manpower was stretched to the breaking point. In April 1865, Lee was forced to abandon Richmond in hope of joining Confederate forces in North Carolina. Grant anticipated the maneuver and cut it off. With no other options, Lee was forced to surrender his army, effectively ending the Civil War.

Grant's strategy must be judged a success, not only for bringing an end to the war but also for bringing an end to the war when it did. The Confederacy still had troops in the field when Lee surrendered, and it could have continued to wage a conventional war or shifted to guerrilla warfare. This did not happen, however, because Grant had done more than checkmate the Confederate military. He had broken the Southern populace's will to fight, and that was the critical factor in bringing the Civil War to a close. But the price of victory was steep—360,000 Union dead and another slain 258,000 Confederates—a larger toll than U.S. losses in World War II.

## tariffs

A tariff is a tax levied on goods brought into or taken out of a country. Tariffs were the primary way in which the U.S. government raised money in the 19th century, and so the tariff received a great deal of attention from Americans in the antebellum era. Eventually, disagreements over tariff rates caused the country to become bitterly divided. Southerners came to believe that the tariff bills being passed by the government favored the North at the South's expense. At the same time, partisans on both sides of the question

eventually came to equate the federal government's ability to impose a tariff with its ability to impose controls upon the institution of SLAVERY.

The tariff debate initially flared up in the 1780s. It immediately became apparent that while the government needed some revenue, each constituency wanted someone else to foot the bill. For example, New Englanders imported large quantities of molasses from the West Indies in order to make rum. They wanted the tariff on imported molasses to be as low as possible in order to keep their costs down. The Deep South, on the other hand, needed slave labor, and congressmen from those states pressed for a low tariff on slaves brought into the country. A compromise was called for, and on July 4, 1789, Congress passed a tariff bill that set fairly modest duties of 5 percent to 10 percent on most imported goods.

While this initial tariff had enough support for it to be adopted by Congress, some of the nation's leaders were dissatisfied. In 1791 Secretary of the Treasury Alexander Hamilton presented his *Report on Manufactures* to President George Washington and to Congress, in which he argued for a high tariff. Hamilton had several reasons for this position, called protectionism: First, he believed that the United States could become an industrial power, and he wanted American industrial interests to be able to develop without interference from goods made in Britain or France. A high tariff would accomplish this by driving up the price of foreign goods. Second, Hamilton favored a strong federal government that used its power to promote American development. He hoped the government could invest tariff revenue in EDUCATIONAL institutions, roads, canals, and other sorts of internal improvements.

Hamilton's arguments were not immediately embraced by Congress, and for the rest of the 1790s, tariff rates remained low. However, the ideas presented in the *Report on Manufactures* found an audience in the next generation of congressional leaders. The most important was Whig leader Henry Clay, whose "American System" was largely a restatement of Hamilton's vision. In the first three decades of the 19th century, Clay and his allies persuaded Congress to adopt an increasingly protectionist stance, culminating in the Tariff of 1828, which set rates on some imports as high as 50 percent.

By the time the Tariff of 1828 was passed, Clay's successes with the tariff had inspired a great deal of animosity among Southern leaders, especially John C. Calhoun of South Carolina. Southerners objected to protective tariffs for a variety of reasons. They were opposed to a strong central government, which high tariff revenues helped to facilitate. Beyond that, because Southern products such as tobacco and cotton were not protected, it seemed that the North was building up its ECONOMY at the expense of the South. Most significantly, Calhoun believed that the

North was using the tariff to become the dominant player in national politics, to the exclusion of the South.

For Calhoun and his supporters, the Tariff of 1828 was the final straw. Calling it the "Tariff of Abominations," Calhoun announced that South Carolina would not abide by its terms. To support his position, Calhoun borrowed the idea of "nullification" from the writings of Thomas Jefferson. This doctrine argued that states were the supreme authority in the United States and that they had the right to ignore the dictates of the federal government or even to secede from the Union if they wished to do so. Though it was left unstated, leaders on both sides of the conflict knew that the South was threatening not only to nullify future tariffs but also any future actions taken to curtail the institution of slavery.

Tensions remained high in the nation for several years, but eventually a compromise was reached. The Tariff of 1833 began a general reduction of rates that continued for the next 30 years. When the CIVIL WAR came, the South adopted a tariff that reflected its preference for low rates. The Northern Congress, meanwhile, passed the highly protectionist Morrill Act of 1861. After the war, tariff rates continued to be high as part of the Republican program of promoting the development of manufacturing. Although the tariff ceased to be a major point of political contention after 1833, the debate over the Tariff of Abominations had set a precedent that would eventually lead to the SECESSION of South Carolina and the start of the Civil War.

## taxation

Before the CIVIL WAR the majority of Americans were not taxed directly. The budgets of both state and federal governments were small, and expenses were paid almost exclusively through duties on imported goods, sales of government-owned land, and property taxes on the wealthiest citizens. When the Civil War came, however, the financial needs of the Confederacy and Union grew to enormous dimensions, and both governments had to find ways to increase their revenues. Among these were several different taxes, the first that many Americans had ever paid.

TARIFFS are taxes on imported or exported goods. Tariffs are indirect taxes, because they are paid by the merchant

who is selling the goods and then incorporated into the sale price of the goods. Tariff revenues were the single largest source of income for the federal government prior to the Civil War and were also a major source of controversy, as most Northerners favored higher rates while most Southerners favored lower rates. When the Civil War broke out, both governments quickly moved to adopt a tariff that reflected their prewar position. In March 1861, the Northern Congress adopted a high tariff, taxing imports at an average rate of 47 percent. Rates were increased several times over the course of the war, and by the end of the war the Union government had collected a total of \$296 million in tariff revenue. In May 1861, the Confederate Congress adopted a tariff bill of its own, taxing imports at an average rate of 12 percent. Due to this modest rate, as well as poor enforcement and the small number of goods coming into the South, the Confederate tariff generated only \$3.5 million over the course of the war.

When the Confederate tariff was adopted in 1861, it was immediately apparent that it would generate very little revenue and that the Confederate government would have to act quickly to find other ways to pay its bills. Some Confederate leaders favored taxation, but the general sentiment in the Confederate Congress was against such a step, fearing that it would undermine support for the war. As the Confederacy's situation became increasingly dire, however, advocates of taxation were able to persuade the Congress to adopt a tax of one-half of 1 percent of the value of all property, including slaves. This tax, adopted on August 19, 1861, ultimately had disappointing results. First, it raised only \$17.4 million. Second, according to the bill's terms, states could pay the tax on a citizen's behalf at a discount rate. Most states did so, financing the payment through bond issues. This dried up much of the available capital in the South and undercut the bond sales of the Confederate government.

In the same month that the Confederacy adopted its property tax, the Union Congress adopted an income tax, the first in American history. The tax was fairly modest, requiring a payment of 3 percent on incomes more than \$800. A year later, a much more comprehensive tax bill was passed. The Internal Revenue Act, adopted on July 1, 1862, levied a rate of 3 percent on incomes between \$600 and \$10,000 and a rate of 5 percent on incomes more than \$10,000 (eventually increased to 5 percent and 10 percent, respectively, in 1864). It also established sales taxes on a broad variety of goods: yachts, newspaper advertisements, medicines, billiard tables, liquor, and tobacco, to name a few. In order to make certain that these sales and income taxes were properly collected, the Internal Revenue Act created a new government agency, the Bureau of Internal Revenue. The Union's income tax had two beneficial effects: It raised roughly \$300 million for the Union war effort, and it helped to keep inflation in check.

Eventually, several financial difficulties in the South compelled the Confederate Congress to adopt an income tax of its own. The Confederate tax, adopted on April 24, 1863, established a graduated tax ranging from 1 percent on incomes between \$1,000 and \$1,500 up to 15 percent on incomes of \$10,000 or more. The measure also included a sort of combination property/income tax for farmers called the "tax-in-kind." The tax-in-kind allowed farmers to set aside certain proscribed amounts of their crops for subsistence and then required them to give 10 percent of the remainder to the government. The Confederate income tax and tax-in-kind were almost unqualified failures. In 1863 inflation was wildly out of control, largely due to the Confederate government having printed too much paper money. By early 1864, it took \$46 to buy what had cost \$1 before the war. As such, the roughly \$140 million collected in income tax and tax-in-kind between 1863 and 1865 had very little purchasing power. Meanwhile, the taxes generated all sorts of discontent on the HOMEFRONT. Farmers were especially angry about the tax-in-kind, because the system for collecting the crops owed to the government was filled with incompetence and corruption. Eventually, the Confederate Congress passed a series of bills modifying the income tax and tax-in-kind in order to make them more acceptable, but the changes came too late to be of much use.

Ultimately, taxation was much more effective in the wealthy North than in the cash-strapped South. The \$600 million raised by the Union government covered more than 40 percent of the cost of the Union's war effort, while the \$145 million gathered by the Confederate government paid less than 7 percent of its expenses. After the war, all of the national taxes except the tariff were repealed. However, a precedent had been set, and it would not be long before permanent income, sales, and property taxes would be established.

**Taylor, Susie King** (1848–1912) *educator, nurse, author*

Teacher, nurse, and author, Susie King Taylor was born a slave in Georgia on August 5, 1848. Her parents, Hagar Ann Reed and Raymond Baker, were both highly regarded by their owners and given privileges that benefited their daughter's future. At age seven, Susie was sent to live

with her grandmother in Savannah, where she learned to sew and, more important, to read and write. An avid student, Susie continued her studies up to the outbreak of the CIVIL WAR in 1861. Passionate in her conviction that SLAVERY was about to end, the 14-year-old fled Savannah for freedom with her uncle's family and found refuge on St. Simon's Island off the Georgia coast and under Union control.

Susie joined the small but dedicated contingent of Northern missionaries, teachers, and abolitionist soldiers who were part of an exciting experiment to educate and prepare the freedpeople for their expected transition to freedom. Located on several of the sea islands off the coast of South Carolina and Georgia, this "rehearsal for reconstruction" anticipated many of the challenges and disappointments that lay in store for ex-slaves. Susie was quickly hired as a schoolteacher, and she taught during the day for children and at night for the adults. Exhausted but exhilarated by her work, Susie did not want to leave in the fall of 1862 when, for safety reasons, the Federals ordered that island civilians be removed to Camp Saxton in Beaufort, South Carolina.

In Beaufort, she worked as a laundress for Company E of the famous First South Carolina Volunteers (later the 33rd U.S. Colored Infantry). The unit was the first authorized AFRICAN-AMERICAN REGIMENT of the UNION ARMY. She met and married one of the regiment's soldiers, Sgt. Edward King, sometime in 1862. Proud to be a part of an African-American unit fighting for freedom and equality, she remained with the regiment throughout the war. She served as a laundress and cook, but her most important roles were those of nurse and teacher. The regiment's soldiers, which included a number of her uncles and cousins, cherished their teenaged "angel of mercy," and she returned their devotion in full. Susie King never received any wages for her work, nor was she eligible for a pension in later years. She did receive a widow's pension of \$100 after her husband's death.

After the war she and her husband settled in Savannah, where she opened a school for African-American children. Due to the extreme racial prejudice that existed in the country at this time, Edward King could not make a living as a carpenter, but he found a job as a longshoreman. In September 1866 he was killed in a work-related accident, leaving a pregnant wife. After the birth of their son, Susie King tried unsuccessfully to continue her work in EDUCATION. After a couple of failed attempts to run schools, she took a job as a laundress and cook for wealthy couple. In the early 1870s King determined that she wished to live in Boston, Massachusetts, where she moved to in 1874. A few years later she remarried to Russell B. Taylor.

Susie King Taylor spent the last two decades of her life working for VETERANS' rights and benefits. In the 1880s

she helped to found the Corps 67 of the Boston branch of the Women's Relief Corps, the auxiliary to the Grand Army of the Republic. The GAR was a political and social organization for ex-Civil War soldiers and had many African-American units. Taylor, who worked as treasurer and in 1893 was president of the corps, agitated for the fair treatment of African-American veterans. Tragedy struck Taylor again in 1898 when her son died in Shreveport, Louisiana.

Disappointed by the lack of progress made by her people since the Civil War, Taylor blamed the racism of the white people in the United States. In 1902 Taylor published her autobiography, which focused on her war experiences. Susie King Taylor died in Boston on October 6, 1912.

## telegraph

The CIVIL WAR was the first military conflict in which long-range communications played a major role. The telegraph was developed and refined by a series of inventors during the first few decades of the 19th century. The most well known is Samuel F. B. Morse, whose main contribution was his development of Morse code in 1841. Morse code uses a series of long and short tones, called dots and dashes, to communicate messages one letter at a time. Morse also played an important role in arranging the financing to build a national telegraphic infrastructure. Thanks to his efforts, and to those of other businessmen, the United States had many thousands of miles of telegraph wire when the Civil War started, 90 percent of it in the North.

Given the Union's advantage, telegraphy played a critical role in its war effort. Before the technology could be fully utilized, however, a number of logistical issues had to be overcome. The most significant was the establishment of a bureaucracy to operate the North's telegraphs. Initially, the American Telegraph Company, a private business concern, was placed in charge of the Union's telegraphy operations. Many leaders on the Union side were uncomfortable with this arrangement, however, and in October 1861 the government stepped in and formed the U.S. Military Telegraph Service, under the command of Col. Anson Stager. Although Stager and a handful of his subordinates were commissioned officers, most of the Telegraphic Service's 1,300 employees were civilians, because Secretary of War EDWIN M. STANTON did not want them to be subject to the orders of field officers. The Telegraphic Service worked with the Army Signal Corps to maximize the value of the North's telegraphic system, and ultimately they enjoyed a great deal of success. More than 1,000 miles of telegraph

lines were laid, and more than 6 million messages were transmitted over Union telegraphs during the course of the war.

Security was another concern with which Northern authorities had to contend. Telegraphs can be easily tapped by enemy spies or by enterprising reporters looking for items for the newspaper. One solution to this problem was censorship, and Telegraphic Service employees had the authority to censor anything they deemed problematic. Another, more effective solution was encoding messages, a technique utilized by both the Confederacy and the Union. By the middle of the war, virtually all messages dealing with military matters were encoded in one way or another.

Like the Union, the Confederacy depended on telegraphy during the Civil War. The Confederates were not able to use the technology as much as they would have liked, however, due to lack of materials. It proved difficult to keep all of the South's telegraph lines in working order, and it was almost an impossibility to provide telegraphic services at the actual sites of battles, a privilege enjoyed throughout the war by Union commanders. Dr. William S. Morris, placed in charge of the South's telegraph lines, did his best to be innovative despite short supplies and the

fact that the Confederacy never established a bureaucratic counterpart to the Union's Military Telegraphic Service. Morris did an effective job, keeping information flowing at a high rate until the final months of the war.

In addition to the critical role telegraphy played in military operations, telegraphs were also important to newspapers. People on both the HOMEFRONT and the war front hungered for news of the war, and journalists were happy to comply. Before the Civil War, news stories would take a week to be printed. With the telegraph, the news could be communicated instantly and printed within a day or two. Civilians were well informed about war-related events. By the end of the Civil War, newspapers would have a permanent role in shaping public opinion.

Telegraphic communication would continue to be an important tool in the postwar era. Business leaders increasingly embraced the technology as a means of keeping up to date on the prices of stocks and commodities. By the 1870s more than 80 percent of telegrams dealt with business matters. Meanwhile, military leaders across the world took heed of the lessons taught by the U.S. experience in the Civil War. By 1875 every major European military power had established a telegraphic corps. The telegraph also became the basis for Alexander Graham Bell's telephone, which began to supplant the telegraph in the 1880s and 1890s.

## theater

The theater was an important cultural institution in cities, towns, and frontier settlements throughout the 19th century. Performances, plays, actors, and the theaters themselves were all elements of the vibrant public and participatory culture that existed in the United States. At a time when politics was overtly theatrical, the theater was often a venue for political acts. Nowhere was this fact demonstrated more dramatically than in the ASSASSINATION OF ABRAHAM LINCOLN in 1865. A lifelong fan of the theater, Lincoln was attending a play at Ford's Theatre in WASHINGTON, D.C., when he was shot and killed by the famously handsome and talented actor JOHN WILKES BOOTH of Maryland.

From the 1790s to the 1870s the theater offered a fairly democratic setting for audiences of all classes and economic groups to enjoy plays, opera, dancing, minstrel shows, and magicians, sometimes all appearing together on the same stage. Whether attending a play in the impressive St. Charles Theater in New Orleans, NEW YORK CITY's vast Bowery Theater, or one of the many more modest establishments in Louisville, Cincinnati, Denver, Chicago, or Natchez, the American patron of the arts could generally expect performances of high quality received by an enthusiastic audience.

Most theaters were divided into separate sections to address the needs of different social classes. The boxes (in front) were reserved for the upper class, the pit for the middle class, the gallery for the working class, and sometimes, way in the back, special rows for African Americans. In some theaters a section called "the third tier" was where prostitutes met their clients. American audiences were known for their boisterous behavior, often indicating displeasure with poor acting performances by shouting and booing, or even throwing eggs and vegetables at the stage. One newspaper review described the unlucky actor who drew an angry response from the audience: "Cabbages, carrots, pumpkins, potatoes, a wealth of vegetables, a sack of flour, and one of soot, and a dead goose, with other articles, simultaneously fell upon the stage."

Americans reserved their most passionate approval and disapproval for the plays of the English playwright William Shakespeare. Shakespeare was widely read in the United States, where his melodramatic tragedies and comedies seemed to strike a powerful chord with many citizens. *Hamlet* and *Macbeth* were two of the most popular of his plays and were performed in countless venues across the country. In part, Shakespeare's stage dominance can be attributed to the droves of English actors who came to the United States to make their fortunes. Edmund Kean, Charles and Fanny Kemble, William Charles Macready, and Ellen Tree all attracted great crowds to their performances.

One of the most brilliant and famous of English actors that came to America's shores was Junius Brutus Booth. Unlike most of his peers, Booth became a citizen. He married and raised his large family on a farm in Maryland. Three of his sons, Junius Jr., Edwin, and John Wilkes, followed in his footsteps. In stark contrast to his Confederate-loving brother, Edwin Booth was a staunch supporter of the Union and, after the war, the greatest actor of his generation. Booth and fellow Shakespearean actor Edwin Forrest also represented the emergence of an American style of acting that emphasized a vigorous style over the more genteel English approach. In a very real sense, actors were instrumental in creating an American identity based on a more informal, democratic, and personal method of stage performance.

The engine that drove the theater during the decades of the middle to late 19th century was commercialization. In an effort to expand the audience base, theater owners sought to appeal to the growing middle class, especially women and families. Laura Keane, an actress who became a stage manager in New York, was instrumental in bringing an influx of middle-class women theatergoers to view the sentimental plays that resonated with their lives. Increasingly, theaters presented different kinds of plays to different types of audiences: minstrel shows, vaudeville, opera, burlesque, ethnic and racial comedies, serious plays, and melodrama. Two of the most profitable and successful plays were about SLAVERY: HARRIET BEECHER STOWE's *Uncle Tom's Cabin* and Dion Boucicault's *The Octoroon*. Specialized touring companies spread out across the country, drawing huge crowds and filling the wallets of their producers. Touring was facilitated by urbanization and far-reaching and sophisticated TRANSPORTATION system. By the late 1870s the theater was flourishing as never before, with New York City's Broadway as the centerpiece of both highbrow and lowbrow American culture.

Levine, *Highbrow/Lowbrow: The Emergence of Cultural Hierarchy in America* (Cambridge, Mass.: Harvard University Press, 1990); Bruce A. McConachie, *Melodramatic Formations: American Theatre and Society, 1820–1870* (Iowa City: University of Iowa Press, 1992).

### Thirteenth Amendment (December 18, 1865)

The Thirteenth Amendment officially ended SLAVERY in the United States, completing a revolution in America. The amendment to the U.S. Constitution was passed by Congress on January 31, 1865, and ratified on December 18, 1865. Its text reads:

SEC. 1. Neither slavery nor involuntary servitude, except as a punishment for crime whereof the party shall have been duly convicted, shall exist within the United States, or anyplace subject to their jurisdiction.

SEC. 2. Congress shall have power to enforce this article by appropriate legislation.

The march toward freedom that the Thirteenth Amendment capped began with runaway and CONTRABAND slaves that clogged Union lines. Their actions forced military and political leaders to confront the future of the institution of slavery. President ABRAHAM LINCOLN mortally wounded slavery in the United States with his EMANCIPATION PROCLAMATION and by prosecuting the CIVIL

WAR until the Confederacy was destroyed. The course of the war evolved from an effort to preserve the Union to the radical undertaking of slave EMANCIPATION. As early as the 1864 election, Lincoln endorsed an amendment to abolish slavery.

Most Republicans assumed that with the ABOLITION of slavery, African Americans in the South would receive the same treatment as white people. This belief was due to an understanding that there was no middle ground between slave and free status. However, the BLACK CODES disabused congressional Republicans of the notion of equal treatment in the South. An incredulous Northern public felt that the sacrifices of the war did not warrant a return to slavery, as the Black Codes implied. Spurred on by white Southern intransigence, RADICAL REPUBLICANS pushed for a more specific and intensive federal effort to protect civil rights.

A key, and often overlooked, component of the Thirteenth Amendment is the enforcement clause, the first in the Constitution, which recognized Congress's power to define and protect freedom. Some Southern states, before Congressional RECONSTRUCTION, rejected the amendment, mainly because of the enforcement clause. It was viewed as an unwarranted expansion of federal power that nationalized racial problems.

Though the Thirteenth Amendment abolished slavery, it was unclear what freedom meant. In many ways, the ratification of the amendment marked the beginning of a long struggle over the implications of freedom. WILLIAM LLOYD GARRISON, the prominent abolitionist, considered his work complete after ratification. Others believed that formal, legal removal of slavery from the American system did not go far enough. "What is freedom?" argued Republican congressman James A. Garfield, "Is it bare privilege of not being chained? If this is all, then freedom is a bitter mockery, a cruel delusion." FREDERICK DOUGLASS, an articulate black abolitionist, challenged Republican leaders to go beyond a narrow conception of freedom. "Slavery is not abolished," said Douglass, "until the black man has the ballot."

The debate over freedom became a debate over the role of government in a democratic society. On the one hand, some Republicans and nearly all of the Democrats believed that it was up to the freedmen to make a life for themselves like white citizens. On the other side, Radical Republicans viewed emancipation as a unique event that required the federal government to take positive action to help the freedmen transition from slavery to freedom. The Black Codes in no small way pushed the REPUBLICAN PARTY into embracing federal intervention to help ex-slaves. Congress passed the FREEDMEN'S BUREAU Bill, the CIVIL RIGHTS ACT OF 1866, and the FOURTEENTH AMENDMENT. The intent of the Civil Rights Act was to

define what freedom meant for the former slaves. The bill was designed, said one congressman, "to secure to a poor weak class of laborers the right to make contracts for their labor, the power to enforce the payment of wages, and the means of holding and enjoying the proceeds of their toil."

Though one of the requirements under President ANDREW JOHNSON's plan for Reconstruction was the ratification of the Thirteenth Amendment, he took a narrow view of it, arguing that the amendment only ended formal slavery. President Johnson also vetoed both the Freedmen's Bureau Bill and the Civil Rights Act and condemned the proposed Fourteenth Amendment. Congress overrode the vetoes, a first for major pieces of legislation in U.S. history, and the Fourteenth Amendment was ratified two years later. The political battles over the meaning of freedom marked a major change in federal Reconstruction policy, with Radical Republicans assuming control over Southern Reconstruction. In the ensuing years, the FIFTEENTH AMENDMENT was ratified, and Congress passed the CIVIL RIGHTS ACT OF 1875, both efforts giving meaning to the Thirteenth Amendment.

### **Thomas, George H.** (1816–1870) *Union general*

A CIVIL WAR general nicknamed "the Rock of Chickamauga" for his valiant performance in that battle, George Henry Thomas was born on July 31, 1816, in Southampton County, Virginia. After graduating from the UNITED STATES MILITARY ACADEMY AT WEST POINT in 1840, Thomas served in the Mexican-American War of 1846 and later was appointed an artillery and cavalry instructor at his old school. When the war broke out Thomas was on military duty in Texas. Unlike most other Virginia-born West Pointers, Thomas remained with the Union. Throughout the war, however, questions of loyalty would cast a shadow on his career. Nonetheless, he was promoted to brigadier general of volunteers in 1861. He saw early action in Virginia's Shenandoah Valley and in Kentucky, where he was made the commander of the 1st Division, Army of the Ohio.

Thomas led his division, and then corps, through several notable battles in the western theater in 1862 and 1863, including Shiloh, Corinth, Perryville, Murfreesboro, Tullahoma, Chickamauga, and Chattanooga. His leadership in battle was slow, careful, deliberate, and unusually effective. Thomas possessed a modest personality that

made him one of the more underrated generals of the war. Maj. Gen. Thomas was offered, but refused, the command of the Army of the Ohio, believing that his friend DON C. BUELL had more experience. After faithfully serving Buell, Thomas was transferred to the Army of the Cumberland under WILLIAM S. ROSECRANS. Thomas's outstanding defense in the BATTLE OF CHICKAMAUGA, Georgia, literally saved the UNION ARMY from certain destruction and allowed an orderly retreat back to Tennessee.

After Rosecrans was relieved of command, Thomas was appointed to head the Army of the Cumberland. He led his army to victory at Missionary Ridge at the BATTLE OF CHATTANOOGA in November 1863 and accompanied Gen. WILLIAM T. SHERMAN in the ATLANTA CAMPAIGN. In May 1864, Thomas's army fought at Kennesaw Mountain and Peachtree Creek. While Sherman marched through Georgia, Thomas was sent to defend Nashville, Tennessee, against the threat of JOHN BELL HOOD's army. In the two Battles of Franklin and Nashville in December 1864, Thomas smashed the Confederates, earning the grateful thanks of President ABRAHAM LINCOLN and the nation.

Thomas remained with the regular army after the war, and when he died in San Francisco on March 28, 1870, he was the commander of the Military Division of the Pacific.

**Toombs, Robert A.** (1810–1885) *politician, Confederate general*

Robert Augustus Toombs was a Confederate secretary of state and general. Toombs was born in Wilkes City, Georgia, on July 2, 1810. A son of wealthy planters, he was educated at Union College in Schenectady, New York. In 1837 he was elected to the Georgia state legislature. Six years later he successfully stood for a seat in the U.S. House of Representatives as a Whig, and in 1852 he was appointed to the U.S. Senate as a moderate Democrat. In this capacity Toombs frequently allied himself with Constitutional Unionists such as Howell Cobb and ALEXANDER H. STEPHENS.

When Republicans rejected the CRITTENDEN COMPROMISE in January 1861, Toombs resigned his seat and joined the Confederacy. He was one of 10 Georgians present at the provisional CONFEDERATE CONGRESS in Montgomery, Alabama, where he fully expected to be appointed president; he was bitterly disappointed when the laurels went to JEFFERSON DAVIS instead. As a sop to

his wounded pride, Davis appointed him secretary of state, but Toombs functioned only five months before resigning. He then served as a brigadier general in the 1862 PENINSULAR CAMPAIGN, though he argued heatedly with his superior, Gen. DANIEL H. HILL, and nearly dueled with him. Toombs performed heroically at the BATTLE OF ANTIETAM in September 1862, where he was wounded, then resigned from the service when his demands for promotion went unfulfilled. The army was generally relieved at his departure.

Toombs returned to Georgia, where, in concert with Governor JOSEPH E. BROWN and Vice President Stephens, he vociferously criticized the Davis administration for circumventing STATES' RIGHTS. He returned to military service during Gen. WILLIAM T. SHERMAN's invasion of Georgia, but he saw no fighting. After the war he briefly fled the country. Toombs returned home in 1867 but refused to apply for a pardon, and he never held public office again. He died in Washington, Georgia, on December 15, 1885, an unreconstructed rebel to the end.

—John C. Fredriksen

**Tourgée, Albion W.** (1838–1905) *author, politician*

As a lawyer, RECONSTRUCTION-era federal judge, Republican activist, and novelist, Albion Winegar Tourgée was one of the foremost champions of African-American civil rights in the 19th century. Tourgée was born in Williamsfield, Ohio, and was trained as a lawyer at the University of Rochester. During the CIVIL WAR he served as a Union officer, spending six months in a Confederate prison. Tourgée moved to Greensboro, North Carolina, following the war, and there he became active in REPUBLICAN PARTY politics and embarked on a career as a novelist.

As a judge of the North Carolina state superior court in the early 1870s, Tourgée became particularly outraged by the KU KLUX KLAN attacks against former slaves. In an 1870 letter to the *New York Times*, Tourgée described in detail Klan brutality over the previous 10 months: “four thousand or five thousand houses broken open. . . . Seven or eight hundred persons beaten or otherwise maltreated.” The Republican Party, Tourgée concluded, was simply unwilling to act. “The government sleeps,” Tourgée told the *Times*; “I am ashamed of a party which . . . has not the nerve or decision enough” to defend former slaves. Tourgée's novels written during this period reflected his disillusionment and bitterness. In *A Fool's Errand* (1879), Tourgée acidly recalled his own career as a North Carolina judge. In *Invisible Empire* (1880), Tourgée damned

the “prejudice-blinded multitudes who made the Policy of Repression effectual.”

During the 1890s Tourgée’s activism intensified as Southern segregation hardened. In 1891 Tourgée helped establish the National Citizens Rights Association, devoted to securing civil rights and banning racially motivated lynchings. In 1896 he appeared before the Supreme Court on behalf of Homer J. Plessy in the landmark case *Plessy v. Ferguson*. Because the Constitution is color-blind, Tourgée argued, racial segregation is unconstitutional. The 8-1 majority rejected Tourgée’s argument, although in 1954 a unanimous court would affirm it in *Brown v. Topeka Board of Education*.

In the years after the *Plessy* decision, Theodore Roosevelt appointed Tourgée to several European diplomatic posts. At the last of these postings, in France, Tourgée died in 1905.

## transportation

The 19th century saw a revolution in transportation. From road building to RAILROAD building, from canal to steamboat construction, new thoroughfares and vehicle forms affected all Americans. The financing of roadways became one of the earliest issues of conflict between the federal and state governments. Sectional politics played a role in whether or not an area would have a federal or state built roadway. In most cases the federal government stepped in when a planned road crossed state lines. Such was the case of the National Road started in Virginia in 1808. When it was completed, this road, built through the Cumberland Gap in the Appalachian Mountains, eventually reached as far west as Illinois.

The National Road became a major route that settlers followed from the East Coast states to new western settlements. The solidity of the road, built from gravel on a stone base, allowed users a better chance at good road conditions. Other commonly used, but not constructed, roads were often muddy and impassable. Many states constructed roadways during the first half of the 19th century following older transportation routes and new paths leading from market to marketplace or from the site of raw materials to the site of production.

The booming ECONOMY of the United States also encouraged the building of canals. In 1816 President James Madison called for the federal government to sponsor a network of canals linked to a network of roads. He believed

that economic growth would follow such a transportation web. New York governor DeWitt Clinton jumped on the idea when he proposed the construction of America’s famous Erie Canal. In 1825, after years of backbreaking work, largely by Irish immigrants, New York’s state-long canal opened. The waterway stretched 364 miles and connected NEW YORK CITY with the Great Lakes region. A technological masterpiece, the Erie Canal shifted the eyes of New York merchants away from European markets and toward the interior of the United States.

The ties created between the Northeast and Midwest also marked a shift in the focus of transportation routes. As did the National Road, the Erie Canal moved goods and people westward rather than to the south. This directional change differed from the previous North-South routes that had driven American communication and market patterns. This shift had lasting implications for national politics, local economies, and future settlement. The Southern areas of the United States became more isolated from the economically powerful Northern manufacturing centers. More important, the lack of transportation infrastructures hurt the Confederacy during the CIVIL WAR.

Especially used on the western rivers, steamboats revolutionized water transportation during the antebellum period. Robert Fulton first demonstrated the capabilities of steamboat travel in 1807. By the 1830s the city of Cincinnati, Ohio, had grown to be the leading builder of new steamboats, which enabled people and goods to be easily transported both up- and downriver. Prior to the invention of steam power, boats had traveled downriver with the current, but they did not return against it. Oftentimes sailors sold their boats for scrap at their final port and returned upriver on land. After 1807, though, transportation on the Ohio, Missouri, and MISSISSIPPI RIVERS became a two-way process. People moved goods north as well as south. River cities grew in economic and political importance as more and more money, goods, and people moved through them on a regular basis. Besides Cincinnati and already established New Orleans, St. Louis became an influential and bustling hub in America’s transportation system.

Steamboats drastically changed the landscape of the American river. Besides their use as vehicles, the boats shattered the quiet of the areas they passed and polluted the air of ports with their exhaust. Because of the unpredictable nature of steam and the relative youth of the technology, many deadly and expensive accidents regularly occurred. Such accidents, along with the widespread and dangerous practice of racing, moved the government to create some of its first federal transportation regulations. Congress passed the Steamboat Act in 1838 and strengthened it in 1852. The act established guidelines for the construction and maintenance of the riverboats in order to prevent accidents and the loss of life and property.

COMPLETION OF THE PACIFIC RAILROAD—MEETING OF LOCOMOTIVES OF THE UNION AND CENTRAL PACIFIC LINES: THE ENGINEERS SHAKE HANDS.  
[PHOTOGRAPHED BY SAVAGE & OTTINGER, SALT LAKE CITY.]

Engraving of the meeting of the Union Pacific and Central Pacific Railway lines at the completion of the Pacific railroad, 1869 (*Library of Congress*)

In response to the growth of water travel and encouraged by the successes they saw in Britain, American entrepreneurs began building railroads during the first half of the 19th century. Cities such as Baltimore, Maryland, saw the possibility to compete with New York by constructing a railroad. Such a transportation system would not be affected by the same bad-weather problems as canals. Builders of the Baltimore and Ohio (B&O) railroad hoped that merchants would choose to move goods by rail, especially in the winter when alternative canals froze over. People also quickly realized the speed with which new railroads could transport passengers and goods to new markets. In spite of kinks in the system, such as nonmatching rail gauge, railroads quickly spread across the eastern (and especially northeastern) portion of the United States.

In 1862 Congress chartered a federal corporation to build a transcontinental railroad. The congressional act created the Union Pacific and Central Pacific Railways to begin construction of a railroad connecting the eastern portion of the United States with the Pacific coast. Both companies built their railroads on lands given to them by the federal government. On May 10, 1869, the two lines met at Promontory Point, Utah. Mostly Chinese immigrant men had labored from Sacramento, California, across the Sierra Nevada mountain range to build 689 miles of the Central Pacific Railroad. In Utah they met the end of 1,086 miles of the Union Pacific Railroad, which Irish immigrants, newly freed African Americans, and Civil War VETERANS had labored to build.

This new transportation route ushered in large-scale migration to the West. Whereas prior roads and routes had

followed settlement, the sheer magnitude and power of the railroad preceded and even predetermined settlement patterns. Because the federal government gave chartered railroad companies lands along their railways, those companies in turn sponsored migration to western lands. The enormous amount of capital needed to build and maintain a railroad also caused the political and economic growth of the West. As a form of transportation, railroads not only moved passengers and goods but also the power center of the United States. Along with shifting political power to the West, the railroad industry strengthened connections between industry and the federal government. Federal troops breaking up the Great Strike of 1877 highlighted this partnership.

Besides a revolution in national transportation patterns, the 19th century also saw a change in local transportation. Urban centers such as San Francisco, Chicago, and New Orleans developed systems of cable and streetcars in the 1870s and 1880s. These urban transportation networks moved a growing number of people involved in emerging industrial and service jobs. In 1897 the nation's first subway system opened in Boston, a mere five years before New York's immense underground route started. Transportation in the 1900s followed, created, and spurred social, economic, and political changes.

### **Tredegar Iron Works**

Tredegar Iron Works, located in RICHMOND, VIRGINIA, was the only first-class iron foundry and rolling mill in the Confederacy at the outbreak of the CIVIL WAR. The only manufacturing plant in the South capable of producing iron plating, heavy artillery, and major ordnance, it played a critical role in providing the materiel needed for the Confederate war effort, especially in the early years of the war.

Tredegar was founded in 1837 by Francis B. Deane, who was a poor administrator. Within a decade, ownership of the plant had passed to the hands of West Point graduate Joseph Reid Anderson, who proved to be a more able manager than Deane, and by 1850 Tredegar was thriving. When the Civil War broke out, Anderson immediately ceased doing business with his Northern customers, and he offered to lease the plant to the Confederate government. The Davis administration refused and instead signed several long-term contracts for Tredegar's services. For the

first two years of the war, Tredegar supplied a substantial portion of the Confederacy's large guns and major ordnance. The iron plating used on the first of the Confederacy's IRONCLADS, the *Virginia*, was created at Tredegar. The plant also worked on experimental projects, including torpedoes and a submarine.

As the war went on, Tredegar was beset by a series of problems. The raw materials that the plant needed were in short supply, even at the outset of the war. The problem became much worse as the Confederate government opened its own iron foundries in other parts of the South. As a result, Tredegar rarely operated at anything more than one-third of its capacity after 1861. The plant also suffered from cash-flow problems, as payment for services was often late or not received at all. In fact, to keep afloat financially, Anderson was compelled to engage in blockade running. Labor shortages also had a negative impact on Tredegar's operations, as an increasingly large portion of the plant's labor force was compelled to take up arms for the Confederacy. By the end of the war, Tredegar had lost its reputation for quality, and Confederate chief of ordnance JOSIAH GORGAS openly complained of his dissatisfaction with the work being done there.

Once the war was over, Anderson moved quickly to keep Tredegar in business. He reestablished his contacts in the North, and he met privately with President ANDREW JOHNSON to arrange a pardon for himself and his partners. Tredegar's time as a dominant player in Southern industry was over, however. Steel was becoming America's metal of choice, and Tredegar did not have the money to convert its equipment to steel production, particularly after taking a huge financial loss during the panic of 1873. Tredegar scaled back its operations, finally closing its doors in 1958.

### **Truth, Sojourner** (ca. 1797–1883) *abolitionist, women's rights activist*

Feminist, lecturer, and religious mystic, Sojourner Truth was born a slave in Ulster County, New York, around 1797. Her birth name was Isabella Baumfree, and she was the 11th of her parents' 12 children. She never knew most of her siblings, who had been sold and scattered. As a young woman, Isabella entered into a respectful but not loving marriage with another slave, Thomas, and bore five children, two of whom were sold away from her.

In 1826, a year before the state of New York outlawed SLAVERY, Isabella fled her owner and lived as a domestic in the home of the devout Van Wegenen family, taking their name. Here, Isabella embarked on her own mystical and religious journey following an epiphany in which Jesus revealed himself to her. Shortly thereafter, she left for NEW YORK CITY, although her children remained behind, indentured by law. Isabella took up residence with Elijah Pierson and his wife, Sarah, evangelists committed to saving prostitutes. Around 1833 Isabella and the Piersons joined a fringe religious group called Kingdom of Matthias, run by a fanatic named Robert Matthews. The sect lived communally near Ossining, New York, until it disbanded two or three years later following unfounded accusations of murder in the death of Pierson.

After the dissolution of the Matthias sect, Isabella returned to New York City and worked as a domestic. In 1843, unable to ignore her religious calling, she traveled east on foot to Long Island and Connecticut. Renaming herself Sojourner Truth, she preached her own doctrine of love, brotherhood, and temperance to anyone who would listen. Isabella was a powerful and, at six feet tall, imposing speaker.

In fall 1843 Truth landed in Northampton, Massachusetts, and found a place in a utopian commune dedicated to ABOLITION and women's rights, causes she adopted as her life's work. While there she met abolitionists WILLIAM LLOYD GARRISON and FREDERICK DOUGLASS and became acquainted with feminist Olive Gilbert. Gilbert was inspired by Truth's story and was well aware of the passions it would generate among antislavery advocates. Because Truth was illiterate, Gilbert decided to write Truth's biography herself, and *The Narrative of Sojourner Truth* was published in 1850. The book covers Truth's early life in slavery and the triumph of her religious beliefs over her bondage. A publishing success, the book made Truth nationally famous.

In 1851 Sojourner Truth attended the Akron, Ohio, women's convention. In a powerful address to the convention, Truth argued that women were the equals of men. Baring her muscular shoulder for convention members to see, she said:

I have ploughed, and planted, and gathered into barns,  
and no man could head me! And a'n't I a woman? I  
could work as much and eat as much as a man—when  
I could get it—and bear de lash as well! And a'n't I a  
woman? I have borne thirteen children, and seen 'em  
mos' all sold off to slavery, and when I cried out with  
my mother's grief, none but Jesus heard me! And a'n't  
I a woman?

Truth believed that her oppression stemmed as much from her gender as from her race. Thus, to her way of thinking,

both obstacles had to be overcome in order for African-American women to achieve freedom.

Truth's speech was very well received in many circles, particularly among feminists. Her fame established, Truth traveled widely, astonishing and electrifying audiences, singing, preaching, and advocating equality: "We'll have our rights, see if we don't; and you can't stop us from them; see if you can." In 1863 a pair of highly flattering essays by Frances Dana Gage and HARRIET BEECHER STOWE were published, and they transformed Truth into a monumental, almost mythical persona.

During the CIVIL WAR Truth raised money for volunteer AFRICAN-AMERICAN REGIMENTS. She frequently visited army camps in the North, earning money through lecturing and selling her autobiography. In 1864 ABRAHAM LINCOLN received Truth as a visitor at the White House. She remained in WASHINGTON, D.C., for a year, joining the National Freedmen's Relief Association to counsel newly freed people. She was also involved in a well-publicized lawsuit against a conductor who manhandled and injured her while throwing her off a streetcar.

Sojourner Truth (Library of Congress)

After the war was over Truth was active in finding jobs for individuals who had been displaced by the war. She advocated a plan of voluntary relocation of freedmen to Kansas to work their own farms on land provided by the government, but the plan came to nothing. She also opposed the FIFTEENTH AMENDMENT granting freedmen the vote on the grounds that it excluded women. In 1875 Truth moved to a commune among spiritualist Quakers (SOCIETY OF FRIENDS) outside of Battle Creek, Michigan. She remained there for the rest of her life, dying on November 26, 1883.

**Tubman, Harriet** (ca. 1821–1913) *abolitionist, Union spy*

Liberator of slaves, spy, commando, nurse, and activist, Harriet Tubman was born a slave on a PLANTATION in Dorchester County, Maryland, around 1821. Tubman was one of Benjamin Ross and Harriet Greene's 11 children. Named Araminta at birth, Harriet worked as a domestic servant, but her housework did not satisfy her owners, who often complained about her. At the age of 13, Harriet was struck in the head with a heavy object by the plantation overseer and suffered a fractured skull. As a result of this injury, she suffered from periodic seizures for the rest of her life.

In 1844 Harriet married a free black man named John Tubman. Soon after, she learned that the financial troubles of her white owners might mean that members of her family would be forcibly separated. Tubman responded by fleeing bondage for PHILADELPHIA, PENNSYLVANIA, a Quaker (SOCIETY OF FRIENDS) stronghold where abolitionists were often willing to help escaped slaves. John Tubman did not join Harriet in Philadelphia, nor did he help her to rescue her family, which she did in stages over the next few years. Within two years of her flight Maryland plantation owners were offering \$40,000 for her capture. In the next 10 years Tubman helped almost 300 slaves reach freedom in the North, using the UNDERGROUND RAILROAD. John Tubman remarried and remained in Maryland.

When the CIVIL WAR began, Tubman committed herself to assist the Union effort. She believed strongly in both the value of a Union victory and the destruction of SLAVERY. Beginning in 1862, she traveled to various Southern states, including South Carolina, to spy and scout for the Union. Her work was made easier by a travel pass that Maj. Gen.

Harriet Tubman (Hulton/Archive)

David Hunter, commander of the Department of the South, provided for her. Harriet's experience with slavery and her efforts to free enslaved people during the prewar period made her an ideal envoy to plantation slaves, who welcomed her and gave her shelter and supplies. At times Tubman served as a nurse for freedmen who had fled North.

Following the war, Tubman continued her activism for the freedpeople while caring for her elderly parents and a number of orphans. Her Harriet Tubman Home for Indigent Aged Negroes was founded in the postwar period and continued after her death. In spite of Tubman's ceaseless efforts for the Union, it took her nearly three decades of struggle to obtain a pension of \$20 a month. This was the same amount given to most Civil War army NURSES, but it did nothing to recognize her many other wartime activities.

Tubman remained active in politics after the war as well. She was a dedicated supporter of African-American EDUCATION and suffrage, promoting the establishment of

freedpeople's schools in the South and attending many suffrage and equal-rights meetings. In addition, she helped to establish the AFRICAN METHODIST EPISCOPAL CHURCH in upstate New York. It was not until 1869 that Tubman was recognized publicly for her work. In that year Sarah Bradford published *Harriet Tubman, The Moses of Her People*. Also in that year Tubman married Nelson Davis, a Civil War VETERAN.

In March 1913 Tubman contracted pneumonia, which eventually caused her death. A memorial plaque in her

honor was dedicated by Booker T. Washington in the town of Auburn, New York.

## Underground Railroad

The Underground Railroad is the name that was given in the decades prior to the CIVIL WAR to a clandestine operation in which runaway slaves were aided in their flights to freedom in Canada or the far northern reaches of the United States by abolitionists. The term *Underground Railroad* can be traced to about 1830, when a slaveholder traveling through Ohio with his slaves saw them all escape their bondage and complained that one of them had “gone off on an underground road.” There had been efforts by the Quakers (SOCIETY OF FRIENDS) and others to help slaves escape as early as the 18th century. However, it was not until the 1830s, when abolitionism began to grow in strength, that the Underground Railroad, so named because it borrowed its operating terms, such as *lines*, *conductors*, *stations*, and *freight*, from RAILROADS, began to help fleeing slaves escape in growing numbers. Southern slaveholders became convinced that the Underground Railroad, which was also referred to as “the Liberty Line,” was an elaborate and well-crafted system that robbed them of their property; they, in fact, may have exaggerated its size and sophistication out of fear and frustration at their slaves running away on their own with little or no aid from abolitionists.

The number of slaves who did find their freedom by heading north out of SLAVERY is impossible to determine with any real accuracy. Estimates range from about 40,000 to near 100,000. It is possible, however, that the actual figures are much lower. The legend of an Underground Railroad was established during the postwar years by those seeking to associate themselves with the heroic struggle against slavery. Some Northerners wrote and spoke of the Underground Railroad as if it were a highly organized system of aiding fugitive slaves. The reality was less impressive. The help that slaves did receive from well-meaning abolitionists and others often came near the end of the former’s journey, when the greatest danger had already passed. The success of the Underground Railroad, such as it was, was often largely the result of the daring and bravery of indi-

vidual slaves. A slave, or a small group of slaves (usually, but not always, men, for women often were responsible for small children with whom travel under the circumstances would have been extraordinarily difficult), would escape from the PLANTATION on which they lived and hide out in nearby woods or swamps until it was safe to proceed toward the North. Once they crossed the Ohio River or some other major divide between North and South and passed into a free state, members of the Underground Railroad would meet up with them. In the southern parts of Delaware, Pennsylvania, Ohio, and Indiana, there was an informal network that did help bring runaway slaves to freedom. Runaways would hide in the homes of the abolitionists, in attics, or in barns, and, on occasion, if they were men, dress as women to avoid detection. Many of the conductors on the railroad were free African Americans who often acted without much assistance from their white counterparts in the movement. Among the most prominent were Josiah Henson, Robert Purvis, William Still, and, the most well known of all, HARRIET TUBMAN. Some of these African Americans, including Tubman, had themselves escaped from slavery and willingly put themselves in harm’s way in trying to free others. Many of the leading white abolitionists were members of the Society of Friends, which had a long history of being involved in antislavery causes. Most slaves who did escape their bondage were from the states of the Upper South; it was much more difficult for enslaved people living in the Deep South to make their way through slave states and get to freedom.

One reason for these elaborate efforts by abolitionists is that the Constitution and then the 1793 Fugitive Slave Law gave slaveholders the right to cross state lines in pursuit of their slaves, and once they had apprehended them, to bring them before either a local, state, or federal judge. During these proceedings, persons charged with being runaway slaves had no rights, as they were denied a jury trial and the chance to speak on their own behalf. To make matters worse for African Americans, slave

catchers sometimes grabbed free blacks and dragged them into court as runaway slaves. In response to what many in the North considered outrageous abuses, several states passed personal liberty laws, which allowed those accused of being runaway or fugitive slaves their rights and also made it a crime to kidnap African Americans and try to force them into slavery. During the negotiations over what became the COMPROMISE OF 1850, Northern senators unsuccessfully tried to get protection for the rights of runaway slaves written into the bill. One of the bills that comprised the omnibus measure of 1850 was a fugitive slave law, one which appeased southern interests. It did so by giving United States marshals the authority to deputize any citizen needed to capture a slave and mandating significant sentences for anyone found guilty of harboring a runaway slave, among other provisions. And since it did not contain a statute of limitations, African Americans who had been in some cases free for decades suddenly found themselves forced back into slavery. All of this political activity spurred on those who worked along the Underground Railroad.

It may be that the Underground Railroad's greatest legacy was in giving hope to enslaved persons who heard of its successes, as well as causing anxiety to slaveholders who feared that their property might escape via the Liberty Line. Although it may be that the Underground Railroad belongs to legend as well as to history, its existence in the decades prior to the Civil War demonstrates the rising determination of the enslaved to be free and the courage of those who helped them along the way.

## uniforms

The purpose of uniforms is to be able to identify military personnel from civilians, to distinguish one army from another, and to promote group solidarity. In 1861 variety was the rule on both sides, but by 1863 the UNION ARMY and the CONFEDERATE ARMY required a “standard” uniform for soldiers.

Their families, local communities, or states provided early Union and Confederate volunteer regiments with uniforms. This ensured that every unit had a slightly different look and quality of dress. Moreover, many regiments wore colorful costumes, following in the tradition

Portrait of a Confederate soldier in uniform (Library of Congress)

of the “Zouave” French units who fought in Algeria. Some famous regiments who wore the outlandish uniforms were the 164th New York, the 114th Pennsylvania, and Coppen’s Louisiana ZOUAVES. Although blue was the official color of the Union soldier, many units decided that they preferred the “cadet gray,” the color of the student’s uniform at the UNITED STATES ACADEMY AT WEST POINT, which was also adopted by the Confederate government for its armies. Similarly, many Southern soldiers took to wearing blue trousers. The FIRST BATTLE OF BULL RUN in July 1861 resulted in confusion, chaos, and tragedy when both Billy Yank and Johnny Reb wore blue *and* gray, and both had similarly outfitted Zouave units in the battle. Afterward, the respective governments struggled mightily to provide their soldiers with standardized uniforms that could be easily differentiated in battle. The Union succeeded in this task; the Confederacy failed miserably.

A top priority for the U.S. War Department was providing an efficient and cost-effective means of clothing the soldiers in the field. Overwhelmed by the demand at first,

the War Department gave contracts to clothing suppliers who, seeking to make huge profits at the expense of the government, delivered uniforms of such poor quality that they fell apart almost immediately. *Shoddy* was the name given to the clothes that were made out of scraps of shredded wool. One Northern reporter observed: "Soldiers, on the first day's march or in the earliest storm, found their clothes, overcoats, and blankets, scattering to the wind in rags, or dissolving into their primitive elements of dust under the pelting rain." Outraged parents demanded immediate reform. A change of leadership in the War Department and congressional oversight brought an end to most corrupt practices by regularizing the awarding of contracts. The Northern textile (especially wool) and shoe industry flourished during the wartime years, working at full capacity.

By 1863 all federal troops were adhering to the *Regulations for the Uniform and Dress of the Army of the United States*. The standard uniform for the infantry was a dark blue frock coat, a shorter "sack" coat, a muslin or wool shirt, wool socks, and light blue trousers. Soldiers were issued a tall black hat with a wide brim called a "Hardee hat" after Maj. William J. Hardee. Most, however, preferred the softer, smaller, forage cap (called the *kepi*, a French word for cap) on the march. For their feet Union men wore sturdy shoes called brogans (a Gaelic term for shoe). These simple clothes, together with the haversack, knapsack, canteen, blanket, tent, cartridge box, belt, bayonet, and musket made up the typical soldier's kit for war. Colored piping sewn on uniforms indicated branch of service: red for artillery, yellow for cavalry, and dark blue for infantry. Distinctions of rank were highly elaborated by decoration on coats and hats. Even after 1863 there was a wide variety in dress. Union soldiers in the western theater, for example, liked to wear informal slouch hats with wide brims to keep the sun out of their faces. To the end of the war, the Scottish-born men of the 79th New York Infantry, also known as the "Highlanders," insisted on wearing their kilts for formal marches!

Article 47 of the *Regulations for the Army of the Confederate States* listed the uniform of the Southern soldier: a gray double-breasted frock coat, a muslin or wool shirt, dark blue trousers, brogans, and a kepi cap or slouch hat. Like their Union counterparts, Confederates wore a more informal coat, called a "shell" jacket for its lightweight quality. Facing on coats and jackets indicated branch of service: red for artillery, yellow for cavalry, and light blue for infantry. Various buttons and insignia identified officers, noncommissioned officers, and enlisted men. For example, generals, lieutenant generals, major generals, and brigadier generals wore three gold stars on the collars of their frock coats. Although in theory the uniforms and equipment of the Confederate armed forces—army, navy, and marines—

closely resembled those of the United States, in reality the difference was great because of the tremendous problem with supply in the South.

The Confederate national government strove to provide their armies with clothing, food, and arms. A largely rural and decentralized ECONOMY, however, could not be transformed overnight to meet the huge demands of war-time. Still, by 1863 factories in North Carolina, Tennessee, and Virginia were churning out clothes that were of varying quality or just downright inferior. Sometimes, the wrong dyes were used in the cloth, and the uniforms could be gray, blue, or brown. Many, if not most, COMMON SOLDIERS by the middle of the war depended on their families to send them HOMESPUN clothes, often with the distinctive butternut yellow-brown coloring—hence one of the nicknames for Confederates became "butternuts."

Portrait of a Union soldier in uniform (Library of Congress)

By 1863 Union control of huge amounts of Confederate territory created severe shortages of supplies and hampered distribution. Often, Confederates had no shoes, and their uniforms were in tatters. One soldier wrote: "I have no seat in my pants, the legs are worn out, have had but one pair of socks which are worn out completely, my shirt is literally rolled off me." By the end of the CIVIL WAR Union soldiers were the best clothed, fed, and shod in the world. Confederate soldiers, on the other hand, suffered from all kinds of privations, including the lack of a decent set of clothes.

## Union army

The Union army comprised the U.S. Army of full-time, "professional" soldiers and, quite literally, an army of volunteers. Through the course of the CIVIL WAR, those volunteers were largely CITIZEN-SOLDIERS who fought not only the most costly but the bloodiest war in U.S. history. The Civil War's victorious army, after a bumpy start, became the largest and best supplied military force the world had ever witnessed. By May 1865 the soldiers in the Union army numbered more than 1 million and the total count of men who served three-year enlistments was more than 2.3 million. Most important, the Union army was responsible for reuniting the nation and liberating 4 million slaves. The American polity deeply distrusted standing professional forces, so in peacetime the army tended to be extremely small compared with those of European nations. Even during periods of hostility, such as the War of 1812 and the Mexican-American War (1846–48), the bulk of American land forces were drawn from state militias and volunteers, as opposed to regulars. The Civil War was no exception to this long-accepted practice. In sum, while the Union army may have rivaled contemporary European forces in size and combat performance, it managed national security within the confines of uniquely American political precepts.

Creating and sustaining a formidable army to oppose Southern rebellion was initially very difficult. The North, like the South, was totally unprepared to train and supply the large number of men needed to fight what quickly became a total war. In early 1861, the regular army (the U.S. Army) consisted of only 15,259 enlisted men and 1,000 officers. After FORT SUMTER, President ABRAHAM LINCOLN called for 75,000 militia volunteers to serve for three months. Northern GOVERNORS offered 300,000 more troops and were responsible for providing equipment and UNIFORMS. A bigger challenge yet was the reten-

tion of experienced leaders. Nearly one-third of all officers trained at the UNITED STATES MILITARY ACADEMY AT WEST POINT resigned their commissions to serve the Confederacy. Many of the senior Union officers with lengthy military experience, such as Gen. IRVIN MCDOWELL and GEORGE BRINTON MCCLELLAN, were professional and talented, as were many former graduates such as ULYSSES S. GRANT and WILLIAM T. SHERMAN. It nonetheless took a long period of trial and error to weed out incompetent officers at every level of command. By 1863 the bulk of Union leadership were seasoned veterans and highly capable in their appointed duties.

It must also be acknowledged that the North had the advantage in terms of industry and population. At the time of the outbreak of civil war, close to 90 percent of the nation's overall industrial capacity was located in the North, with additional factories, mills, and foundries added as the conflict unfolded. This disparity put far greater materiel resources at the Union's disposal: cannon, rifles, and related battlefield impedimenta, and also transportation. The Union could quickly manufacture steam engines and railroad tracks in whatever quantity deemed necessary. The disparity in population was equally telling. The North had a 2.5:1 advantage in numbers overall, while the ratio of those eligible for military service was 4.28:1. But in 1861 the nation lacked the administrative expertise and strategic direction to harness these advantages.

In May 1861, without explicit authority from Congress (which was not in session until July), Lincoln increased the size of the regular army to just over 22,000 soldiers. At the same time Lincoln called for 42,000 three-year volunteers. Lincoln believed his position as commander in chief allowed for his actions without congressional approval. In July 1861, Congress affirmed Lincoln's extralegal decisions and authorized a VOLUNTEER ARMY of 500,000 men. Congress also called for 300,000 more men for three-year terms. As the war progressed, volunteering declined dramatically. Though the North had a large population advantage over the South (18,936,579 to 5,447,646, with 4,559,782 versus 1,064,193 of draft age), the terrible costs of the war made young men reluctant to join the army. Losses through battlefield casualties, DESERTION, illness, and expiration of enlistment made it imperative to continuously add more soldiers. Congress issued another call for 300,000 volunteers in July 1862. The low response led to the BOUNTY SYSTEM, which offered cash inducements to enlist.

By spring 1863 the Union army was in need of still more men. On March 3, Congress passed the Enrollment Act calling for the first forced CONSCRIPTION in U.S. history. By its terms states were required to fill a certain quota of troops based on population and previous enlistment numbers. Any state failing to fill its quota would be subject

to a draft. The Enrollment Act also contained a provision that allowed a person to hire a substitute or pay \$300 to avoid service. More than 125,000 men took advantage of this. These exclusions reinforced the deep-rooted but erroneous notion among the immigrant working class that the Civil War was a “rich man’s war and a poor man’s fight.” Resentment exploded into the NEW YORK CITY DRAFT RIOTS in 1863. After several days of rioting, Union combat troops were brought in from Gettysburg to put an end to the chaos.

Ultimately, draftees were not an especially important part of the Union army. Fewer than one man in 10 was a draftee, and beyond that, draftees tended to be poor soldiers. This is not to say that the draft was not important to the Union army, however. At the same time that Congress created the draft, it also established a series of incentives, mostly cash bonuses, in exchange for voluntary enlistment. Any soldier who was drafted forfeited these bonuses, while also carrying the stigma of being a draftee. It is impossible to say how many soldiers entered the ranks voluntarily in order to collect their enlistment bounty and avoid being drafted, but certainly their number was substantial.

The Union army, like its Southern counterpart, was divided into three parts: infantry, cavalry, and artillery, with by far the largest numbers in the infantry. In 1861 the cavalry and artillery forces were attached to infantry. By the end of the Civil War, in raw numbers, the North had raised 2,040 regiments, of which 1,696 were infantry, 272 cavalry, and 72 artillery. The Union army totaled more than 1 million men under arms, while the CONFEDERATE ARMY mustered out about 180,000 men in uniform. This overwhelming advantage of manpower played a role in helping the Union to win the war. However, the three-pronged structure with both the artillery and cavalry forces attached to infantry units did not allow for the most efficient use of the large number of federal recruits early in the war effort. Especially troublesome was the fact that this structure often did not allow concentration of cavalry and artillery where it was most needed. In 1862 the army converted a number of cavalry regiments into three formal mounted brigades. By 1863, a cavalry corps was finally formed, consisting of about 12,000 mounted men. The new arrangement helped the Union cavalry compete better in battle against their Confederate counterparts. In that same year, artillery batteries were placed under direct control of corps commanders. This change gave army commanders more flexibility and less administrative work in carrying out tactical plans.

At first, the federal government had difficulty finding competent officers. Seven of the nation’s eight military colleges were located in the South, providing many trained officers for the Confederate army. Also, political considerations were important in the appointment of officers. At the beginning of the war, Union soldiers, like their Confederate

brethren, elected their officers. This disastrous practice was ended after 1862; nevertheless, politics continued to play an important role in appointment of generals, many with little military experience. By making these political appointments, Lincoln gained support for the war among key constituencies, particularly Democrats and certain ethnic groups.

Some political appointees did quite well. For instance, JOSHUA LAWRENCE CHAMBERLAIN of Maine and John Logan of Illinois built distinguished service records. The majority were not nearly as well regarded. Two generals from Massachusetts, BENJAMIN FRANKLIN BUTLER and NATHANIEL P. BANKS, and California’s John C. Frémont performed poorly in combat, costing many men their lives. Indeed, “political” generals performed so badly at the FIRST BATTLE OF BULL RUN in July 1861 that Congress was compelled to set up a watchdog group, the JOINT COMMITTEE ON THE CONDUCT OF THE WAR, which, among other things, established minimum qualifications for Union officers. Also, as the war went on, many of the Union’s more incompetent officers were weeded out or resigned.

In the end the formal structure of the Union command proved superior to that of the Confederacy and evolved into a modern, stafflike organization of hundreds of men, including a section of military intelligence operatives. Union officers took great risks during the Civil War. These men were 15 percent more likely to be killed in battle than an enlisted man. Generals had the highest risk for combat death; with a 50 percent greater chance of being killed than privates. Overall, Union soldiers were actually almost two and a half times more likely to die from disease than from combat during the war. Over the course of the war, the 2.5 million men who served in the Union army suffered 110,070 combat deaths and nearly 250,000 deaths due to DISEASE AND EPIDEMICS.

As Union leaders dealt with manpower issues, they also addressed the difficulties of supplying a force as large as the U.S. Army. At that time, an army of 100,000 men required 2,500 supply wagons, 35,000 animals, and an average of 120,000 pounds of supplies a day. The lack of army provisions early in the war forced states to make concerted efforts to provide troop provisions until the federal government could organize its Quartermaster Department and reimburse the states. This approach to provisioning the army led to a variety of problems in the first year. For example, Northern soldiers wore UNIFORMS of many different colors, which often made distinguishing friend from foe difficult. The resulting confusion ultimately led to the standardization of Union uniforms after the First Battle of Bull Run to light blue trousers and dark blue blouses. An important exception to this was the two regiments of army sharpshooters, considered one of few consciously elite formations in the Union army, who were clad in distinctive green uniforms.

There were many logistical issues to be resolved in order to keep Union troops provisioned. Secretary of War EDWIN M. STANTON did an excellent job of directing and planning the various elements of the conflict for the North. The Union Quartermaster Department, ably led by General Montgomery C. Meigs, worked with Stanton to supply the Federals in an effective and efficient fashion. Despite notable glitches, after 1863 the soldiers of the Union army enjoyed better food, TRANSPORTATION, clothing, arms, equipment, supplies, and health care than any other army up to that time. The ability of the United States to acquire, train, equip, and deploy 1 million men over an area larger than western Europe reflected both the Industrial Revolution in warfare and modern military management. This feat presaged the achievements realized on an even larger scale during World War I.

Since volunteers formed the vast majority of the Union forces and came from local and state levels, regiments were named chronologically by state (for example, the First Pennsylvania Infantry Regiment was the first infantry

regiment formed by the state of Pennsylvania). Some units were formed based on ethnicity; besides African-American troops, Scottish, Irish, and German units were also created. Training of these raw recruits first took place in designated camps in each state. The men were “mustered” into service with the U.S. volunteer army and began their lives as soldiers. Inexperienced officers, who often learned the elements of drilling by reading a military manual, emphasized regimental drill and moving from formation to fighting. Most volunteers, especially early in the war, hated the confines of camp life and were eager to get into the battle before the fighting was over. This anxiousness to get out of training camp and get into action before the “fun” was over was probably fostered by the training regime. Neither mock combat nor a meaningful amount of target practice took place. After the initial training period, the men would board trains or go on ships by regiments for transport to their assigned destinations. The Union army’s basic organizational unit was the company (numbering 100 men), with 10 companies making up a regiment (1,000 men

Union troops about to fire a field gun during the Civil War (Hulton/Archive)

per regiment for infantry and 1,200 for cavalry), five regiments for a brigade, three brigades for a division, and three divisions for a corps. Several corps formed an army. The Union infantry (foot soldiers) forces consisted of 16 armies whose names were based on major rivers, such as the Army of the Potomac and the Army of the James in the eastern theater and the Army of the Tennessee, the Army of the Ohio, and the Army of the Cumberland in the western theater. Each army generally consisted of 35,000 to 40,000 men, although the Army of the Potomac was much larger.

An army's numbers and organizational units fluctuated during the war. When a company became depleted due to illness, casualties, and desertions, new recruits were generally not brought in to fill spots beside veteran members, which ultimately diminished combat performance and increased casualties. Among the problems with adding new enlistees to battle-experienced units was the fact that existing regiments had built up through their service together an esprit de corps. Battle-hardened units frequently resented raw recruits, feeling that the "new guy" would threaten the efficiency of the unit. George Templeton Strong, in a LETTER home, went so far as to call new recruits "an undisciplined mob." There was always a question whether a new recruit could really be trusted in the heat of the fight to give his all—to die for his comrades. This was especially important late in the war, when the quality of enlistees was questionable, since bounties were on the rise and "bounty jumping" (signing up, collecting the bounties, and then deserting only to sign up in another area to collect more bounties) became fairly common. On the political level, states preferred to build new companies and new regiments rather than fill gaps in existing units because there was more prestige in bringing more regiments to the Union effort, and each new regiment allowed the appointment of new officers, which was a convenient way to reward political colleagues. Generally then, new companies were formed with higher-ranking officers appointed by politicians. Thus, throughout the conflict, companies were usually at reduced strength. More companies were combined to make up regiments than army regulations specified. Therefore, some brigades consisted of up to 10 regiments, greatly complicating the logistics of army administration.

Because the government relied so heavily on civilian support (both in terms of political support and enlistments) for the war, public opinion and politics played a substantial role in determining Northern strategy. The key Union military strategy developed by Winfield Scott and refined and added to by McClellan, Grant, and others, can be summed up briefly in three slogans: the "Anaconda Plan," "On to Richmond," and "Total War." The first advocated encircling the Confederate coastline and rivers, thereby choking off its economic lifelines; the second called for moving quickly and decisively to defeat the Southern armies in

the field and capture the Confederate capital in RICHMOND, VIRGINIA; and the third employed the first two with the added goal of destroying the Confederate civilian will to fight.

McClellan's 1862 PENINSULAR CAMPAIGN, in part, was conceived of as a way to satisfy the Northern populace's demand for a strike against the heart of the Confederacy. When the Confederate army invaded Pennsylvania in 1863, Northern military leaders knew that fast action was necessary because Northern citizens would not abide by an invasion of their soil. The failure of the spring OVERLAND CAMPAIGN in Virginia drove Northern morale to new lows and placed Lincoln's reelection bid in jeopardy. In fall 1864 Sherman made haste to capture ATLANTA in time for the presidential ELECTIONS. Sherman's success undoubtedly clinched Lincoln's reelection.

Waging war in a democratic republic required the consent and support of the people through elections. Lincoln, as both president and commander in chief, had to lead the Union's war effort and explain and defend his policies to citizens. The political and military were thus closely connected in the Civil War. When the Union suffered severe battlefield losses, as it did during 1861 and 1862, drastic measures had to be taken to sustain the morale of the Northern people and achieve military aims.

One measure that heavily influenced the fate of the Union armies and the future of the United States was Lincoln's issuance of the EMANCIPATION PROCLAMATION on January 1, 1863. Although an earlier congressional act had allowed African Americans to join the Union army, the proclamation was Lincoln's first official endorsement of the idea and resulted in the formation of the United States Colored Troops (USCT). USCT forces totaled 178,975 by the end of the war and made up 12 percent of the U.S. Army. More than half of these soldiers were recruited in the South, so their addition to the Union army had the added benefit of draining the South of needed manpower. Indeed, in August 1863 Grant wrote Lincoln that the "freedom of Negroes is the largest blow to the Confederacy yet."

By war's end no fewer than 120 black infantry regiments, seven cavalry regiments, and 12 heavy artillery regiments were in service. In December 1864, these AFRICAN-AMERICAN REGIMENTS were segregated into their own XXV Corps under Gen. Godfrey Weitzel. Black troops performed valiantly in the battles during the siege of Petersburg in summer 1864, and in 1865 they were among the very first troops to occupy the former Confederate capital. On balance, African Americans performed exceedingly well when well led and given a chance to fight, and their presence helped tip the military manpower advantage in the North's favor. It was not until spring 1865 that Southern leaders even considered the arming of slaves to fight on

the Confederacy's behalf. When such a law was passed, it exerted no impact on the outcome of events.

With the surrender of ROBERT E. LEE's Army of Northern Virginia in April 1865 at APPOMATTOX COURT HOUSE, VIRGINIA, the Civil War came to a close, but the Union still had a formidable army in the field. The peaceful demobilization of the Union army was accomplished in record time after Appomattox. Once again, the uniquely American notion of massed "citizen soldiery" backed by a small core of professional VETERANS had risen to the occasion and prevailed in wartime. Before the soldiers went home to their respective states, a huge celebration was held in WASHINGTON, D.C. For two days, May 23–24, 1865, the men of the Army of the Potomac and Sherman's western armies marched in the "Grand Review" down Pennsylvania Avenue to cheering crowds. Proud of their role in winning the war, freeing the slaves, and ensuring the continuance of the United States of America, Union army veterans after the war formed the Grand Army of the Republic, a powerful group that exerted considerable influence on the political and economic life of the reunited nation.

## Union League

The Union League was a REPUBLICAN PARTY membership organization that originated in the border states of the North in 1862 to promote patriotism in support of the Northern cause. Based on the model of fraternal organizations so common in 19th-century America, over the course of the war the league spread to many areas in the North and moved South with Northern soldiers and found support among freedmen, freedwomen, and white yeoman farmers who were dissatisfied with the Confederacy. Later in RECONSTRUCTION the League was significant for its part in organizing African-American political action.

In the North, the league bolstered sagging enthusiasm for the war effort. Many prominent citizens joined

branches in cities like New York, Boston, and Philadelphia. In Midwestern states like Illinois the Union League movement stood strongly against rising COPPERHEAD sentiment in 1862 and 1863. For example, the St. Louis branch of the league resisted any attempts to bring Missouri into the Confederate column. Like one of its apolitical counterparts, the Free Masons, the league offered many social benefits. The men who belonged were known for their undying devotion to the Union cause. The Union League played an important role in mobilizing support for President ABRAHAM LINCOLN's reelection bid in 1864.

In the South the league played an equally important role as it became a stronghold of the Southern Republican Party, while educating newly freed slaves about the democratic process and helping them to harness their newly acquired public power. The Southern branch was considered radical in its positive approach to African-American political participation in the South. There was strong resistance among white Southerners to any association enrolling freed slaves into an oath-bound association for the express purpose of making voting Americans of them. The National Council of the Union Leagues, headquartered in WASHINGTON, D.C., attempted to set a moderate tone for the Southern branch. The council, which funded the league, wished to establish a strong Republican Party in the South and to encourage political involvement for freedmen. At the same time, it wanted the Southern Union League to restrain its militancy, in order to avoid alienating white Southerners.

While the Union League functioned primarily as a political machine for the Republican Party, it provided education and social and economic support as well. The league hosted wide-ranging political discussions and debates and promoted schools and churches on the local level. It also petitioned against local officials hostile to freed members and supported African American claims for VETERANS' benefits. Finally, the Southern league offered African Americans advice in financial planning, EMPLOYMENT, legal issues, and politics.

Despite the enthusiastic participation of black Southerners in the Union League, the organization's existence was short-lived. Its obvious support of African-American political and social rights alienated interested white farmers. By 1869, membership numbers were in decline. The KU KLUX KLAN targeted league members and meetings as part of a campaign to disenfranchise freed people. That violence, in combination with the rise of REDEMPTION governments in the South, spelled the end of the Union League in the South. The failure of the Union League is reflective of the larger failure of Reconstruction to successfully establish a place for Southern African Americans and the Republican Party in the South's political landscape. The Union League clubs in the North continued to flourish.

ish, however, and remained stalwart in their support of the Republican Party to 1900.

## Union navy

The Union's strategy in the CIVIL WAR demanded a great deal of its navy. And despite starting the war with few ships of any value, the navy eventually proved up to the task, playing a critical role in helping the Union to achieve victory. "At all the watery margin, they have been present," noted President ABRAHAM LINCOLN toward the end of the war. "Not only on the deep sea, the broad bay, the rapid river, but also up the narrow muddy bayou, and wherever the ground was a little damp, they have made their tracks."

When Union secretary of the navy GIDEON WELLES took office, he found himself with a fleet that was entirely inadequate for the Union's needs. The navy had only 90 ships, and the vast majority were either unseaworthy, in faraway ports, or still under construction. Only 14 ships were actually in U.S. waters and ready for service, and the majority of these were not warships. So, like the Confederacy, the United States was largely forced to build its fleet from scratch. Ultimately, this proved a hidden blessing for the Union navy, because it benefited from a revolution in naval warfare begun in the two decades preceding the war. Steam engines replaced sails. Ships began to be plated with iron, which could withstand cannon fire much more effectively than wood. Powerful new guns and ordnance were developed. Welles was determined to piece together a large navy that utilized all of these new technologies, and backed by the economic power of the North, he was able to do so—building, purchasing, or leasing hundreds of vessels. Eight months after the war started, the Union navy had grown to 264 ships. A year later the number was at 427, and by the end of the war there were 671 ships on the Navy Department's register, making the Union navy the largest in the world.

Of course, so large a navy could not have been put out to sea without a substantial number of sailors. Unlike the Confederacy, the Union navy never had problems finding enough manpower. The officer corps, numbering 1,457 men at the start of 1861, did suffer some defections to the South. However, more than enough talented officers

remained, among them DAVID GLASGOW FARRAGUT, Samuel F. Du Pont, DAVID DIXON PORTER, and JOHN A. B. DAHLGREN. The ranks of enlisted men grew rapidly throughout the war, from 7,600 in 1861 to 51,000 in 1865. Included in this number were African Americans, who were able to serve in the navy throughout the Civil War.

The Union navy had three main tactical objectives during the war. The first, and best known, was a blockade of Southern ports. The purpose of the blockade was to seal off Southern ports on the Atlantic coast, Gulf coast, and MISSISSIPPI RIVER so that the Confederacy would be unable to export cotton or import the goods that were needed to survive and to wage the war. This was not an easy job, for the Confederacy had more than 3,000 miles of coastline to be patrolled. In the early years of the war, when the Union navy lacked ships, the blockade was dismissed by critics as a "paper blockade." However, as the navy expanded and its officers grew more experienced over the course of the war, the blockade became fairly effective. In 1860, the last year before the Civil War began, the South exported 816 million pounds of cotton. In 1864 exports of cotton totaled less than 3 million pounds. The Confederacy kept no official records on how many ships trying to run the blockade were captured or destroyed, but Union officials placed the number at about 1,500.

The Union's navy's second goal was to protect Northern shipping routes from Confederate commerce raiders. The commerce raiders were generally operated by the CONFEDERATE NAVY and were responsible for capturing or destroying as many Northern merchant ships as possible. The fight against the commerce raiders was the most difficult of the Union navy's responsibilities during the Civil War. First, the open seas are almost impossible to patrol. Perhaps more importantly, the fight against the commerce raiders led to diplomatic conflicts. The most significant of these occurred in November 1861, when Capt. Charles Wilkes of the USS *San Jacinto* boarded the British steamer *Trent* and removed two Confederate agents on board. For a period of time, Britain threatened war over what came to be called the *Trent* affair. Eventually, the British were mollified, and war was averted. Union navy commanders learned their lesson, and though occasional missteps occurred throughout the war, none were as serious as the *Trent* affair. Meanwhile, the navy had a few notable successes in fending off the commerce raiders. The most prominent of these was the June 1864 sinking of the *ALABAMA*, the Confederacy's most successful raider.

The Union navy's final objective was to assist the army in its operations against the Confederacy. In some cases, the navy was able to capture key strategic locations largely on its own. Such was the case with New Orleans and Charleston. More often the navy supported the UNION ARMY's forces on land. Naval bombardment played an

Sailors relaxing on the deck of the USS Monitor (Library of Congress)

important role in capturing Fort Donelson, Vicksburg, and Mobile Bay. Although regularly participating in engagements being fought on land, the Union navy rarely engaged in traditional warship-versus-warship naval warfare. This is because the Confederate navy would generally retreat from confrontations between warships, unable to afford the losses that such battles brought. The Union navy's most famous engagement did involve combat between warships, however. The Battle of Hampton Roads pitted the ironclad USS *Monitor* against the ironclad CSS *Virginia*. Although IRONCLADS had been in used in naval combat before the Civil War, Hampton Roads marked the first time that an ironclad faced off against another ironclad. The battle ended in a draw and had no impact on the overall course of the war. Nonetheless, Hampton Roads received a great deal of attention in both North and South and throughout the

world. This helped usher in an arms race among the naval powers of the world, as they scrambled to convert their fleets to ships made of iron and, eventually, steel.

Despite its humble beginnings, then, the Union navy came to play an important role during the Civil War. It helped disrupt the ECONOMY of the South, protected the economy of the North, and provided critical assistance for the Union army. The Union navy must be given a substantial portion of the credit for the defeat of the Confederacy.

### United Daughters of the Confederacy (1894– )

The United Daughters of the Confederacy (UDC) was founded in 1894 in Nashville, Tennessee. Like so many women's organizations of the late 19th century, including the Daughters of the American Revolution and the Association for the Preservation of Virginia Antiquities, its purpose was primarily commemorative. Its membership was made up of the wives and daughters of the men who had fought for the Confederacy, and its mission was to perpetuate the memory of the Southern cause and to honor the soldiers who had defended it. Inevitably, of course, its membership was also entirely white and, unlike the troops who had actually fought the war, its ranks included a disproportionate number of the South's elite, patrician class who had a vested interest in maintaining the social and racial status quo.

The UDC was the driving force behind many of the South's most visible commemorative activities in the late 19th and early 20th century. It was also a key proponent of the "LOST CAUSE" ideology of the South. The UDC sponsored observances of Memorial Day, raised money for war memorials, and established museums and relic rooms throughout the South. Perhaps the organization had its most far-reaching influence, however, in its campaigns to censor Southern textbooks to ensure that only a pro-Confederacy view of the CIVIL WAR was taught in Southern schools. Due in large part to the United Daughters of the Confederacy, several generations of Southern white children were thus offered no alternatives to the view that SLAVERY was a benign institution, that SECESSION was a just and holy cause, and that RECONSTRUCTION had visited a great wrong and indignity upon an innocent South. It remains active to date.

### United States Army Corps of Engineers

The United States Army Corps of Engineers had its origins in the Revolutionary War and found a permanent home in 1802 when President Thomas Jefferson signed the bill

founding the UNITED STATES MILITARY ACADEMY AT WEST POINT, New York. Jefferson believed strongly that the training of military officers in a democratic republic should take place within a curriculum that emphasized mathematics and engineering, after the French model. Until 1866 the U.S. Army Corps of Engineers ran West Point, and the top students of each class—such as ROBERT E. LEE and GEORGE BRINTON MCCLELLAN—were always assigned to the corps.

From 1818 to 1863 there were actually two corps. The first, called the Topographic Engineering Corps, explored and mapped territory and rivers and designed and built harbors and other improvements. Lee, who graduated second in his 1829 class, was assigned to oversee construction of the St. Louis, Missouri, harbor. The second part of the corps, named the Corps of Engineers, was concerned with building defensive fortifications. An excellent example of the latter was FORT SUMTER, SOUTH CAROLINA, begun in the late 1850s and still uncompleted when it was captured by Confederate forces in April 1861.

The fact that the graduates of the top military academy in the country were trained in engineering guaranteed that the corps would play an important role in the major wars of the 19th century, including the CIVIL WAR of 1861–65. The skills that corps members learned proved indispensable in wartime: mapping out the operational theaters, building and rebuilding bridges and rail tracks, assisting in the planning and preparation of sieges, and designing and building field fortifications. Thus, engineers were trained to be experts in both the offensive and defensive modes. As the first "modern war," the Civil War featured complex engineering feats such as Gen. McClellan's and Gen. ULYSSES S. GRANT's sieges at Yorktown and Vicksburg, respectively. Over the years, the two sections of the engineer corps were joined permanently, and its numbers expanded in 1863. After 1865 the U.S. Army Corps of Engineers helped map and develop the western territories and assisted in building the transcontinental RAILROADS.

### United States Christian Commission (1861–1866)

Reflecting both the deeply religious nature of 19th-century American life and a strong commitment to voluntarism, the United States Christian Commission (USCC) was formed to provide a variety of social services to the men who served

the Union as soldiers. Like many other philanthropic organizations, the USCC mobilized civilian (and especially female) energies throughout the CIVIL WAR to ease the burdens of the troops in both material and spiritual ways.

When large numbers of volunteers began to leave for the war, many Northern Christian activists became convinced that soldiers' lives should be made easier. In November 1861, at a conference in PHILADELPHIA, PENNSYLVANIA, George H. Stuart, a wealthy merchant and staunch Presbyterian, was named the first president of the newly created United States Christian Commission. He remained president for the life of the Commission.

The USCC's original plan was to assist the chaplains of the armed services in their daily work. To do this, the USCC settled on eight unifying principles: compassion, voluntarism, benefits for the body and soul, personal distribution, personal ministrations, nationality (patriotism), cooperation, and respect for authority. Through adherence to these principles, the commission believed that it could assist in the war effort without interfering with military authorities.

An extensive administrative organization supported the USCC's work. There was an executive committee, station agents and field representatives served in the field, and the local organization was broken into branch commissions and ladies commissions. The executive committee oversaw the USCC's daily affairs. Initially, it was composed of only 12 members, but the number grew to 55 as the UNION ARMY grew and the extent of the need became apparent.

Station agents, often called ministers, oversaw the activities of the field representatives, volunteers who personally aided soldiers in the field. While field representatives worked directly with soldiers, station agents monitored USCC work for a particular army corps or a locale near the front line. Station agents also organized supplies, ensuring that each field representative had what he or she needed and directing aid first to those areas that needed it most.

The branch commissions and ladies commissions both served as fund-raising and public relations arms for the USCC. Although their ultimate goal was the same, they each used their own methods. Whereas the branch commissions primarily focused on raising cash for the war effort, the ladies commissions organized women to prepare food, clothing, and gifts for distribution to Union soldiers. According to the 1866 final report of the USCC, the ladies commissions consisted of 266 members in 17 states and had raised more than \$200,000 during the course of the war. One of the most-notable members of the ladies commissions was Annie Wittenmyer. Concerned about the diet of soldiers in Missouri, she established the first kitchen in the Cumberland Hospital in Nashville, Tennessee. Wittenmyer's diet was a vast improvement in both health and satisfaction, providing nutritious, tasty foods.

The backbone of the USCC, however, was its delegates, or field representatives. These men and women went to the field equipped with a memo book, instructions, food, bedding, utensils, and publications of various kinds. Each delegate worked for an average of 38 days and was responsible for all the supplies sent to that particular spot, in addition to giving assistance to the surgeons and chaplains where necessary. Even though the delegates' primary responsibilities were to assist the chaplains in their pastoral and evangelical work, they often acted as lay ministers, librarians, NURSES, social workers, and worship leaders. By the end of the war more than 5,000 people had served as delegates for the USCC.

President ABRAHAM LINCOLN's administration recognized the positive effect of the USCC on behalf of Union troops. Lincoln offered support to the commission wherever possible during the war. In addition, Gen. ULYSSES S. GRANT welcomed the commission and gave its members free access to his men.

The assistance provided by the USCC was invaluable. By the end of the war, the commission had raised more than \$6 million to benefit the army. Delegates distributed 1.5 million Bibles and 1 million hymnals. In addition, they preached more than 58,000 sermons, held 77,000 prayer meetings, and assisted the soldiers in writing more than 92,000 LETTERS to their families and friends.

### United States Military Academy at West Point

The United States Military Academy at West Point, located about 40 miles north of NEW YORK CITY, provided the trained officer corps for the United States's small professional army in the 19th century. West Point occupied a location of key strategic interest during the Revolutionary War. George Washington made his headquarters there in 1779, and one year later Benedict Arnold, then in control of the encampment, tried to surrender the area to the British. Though soldiers have lived at West Point continuously since the Revolution, the founding fathers of the United States were initially apprehensive about establishing a military academy because they feared a standing army.

In 1776 George Washington, prodded on by Gen. Henry Knox, undertook an early initiative on behalf of the academy. Washington believed that the United States must not become dependent on foreign officers for instruction. In 1790 the U.S. government purchased the land that

would form the basis of the academy. Alexander Hamilton proposed that the academy be divided into four schools: a school for teaching military fundamentals, one school for teaching engineering and artillery techniques, another school for the techniques of cavalry and infantry, and finally a school for naval techniques. Yet at the end of President John Adams's administration, West Point had but 12 cadets and one teacher. Thomas Jefferson opposed the academy early on, but while he was president, his attitude softened, and West Point was officially founded under his administration in 1802. Jefferson realized that the academy was his best hope of a national university.

In 1815 James Madison stipulated that West Point should have an independent superintendent, a role previously fulfilled by the chief engineer. Indeed, the academy had long privileged its engineers (the UNITED STATES ARMY CORPS OF ENGINEERS was founded by the school), and this bias would continue under the direction of the new superintendents. In fact, it was not until 1866 that regulations permitted the superintendent to come from other branches of the army. In 1816 Madison's secretary of war introduced a four-year curriculum at West Point with general examinations held in July and September.

These examinations created West Point's famous ranking system. The ranking system determined the corps to which cadets went after graduation. Those who ranked highest went into the engineering corps; those who ranked lowest went into the infantry. All facets of cadet life contributed to the construction of these rankings. For instance, during the limited free time made available by the new curriculum, most cadets accumulated demerits for infractions of West Point's extremely strict regulations. However, one of the most notable alumni of the academy, ROBERT E. LEE, never once collected a demerit. Most cadets found the spartan existence at West Point unpleasant. The artist James McNeill Whistler and the poet Edgar Allan Poe are two of West Point's most notable antebellum dropouts.

From 1817 to 1833 the most important man at "the Point" was Superintendent Sylvanus Thayer. Before becoming superintendent, Thayer went to France, where he purchased the books that became the building blocks of the academy library, the nation's first and, at the time, only military library. Thayer also abolished West Point's annual summer vacation in favor of "summer encampment." From then on, cadets would spend their summers living in tents and practicing unceasing drills. Only after the third year would cadets be able to enjoy a brief summer "furlough." In 1828 Thayer instituted the policy that a recommendation from a member of Congress be a prerequisite for gaining entry to the academy, a policy that continues today. Under Thayer's direction, the academy continued to emphasize the production of engineers, as the young nation still found itself very much in need of members of this profession.

One historian has labeled the years between 1840 and 1860 the "golden years" of West Point. It was during these years that a high percentage of the CIVIL WAR's best-known generals attended the academy. West Pointers dominated the United States's successful campaign in the Mexican-American War (1846–48) and continued to dominate the command of both armies during the Civil War. The most important battles of the Civil War featured West Point men commanding on *both* sides.

During the early years of the war, RADICAL REPUBLICANS attacked West Point for having produced a pro-Southern army aristocracy. These Republicans had some telling evidence at their disposal: A majority of competent Confederate generals were West Point graduates, as was the president of the Confederacy himself. In addition, the West Point alumni who remained loyal to the Union tended to be conservative Democrats such as Gen. GEORGE BRINTON MCCLELLAN. These Republican critics also asserted that the UNION ARMY showed too much favoritism to West Point graduates. It was true that some West Point alumni rose in rank in spite of their mediocre performance. Nevertheless, by 1863, Union armies commanded by West Point graduates had won enormous victories at Vicksburg and Gettysburg, and the anti-West Point mood quickly faded.

### United States Naval Academy at Annapolis

The United States Naval Academy was established in 1845, nearly half a century after the founding of the UNITED STATES MILITARY ACADEMY AT WEST POINT in 1802. Originally known as the Naval School, it was located at Fort Severn in Annapolis, Maryland. Franklin Buchanan was appointed its first commandant, and in its first year the institution had seven faculty members and 200 students, most of whom had already served in the navy for five years or more. The original curriculum at the Naval School was modeled after that of West Point and included philosophy, mathematics, chemistry, ordnance, and navigation.

The school evolved a great deal in the 1850s when it was rechristened the U.S. Naval Academy and the curriculum was expanded. All students were required to wear UNIFORMS, and a system of demerits for midshipmen who

misbehaved was established. The academy's campus was enlarged, and the faculty was expanded by adding both civilian and military instructors. By the late 1850s, the Naval Academy was one of the world's finest institutions for training naval officers.

When the CIVIL WAR broke out, the Naval Academy was only 15 years old, so it did not have nearly as much of an influence on the Civil War as its army counterpart at West Point. While most of the high-ranking Union and Confederate generals were trained at West Point, most of the war's prominent naval officers started their careers long before the U.S. Naval Academy had been established, and so they were not educated at the institution. The war did have a pronounced influence on the academy, however. With the outbreak of hostilities, a number of the academy's students and faculty, including its commandant Franklin Buchanan, resigned to join the CONFEDERATE NAVY. Shortly thereafter, fears that the Confederacy might attack the location at Annapolis prompted the academy to relocate to Newport, Rhode Island, for the duration of the war.

When the Civil War ended, the academy returned to Annapolis, and Rear Adm. DAVID DIXON PORTER was named commandant. Porter continued to expand and modernize the academy's facilities and curriculum. In the 1870s, the school experimented briefly with desegregation, but not one of the three African Americans admitted was able to graduate. By the 1890s the Naval Academy had become the sole training ground for all of the United States's high-ranking naval officers.

### United States Sanitary Commission

Formed in response to the rapid growth of the U.S. Army during 1861, the United States Sanitary Commission (USSC) consisted of Northerners on the HOMEFRONT

Men posing in front of the USSC lodge in Washington, D.C. (Library of Congress)

mobilized to provide medical care, supplies, and other necessities for the soldiers in the UNION ARMY. Inspired by the British Sanitary Commission that was active during the Crimean War (1853–56), this group hoped to improve the poor hygiene of the camps and the health of the soldiers while assisting the wounded and coordinating the distribution of food and supplies to the men in blue.

The commission's network consisted of tens of thousands of mostly female volunteers in numerous soldiers aid and LADIES AID SOCIETIES. Many of the societies were affiliated with the Woman's Central Association for Relief, which provided the majority of the hands-on work at the local level. At the national level, the USSC was led by Henry W. Bellows, the president, along with George Templeton Strong, the treasurer, and FREDERICK LAW OLMSTED, the secretary. These men were dedicated to creating an organization that not only assisted the Northern soldiers but also educated people about the importance of discipline and sacrifice in society. While the hierarchy of the organization was male, the "foot soldiers" of the USSC's campaign were generally women. The women of the commission used grassroots, locally organized female activism to promote the USSC's goals. During the four years of the CIVIL WAR the commission's men and women raised at least \$7 million in cash and were responsible for distributing \$15 million worth in supplies.

One of the commission's most reliable sources of income came from the numerous community fairs they held in the years during and after the war. These "sanitary fairs" were held in small and large cities throughout the North and usually lasted for 10 to 14 days. During this time schools and businesses would close to allow the entire community to participate in the exhibits, shops, and entertainment presented at the fairs. The fairs raised money by charging admission, collecting donations, and selling toys, crafts, Civil War memorabilia, and food. The first large-scale sanitary fair, put on by the Northwestern Sanitary Commission in Chicago, raised more than \$100,000 in October 1863. In April 1864 New York's "Metropolitan Fair" netted \$1 million for the USSC. When all was said and done, the fairs raised approximately \$4 million, a significant portion of the U.S. Sanitary Commission's total budget.

The USSC served as an on-call support group for areas that suffered the most during the war. Following large battles where the military's medical staffs and the local citizens could not adequately provide for the sick and dying soldiers, the U.S. Sanitary Commission would be called upon to give them assistance.

Upon arrival at the scene, the U.S. Sanitary Commission helped set up temporary hospitals and provide medical assistance to the wounded. The commission's volunteers also wrote LETTERS for the soldiers to their loved ones at home, read the Bible to the soldiers, and provided moral support to the wounded. The volunteer work and

assistance provided by the USSC enabled many of the wounded soldiers to recover and continue fighting with their regiments.

Despite the philanthropic nature of the U.S. Sanitary Commission, there were many who disagreed with the management philosophies of the commission's administrators. Most of the complaints focused on excessive control by the administrators, who were accused of spending the organization's dollars frivolously.

It is important to note, however, that the vast majority of the men, women, and even children who volunteered for the commission did so out of the goodness of their hearts and for the benefit of their fellow compatriots. A number of smaller women's organizations and aid societies created to assist the soldiers were eager to help the USSC in every way possible.

The U.S. Sanitary Commission was the most recognizable philanthropic organization during the Civil War. Dedicated to improving the well-being of the Union soldiers, the commission provided invaluable medical assistance and moral support that enabled the soldiers to continue their fight to save the Union. The USSC also helped develop a nationally active women's community, elements of which went on after the Civil War to promote other agendas such as women's suffrage and temperance.

### **United States v. Cruikshank** (1876)

The origins of *United States v. Cruikshank et al.* began on Easter Sunday 1873, when more than 100 African Americans were murdered in Grant Parish, Louisiana. The Supreme Court's ruling in the *Cruikshank* case curtailed federal powers of enforcement, set back the push for black suffrage in the South, and made it clear that voting, if you were African American, was a great risk.

In 1870 Republicans in Congress pressed for enforcement legislation for the FIFTEENTH AMENDMENT, which had guaranteed that the right to vote would not be denied because of "race, color, or previous condition of servitude." Pursuant to this, Congress passed the ENFORCEMENT ACTS. The first of these acts, passed in May 1870, outlined

federal voting protection policies. While Congress acted to shore up the voting rights of black Republicans in the South, REDEMPTION of Southern governments was beginning. Throughout the South, Democratic candidates were stepping forward to reclaim their local, state, and regional politics from the Republicans. The KU KLUX KLAN and other white supremacist groups gained members and were determined to keep African Americans from exercising their Fifteenth Amendment right to vote.

In this climate, the election of 1872 in Louisiana was a tense affair. Even in 1871, white Republicans in Grant Parish were harassed and attacked. In Grant Parish the local results of the election were hotly contested, and the issue of African Americans voting was certainly a concern because they voted for the Republican candidate. Both the Republican and the Democratic candidates claimed victory and established governments including a judge and a sheriff. Republican William P. Kellogg's appointees sealed off the town of Colfax to ward off the Democrats who claimed victory for their candidate John McHenry. While the political debates raged, rumors began flying of African Americans attacking white citizens on the outskirts of town, and then there were subsequent rumors of white peoples' plans to counterattack. For protection, African Americans began congregating at the Colfax Courthouse. By Easter Sunday of 1872, there were approximately 400 African Americans camped around the courthouse. The crowd of African Americans drew a crowd of some 300 armed white people to the courthouse. They were led by the local sheriff, C. C. Nash, a Democratic appointee who had earlier been charged with attacking white Republicans. Nash ordered the African Americans to disperse. When they refused, he gave the women and children 30 minutes to leave the area. When the time was up, the shooting commenced. The African Americans who tried to flee were chased down and killed if they were caught. The remainder barricaded themselves in the courthouse. They were eventually forced out and those that ran were also hunted down and killed if caught. By the late afternoon the battle was over, and 50 African Americans had been arrested. Nash promised that they would be released the next day. Instead of release, however, they were marched along isolated roads and executed in small groups. One man, Benjamin Brimm, survived his wounds and crawled away, and he became the chief witness in the government's case.

Upon news of these events, the U.S. attorney general ordered an investigation. Government investigators estimated that by the end of the day of fighting, at least 105 African Americans had been killed. There were 98 defendants charged in the case, but only nine were taken into custody to stand trial under the case name of *United States v. C. C. Nash and Others*. They were each charged with violating sections of the Enforcement Act. It took two trials to acquit one defendant completely, find five defendants

not guilty of any charges, and convict three men of conspiring to block the "free exercise" of constitutional rights. No one was found guilty of any of the murder charges.

The case came to the Supreme Court as *United States v. Cruikshank et al.* (Cruikshank being one of the three convicted defendants) in 1874. In the decision of the Court in 1875, Chief Justice Morrison R. Waite declared the charges against the three men invalid because nowhere in the indictment did it specifically charge that the actions taken by the defendants were taken because the victims were African American. Waite stated that while one "may suspect that race was the cause of the hostility," it could not form the basis of a conviction since it was not in the indictment. Waite stated that since there was "no allegation" that the attacks were "done because of the race or color of the persons conspired against," then "[w]hen stripped of its verbiage the case as presented amounts to nothing more than that the defendants conspired to prevent certain citizens of the United States . . . from enjoying the equal protection of the laws of the state and of the United States. . . ." Waite also argued that the "Fourteenth Amendment prohibits a State from depriving any person of life, liberty, or property, without due process of law; but this adds nothing to the rights of one citizen as against another." Thus, since it was, according to the Court, merely a matter of individuals acting against other individuals and not the state of Louisiana acting against the individuals, the Enforcement Acts did not apply.

The Easter massacre at Colfax Courthouse in Grant Parish was the bloodiest of RECONSTRUCTION violence. When the Supreme Court was finished with the case, the practical enforcement of voting rights was left to local and state authorities. This meant that in the South, African Americans were essentially without recourse if any individual moved to keep them from voting. *Cruikshank* and what has come to be its companion case in legal history, *United States v. Reese* (which upheld poll taxes as legitimate voting requirements), sealed the fate of African Americans wishing to exercise their Fifteenth Amendment rights in the South. In keeping African Americans from the polls, these cases also doomed the REPUBLICAN PARTY in the South, because the party depended on the votes of the freedmen to stay in power. The decision in *Cruikshank*, though applauded by Southern and Democratic newspapers, did agree that the Fifteenth Amendment protected voters against discrimination based on race. Thus, it was a technical victory for those who wished to affirm that suffrage was a constitutional right that could not be abridged on the basis of race. But the message of the Court seemed clear to African Americans in the South: Voting is a risky business that may cost you your life.

## **Vallandigham, Clement L.** (1820–1872) *lawyer, politician*

Lawyer and U.S. congressman, Clement Laird Vallandigham was the most prominent antiwar Democrat, or COPPERHEAD, during the CIVIL WAR. Vallandigham was born on July 29, 1820, in New Lisbon, Ohio, to Presbyterian minister Clement L. Vallandigham and Rebecca Laird. Young Clement was educated at New Lisbon Academy and at Jefferson College (now Washington and Jefferson College). After a brief stint as a teacher, he studied law and was admitted to the Ohio bar in 1842. Vallandigham quickly became a successful lawyer, ultimately forming a lucrative partnership with Thomas J. S. Smith in Dayton, Ohio. In 1845 he began his political career with his election to the Ohio legislature. He was reelected the following year and chosen as Speaker of the House. In 1847 Vallandigham married Louisa A. McMahon, with whom he had two sons.

During the 1850s, Vallandigham continued to practice law while also dabbling in a number of other professions. For two years, he was editor of the Dayton *Empire*. He served in the Ohio state militia, eventually rising to the rank of brigadier general. He also made a number of attempts to break into national politics. In 1852 and 1854 he was defeated as a candidate for the House of Representatives. Despite his losses, Vallandigham was able to make a name for himself as a Democrat in the Jeffersonian mold, who believed strongly in the strict construction of the Constitution and in STATES' RIGHTS. He expressed support for the Mexican-American War (1846–48) and the Compromise of 1850, and he condemned ABOLITIONISTS. Although Vallandigham was personally opposed to SLAVERY, he felt a special kinship with the South, which had been home to many of his ancestors. Finally, in 1858, Vallandigham was elected to the House. He was reelected in 1860, pledging that he would never “vote one dollar of money whereby one drop of American blood should be shed in a civil war.”

When war finally came, Vallandigham continued to be vocal in his opposition, and he called for peace, even if it

meant letting the Confederacy remain independent. He was roundly and bitterly denounced by Republican politicians and newspaper editors. For example, in June 1861, the editor of the *Louisville Journal* called Vallandigham “A Traitor, A Monster, A Disgrace to his Ancestry, A Shame to Posterity. . . .” The charge that Vallandigham had betrayed the Union effectively destroyed his chances for reelection in 1862, ending his tenure in Congress. In his final speech to the House, delivered on January 14, 1863, Vallandigham reiterated his call for peace and warned that the states of the Northwest might join the Confederacy in seceding if the war was allowed to continue.

Ousted from his seat in Congress, Vallandigham decided to run for the governorship of Ohio on an antiwar platform. In the spring 1863, Gen. AMBROSE E. BURNSIDE, commander of the Military District of Ohio, issued an order that said it would no longer be acceptable to criticize publicly the Northern war effort. Vallandigham defied the order and was arrested and charged with “expressing treasonable sympathy.” Convicted by a military tribunal, he was sentenced to imprisonment at Fort Warren for the duration of the war. Shortly thereafter, ABRAHAM LINCOLN commuted the sentence and banished Vallandigham to the Confederacy. He remained there for a short time before relocating to Canada.

As a result of his conviction, Vallandigham became a powerful symbol for Northerners who opposed the war. The Sons of Liberty, a group of roughly 250,000 Confederate sympathizers in the North, rallied to Vallandigham's cause and named him supreme commander of their group. Meanwhile, angry Ohio Democrats gave Vallandigham their nomination for GOVERNOR. Ohio Republicans were incensed by the choice. A soldier in the 99th Ohio expressed the sentiments held by many of his comrades when he wrote, “Is the Democratic party so short of good men that they were compelled to take up a man justly banished for his treasonable practices?” In the election, Vallandigham was soundly defeated.

In 1864 Vallengham appealed his conviction to the Supreme Court, which declined to hear the case, arguing that civilian courts have no jurisdiction over military tribunals. Despite losing his case, Vallengham nonetheless returned to the states. Lincoln chose to ignore this, not wanting to draw any more attention to Vallengham. At the Democratic convention in 1864, Vallengham helped to write the DEMOCRATIC PARTY's platform. In it, he and his followers were able to include a plank calling for the immediate cessation of hostilities. GEORGE BRINTON MCCLELLAN, the convention's choice as its presidential candidate, quickly repudiated the peace plank. That, along with renewed Union successes on the war front, effectively destroyed Vallengham's power.

After the war Vallengham sought to rebuild his political career. He came to accept the end of slavery, and he said he hoped to work on bridging the gap between the Republican and Democratic Parties. In 1867 Ohio Democrats denied him an opportunity to run for the U.S. Senate, and Vallengham returned to his law practice. In 1872 he was hired to defend a man accused of murder. While doing a demonstration of how the victim had been shot, Vallengham inadvertently shot and killed himself. He won the case posthumously.

### **Vance, Zebulon B.** (1830–1894) *politician, lawyer*

Zebulon Baird Vance was GOVERNOR of North Carolina during the CIVIL WAR. Vance was born in Buncombe City, North Carolina, on May 13, 1830. He studied law at Washington College in Tennessee and the University of North Carolina. In 1854 he was elected to the state legislature, and six years later he won a seat in the U.S. House of Representatives as a Whig. He was reelected in 1858.

Vance became closely identified with the Constitutional Unionist party of JOHN BELL, whom he supported for the presidency in 1860. It was only after the election of ABRAHAM LINCOLN that he urged North Carolina voters to support a SECESSION referendum. Following the outbreak of war in April 1861, he formally cast his lot with the Confederacy. Vance initially served as colonel of the 26th North Carolina Infantry and was active in several battles around RICHMOND, VIRGINIA, and in the Peninsula. He was the Conservative Party's candidate for governor in September 1862, and he handily defeated his opponent.

As a wartime governor, Vance was obliged to carefully balance his commitment to the centralized Confederate administration of President JEFFERSON DAVIS, which

demanding increasing supplies of men and matériel, against the needs of his state, which had to sacrifice to supply these. In a military sense he directly helped the Confederate cause by supplying 120,000 North Carolina soldiers, the largest contingent from any Southern state, and he took measures to improve the state's textile and munitions capabilities. But he also ignored Davis's decrees to suspend HABEAS CORPUS, and he fervently championed individual rights.

Following the Confederacy's collapse in 1865, Vance resumed his law practice. In 1870 he was appointed to the U.S. Senate but was not allowed to take his seat. He lost a senatorial contest in 1872, but in 1876 he was reelected governor. Vance did return to the U.S. Senate in 1879, and he served there until his death in WASHINGTON, D.C., on April 14, 1894. A charismatic politician and a talented orator, Vance is regarded as among the Confederacy's best wartime governors.

### **Van Lew, Elizabeth** (1818–1900) *Union spy*

Born to a wealthy and prominent family in RICHMOND, VIRGINIA, Elizabeth Van Lew became one of the Union's most valuable spies, providing military and tactical information throughout the CIVIL WAR. Van Lew was born on October 17, 1818, to John and Elizabeth Van Lew. John Van Lew was an important Whig leader in Richmond, and his home was frequently full of local politicians whose presence certainly influenced the development of Elizabeth's own political philosophy. She was educated in PHILADELPHIA, PENNSYLVANIA, a city that was a center of antislavery rhetoric and activism in the antebellum period.

Returning to Richmond from Philadelphia, Elizabeth was committed to ABOLITION. When the war began, the unmarried 42-year-old Van Lew pleaded her loyalty to the Union, despite the obvious dangers of holding this view in wartime Richmond. Van Lew and her mother first helped the Union effort by assisting prisoners of war at Libby Prison, bringing them food, books, and clothing. Her family's prominence meant that Van Lew was privy to a great deal of military information, and she devised a variety of ways to convey that information to Union leaders. When Richmond fell to the Union on April 2, 1865, Van Lew recognized the value of the documentation left behind. Rushing to Confederate offices, she collected paperwork and records, conveying them to Union authorities.

After the war President ULYSSES S. GRANT recognized Van Lew's contribution to the Union effort by appointing her postmistress for Richmond. Van Lew lost her appointment in 1877 when Rutherford B. Hayes became president but regained it under Grover Cleveland. By the 1880s, however, Elizabeth's life in Richmond had become sad and lonely. Her mother dead, Van Lew had few friends among the local population. Although her aid to the Union had been of great use, few citizens of Richmond approved of her activities. In addition, she had incurred large debts during and after the war and had no way to repay them or to support herself.

Van Lew was rescued by the family of one of the Union soldiers she had assisted at Libby Prison. Relatives of Col. Paul Revere repaid her kindness and generosity by supporting her financially for the rest of her life. In the 1870s Van Lew's activist nature found an outlet through her ardent support of the women's rights movement. She died in Richmond in 1900.

## veterans

At the end of the CIVIL WAR there were nearly 2.5 million men who had donned the blue or the gray. This was vastly more veterans than the combined total of all of the other American wars fought up to that time. These men had naturally formed bonds that they were reluctant to abandon, and the war had not been over for very long before groups of former soldiers began to seek out ways to come together at local, state, and national levels.

Former Union soldiers were the first to organize. Soon after the end of the war, several officers gathered in Philadelphia and founded the Military Order of the Loyal Legion of the United States, known also as MOLLUS. MOLLUS was never a particularly large organization because of its stringent membership requirements: only Union officers and their eldest male sons could join. However, MOLLUS inspired numerous imitators with more relaxed standards. Among them were the Society of the Army of the James, the United States Soldiers and Sailors Protective Society, the United States Service Society, and the Grand Army of the Republic (GAR). The GAR was the single most important Civil War veterans' organization, numbering 400,000 members at its peak in the 1890s. The GAR was able to enroll so many members because it allowed all Union veterans to join, including African Americans. Children and wives of veterans could also be a part of the organization.

Confederate soldiers soon followed the lead of their Union counterparts. In 1870 several former Confederate officers gathered in RICHMOND, VIRGINIA, and founded the Association of the Army of Northern Virginia. Similar groups, mostly with limited memberships, were established in the other former Confederate states over the course of the next decade. The most prominent of these groups was the Association of the Army of Tennessee, the Grand Camp of Confederate Veterans of Virginia, and the North Carolina Society of Ex-Sailors and Soldiers. Finally, in February 1889, these groups came together to form the United Confederate Veterans, or UCV. The UCV founded two auxiliary organizations, the Sons of Confederate Veterans and the UNITED DAUGHTERS OF THE CONFEDERACY; both are still in existence. At its height in the early 1900s, the UCV counted 80,000 members among its ranks.

Both Confederate and Union veterans organizations served a variety of purposes in the lives of their members. Perhaps most obviously, they provided camaraderie. Most veterans posts held regular social meetings. They also organized regular reunions of regiments or brigades. Often, the UCV and GAR would coordinate on "campouts," where entire armies would reunite on the important battlefields on the anniversaries of the battles fought there. Campouts were held on the 25th and 50th anniversaries of Gettysburg, for instance.

In addition to their role as social organizations, veterans groups were also powerful political lobbies. The GAR was arguably the single most influential interest group in the United States in the years between Appomattox and the turn of the century. If a candidate for state or national office wished to be elected on the Republican ticket, the GAR's support was often critical. For example, of the men who won presidential ELECTIONS between 1868 and 1900, only Democrat Grover Cleveland was not a member of the GAR. Veterans expected concessions in exchange for their support. In the years immediately after the war, they pushed for harsh terms for the readmission of the South, and they were staunch supporters of Radical RECONSTRUCTION. Later, the GAR focused on securing federal funding for veterans' hospitals and pensions. A succession of pension bills was passed in the 1870s and 1880s, each increasing the amount being paid to former soldiers or relaxing the requirements for pension eligibility. By the mid-1890s, pension payments to Union veterans and their families accounted for 40 percent of the entire federal budget.

Confederate veterans did not have the political leverage that their Union counterparts enjoyed, but they nonetheless focused on the same issues. The FOURTEENTH AMENDMENT prohibited former Confederates from receiving federal benefits, so veterans groups in the South

were compelled to turn to their state governments and private entities for support. Some Southern states, notably Louisiana, Georgia, and South Carolina, established relatively generous pensions for their veterans. Other states, including Texas and Louisiana, provided grants of land for former soldiers. In 1885 a combination of public and private funding allowed for the founding of Lee Camp, the first soldiers home for Confederate veterans. Ultimately, there were a total of 16 soldiers' homes that provided care for more than 20,000 indigent and disabled ex-Confederates.

As the GAR and UCV worked to provide health and pension benefits for veterans, they also strove to shape the memory of the war. Veterans were interested in placing the bravery and sacrifice of the COMMON SOLDIER at the heart of the narrative. To that end, the GAR, the UCV, and their auxiliary support groups undertook a variety of initiatives. Each organization commissioned history textbooks and lobbied for their use in schools so that children could be taught the "correct" version of what had happened during the war. Both organizations played a role in establishing Memorial Day as a national holiday, and both the GAR and the UCV erected countless MONUMENTS to soldiers and their leaders across the country, particularly at important battlefields and at cemeteries. Roughly 500 monuments were built by Southern veterans' groups, while approximately 5,000 were unveiled by the GAR and its allies. The majority of these monuments were built between 1880 and 1910.

In 1896 William McKinley became the last veteran of the Civil War to be elected to the presidency. By the start of the 1900s the Civil War was beginning to seem distant in the minds of Americans, and a majority of veterans had already passed away. When the 50th anniversary campout at Gettysburg was held in 1913, it was widely understood that the event would be the final gathering for the men who had fought in the Civil War. By the time of World War I the number of living veterans had been reduced to a few thousand, and by the time the GAR disbanded in 1949, it was down to less than a hundred. The last Civil War veteran, Albert Woolson, died in 1956, 95 years after the first shot was fired at FORT SUMTER, SOUTH CAROLINA.

### Vicksburg campaign (November 1862–July 1863)

ABRAHAM LINCOLN, hearing the news of the July 4, 1863, surrender of Vicksburg, Mississippi, to Union forces, exclaimed: "The father of waters again goes unvexed to the seas!" The Confederate loss of Vicksburg and, with it, the Union's control of 250 miles of the MISSISSIPPI RIVER to Port Hudson, Louisiana, was a huge blow to the fledgling Southern nation. Vicksburg was a vital economic and military link between the Confederacy and its western states of Louisiana, Arkansas, and Texas. History records Maj. Gen. ULYSSES S. GRANT's strategy to capture the "Gibraltar of the West" as one of the greatest military campaigns of all time.

In 1861 Vicksburg had a population of 5,000, making it the second largest city in the state. Crisscrossed with narrow, twisting streets, Vicksburg was a bustling commercial center and TRANSPORTATION network for the planter class of Mississippi and Louisiana. Like Natchez, its downriver sister, Vicksburg's wharves teemed with riverboats loaded with cotton and passengers headed for New Orleans. Vicksburg was a railroad hub as well, with lines going east to the state capital, Jackson. "Vicksburg is the key," President Lincoln argued. "This war can never be brought to a close until the key is in our pocket." The president of the CONFEDERATE STATES OF AMERICA, JEFFERSON DAVIS, whose PLANTATION was near Vicksburg, agreed that the citadel city was the "key," but he clearly wanted to keep it in the Southern pocket.

Vicksburg's role was defined early. A major strategic goal of the Union's war effort was to gain control of the Mississippi River from Illinois to the Gulf of Mexico. Necessarily, the Confederates' war aims were geared toward protecting the river and the surrounding Southern territory against Union invasion. Early on, Union armies in the west were successful in using a combination of naval and infantry forces to gain control of the upper part of the river from Illinois to just north of Vicksburg, and the lower Mississippi River, from New Orleans to just south of Port Hudson, Louisiana. Recognizing that the Confederacy must guarantee that the last large portion of the river remain open to traffic, Southerners poured their energies into making Vicksburg an "impregnable fortress."

In May 1862, Southern forces occupied Vicksburg and began a yearlong project of fortifying the city against Union invasion. In many ways, Vicksburg was naturally well protected due to its unique geographical position. Perched on bluffs more than 200 feet above the Mississippi River, Vicksburg was practically unassailable from the water.

Defenders made sure of that when they placed 100 cannons along a nine-mile ridge. From that ridge, the Confederates controlled the river for more than 30 miles. Attack from land would be almost as difficult. Miles of swamps, thickets, bayous, and rivers bordered Vicksburg from both north and south. The only way to assault Vicksburg by land was from the east, and in 1862 middle Mississippi was firmly under Southern control. Taking no chances, however, rebels built strong defenses protecting their most vulnerable part. For nine miles east of the city, Confederate engineers constructed a series of watchtowers with walls up to 20 feet thick overlooking gullies and hollows. Along this line, 115 cannons were placed, and trenches and rifle pits were dug to protect both cannons and soldiers. Well before the final trench was dug, however, Vicksburg's position was challenged.

In late May and early June 1862 Union naval gunboats under the command of DAVID GLASGOW FARRAGUT began bombardment of the city. The cannons on the high bluffs overlooking the river fired on the Northern ships, and Farragut, realizing he was overmatched, withdrew. Throughout the summer other attempts were made to attack Vicksburg, all to no avail. Both sides realized that a massive show of force by the UNION ARMY was coming, and soon. In October, Confederate major general John C. Pemberton was appointed commander of Mississippi and eastern Louisiana. The Pennsylvania-born Pemberton, a West Pointer and career military officer, married a Virginian and cast his lot with the Confederacy in 1861. Pemberton felt confident that his army of 30,000 would defend ably the fortress above the Mississippi.

On November 2, 1862, Maj. Gen. Ulysses S. Grant, victor of the Battles of Fort Henry and Donelson (which opened the South to invasion via the Tennessee River) and the BATTLE OF SHILOH, began a campaign to capture Vicksburg. He moved his army south from Grand Junction, Tennessee, along the lines of the Mississippi Central Railroad. His immediate destination for the 30,000-strong Army of the Tennessee was Holly Springs, Mississippi. Grant ordered Maj. Gen. WILLIAM T. SHERMAN to detach a part of his force and attack Vicksburg from the north. Both forces would converge on Vicksburg at the same time from different directions. It was a good idea that failed miserably. Confederate cavalry destroyed Grant's supply base at Holly Springs on December 20, and he lost contact with Sherman. A week later, Sherman's 32,000 men were decisively repulsed at the Battle of Chickasaw Bayou.

Grant retreated back to Memphis, Tennessee, in January 1863 to reconceptualize his campaign. He went downriver again and put his soldiers to work on building canals and other river projects. Hopefully, a water route could be opened that would allow his army to avoid the killing fire of the Vicksburg cannons and get on dry ground either south

Siege of Vicksburg, July 4, 1863 (Library of Congress)

or east of the city. Months went by, and all the projects ended in frustration. "Grant has no plan for taking Vicksburg," one critic wrote from WASHINGTON, D.C. "He is frittering away time and strength to no purpose." Even his ablest generals agreed. Heavy criticism was leveled at Grant from many sides, but a worried Lincoln remained steadfast in his support.

Finally, Grant came up with a successful operation in March and April 1863. His plan was simple, bold, and ingenious. With the help of Adm. DAVID DIXON PORTER, commander of Union naval forces in the region, Grant marched his army down the west side of the Mississippi below Vicksburg. Porter's boats and transports, having earlier braved successfully the Vicksburg batteries, transported two of Grant's three corps safely across the river. Sherman was ordered to stay behind and make a false attack on Vicksburg to confuse Pemberton—and Pemberton's commanding general, JOSEPH E. JOHNSTON, headquartered in Jackson—as to Grant's real intentions. As soon as all of Grant's army was across the river, Sherman rejoined the main force.

Simultaneously, Grant ordered a young Union cavalry commander—Col. Benjamin H. Grierson, a former MUSIC teacher from Illinois—to take 1,700 horsemen on a diversionary raiding party across middle Mississippi. Grierson, riding hard from southwestern Tennessee, accomplished everything Grant asked for in his 16-day, 600-mile raid in April. Fifty miles of railroad track were destroyed, Confederate communications seriously disrupted, 500 rebel prisoners taken, Southern generals confused, and civilians up in arms.

On May 1, the main Union army was on the eastern side of the Mississippi. Grant was on the march and cut off from his supply base. Others fretted, but he decided to

“carry what rations of hard bread, coffee, and salt we can and make the country furnish the balance.” The next two and a half weeks saw Grant’s army moving swiftly west and then east again, engaging and defeating two Confederate armies (Pemberton’s and Johnston’s) at Port Gibson, Raymond, Jackson (the state capital), Champion’s Hill, and Big Black River. The Union soldiers’ morale was high. In 17 days they had marched 180 miles and won five battles. The Union’s casualty rate was costly at 4,300 but lower than the Confederates at 7,200. The defeat at Big Black sent Pemberton and his weary men scurrying back for the safety of the fortified city. By noon of May 19, the Federals had arrived at Vicksburg in force, and Grant, convinced that his men could take the city easily, ordered the first of two frontal assaults. Both were unsuccessful, and Grant settled in for the long siege that he had hoped to avoid.

From the military point of view, a siege means the desire to capture a fortified position to gain territory. For Grant, this meant putting his men to work digging trenches until the nine miles of Confederate fortifications behind Vicksburg were encircled by 12 miles of Union earthworks. By June the Union army was not only well entrenched but enlarged greatly. Grant had roughly 75,000 men to deploy, with more arriving daily. Additionally, a steel wall of rifles and cannons ringed the increasingly beleaguered city, and the latter boomed all day and all night. General Pemberton, believing that help in the form of General Johnston and his troops would arrive at any time, vowed never to give up. Because all supply lines into Vicksburg were cut and communication difficult, Pemberton did not receive Johnston’s message of June 15 in which he warned Pemberton to escape with his army intact, as saving Vicksburg was hopeless.

From the civilian point of view, a siege means possible starvation and certain disruption of life and destruction of property. At Vicksburg, 3,000 citizens and 30,000 soldiers were trapped and desperate. For almost six weeks, through the terrible heat of late May and June, the mostly women and children civilians of Vicksburg endured dwindling food and water supplies with great courage and spirit. Soon signs of malnutrition appeared in the population. Mule meat and a few handfuls of corn constituted a good day’s diet for both soldiers and civilians. Moreover, the constant and deadly rain of Union artillery shells drove terrified families out of their homes and into caves dug out of the hillsides of Vicksburg. In the streets, the houses, fences, and trees that had not been obliterated by bombs were destroyed for firewood. On June 28, Pemberton received a letter, signed by “Many Soldiers,” begging him to surrender if he would not see everyone die of starvation. The soldiers by now were too weak to even try to escape their prison. On July 3 Union soldiers near Confederate trenches claimed to see

many white flags flying, the classic sign of surrender. On that day, General Pemberton met with Grant and agreed to surrender his army the next day.

The terms were generous. The Confederates—27,230 enlisted men and 2,166 officers—were given “paroles,” pieces of paper signed by soldiers that allowed them to go home if they promised not to take up arms against the Union again, thus sparing them from incarceration in a Northern prison camp. Besides the surrender of the army, the Federals captured 200 cannons and 60,000 small arms, so badly needed by Southern armies. The most important outcome by far was that Vicksburg was captured, and on July 9 the Confederacy was split in two when Port Hudson fell to Union general Nathaniel P. Banks. Lincoln knew who deserved the credit for this great and decisive victory for the North. “Grant is my man,” he said, “and I am his the rest of the war.” Shortly afterward, Grant was promoted to head the Military Division of Mississippi, and Sherman, at Grant’s request, assumed Grant’s former position as commander of the Western Department and head of the Army of the Tennessee.

“This was the most Glorious Fourth I ever spent,” remembered one Union soldier. Indeed, July 4, 1863, was widely celebrated in the North, and not just for the surrender of Vicksburg but also for the Union’s win on the fields of Gettysburg, Pennsylvania, on July 3. Although almost two more years would pass before the war was finally over, it was clear, as Grant wrote in his memoirs, that “[t]he fate of the Confederacy was sealed when Vicksburg fell.”

### volunteer army

Roughly 90 percent of the men who made up the armies of the CIVIL WAR, a total of more than 2 million individuals, were volunteers. These amateur soldiers volunteered for a number of reasons, and while their service was invaluable, their approach to warfare often exasperated the professional generals who commanded them.

On the Union side, men were generally accepted into service through the U.S. volunteer system. The Confederates used a system that was identical in all but name. The U.S. volunteer system, used throughout the 19th century, placed the burden of responsibility for raising troops on the states. With congressional approval, GOVERNORS would nominate local notables as officers. These officers, in turn, would put together units by recruiting men from their community to serve terms ranging from three months to three years in length. Once a company or regiment had been formed, it would be accepted into federal service and henceforth commanded and paid for by the U.S. government. The only major exception to this pattern was AFRICAN-AMERICAN REGIMENTS, which, for the most part, were organized directly by the federal government.

In the first months of the war, there was no shortage of volunteers. Indeed, both governments were compelled to send men home because so many reported for duty. Ohio, for example, was asked to supply 13 regiments by ABRAHAM LINCOLN, but Governor William Dennison wrote to explain to the president that "without seriously repressing the ardor of the people, I can hardly stop short of 20 regiments." After the patriotic furor of the first few months died down, however, volunteers were much harder to come by. Ultimately, both governments were compelled to resort to providing bounties, which were rewards of cash and/or land, for men who enlisted or reenlisted. Both governments also adopted a draft, although this only provided about 3–6 percent of the men who fought.

For the men who volunteered in the early months of the war, the experience could be quite exhilarating, as their communities rallied around them. Older men would regale the volunteers with tales of service in previous wars. Women would make UNIFORMS and other necessities and would smother the volunteers with attention. "If a fellow wants to go with a girl now," wrote one Indiana man in his journal, "he had better enlist. . . ." The new soldiers also had to take care of a number of formalities. Junior-grade officers, the captains and lieutenants, had to be chosen via popular vote. A physical exam had to be passed, although this exam was generally not very thorough, as evidenced by the fact that several hundred women managed to pass it. Once the volunteers had been supplied and all the formalities had been completed, there was usually a big send-off, perhaps with a picnic or a parade. Most units were presented with a flag made by the women of their community. At this point, the volunteers were ready to report for duty.

For many volunteers, perhaps even most, their service in the Civil War marked the first time they had ever left their homes. Why were men willing to abandon everything they had ever known in order to join the fight? There were a number of common reasons. Some men were motivated by the cause of their side or hatred for the other side.

Others, particularly in the early months of the war, were attracted by the excitement that prevailed throughout the country and by a desire for new and different experiences. Still others felt pressure from the members of their community. A common attitude was that combat was a chance for a soldier to prove his manhood, and men of the proper age who chose not to enlist were often shunned. Economic motivations were also common. A soldier's pay represented a substantial increase in salary for some members of the working class. The generous bounties the Confederate and Union governments began to offer in 1862, often in excess of \$1,000, made enlistment an even more attractive financial proposition.

For leaders on both sides of the Civil War, there were a number of benefits to having a volunteer army. "The patriot volunteer, fighting for his country and his rights," noted THOMAS J. (STONEWALL) JACKSON, "makes the most reliable soldier on earth." Jackson knew that many soldiers spent their terms of service surrounded by friends and relatives that they had known for years or decades. This situation reduced the chance that a soldier would "skeeaddaddle" during a battle or desert the army after a battle. Beyond that, soldiers maintained strong ties with people on the HOMEFRONT and could be valuable allies in sustaining the civilian population's support for the war. Northern soldiers, in particular, played a critical role in Lincoln's reelection in 1864, ensuring that the war would only end once reunion had been achieved. Finally, the enlistment of large numbers of volunteers added a number of talented soldiers to the ranks who otherwise would not have entered armed service. Widely respected Union generals Francis Channing Barlow and JOSHUA LAWRENCE CHAMBERLAIN were volunteers. On the Southern side, volunteering added Gens. PATRICK R. CLEBURNE and James J. Pettigrew to the ranks.

Although volunteers provided several useful advantages, they also had their shortcomings. A number of generals shared the sentiments of South Carolina governor James Henry Hammond, who wrote in 1861 that, "carrying on a war by volunteers is absolutely suicidal." Hammond's disdain was largely due to the poor soldiering he saw early in the war, when officers were being chosen by a vote of their fellow soldiers. These elections were popularity contests, and so the men chosen almost invariably had little military experience. They did a poor job of training the men under their command and an ineffective job of commanding them in battle. The situation demanded a solution, and by 1862 important changes had been put in place. Experienced military men from the U.S. Army and from Europe were brought in to properly train soldiers. Meanwhile, officers were no longer elected and, instead, were chosen based on merit.

Other problems with volunteers proved less easy to solve and were a constant headache for commanding gen-

erals. Volunteer soldiers were less disciplined than career men. Their beliefs about what kinds of behavior were appropriate during a war were not nearly as strongly held as among their professional counterparts. This tendency manifested itself in a variety of ways. The diversions that many volunteer soldiers pursued often shocked the Victorian sensibilities of people on the homefront: gambling, frequenting prostitutes, drinking, smoking, and so forth. Beyond that, Union and Confederate soldiers frequently had few doubts about associating with the enemy once battles were over, and the trading of such commodities as newspapers, tobacco, and coffee across the lines was common. Perhaps the greatest problem was the lack of restraint that many volunteer soldiers showed when interacting with civilians, regularly mistreating them and their property. These incidents undermined support for the war and sometimes provoked violent responses. Ultimately, repeated violations of the RULES OF WAR led the Northern government to issue the Lieber Code of 1863, a set of guidelines designed to control soldiers' behavior. The code was only partially successful.

Once the war was over, virtually all of the volunteers who remained in the armies of the United States and the Confederacy were quickly mustered out of service. After

returning home, however, they continued to play an important role in national political life. The men who had served in the North became an important Republican voting bloc, while Southern VETERANS became a key Democratic constituency. Each of the presidents between 1876 and 1900, with the exception of Grover Cleveland, was a Civil War volunteer. The volunteers also worked to shape the memory of the war, writing memoirs of the war and erecting MONUMENTS on battlefields. They ensured that the COMMON SOLDIER would forever occupy a central place in the history of the Civil War.

## **Wade, Benjamin Franklin** (1800–1878) *lawyer, politician*

Born in Fleeting Hills, Massachusetts, on October 27, 1800, Benjamin Wade moved with his family to Andover, Ohio, in 1821. He began practicing law in 1827, and over the next two decades served as a prosecuting attorney, a state senator, and a circuit judge. On March 15, 1851, he received the news of his election to the U.S. Senate.

Wade served his first term as a Whig, but in the two terms that followed he represented the REPUBLICAN PARTY. In his attacks on the KANSAS-NEBRASKA ACT and his defense of his colleague CHARLES SUMNER, Wade displayed both his principles and leadership ability. He earned the nickname of “Bluff” Ben Wade and the respect of his Northern colleagues for answering the challenge by a Southerner to duel with the reply that he favored squirrel guns at 20 paces. More important, within the Senate chambers during the war, the Ohio senator served as an outspoken voice of the RADICAL REPUBLICANS, pushing for a more aggressive military policy from ABRAHAM LINCOLN and his administration. Wade also utilized his chairmanship of the JOINT COMMITTEE ON THE CONDUCT OF THE WAR and the proposed WADE-DAVIS BILL to actively campaign for the ABOLITION of SLAVERY and a harsh RECONSTRUCTION.

In 1867 Wade became the president of the Senate. In this position he, along with Chief Justice SALMON P. CHASE, presided over the impeachment proceedings of President ANDREW JOHNSON. Following the unsuccessful attempt to remove Johnson from office, Wade retired from the Senate and returned to Ohio. In 1868 he failed to gain the vice presidential nomination on the Grant ticket, and in 1876 he served as a presidential elector, repudiating the compromise that gave Rutherford B. Hayes the presidency of the United States.

Benjamin Wade died in Jefferson, Ohio, on March 2, 1878.

## **Wade-Davis Bill** (1864)

In winter 1863–64 ABRAHAM LINCOLN set forth his vision for the policies regarding the readmission of Southern states to the Union. He proposed lenient regulations, and early in 1864 he went forward with his plans by initiating RECONSTRUCTION governments in both Louisiana and Arkansas. Upset with the fact that Lincoln appeared to be establishing the foundation of a Reconstruction policy without the consent of the legislative branch, the RADICAL REPUBLICANS passed a bill that presented their own version of Reconstruction on July 2, 1864. First initiated in the House of Representatives by Henry Winter Davis of Maryland, the measure gained approval in the Senate under the guidance of BENJAMIN FRANKLIN WADE of Ohio.

The bill, known by the surnames of its sponsors, set out a stringent procedure for readmission. Most notably, it required a majority of white voters in the state under consideration to take the IRONCLAD OATH of allegiance to the United States, and it also demanded that the state’s constitution include a clause abolishing SLAVERY. Although the bill did not include all of the points of the radical program, including African-American suffrage, it did give notice to the country and to Lincoln that congressional Radicals did not intend to allow the president solitary control of the Reconstruction of the South. The Senate approved the bill on the very last day of the summer session in a move designed to force Lincoln’s approval. But rather than accede to the demands of the Radicals, the president pushed the bill aside and refused to sign it, taking advantage of his pocket-veto privilege. Lincoln’s veto led Wade and Davis

to issue a manifesto denouncing the president's action as an unconstitutional denial of legislative authority.

**Wakeman, Sarah Rosetta** (1843–1864) *Union soldier* Female soldier Sarah Rosetta Wakeman was born in New York State to a farming family. In 1862 she left home because she “got tired of staying in [the] neighborhood.” Dressed as a man, she signed on to be a boatman on the Chenango Canal in New York. A month later she went to the local army recruitment office and, giving her name as Lyons Wakeman, she enlisted in the 153rd New York Volunteer Infantry Regiment. Private Wakeman was mustered into service on October 17, 1862.

For the next 15 months the 153rd was among the units responsible for defending WASHINGTON, D.C. Although Wakeman's regiment was regularly ordered to prepare for an enemy attack during that time, none came. Finally, in February 1864 the 153rd was transferred to the field to take part in NATHANIEL P. BANKS's RED RIVER CAMPAIGN in Louisiana. After an incredibly difficult 700-mile march, Wakeman and her unit participated in the second engagement of the campaign, at Pleasant Hill. They helped to turn back six Confederate charges before being forced to retreat. Shortly thereafter, Wakeman fell ill with dysentery. She reported to the regimental hospital on May 3 and was transferred to a general hospital in New Orleans in late May, where she died on June 19 without her secret being discovered. She was buried in New Orleans under a tombstone bearing her male enlisted name, Lyons Wakeman.

There were approximately 400 known WOMEN SOLDIERS in the CIVIL WAR. We are left with very little information about most of them, but Wakeman is the exception to the rule. She wrote many LETTERS to her family, which were discovered and published in 1994. At present, this collection is arguably the best contemporary account of the experiences of a woman disguised as a man who donned a uniform during the Civil War.

**Walker, Mary Edwards** (1832–1919) *Union surgeon* CIVIL WAR doctor and MEDAL OF HONOR winner Mary Edwards Walker was born on November 26, 1832, in Oswego, New York. She received an excellent EDUCATION as a young woman, eventually earning her medical degree in 1855 from Syracuse Medical College.

When the Civil War broke out in 1861, Walker immediately decided to get involved. She traveled to WASHINGTON, D.C., to offer her services as a surgeon to the U.S. Army's Medical Department. Walker was offered an appointment, but only as a NURSE, which she refused. She began a letter-writing campaign, and eventually a compromise was reached, with Walker agreeing to work as

Mary Edwards Walker (Library of Congress)

an unpaid volunteer surgeon in exchange for rations and housing.

Walker served in several locales throughout the war. Her main base of operations was the “Indiana Hospital,” housed in the U.S. Patent Office in Washington, D.C. Walker also tended to wounded in the field at Warrenton, Virginia, and Fredericksburg, Maryland, as well as other locations. She earned the respect of each of the male surgeons she served under, all of whom urged the government to give her a formal appointment. In early 1864, after much lobbying on Walker’s behalf, she was finally given a noncommissioned civilian surgeon’s contract paying \$80 a month. Walker’s good fortune proved to be short lived. She was captured a few weeks later by a Confederate sentry and spent the remainder of the war in PRISON.

Walker hoped that the government would recognize her contributions with a permanent position as an army medical inspector. After some deliberation President ANDREW JOHNSON decided not to grant Walker’s request. However, he did support her nomination for and eventual award of the Medal of Honor. Walker was the only woman to win the award for service during the Civil War. Later, Walker turned her attention to political issues, especially women’s suffrage.

Throughout her life she wore her Medal of Honor as a badge of the government’s gratitude. In 1919 a review board revoked Walker’s medal. She declined to surrender her medal and told the board “you can have it over my dead body.” Six days later she died near Oswego, the place of her birth. In 1977 the medal was officially restored.

### **Walker, William** (1824–1860) *American filibuster*

William Walker is best remembered as an American filibuster, or leader of private military expeditions abroad. Walker was born in Nashville, Tennessee, on May 8, 1824. He completed medical studies in Pennsylvania by the age of 19 and relocated to New Orleans, Louisiana. There, in 1845, he married Ellen Galt Martin, who convinced him to pursue a career in JOURNALISM. Walker enthusiastically supported American expansionism, and in his columns in the *Daily Crescent* he denounced both SLAVERY and FILIBUSTERING as inadequate means of furthering American expansionist aims.

After his wife died of cholera in 1849, Walker relocated to gold rush California, where he practiced MEDICINE

and edited a newspaper in San Francisco. In 1853, having changed his mind about filibustering, he led 45 armed men on an expedition to Mexico and seized Sonora, a territory of Mexico near Baja California. There he proclaimed an independent republic that, unlike the Mexican government, protected slavery. Mexican authorities resisted, and the United States did nothing to support him. Abandoned by his soldiers, Walker turned himself in at San Diego on May 8, 1854, whereupon he was arrested. He stood trial for violating U.S. neutrality but was acquitted.

Walker next turned his attention to Nicaragua, where, on June 16, 1855, he landed with 58 mercenaries. His force joined local insurrectionists, and together they overturned the opposition Legitimists. The victors formed a coalition government, which was also proslavery, with Walker serving as commander in chief of Nicaraguan forces. But Walker’s scheme brought him in direct conflict with two immovable powers. The first was millionaire businessman Cornelius Vanderbilt, who coveted the interoceanic transit route and kept ships at Nicaragua. The second was Great Britain, which regarded the new regime as hostile to its ambitions along the Mosquito Coast (the Atlantic side of Nicaragua and Honduras). Together they convinced a coalition of Central American nations to invade Nicaragua, and Walker, who had since been elected “president,” was forced to flee for the United States.

Undeterred, Walker raised more volunteers and made two more attempts, in 1857 and 1858, to establish a foothold in Central America. In August 1860 he conducted his final campaign against Honduras. Defeated by a combination of local and British forces, Walker was forced to surrender. He was executed by Honduran authorities at Trujillo on September 12, 1860.

### **war contracting**

In the first months of the CIVIL WAR thousands upon thousands of men rushed to join the ranks of both the CONFEDERATE ARMY and the UNION ARMY. These men had to be equipped with UNIFORMS, weapons, and other necessities. To do so was not an easy task, because the antebellum army was very small and therefore had only a very limited amount of modern military equipment. As such, both governments were forced to rely on private manufacturers to help provision their armies.

In the North, responsibility for supplying the military's needs initially fell on Secretary of War Simon Cameron. Cameron was a political appointee, given a place in ABRAHAM LINCOLN's cabinet solely to satisfy Republican voters in Pennsylvania, and he was not capable of managing a large-scale mobilization. In the early months of the war, the process of awarding war contracts was rife with corruption. Manufacturers, with an eye toward maximizing profits, would overcharge the government or provide extremely inferior goods. Guns would misfire or jam, and food was often spoiled. Many uniforms were made of a material called "shoddy," a term that eventually came to describe anything of poor quality. Shoddy uniforms would generally disintegrate after a few months of use, leaving a soldier with no protection from the elements.

Eventually, the situation was so bad that a congressional investigation of the war-contracting process was launched. In the end, however, Congress took no action because President Lincoln acted first, sending Cameron to Russia to serve as the American foreign minister. EDWIN M. STANTON, Cameron's replacement, a no-nonsense lawyer from Ohio, quickly developed a reputation for efficiency and integrity. Stanton initiated a review process to make certain that contracts were only awarded to reliable manufacturers and that the prices the government paid were fair. By the end of 1862, Stanton had brought the situation under control, and for the rest of the war the Union forces were the best-supplied military in the world.

For the South, provisioning the army and navy was an even more difficult task. Food and cotton were abundant, but the Confederates had few other assets. The South had virtually no military equipment on hand at the beginning of the war, and almost all of what they did have was antiquated. Additionally, the South had little manufacturing capacity. At first, the Confederates relied on Europe for equipment, trading cotton for goods. However, this channel quickly dried up due to diplomatic pressure from the Lincoln administration as well as the Union blockade. And so, by the end of 1862, the Confederates largely had to rely upon themselves to equip the military.

Like the North, the South made as much use of private contractors as was possible. The privately owned TREDEGAR IRON WORKS in Virginia grew to be the single most important supplier of goods to the Confederate army, and smaller firms such as Cook and Brother Armory in Georgia also made contributions. However, because there were so few manufacturing concerns in the South, the Confederate government also found it necessary to go into the manufacturing business for itself. By 1863, publicly owned firms were producing ships, guns, bullets, blankets, wagons, uniforms, and virtually every other manufactured good needed to wage war.

The Confederates had some notable successes in their manufacturing endeavors. In particular, the Confederate

Ordnance Department did a remarkable job of providing ammunition and gunpowder. Generally, however, the CONFEDERATE NAVY and army were woefully undersupplied. Southern manufacturing capacity grew substantially during the war, but never to the point of being able to adequately equip the Confederate army. And even if Southern factories had the capacity to produce what was needed, they lacked the necessary raw materials and manpower. By the middle of the war, the disparities between the equipment of the Union military and the Confederate military were abundantly evident, and the gap continued to grow as the war dragged on. Necessarily, the Union government's success in war contracting must be counted among the reasons that the North was able to win the Civil War.

### **Warmoth, Henry Clay** (1842–1931) *lawyer, Union soldier, politician*

Born on May 9, 1842, in MacLeansboro, Illinois, Henry C. Warmoth became a lawyer, Union officer, and RECONSTRUCTION governor. As a young boy, he moved with his family to Fairfield, Illinois, where he received an EDUCATION in local schools. Warmoth studied the law in Fairfield, and when he moved to Lebanon, Missouri, in 1860 he received admittance to the bar, despite being only 18 years old. A bright and ambitious young man, Warmoth was appointed county attorney. During this period of increasing sectional tensions in a slave state, he joined the state militia. In 1861 Warmoth declared his loyalty to the Union and helped to raise an infantry regiment. In November 1862 he was rewarded with a lieutenant colonelcy in the 32nd Missouri Infantry Regiment. He served under Gen. John A. McClernand in the VICKSBURG CAMPAIGN of 1862–63 and was wounded in battle in May 1863.

Gen. ULYSSES S. GRANT relieved McClernand of command just at the time that Warmoth was injured. Warmoth was angry that his friend and mentor had been dismissed. Due to statements Warmoth made that expressed his displeasure, Warmoth was accused of maligning Grant's army and was promptly given a dishonorable discharge. He asked for, and received, reinstatement to his unit from President ABRAHAM LINCOLN. He then led the 32nd in the BATTLE OF LOOKOUT MOUNTAIN, near Chattanooga, Tennessee, in November 1863. Requesting a post in New

Orleans, Warmoth moved to the Crescent City in 1864, and when the war ended, he was serving as a provost judge.

By 1865 Warmoth had established a law practice in New Orleans and had helped the REPUBLICAN PARTY to organize in Louisiana. Popular and charming, Warmoth actively sought political office, and in April 1868 he was elected GOVERNOR of Louisiana. As governor, Warmoth was confronted immediately with organized white terrorist groups who stopped Republicans from voting for Grant in the 1868 election. Throughout his administration, Warmoth tried and failed to establish the legitimacy of his CARPETBAGGER Republican administration. Using fair as well as foul methods, Warmoth became mired in corruption and scandal. In the scandal-ridden Louisiana election of 1872, Warmoth became so embroiled in controversy that he was impeached, but he was never brought to trial. After 1872, Warmoth remained active in Republican politics, but he was more successful as a planter and businessman in his adopted city of New Orleans, where he died on September 30, 1931.

## Washington, D.C.

The CIVIL WAR drastically changed the capital city of the United States of America, Washington, District of Columbia. Often called Washington City in the 19th century, it was transformed from a small, provincial city of 63,000, in which the nation's Capitol was located, to the "Nation's Capital," of more than 200,000. In 1860 it was a sleepy Southern town, with muddy, dirty streets, an unhealthy, noxious environment, and many ramshackle buildings. By 1865 Washington, D.C., was the symbol of a newly reunited country, but more than that, it had become a distinctly cosmopolitan place. The former Southern population was enlarged and enlivened by a broad cross section of society—Southern, Northern, freedpeople, businesspeople, and a huge influx of middle-class women and men who came to work for expanded wartime government agencies and stayed to live. Between 1861 and 1865 the city's population nearly quadrupled.

Washington, D.C., during the Civil War stood for the heart and soul of the Union cause, a cherished symbol of the power of the United States of America. President ABRAHAM LINCOLN, the members of the cabinet, and members of Congress lived and worked in the city, carrying on the vision of the founding fathers. Washington, D.C., was also

the most tempting target for Confederate armies. Its capture would be a brilliant prize for the Southern cause, and citizens learned to live with the threat of sudden invasion. The war's threat to D.C. was demonstrated graphically by the circle of forts guarding the city, the barracks crammed with soldiers, the shanty towns filled with ex-slaves bringing the revolution in freedom close to government scrutiny, and the hospitals teeming with wounded and dying soldiers.

Situated on the banks of the Potomac River, the District of Columbia at the start of the Civil War was composed of several small, distinctive communities in a rural setting. Much of the city was built on a swamp, and disease and illness were rampant, particularly in the hot, muggy summer months. The White House is a good example of the unhealthy conditions experienced by many Washingtonians: It was nearby the part of the Potomac River that met with the city canal (the sewer), the city dump, and a slum area called "Murder Bay." This unpleasant combination made life challenging and, occasionally, tragic for the chief executive and his family. The 1862 death of Abraham and MARY TODD LINCOLN's son, Willie, was attributed to typhoid fever, a disease contracted through infected drinking water.

Washington City was in an unfinished state in 1860. The Capitol building, where Congress holds session, was undergoing a major renovation, which included the addition of a huge dome. When criticized for spending money on this construction during wartime, Lincoln replied, "It is a sign we intend for the Union to go on." On December 2, 1863, the famous figure "Armed Freedom" was placed on top of the dome, and by Lincoln's second inaugural the Capitol was completed. Through the war years it also served as a fort, a barracks, a bakery, and a hospital. The Smithsonian Institute and the Treasury Building were also prominent structures; the latter also housed the State Department. The Navy and War Departments were located near the White House; Lincoln was usually able to walk there without fear of attack.

In the tense early days of the Civil War, Washington, D.C., was a city under siege. Though the district's responsibilities were national, its immediate safety was questionable. Roughly 100 miles from RICHMOND, VIRGINIA, the seat of the newly established CONFEDERATE STATES OF AMERICA, Washington was set amid the beautiful tree-lined hills of the Potomac River Valley; the 10-square-mile tract of the District of Columbia was bordered on three sides by Maryland, a slave state with divided allegiances. Virginia, the Confederate stronghold, bordered the fourth side.

At the outset of the Civil War, President Lincoln found himself and the Union government practically defenseless in the capital city. Dire as the situation was, it became even worse on April 19, 1861, when a confrontation threatened

to speed Maryland toward SECESSION and isolate the capital city. The Sixth Massachusetts Regiment, the first fully armed unit to respond to Lincoln's call for troops, left home to defend Washington. Since no rail lines passed all the way through Baltimore, the unit had to detrain and cross the city to board another train. A mob formed in the path of the soldiers, and they were eventually surrounded. Citizens began pelting them with rocks, bricks, and pistol fire. A few men of the Sixth opened fire, and a nasty brawl ensued. By the time the regiment fought its way to the train and out of the city, four soldiers and 12 townspeople lay dead.

Because of the incident, Maryland governor Thomas Hicks, a Unionist, approved the destruction of RAILROAD bridges into the city. Secessionists tore down the TELEGRAPH lines that passed through Baltimore from Washington, and the Union capital was effectively cut off from the North. Fearing an attack, citizens and government clerks in Washington formed into volunteer companies. However, on the next day the 7th New York Regiment arrived by train, having commandeered and repaired a dilapidated steam engine in Annapolis. Other units soon followed, and the imminent danger to the capital passed.

When Col. Charles P. Stone set about organizing the militias that would provide a permanent defense force for Washington, he faced a daunting task. The regiments that arrived in the early days of the war were impressive in number but questionable in quality. Most were untrained, and discipline was rarely enforced. Accommodations were insufficient; the Capitol housed the men of the 7th New York who arrived in April 1861. Robert Gould Shaw, a private with the Seventh, addressed a letter to his parents in this way: "April 26, 1861, House of Representatives." He described his experience: "That evening we marched up to the Capitol, and were quartered in the House of Representatives, where we each have a desk, and easy-chair to sleep in, but generally prefer the floor and our blankets. . . . The Capitol is a magnificent building, and the men all take the greatest pains not to harm anything. Jeff Davis shan't get it without trouble." Many soldiers also encamped in the East Room of the White House.

The defense of Washington, D.C., proved a chronic problem for Lincoln and his generals. From the very steps of the White House, Lincoln could view Arlington, ROBERT E. LEE's former home, a constant reminder of the danger that surrounded the city. Even more problematic was the fact that the city was strategically exposed, situated at the point of the "V" formed by the Potomac and Anacostia Rivers. Approaches into the "V" from the north abounded; bridges provided access from the south.

Col. Joseph Mansfield, commander of the Department of Washington, was responsible for overseeing the construction of fortifications outside Washington. The projects were just underway when Union forces were defeated at the FIRST

BATTLE OF BULL RUN in July 1861. Lincoln and other leaders, unsure of the CONFEDERATE ARMY's capability, feared invasion. Although it never came, Secretary of War EDWIN M. STANTON made it clear that Union campaigns in Virginia would always include provisions for the defense of Washington. GEORGE BRINTON MCCLELLAN later claimed that the policy drastically hindered his PENINSULAR CAMPAIGN.

Batteries and forts eventually created a 37-mile circle around Washington. Including Alexandria, Arlington Heights, Chain Bridge, and Georgetown, there were 68 forts with more than 800 huge cannons, typically between 700 to 1,500 yards apart. Twenty-three miles of trenches and 93 manned artillery positions completed the ring of defense. Other important sites such as city reservoirs, major roads into the city from the southeast and the north, and the entrance from the Potomac River into the city were heavily protected. If the enemy got beyond the fort, preparations were made for the Treasury building to be a barricade against attack and for the president and his cabinet to be hidden safely in its basement.

The strong fortifications were weakened from time to time by a chronic problem with understaffing. The men who stood behind the "ring of forts" numbered 30,000, sometimes more and sometimes far less. The latter was the case in July 1864. As ULYSSES S. GRANT directed the siege of Petersburg with an eye to capturing Richmond, Confederate general JUBAL A. EARLY defeated Union forces on a march to Washington with 15,000 rebel soldiers. On July 11, Early appeared outside the Washington defense works, five miles north of the White House. In response to the frantic appeals of the War Department, Grant dispatched the VI Corps to Washington to bolster the convalescents, militia, and unit remnants on hand there. Early launched a tentative attack on July 12, the only combat personally witnessed by President Lincoln, who watched from Fort Stevens. Early was stopped from a full attack by the presence of the VI Corps, and he wisely withdrew.

Early's near-invasion was the closest the South ever came to attacking the Northern capital during four years of civil war. Other challenges were nearly as great. In May 1861 Washington had one hospital. Fourteen months later, 60 hospitals were built within the city. But it was impossible to build enough hospitals to house the thousands and thousands of sick, wounded, and dying soldiers from the nearby battlefields OF Bull Run, FREDERICKSBURG, and CHANCELLORSVILLE, to name a few.

The War Department had to take over hotels, churches, schools, colleges, and homes and turn them into hospitals. Living in Washington meant that locals were the first to know the terrible price of each battle, as the long line of horse-pulled ambulances deposited the bitter fruits of carnage. After 1863 specially designed "pavilion" style hospitals predominated. Cleaner and more efficient, the white

shedlike structures could be expanded to meet the needs of the war.

Indeed, the whole city could be described as the major supply depot for the eastern UNION ARMY. Bakeries, butcheries (more than 10,000 head of cattle grazed on the grass near the unfinished Washington Monument), warehouses for food, clothes, and ammunition dotted the landscape.

Despite Washington, D.C.'s, vulnerable position during the Civil War, President Lincoln never seriously considered relocating further north. Overnight, the city stood as a proud symbol of the Union, the seat of governance, where politicians, wealthy businessmen, and senior military officials discussed and planned the unfolding war; a target for the Confederates and their spies and sympathizers to plot the Union's downfall; a safe haven for more than 40,000 escaped, and later freed, slaves; the destination for soldiers and many of their family members; a final stop for job seekers, women and men alike, to fill the thousands of new positions the expanded wartime administration required. The immense changes Washington, D.C., underwent during the war paralleled those of the larger nation.

**Watie, Stand** (1806–1871) *Cherokee chief, Confederate general*

Cherokee political leader and Confederate brigadier general Stand Watie was born on December 12, 1806, in the Cherokee town of Oothcaloga, near Rome, Georgia. His father was David Oowatie and his mother was Susannah Reese.

As a child, Watie attended the Moravian Mission School in Springplace, Georgia. He became a planter as well as a clerk in the Cherokee Supreme Court. In 1835, along with approximately 100 other Cherokee, he signed the controversial Treaty of New Echota. In the treaty, which Principal Chief John Ross and the majority of the Cherokee Nation opposed, the Cherokee agreed to cede their land to the United States and move to the territory now known as Oklahoma. Watie migrated in 1837, while most of the nation unsuccessfully tried to resist removal.

The tensions between Ross and Watie reemerged when the CIVIL WAR began. Ross led the Cherokee Nation to a stance of neutrality, but Watie immediately threw his support behind the Confederacy. Watie received a commission as a colonel, formed the Confederate Cherokee Regiment of Mounted Rifles, and arranged a Cherokee-Confederacy alliance. Ross reluctantly supported the alliance before fleeing the nation in 1862. With Ross gone, the Cherokee elected Watie principal chief. Watie participated in various cavalry engagements in Indian Territory, including battles at Wilson's Creek, Chustenahlah, Pea Ridge, Cowskin Prairie, Webbers Falls, and the First and Second Battles of Cabin Creek. In May 1864 the Confederacy rewarded Watie with a promotion to brigadier general, making him the only NATIVE AMERICAN to achieve this rank. Watie's military career ended when he surrendered on June 23, 1865.

When the war ended, Watie helped negotiate the Cherokee Reconstruction Treaty of 1866 and served as a delegate to the General Council for Indian Territory in 1870–71. Soon after, Watie returned to his Honey Creek farm, where he died on September 9, 1871.

**Welles, Gideon** (1802–1878) *politician*

Diarist and secretary of the UNION NAVY, Gideon Welles was born on July 1, 1802, in Glastonbury, Connecticut, to the merchant Samuel Welles and his wife Anne Hale. An excellent EDUCATION prepared Welles for a career as a newspaperman and politician. A staunch Democrat, Welles wrote for the *Hartford Times* while establishing a strong political base among Connecticut voters. In the 1820s and 1830s he was elected to the state legislature. Although ambitious for higher office, Welles was defeated in each of his attempts to become a congressman, a senator, and the GOVERNOR of his state. In 1846 Welles was appointed chief of the Bureau of Provisions and Clothing in the Navy Department. In this position he was responsible for supplying the U.S. Navy during the Mexican-American War (1846–48).

Married to his cousin Mary Jane Hale and the father of nine children, Welles spent the 1840s and 1850s actively opposing the extension of SLAVERY in the territories. He articulated his position in a series of editorials in the *New*

*York Evening Post* denouncing the Compromise of 1850 and the Fugitive Slave Act. He broke with his party in supporting former Democrat Martin Van Buren on the Free-Soil ticket in the presidential election in 1848. In 1855 Welles joined the newly formed REPUBLICAN PARTY in protest over the Kansas-Nebraska “outrage.” He established a Republican newspaper, the *Hartford Evening Press*, and was a force in mobilizing New England behind the young party. A member of the Republican National Committee, Welles was determined to elect a president in the election of 1860. Welles threw his support behind ABRAHAM LINCOLN of Illinois, and for that, he was given a position in Lincoln’s cabinet. On March 4, 1861, Gideon Welles was appointed secretary of the U.S. Navy.

Secretary Welles faced formidable challenges at the beginning of the American CIVIL WAR. From a tiny, weak, and old-fashioned navy, Welles was expected to mount an effective blockade of Southern ports along the Atlantic coast, conquer Confederate forces protecting the vast interior water systems, and forge a smooth working relationship with the U.S. Army. From 1861, Welles expanded the fleet through buying, building, and leasing. For example, he leased 184 merchant ships from private companies and quickly converted them into IRONCLADS, ready for service. Realizing that a successful wartime navy demanded more than building gunboats, Welles assembled an impressive staff, including the brilliant assistant secretary of the Navy, Gustavus Vasa Fox. They worked together to make the navy contracting system efficient and relatively free of corruption. Just as important, Welles created a “Committee of Conference” to plan the overall strategy of the water war. Essentially a think tank, the committee also recommended specific tactical maneuvers and coordinated the movements of the various fleets in the eastern and western theaters.

Union naval victories achieved early in the war confirmed the correctness of Welles’s program. PORT ROYAL in South Carolina fell in November 1861, soon to be followed by the fall of western Forts Henry and Donelson in early 1862, and New Orleans in the same year. Naval heroes such as DAVID DIXON PORTER and DAVID GLASGOW FARAGUT drew attention to the fact that Union control of the Atlantic coast and the MISSISSIPPI RIVER would strangle and then stop the flow of goods and munitions to the Confederacy. Although the blockade was never totally effective, its success has to be counted as a major factor in the ultimate Union victory. In 1865 Welles could reflect with pride that the U.S. Navy was second in strength and numbers only to the British.

Welles was a loyal Lincoln man, but he engaged in bitter quarrels with the other cabinet members, most notably EDWIN M. STANTON and WILLIAM H. SEWARD, secretaries of war and state. He recorded the controversies

and events of the Civil War in his remarkable and brilliant diary. Welles also recorded his growing dissatisfaction over the direction of RECONSTRUCTION policy. Although he supported EMANCIPATION, Welles opposed giving African Americans full civil rights. After the ASSASSINATION OF ABRAHAM LINCOLN, President ANDREW JOHNSON retained Welles in his cabinet, and the two men found they had much in common. Like Johnson, Welles favored STATES’ RIGHTS and an easy Reconstruction policy toward the former Confederacy. Eventually, Welles rejoined the DEMOCRATIC PARTY, and at the end of Johnson’s administration returned to Hartford. He died on February 11, 1878.

**Wheeler, Joseph** (1836–1906) *Confederate general, politician*

Joseph Wheeler is one of only two persons who achieved the rank of general in both the CONFEDERATE ARMY and the U.S. Army. Born in Augusta, Georgia, on September 10, 1836, he grew up in Connecticut and entered the UNITED STATES MILITARY ACADEMY AT WEST POINT in 1854. Upon graduation he served in the Regiment of Mounted Rifles at Fort Craig, New Mexico. In 1861 Wheeler returned to Georgia and was commissioned as a lieutenant, and soon after he became colonel of the 19th Alabama Infantry Regiment. Two years later, at the age of 26, he was promoted to major general of cavalry.

His skills as cavalry commander were most effective when he operated close to the army; he covered every retreat of the Army of Tennessee from Perryville, Kentucky, to Atlanta, Georgia. Instead of accompanying the army on its march toward Nashville in 1864, Wheeler’s cavalry was assigned the difficult and mainly futile task of harassing the UNION ARMY of Maj. Gen. WILLIAM T. SHERMAN as it marched through Georgia and the Carolinas. Though many in the Army of Tennessee (as well as many historians) judged his offensive tactics and raids to be of little importance, Gen. ROBERT E. LEE considered him one of his two best cavalry officers.

After the end of the war, Wheeler married Daniella Jones Sherrod and settled in Lawrence County, Alabama, as a well-to-do lawyer, planter, and businessman. From 1884 to 1898, he served as a Democratic congressman from Alabama, in which capacity he actively opposed the tariff and supported Free Silver.

Joseph Wheeler (Library of Congress)

At the outbreak of the Spanish-American War in 1898, Wheeler offered his services to President McKinley and was commissioned major general of U.S. Volunteers. He participated in the capture of Santiago, where troops under his command, the “Rough Riders,” stormed San Juan Hill. He died on January 25, 1906, in Brooklyn, New York, and is one of a very few Confederate generals interred in Arlington National Cemetery.

### Whiskey Ring

The Whiskey Ring was a group of distillers who defrauded the government of millions of dollars in the 1870s. The national scandal stirred up by the exposure of the ring further tarnished the troubled presidency of ULYSSES S. GRANT and inspired a wave of reform.

In 1872 distillers in St. Louis, Missouri, devised a scheme to avoid the federal excise tax on whiskey. Paying off tax collectors to ignore the duty owed on their product, they began to earn tremendous profits. Working in collusion with a whole network of Treasury officials, the Whiskey Ring swindled the government of millions in tax revenues. The operation continued for several years, growing in size all the time. During this early period special agents of the Treasury tried to stop the fraud but were always unsuccessful.

Eventually, news of the racket began to escape from the circle of distillers and the government agents that the Whiskey Ring was paying off. Newspaper reporters who checked out the story were given money in exchange for silence. Government officials who stumbled upon the ring were also paid to look the other way, and a fund was set up by the ring to distribute payoffs to a broad range of storekeepers, government employees, and collectors. It would not be long, however, before the secret became too large to easily manage. Far beyond the original city of St. Louis, there were now branches of the ring in Chicago, Cincinnati, Milwaukee, New Orleans, Peoria, and most ominously, in WASHINGTON, D.C., the nation’s capital.

On May 1, 1875, newspapers in St. Louis reported that John D. McDonald, the city’s supervisor of U.S. revenues, had conspired to defraud the government of more than \$2 million worth of excise taxes. McDonald, a very highly positioned official, had accepted bribes from the distillers in exchange for ignoring their requirement to pay the federal tax on whiskey. McDonald also happened to be a close personal friend and appointee of President Grant. On May 10, Secretary of the Treasury Benjamin H. Bristow launched the investigation that would put an end to the ring. Bristow’s agents seized 16 distilleries, and the indictments began.

The public uproar against the Whiskey Ring was deafening. As people learned just how far the corruption went, faith in the government and in their president declined sharply. After Bristow and the Treasury Department investigated the ring, 238 people were indicted, including President Grant’s private secretary, Gen. Orville Babcock. President Grant himself was not involved in the scandal, but his proximity to it led to numerous accusations against his presidency.

Although most of the people who were indicted were not convicted, the scandal did a great deal of political damage to the Grant administration. Things were not helped any when President Grant personally intervened to ensure that Babcock was not convicted. Shortly thereafter, however, Babcock resigned his position.

The Whiskey Ring was the worst of the scandals that plagued Grant’s presidency. The CRÉDIT MOBILIER scandal, the resignations of his attorney general and secretary of the

interior under suspicion of corruption, and the impeachment of his secretary of war for selling military appointments—combined with the exposure of the Whiskey Ring—left many with the impression that Grant’s administration and the federal government itself were hives of corruption.

After the Whiskey Ring was exposed, the effort to “clean up” the government reached a new pitch. A reform GOVERNOR from Ohio, Rutherford B. Hayes, was nominated by the REPUBLICAN PARTY to be the next president. Due in part to the public anger over the Whiskey Ring, Hayes was elected on a platform of reform and honesty. Grant’s image as a president who allowed corruption to run rampant permanently damaged his reputation.

**Whitman, Walt** (1819–1892) *journalist, poet, Union nurse*

Renowned American poet and CIVIL WAR nurse Walt Whitman was born on May 31, 1819, in Long Island, New York. He was the second child of Louisa van Velsor and Walter Whitman, Sr., both of them poor farm folk with little formal EDUCATION and a diminishing tract of family land. In 1823 the Whitmans took advantage of an economic boom and moved to Brooklyn, New York.

There, Whitman attended public school, and at the age of 12 he entered the printing trade. Over the next several years, Whitman worked as a printer, teacher, and eventually he became a journalist, editing a daily newspaper in New York at the age of 23. In 1846 Whitman became editor of the Brooklyn *Daily Eagle*, but because of his Free-Soil politics, he was dismissed in 1848. After working two more years as a journalist in New Orleans and New York, Whitman built houses and sold real estate with his father from 1850 to 1855.

Throughout all of his years in New York, Whitman read voraciously and developed a love of THEATER and opera. Though he exhibited virtually no literary promise, Whitman published stories and poems in several newspapers and magazines. Eventually, he began experimenting with a new style of poetry, and in spring 1855, once he had composed several poems in this new style, Whitman published the first edition of *Leaves of Grass* at his own expense.

The text drew little attention, though Ralph Waldo Emerson praised it highly in a letter to Whitman. Another year went by before a revised second edition of *Leaves*

Walt Whitman (Library of Congress)

*of Grass* was published. It too was a commercial failure. Following the release of the second edition, Whitman edited yet another daily newspaper, but he found himself once again unemployed by the summer of 1859. In 1860, however, a Boston publisher put out the rearranged and enlarged third edition of *Leaves of Grass*, which included Whitman’s “Calamus” poems. In these poems Whitman wrote of an apparent homosexual love affair, though it is uncertain whether or not the affair ever actually happened. The publisher went broke with the onset of the Civil War.

With the start of the war, Whitman composed and published several poems for recruitment purposes, many of which were later printed in *Drum Taps* (1865). When Whitman’s brother was wounded at the BATTLE OF FREDERICKSBURG in 1862, he went to WASHINGTON, D.C., staying a while in his brother’s hospital camp and eventually taking a temporary post in the paymaster’s office. Using his spare time to visit wounded and dying soldiers in the Washington hospitals, Whitman bought and delivered small gifts to both Confederate and Union soldiers in an attempt to alleviate their mental and physical suffering.

By mid-1865 the atrocities of the war and the ASSASSINATION OF ABRAHAM LINCOLN had left Whitman somewhat disillusioned with life. His changing attitude is reflected in

*Drum Taps*, released in May 1865. Unlike Whitman's earlier oratorical recruitment pieces, this poetic collection showed a keen awareness of the realities of war and included his most well-known allegorical poem, "O Captain, My Captain." In the poem Whitman eulogizes President ABRAHAM LINCOLN by using the metaphor of a ship's captain who has died at the end of a long voyage. The work concludes with one of Whitman's most famous verses:

My Captain does not answer, his lips are pale  
and still,  
My father does not feel my arm, he has no pulse  
nor will,  
The ship is anchored safe and sound, its voyage  
closed and done,  
From fearful trip the victor ship comes in with  
object won;  
Exult, O shores, and ring O bells!  
But I, with mournful tread,  
Walk the deck my Captain lies,  
Fallen cold and dead.

In fall 1865 *Sequel to Drum Taps* was published; the collection contained "When Lilacs Last in the Dooryard Bloom'd," another well-known elegy for Lincoln.

A reworked fourth edition of *Leaves of Grass* was issued in 1867. Whitman finally began garnering recognition, particularly in England, thanks to the writings of journalists William O'Connor and John Burroughs and the release of an English edition of his work edited by William Michael Rossetti.

Whitman fell ill in 1872, likely due to the emotional strain that resulted from his ambiguous sexuality. He was partially paralyzed by a stroke in January 1873, but in May he was healthy enough to journey to his brother's home in Camden, New Jersey, where his mother had died. Due to his uncertain EMPLOYMENT status and ill-health, Whitman decided to remain with his brother for several years, although by 1879 he was well enough to take an extended trip to the West.

In 1881 yet another edition of *Leaves of Grass* was published, and it was immediately denounced as immoral by the Society for the Suppression of Vice. Facing prosecution, the publisher gave the plates to Whitman, who printed an author's edition of the book. Thanks to the publicity generated by this controversy, the book sold much better than any of the preceding editions, and Whitman was able to buy a cottage in Camden, where he spent the rest of his life delivering lectures and receiving admirers. In April 1888 he suffered another stroke that left him almost completely incapacitated. Whitman died March 26, 1892, and was buried in a tomb he designed himself.

Reynolds, *Walt Whitman's America* (New York: Knopf, 1995); Walt Whitman, *Leaves of Grass* (New York: Metro Books, 2001).

**Wigfall, Louis T.** (1816–1874) *lawyer, politician*

Louis Trezevant Wigfall was a Texas politician and secessionist. Wigfall was born in Edgefield, South Carolina, on April 21, 1816. He graduated from South Carolina College in 1837 and became an attorney. He espoused secessionist sympathies as early as 1844, when he protested the protective tariff and the defeat of a motion to annex Texas. (In 1845 another motion to make Texas a U.S. state succeeded.) Blunt and outspoken, Wigfall fought several duels and was forced to leave South Carolina in 1848. He settled in Marshall, Texas, and soon became a prominent pro-Southern voice in local politics.

In 1859 Wigfall was appointed a U.S. senator, and he spent the next two years agitating for federal protection of SLAVERY while opposing all attempts at compromise. In December 1860, in the wake of ABRAHAM LINCOLN's election as president, he composed the "Southern Manifesto," which declared conciliation hopeless and urged SECESSION as the only viable alternative to subjugation. In January 1861 Wigfall joined five U.S. senators from Southern states to defeat the CRITTENDEN COMPROMISE, thus removing the country's only possible alternative to war.

Wigfall left the U.S. Senate in March 1861 and reported for duty at Charleston, South Carolina, as an aide to Gen. PIERRE GUSTAVE TOUTANT BEAUREGARD. There he gained a degree of notoriety by rowing out to the beleaguered FORT SUMTER and demanding its surrender. In consequence of his staunch support for the Confederacy, Wigfall was appointed to command the Texas Brigade in October 1861, but he resigned this post to take his seat in the CONFEDERATE CONGRESS. He differed from many contemporaries by fully supporting the wartime measures of President JEFFERSON DAVIS, including CONSCRIPTION, IMPRESSMENT, and suspension of HABEAS CORPUS. But as time went on, he became one of Davis's most strident critics. Wigfall helped to defeat Davis's effort to create a Confederate Supreme Court, which he viewed as a menace to STATES' RIGHTS. He especially opposed Davis's military conduct of the war and was instrumental in having Gen. ROBERT E. LEE appointed general in chief in January 1865.

After the war Wigfall fled the country. He remained abroad until January 1874, and he died at Galveston, Texas, on February 17, 1874. He is remembered as an ardent FIRE-EATER and secessionist.

### Wilderness, Battle of the (May 5–6, 1864)

The Battle of the Wilderness was fought on May 5 and 6, 1864, in a densely wooded area of the Virginia countryside. This first clash between the armies of ULYSSES S. GRANT and ROBERT E. LEE in the OVERLAND CAMPAIGN was a harbinger of the nonstop fighting and shockingly high casualty rates that stunned the American people in the last year of the war. The Battle of the Wilderness was a bloody stalemate, but Grant's decision afterward to fight it out until the end turned the tide toward Union victory.

The Battle of the Wilderness was waged at the same place that the BATTLE OF CHANCELLORSVILLE had been fought one year earlier. The conflict was Grant's first attack on Lee after having been named commander of all Union armies two months previously. As the Army of the Potomac approached the Rapidan River, Grant had four corps. There were three large infantry corps and also PHILIP H. SHERIDAN's cavalry corps for a total of 118,000 men. Lee had less than half the number of combat-ready soldiers as Grant, but he had the advantage of being familiar with the roads and rugged terrain.

On May 4, most of the Army of the Potomac crossed the Rapidan River without any resistance. Lee had settled on an attack of Grant's right flank, believing that the UNION ARMY was not prepared for an assault. The vicious fighting began along the Orange Plank Road on May 5 and proceeded in a "fog" as the dense forests made artillery useless and caused many soldiers to become disoriented.

By nightfall on May 5, the lines of battle stretched for 5 miles. Lee ordered Gen. JAMES LONGSTREET to make a night march to support Gen. AMBROSE P. HILL's men, who were confronted by a large Union force under the command of Gen. WINFIELD SCOTT HANCOCK. Longstreet's men arrived the next morning, just in time to avert Hancock's men from destroying both Confederate flanks. Longstreet prevented defeat and halted the Union onslaught, but at the cost of a large number of casualties. Longstreet was himself wounded by friendly fire as the Union forces retreated. This slowed the Confederate pursuit and allowed the UNION ARMY to reorganize. They quickly confronted CONFEDERATE ARMY under the command of Gen. Richard H. Anderson. The firefight that broke out was so intense that logs on Union breastworks actually caught fire, literally separating the two armies.

Attacks and counterattacks continued through the day on May 6 and made for a bloody field of battle. Near sundown, Confederate commander RICHARD S. EWELL

attempted to restart the offensive by turning the Union right. Though his initial assault was partially successful, it was not completed due to nightfall. The battle had ended.

Grant had lost his first confrontation with Lee, suffering more than 17,000 casualties compared with the 8,000 inflicted on the Confederates, but he did not retreat. "At present we can claim no victory over the enemy," Grant wrote of the battle, but "neither have they gained a single advantage." Grant brought up reinforcements and continued to move the Army of the Potomac, much to their surprise and delight, in the direction of the Confederate capital. He told President Lincoln that, "whatever happens there will be no turning back." Grant had begun his plan of "total war." The next stop would be at the BATTLE OF SPOTSYLVANIA.

### Wilmot Proviso (1846)

The Wilmot Proviso was a bill proposed in the House of Representatives by Pennsylvania Democrat David Wilmot that would have prohibited SLAVERY in all territories added to the United States as a result of the Mexican-American War (1846–48).

In 1846, President James K. Polk told Congress that the war with Mexico was a legitimate defense of U.S. territory in newly annexed Texas. He expressed his belief that Mexican dictator Santa Anna had planned to reconquer the state, which had seceded from Mexico only a decade before. Northern abolitionists were skeptical that the president was being forthright. They believed the war to be little more than a thinly disguised effort to expand Southern slavery at Mexico's expense.

Once the war was won, Polk requested a \$2 million appropriation from Congress in order to negotiate a peace settlement with Mexico. Congressman David Wilmot decided it was time to act. He proposed an amendment to the "\$2 million bill" which "provided . . . that neither slavery nor involuntary servitude shall ever exist in any part of said territory [acquired from Mexico], except for crime, whereof the party shall first be duly convicted."

Quickly called the "Wilmot Proviso," the proposed amendment touched off a storm of outrage throughout the South. Southerners saw the Wilmot Proviso as a cynical

Northern effort to increase their political power. Responding to a New York congressman's support for Wilmot, Georgia congressman Seaborn Jones declared that Wilmot's real fear was not slavery at all but, rather, "the power of the South in Congress. . . . It was not . . . the damning sin of slavery that the gentleman could not tolerate . . . oh, no sir! It was the potential power thus acquired by another part of the Union that roused . . . holy indignation!"

While the House added Wilmot's proviso to the \$2 million bill, the Senate adjourned before considering the legislation. In 1847 Polk increased his request to \$3 million. Wilmot again added his proviso to the House version. This time, the Senate rejected the amendment outright.

The defeat of the Wilmot Proviso rallied antislavery forces, who abandoned the Democrat and Whig Parties in order to form organizations committed to keeping slavery out of the territories. The Liberty Party, the Free-Soil Party, and finally the REPUBLICAN PARTY all pledged themselves to passage of the proviso. David Wilmot himself was a part of this political transformation. Leaving the DEMOCRATIC PARTY, Wilmot first joined the Free-Soil Party and then, in the mid-1850s, became a Republican. During the CIVIL WAR, Wilmot served as a U.S. senator for Pennsylvania from 1861 to 1863 and then as a judge in the court of claims. By the end of the war, Wilmot's vision had become reality.

**Wilson, Henry** (1812–1875) *abolitionist, politician*

Henry Wilson was a U.S. senator regarded as one of the most effective and respected of the RADICAL REPUBLICANS. Born Jeremiah Jones Colbath on February 16, 1812, in Farmington, New Hampshire, he was a son of poor farmers. Following a decade-long indenture to a local merchant, he changed his name to Henry Wilson and became a cobbler by trade. Wilson established a profitable shoe factory in Natick, Massachusetts, then successfully ran as a Whig for a seat in the state legislature in 1841.

Politically, Wilson was an ardent abolitionist who also championed the interests of working-class people. He left the Whigs in 1848 over the party's failure to endorse the WILMOT PROVISIO, an antislavery measure. He then joined the new Free-Soil Party and edited the Free-Soil newspaper, the *Boston Republican*, until 1851. Three years later

he changed his affiliation to the American (Know-Nothing) Party, and in 1855 he was appointed to fill a U.S. Senate seat vacated by Edward Everett. As a U.S. senator, Wilson became one of the most outspoken opponents of SLAVERY and its expansion. In 1860 he became a member of the REPUBLICAN PARTY and campaigned for ABRAHAM LINCOLN's presidency, urging members of his party not to seek compromise with the South.

In spring 1861 Wilson was appointed as chair of the powerful Committee on Military Affairs, where he put his several years of experience as a brigadier general of Massachusetts militia to good use. In this capacity he capably framed and advanced legislation for organizing, recruiting, and supplying an army that numbered 1 million men by 1865. Wilson distrusted the officers of the Army of the Potomac; consequently, he pushed for an increase in admissions to the UNITED STATES MILITARY ACADEMY AT WEST POINT in an attempt to flood the military with professional soldiers who supported Republicans. Along with fellow senator and Radical Republican CHARLES SUMNER, Wilson also championed abolitionist goals, and in 1865 he helped to create the FREEDMEN'S BUREAU to assist liberated African-American slaves.

After the war Wilson opposed President ANDREW JOHNSON's moderate RECONSTRUCTION, although he sided with moderates to advocate both federal aid for EDUCATION and homesteading throughout the South. In 1872 he shared the Republican ticket with ULYSSES S. GRANT and was elected vice president. Wilson presided over the Senate until his death in WASHINGTON, D.C., on November 22, 1875.

**Wise, Henry A.** (1806–1876) *politician, Confederate general*

Henry Alexander Wise was GOVERNOR of Virginia and a Confederate general. Wise was born in Drummondstown, Virginia, on December 3, 1806. He graduated from Washington College in Pennsylvania in 1825 before establishing a successful legal career. Wise became an outspoken proponent of SLAVERY and Southern rights, and in 1832 he was elected to the U.S. House of Representatives as a Jacksonian Democrat. However, he parted company with Andrew Jackson during the "bank war" and joined the

Whig Party; as of 1843 he was once again a member of the DEMOCRATIC PARTY. In 1844 President John Tyler appointed him ambassador to Brazil, a position he held for three years. Afterward, Wise resumed his legal activities in Virginia. He served as a delegate at the state constitutional convention of 1850, and in 1855 he was elected governor.

In 1856 he campaigned on behalf of JAMES BUCHANAN for the presidency, but JOHN BROWN's abolitionist raid in 1859 pushed Wise back into the STATES' RIGHTS camp, where he demanded the vigorous prosecution of Brown and his supporters. Wise opposed SECESSION at first, but after President ABRAHAM LINCOLN called for military volunteers, he attended the Virginia secession convention in spring 1861. There he sided with the majority of delegates and voted for secession, tendering his services to the Confederacy.

Despite his lack of military experience, Wise was made a brigadier general on June 5, 1861. He was initially posted in the Kanawha Valley of western (now West) Virginia, where he lost several important skirmishes and was transferred. He ended up commanding the District of Albemarle, North Carolina, until Union forces easily captured strategic Roanoke Island. Wise was then shunted over to Virginia's Peninsula region, where he fought bravely, if ineptly, over the next three years. Despite his uneven performance in the field, Wise was a popular leader with his men. He surrendered with the main army at APPOMATTOX COURT HOUSE, VIRGINIA, in April 1865. He subsequently resumed his legal activities, and he never asked for a governmental pardon. Wise died in RICHMOND, VIRGINIA, on September 12, 1876, a vigorous politician but an indifferent military leader.

### Women's National Loyal League

The Women's National Loyal League was a political association of women in support of the Union war effort during the CIVIL WAR. Thousands of women worked to help Union troops by participating in the activities of the UNITED STATES SANITARY COMMISSION, UNITED STATES CHRISTIAN COMMISSION, and local soldiers' aid societies. The hospital clothes they made and the fruits and vegetables they packed for shipment to the front symbolized traditions of domesticity females usually assumed during the 19th century. However, a growing number of women tried to support the war effort by operating in the political sphere dominated by men.

Most Northerners understood that SLAVERY helped cause the Civil War and that resolution of the conflict

depended on settling the questions about the position of African Americans. The debate on slavery allowed some women to assume purely political roles in their war work. They determined that the restoration of the Union depended on the EMANCIPATION of African Americans and began to plan a campaign in support of that end, calling upon women from all loyal states to join them at a convention to form the Women's National Loyal League. The meeting took place at New York's Church of the Puritans on May 14, 1863.

The drive toward emancipation for slaves undertaken that day built on earlier work done by women and on associations that men organized to support the ABRAHAM LINCOLN administration. Women had used the power of the petition to exert their influence in matters pertaining to ABOLITION as early as the 1830s. They collected signatures on documents supporting various resolutions and then sent the material to sponsoring congressmen. During the Civil War, men who supported the Republican administration formed UNION LEAGUE Clubs. These groups tried to convince citizens to support the war effort and to undercut the influence of Peace Democrats, or COPPERHEADS. At the same time, women founded their own Union League Clubs. Like soldiers' aid societies, these groups used traditional, domestic approaches to support the government. By reducing their consumption of food and textiles, needed commodities were made available for the military.

The Women's National Loyal League wanted to recognize and give moral support to the traditional work of aid societies while remaining focused on support of the government through political action. Women from more than a half-dozen states attended the first meeting. The most prominent members of the women's movement for full citizenship rights played important roles. Lucy Stone presided, and ELIZABETH CADY STANTON, Susan B. Anthony, Angelina Grimké Weld, Ernestine Rose, and Antoinette Brown Blackwell took part in the debates. The leaders announced the goal of collecting 1 million signatures on a petition calling for the emancipation of "all persons of African descent held in involuntary service in the United States."

Not all women favored the obvious political aims of the leaders, and many objected to the feminist nature of the gathering. They believed that Lincoln needed the support of women in order to restore the Union, but they felt it more appropriate to maintain a traditional role for women. They favored conservation of household goods, a focus on stimulating patriotism, and direct support of soldiers by writing LETTERS to the men and similar philanthropic activities. When the leaders of the convention refused to alter their plans, many of the conservative delegates withdrew.

Despite such objections, the organizers created a national association. Membership cost a one-dollar fee and allowed members to wear the league's pin, which had

the figure of a slave whose chains had been broken and the words, "In Emancipation is national unity." The initial goal of mere emancipation for slaves changed as a result of violence against African Americans and others during the NEW YORK CITY DRAFT RIOTS in 1863. Following those events, the Loyal League petitioned for citizenship for all African Americans.

By 1864 the group had more than 5,000 members. Senator CHARLES SUMNER of Massachusetts presented their documents to the political leaders. Their work resulted in more than 20,000 petitions with more than 400,000 signatures. Although their labors did not lead directly to full citizenship for African Americans or women, the Women's National Loyal League, born in war and trained in the political battle of emancipation, gave women experience in the political world from which they would ultimately gain full citizenship rights.

### women soldiers (1861–1865)

With significant exceptions, most women stayed at home during the American CIVIL WAR. Their encouragement of their male relations to enlist and then stay in the army and fight was critical to the war effort, as was their willingness to assume the work burdens of their absent husbands or fathers and brothers in countless farms, plantations, and businesses across the country. In addition, thousands of women stepped outside of domestic boundaries, finding employment as nurses, factory operatives, teachers, and government clerks. Few women, however, transgressed gender norms more profoundly than a small (estimated 400–500) but fascinating group of women who enlisted as soldiers in the Civil War in the Union and Confederate armies.

Typically, many female soldiers were the wives, lovers, or sisters of male soldiers. Their identities were usually discovered fairly swiftly, leading to immediate removal from the field, as only men could enlist or be drafted in the 19th-century American military. Some were bold adventurers, such as Sarah Emma E. Edwards—nurse, spy, and soldier—who claimed to have served in the Army of the Potomac in a Michigan regiment under the name of Pvt. Franklin Thompson. Others successfully hid their gender for a while but were exposed through injury or death. CLARA BARTON tended to an injured woman in blue on the battlefield of ANTIETAM; a dead female Confederate was discovered at GETTYSBURG after Pickett's Charge;

yet another woman soldier (Union) wounded at the battle of CHATTANOOGA was captured by the Confederates and later returned by them to the North.

A number of women soldiers escaped notice altogether during the war, their secret uncovered decades later. Pvt. Albert D. J. Cashier (an Irish immigrant named Jennie Rodgers) falls into this category. Rodgers enlisted and served for three years in the 95th Illinois Volunteer Infantry, fighting at Vicksburg (see VICKSBURG CAMPAIGN). Returning to Illinois after the war, she took up farming, living as a man until an injury exposed her true sex in 1911. A former comrade in the 95th asked to comment on the surprising news described the five foot Rodgers/Cashier as a "brave little soldier." The most famous recovered female soldier is Sarah Rosetta Wakeman (Pvt. Lyons Wakeman of Company G, 153rd New York State Volunteers), whose letters were only discovered recently. The remaining women soldiers left little or no record accounting for their motivations for enlisting or descriptions of their experiences in camp and battle, but enough is known now to offer a reasonable depiction.

From the evidence, women who disguised themselves as men (cutting their hair short, wearing pants, binding their chests, changing their names) to fight in the war shared many characteristics with their male comrades. They were young, single, and largely from rural families. They enlisted for many reasons—patriotism, a desire to travel, a romantic notion of combat, or the prospect of bounties and monthly pay. Probably, female soldiers chafed at gender restrictions and longed for the kind of independence that could only be achieved through changing their sexual identities. Thus the opportunity for escape presented by the war's chaos and excitement was too good to pass up.

The ones who escaped detection by the authorities shared every challenge of soldierhood—learning how to fire a rifle, enduring the many discomforts of camp life, patiently joining in the endless marches, risking the diseases and injuries, and most of all displaying courage and fortitude in battle. "I don't know how long before I shall have to go into the field of battle," wrote Wakeman to her parents, shortly before her death in the RED RIVER CAMPAIGN. "For my part I don't care. I don't feel afraid to go," she said, adding "I don't believe there are any Rebel's bullets made for me yet."

The extreme laxity of the Civil War VOLUNTEER ARMY made it much easier to elude discovery at every stage for those who were desirous of preserving their masculine role. The initial physical exams were superficial, the training short, and army conditions, such as living outdoors, offered privacy for intimate functions. One or two cases suggest that female soldiers' male peers were complicit in keeping their secret. Generally speaking, however, powerful social conventions blinded most men from "seeing" a female

comrade, until presented with incontrovertible evidence. Women wore skirts, had long hair, acted feminine, and were not thought capable of physically or mentally handling warfare. Then, too, slight, short, beardless, high-pitched-voiced teenage boys were common enough in both armies, making genital scrutiny as unnecessary as it was unlikely.

Women fought as combatants in a number of Civil War battles and skirmishes. Like their male counterparts, they often fought bravely under fire, and some sacrificed their lives for their country. They were never lauded openly for their service, nor rewarded afterward with a veteran's pension, unless they kept their male identity. After the war, only a handful of females published accounts of their military experiences. The majority blended back into mainstream society, their anonymity frustratingly secure from history's gaze.

### women's status and rights

The mid-19th century proved a time of upheaval in women's lives. Women—black and white—organized, declared rights, and struggled to participate in the public (especially political) sphere. By the late-19th century, they had voiced revolutionary goals but had not achieved equality.

The demand for women's rights began before supporters organized any formal efforts. Initially, 19th-century white women achieved some success by taking their domestic responsibilities into the public sphere. They took active roles in voluntary and benevolent associations, including temperance, child labor, health reform, EDUCATION, and abolitionism, that drew upon traditionally domestic chores such as child rearing, household tasks, and family management.

The links between women's rights and the abolition movement were drawn early. As abolitionists publicly demanded civil rights for African-American slaves, some women became aware of the similarities between their condition as women and that of slaves. They found it easy to draw parallels between their situation and that of African

Americans: Neither group could vote, and the law deemed both inferior to white men. Women's commitment to anti-slavery led some to form their own abolitionist organizations, including the WOMEN'S NATIONAL LOYAL LEAGUE. These female-run abolitionist groups eventually led to the founding of women's rights organizations, especially the American Equal Rights Association and the American Woman Suffrage Association.

The transition from reform movements to women's rights seemed a natural one. Women, frustrated with the restrictions placed on them in many organizations, gladly took up the fight to secure themselves a recognized place in society. They were aided by the ability to transfer the skills they had gained in the various associations to their campaigns for women's rights. In particular, women had learned the importance of organization, public speaking, persuasive writing, and argumentation. Many of the early leaders of the woman's rights campaign, including Lucretia Mott and ELIZABETH CADY STANTON, had been prominent and outspoken abolitionists. Susan B. Anthony had been both a temperance and an antislavery activist.

The first formal meeting in the fight for women's rights took place between July 19 and 21, 1848, in Seneca Falls, New York. At this convention a group of feminists, including Stanton, Mott, Jane Hunt, Mary McClintock, and Martha C. Wright, gathered together hundreds of supporters, male and female, and launched a national campaign for women's rights.

The activists at Seneca Falls presented a Declaration of Rights for Women, also known as the Declaration of Rights and Sentiments, which asserted a list of grievances and resolutions. Stanton, the declaration's author, modeled her document on the Declaration of Independence, but her rendition put American men in the role of oppressor. The declaration's list of grievances accused men of denying women the right to vote, to own property, and to access equal representation and education. It further berated men for taking away women's rights at marriage and highlighted the dangers of women's subordination to men, including their vulnerability to violence. It demanded the grievances be addressed and offered 12 resolutions. By the end of the convention, 100 people had signed the document, including 68 of the 300 women in attendance and 32 of the men. The Declaration of Rights became a rallying point for the women's rights movement. Stanton, much to the dismay of some of the people involved, also used the convention as an opportunity to demand women's suffrage.

Two weeks after the Seneca Falls Convention, an even larger women's rights meeting was held in Rochester, New York, and other women's rights conventions soon followed. The most well-known meetings took place in Salem, Ohio; Worcester, Massachusetts; and Akron, Ohio. At the convention in Akron in 1851, runaway slave and women's

rights activist SOJOURNER TRUTH addressed the audience. In response to ideas about the natural delicacy of white women, she recounted some aspects of her life as a slave. Although white women were seen as too feminine and delicate to do any hard labor or even get into a carriage themselves, Truth asserted herself as a woman despite her work as an enslaved field laborer and mother of 13. As she listed her hardships, Truth continued to ask her audience, "A'n't I a woman?" She and other free black women demonstrated that they, too, wanted equal rights.

Women continued to organize and lobby for their rights throughout the 1850s. In 1854 Stanton founded the New York Suffrage Society, which organized petition drives and gathered 10,000 signatures in favor of women's suffrage and property rights. That year, both Anthony and Ernestine Rose spoke to various legislative committees. In addition, Stanton became the first woman to speak in the New York Senate when she stood to present the society's petitions.

By 1860 women had gained access to public and private institutions that educated them for careers in teaching. Newly formed women's medical hospitals also trained them to work in the medical profession as physicians and medical missionaries. It was initially assumed that female doctors would care only for other women and children.

The CIVIL WAR brought women into the public sphere in even greater numbers—raising money for soldiers, nursing the wounded, and providing other valuable services. American women founded more than 20,000 aid societies to supply the troops with food, clothing, and medical supplies. In the North, women soon filled the ranks of the UNITED STATES SANITARY COMMISSION, a volunteer organization run by men but dependent on the efforts of women to get medical supplies and personnel to army hospitals. In addition, women also filled the jobs left empty by the soldiers on the battlefield, including those as PLANTATION mistresses, factory workers, NURSES, and treasury employees. Both the U.S. and Confederate governments, for example, employed several hundred women to work in the treasury and at other government posts during the war. Women's voluntary participation in various roles highlighted their desire to sustain the HOMEFRONT, even if it meant assuming traditionally male roles. Some women hoped that their successful performance during the Civil War would assist them in their fight for suffrage and other rights of citizenship.

Women in the North and South also asserted their rights as citizens through wartime protests. In 1863 angry women participated in FOOD RIOTS in the South and draft riots in the North. In separate but similar incidents, Southern women, especially in Virginia, Alabama, and North Carolina, took to the streets to demand fair food prices and government protection. Northern women similarly participated in antigovernment actions. Many lower-class women

participated in the NEW YORK CITY DRAFT RIOTS in the summer of 1863 to protest the IMPRESSMENT of their husbands into military service and wartime policies designed to free slaves. During the lengthy and violent riots, several hundred women were arrested, convicted, and jailed.

As the Civil War came to a close and Congress discussed extending the vote to freed African Americans, feminists hoped that the expansion of the franchise would extend to female citizens. They were disappointed by the inclusion of the word *male* in the FOURTEENTH AMENDMENT, the first time gender-specific language had been used in the Constitution. Such wording made clear the idea that Congress intended to extend voting rights only to men. To protest the exclusion of women's suffrage in the Fourteenth Amendment, Stanton ran for Congress in August 1866. She gained only 24 votes.

After the passage of the Fourteenth Amendment, female activists regrouped. On May 10, 1866, the National Women's Rights Convention established the American Equal Rights Association to work for the rights of all women, regardless of race. The women involved hoped that a coordinated effort would ultimately result in woman suffrage. Republican men who felt threatened by the idea of woman suffrage often ridiculed the mostly Northern Republican women who were involved in this movement.

White feminists disagreed with the tactics of the American Equal Rights Association. Anthony and Stanton, for example, thought the biracial organization unfairly ranked African-American rights ahead of woman suffrage. Consequently, they formed the NATIONAL WOMAN SUFFRAGE ASSOCIATION (NWSA) in May 1869. Stanton became the NWSA's president and actively pursued a national campaign for white-woman suffrage. The NWSA attracted many working-class women and radicals and refused to support the FIFTEENTH AMENDMENT unless it enfranchised women as well as African Americans.

The NWSA had many opponents, even among those working for women's rights. Later that year, Lucy Stone, JULIA WARD HOWE, and other conservative feminists established the American Woman Suffrage Association (AWSA). In contrast to the NWSA, the AWSA invited male as well as female members and pursued a state-by-state, instead of a nationwide, strategy for woman suffrage. The AWSA supported the Fifteenth Amendment and lobbied at the Republican convention. The membership of the AWSA was largely middle class. Not wanting to detract from any effort for woman suffrage, many women joined both organizations.

Some of the efforts for woman suffrage proved successful. In Wyoming, women received the right to vote on September 6, 1870. Few states followed suit, however, and it would be another 50 years before the right was given to women throughout the United States. The slow-moving

results did not slow down radical feminists' attempts to gain rights. In an effort to gain the franchise, Victoria Woodhull presented a petition for woman suffrage to the House Judiciary Committee on January 11, 1871. Her address to the Judiciary Committee was the first one made directly by a woman.

Women continued to participate in reform movements in post-Civil War America. They primarily focused, as before, on issues seen as vital to the stability of the household. When the Women's Christian Temperance Union was established on November 18, 1874, Annie Wittenmyer became the organization's first president. The WCTU would play an integral part in the fight against alcohol's detrimental effects on fathers and families.

After EMANCIPATION, freedwomen worked to improve the legal and economic status of their families and communities. Like white women, they could not vote, but they participated in political activities. Black women attended rallies and parades and spoke at public meetings, encouraging their men to vote. They hoped that male African-American enfranchisement would give them a voice and the rights they had been denied as slaves. African-American leaders such as Ida B. Wells of Tennessee promoted education, civil rights, and campaigns against Southern violence. Black women also asserted themselves as women and mothers in the postwar years as they actively worked to reclaim their families and win legal recognition of their marriages. In addition, African-American women actively worked to gain voting rights as well as civil rights, even though they were often excluded from the larger, white-run women's organizations fighting for suffrage and other women's rights.

By the end of RECONSTRUCTION, the fight for women's rights remained close to where it was at the Seneca

Falls Convention in 1848. For the U.S. Centennial Exposition of 1876, Stanton and Matilda Joslyn Gage prepared a document, the Declaration of Rights of Women, that they hoped would alert the public to the difficulties and inequalities that women continued to face in postwar America. This document, much like the Declaration of Rights and Sentiments in 1848, mirrored the rhetoric and ideas of the Declaration of Independence but highlighted the contradictions between the official ideals and the realities of women's lives. Members of the NWSA asked the centennial committee to allow them to present their document at the public celebration, but the committee denied this request. In protest, at the end of the official program, Anthony and Gage pushed their way to the speaker's platform and presented a copy of their Declaration of Rights. They demanded equal civil and political rights for American women, including the right to serve on juries, no TAXATION without representation, and the removal of the word *male* from state constitutions and judicial codes. Taking things further than did the 1848 declaration, the centennial document demanded equal political rights for American women.

## **Yancey, William Lowndes** (1814–1863) *politician*

Diplomat, politician, and orator, William Lowndes Yancey was born in Warren County, Virginia, in 1814 to Benjamin Cuworth Yancey and Caroline Bird. Yancey's father died when he was very young, and soon thereafter his mother married Presbyterian reverend Nathan S. S. Beman. In 1823 Beman decided to move the family to New York, where he became involved in the abolitionist movement. Beman's dignified public persona as a reverend and social reformer was in marked contrast to his conduct in private, where he verbally and physically abused his wife. Young William grew to hate his stepfather's hypocrisy, which he equated with his abolitionism.

In 1833 Yancey returned to the South. He dropped out of Williams College in Massachusetts and moved to Greenville, South Carolina. While in Greenville, Yancey tried his hand at a number of professions. He edited the *Greenville Mountaineer*, where he regularly attacked John C. Calhoun for his secessionist rhetoric. He read law under Benjamin F. Perry and was admitted to the bar. He also became a **PLANTATION** owner after marrying Sarah Carolina Earle in 1835 and gaining control of her 35 slaves. The young couple settled in Alabama.

During the latter part of the 1830s Yancey suffered a number of misfortunes. He lost a great deal of money in the panic of 1837. In 1838 he was convicted of manslaughter after killing his wife's uncle during an argument. In 1839, shortly after his release from prison, most of Yancey's slaves died after an angry neighbor poisoned the well at his plantation. As a result, he was compelled to return to the practice of law to support himself and his wife.

In 1840 Yancey decided to become a candidate for political office. By this time, he had completely reversed his earlier position and was an ardent supporter of Calhoun and his **STATES' RIGHTS** philosophy. Yancey served in Alabama's legislature from 1841 to 1842 and in the state's senate from 1843 to 1844. He was then elected to two terms

in the U.S. House of Representatives. Yancey's first speech as a congressman so enraged one of his colleagues that a duel was arranged, although no blood was shed. Yancey quickly grew weary of the need to constantly compromise his beliefs, and despite being reelected he resigned his seat in 1846.

Yancey did not return to politics before the **CIVIL WAR** started. Instead, he became a devoted and forceful speaker on behalf of **SECESSION**. He wrote **LETTERS** and delivered hundreds of speeches on behalf of the cause, earning a name as the "prince of the **FIRE-EATERS**." In 1860 Yancey led the group of Southern delegates who abandoned the Democratic convention in Charleston. In 1861, he led the convention that took Alabama out of the Union.

Despite Yancey's prominence, he and other fire-eaters were not offered important positions in the Confederate government. **JEFFERSON DAVIS** needed to convince the states of the Upper South to join the Confederacy, and that goal was best served if moderates appeared to be in control. To keep Yancey quiet, Davis gave him responsibility for leading a delegation to England to try and secure recognition for the Confederacy. The mission failed, in part because the Confederacy had little leverage and in part because the hot-tempered Yancey was not a very good diplomat.

Yancey returned to the Confederacy in 1862 and was elected to a seat in the Confederate Congress. Convinced that Jefferson Davis had set him up to fail in England, he became one of the administration's harshest critics. Yancey attacked the president for seizing too much power and for failing to promote enough Alabamians to generalships. Yancey never received satisfaction on either of these issues, although he was able to help stop the Confederacy from establishing a supreme court in 1863. Shortly after this victory, Yancey was reduced to invalidism by the kidney disease he had suffered from for many

#### 440 Yancey, William Lowndes

years. He died in Montgomery in July 1863, just before his 49th birthday.

## Zouaves

The word *Zouave* refers to a type of UNIFORM borrowed from French military FASHION by CIVIL WAR soldiers in both the North and South. The distinctive features of this style of uniform are baggy pants, frequently accompanied by a sleeveless vest, a collarless jacket, and a fez hat.

Some American Zouave units took their quest for authenticity to extremes. These soldiers might wear turbans instead of fezzes or even shave their heads in imitation of the original Zouave soldiers. Zouave uniforms frequently came in high-visibility red, which apparently gave these 19th-century warriors little cause for concern. Whatever the style, all Civil War Zouaves went into the war clad in a similarly gaudy manner.

Zouave uniforms originated in Algeria, and Algerian men serving in the French Foreign legion introduced the uniform to Europe. These original Zouaves had a well-publicized reputation for military prowess, particularly for their ability to reload their rifles from the prone position. As Europeans adopted the uniforms, military units also took the name of “Zouave.” Zouave fame spread worldwide in the wake of the Crimean War, where they performed valiantly. By this time, native-born Frenchman composed nearly all the Zouave units.

GEORGE BRINTON MCCLELLAN served as the official U.S. observer of the Crimean War, and in this capacity he filed a report to the U.S. Congress. McClellan lavished praise on the Zouaves, claiming that they represented “the beau-ideal of a soldier.” Although McClellan’s report had some influence upon the Zouave craze in the United States, his influence was secondary to that of Elmer Ephraim Ellsworth.

In 1859 Ellsworth introduced the Zouave fashion to Chicago. Ellsworth was a charismatic militia leader, and he took a unit of the Chicago militia and transformed them into the “Zouave Cadets of Chicago.” People paid to watch militia units drill, and Ellsworth’s men became a crowd favorite throughout the Midwest and the East. In addition

to the flashy uniform, Ellsworth’s men appealed to the public with the gymnastic feats they incorporated into their drill routine.

When the Civil War began, Ellsworth became the colonel of the 11th New York Infantry, and he introduced the Zouave uniform to the New York soldiers under his command. Many of these soldiers had been members of the NEW YORK CITY Fire Department, so the 11th New York Infantry came to be called “Ellsworth’s Fire Zouaves.”

Ellsworth became one of the first casualties of the Civil War when an incensed innkeeper shot him for removing a Confederate flag from the roof of the Marshall House Tavern in Alexandria, Virginia, on May 24, 1861. Ellsworth’s early martyrdom influenced many other Union units to adopt the Zouave uniform. By the end of 1861, New York City alone had four complete Zouave regiments. One of these regiments, the Ninth New York, commonly known as Hawkin’s Zouaves, suffered 63 percent casualties at the BATTLE OF ANTIETAM. It is said that for a battle cry the Ninth chanted, “zoo! zoo! zoo!”

The South had very few Zouave soldiers except in Louisiana. During the course of the war, the Louisianians found it difficult to replace their distinctive uniforms. The Union blockade of the South made it nearly impossible to reacquire such fashions from abroad. However, the famed LOUISIANA TIGERS, who composed the 10th Louisiana infantry, maintained a ragged version of their uniform throughout the war.

Chatam Roberdau Wheat, a soldier of fortune who had fought with Garibaldi for the unification of Italy, created the 10th Louisiana, recruited from the roughest neighborhoods of New Orleans. Although the majority of the Louisiana Tigers were of Irish descent, the unit boasted soldiers of 15 different nationalities. The 10th Louisiana served throughout the war in ROBERT E. LEE’s Army of Northern Virginia, and it is sometimes referred to today as “Lee’s Foreign Legion.”

A wounded Zouave being offered a drink by a companion after the Battle of Chancellorsville (National Archives)

Pennsylvania was the Northern state that boasted the most Zouave units. One Pennsylvania unit served as the personal bodyguard of Gen. Nathaniel P. Banks. This unit, which called itself the Zouaves d'Afrique, was chased from the field at FIRST BULL RUN by the 10th Louisiana Infantry. Later, at the BATTLE OF GETTYSBURG, the Zouaves d'Afrique played an essential role in turning back the Confederate assault on Cemetery Hill.

Northern Zouave units maintained their popularity with civilians throughout the war. Oftentimes, in the early years of the conflict, when patriotic sentiments still ran high, Zouaves participated in "musical entertainments." These entertainments involved brass band concerts interspersed

with drill maneuvers, courtesy of the Zouaves. Such concerts sometimes went on for two to three hours at a time. Even today, Zouave units are very popular among "living history" buffs who engage in Civil War reenactments. The gaudy Zouave uniform still appeals today, largely because it harks back to a moment outside of living memory: a time when leaders tried to make war into a chivalric spectacle.

# Chronology

---

## 1856

James Buchanan, a proslavery Democrat from Pennsylvania, defeats Republican candidate John C. Frémont in the presidential election.

Tensions between antislavery and proslavery settlers in Kansas erupt into a guerrilla war; the conflict is called “Bleeding Kansas.”

Senator Charles Sumner’s “Crime against Kansas Speech” vehemently denounces the Kansas-Nebraska Act of 1854 and its authors.

## 1857

In the *Dred Scott* decision, the U.S. Supreme Court rules that a slave is not a citizen; the ruling provokes criticism in the North.

Proslavery advocates draft the Lecompton Constitution of 1857 to organize the Kansas Territory as a slave state.

## 1858

The first transatlantic telegraph cable is completed; the project is backed by financier Cyrus Field.

U.S. consul general Townsend Harris negotiates the Harris Treaty of 1858 with Japan. The treaty opens Japanese ports to American trade, grants U.S. citizens resident rights in Japan, and establishes diplomatic missions in the capitals of both nations.

The U.S.-Chinese Treaty of 1858 allows U.S. ships increased access to Chinese ports and grants U.S. citizens in China exemption from local jurisdiction.

Albert Bierstadt begins painting his landscapes of the American West.

The Pike’s Peak gold rush brings many settlers and miners into the Cheyenne and Arapaho hunting grounds in Colorado; when the Indians refuse to sell their land and move to reservations, Governor John Evans declares war on them, putting Col. John Chivington in charge of the operation.

Abraham Lincoln’s senatorial nomination acceptance, the “House Divided” speech, declares that the Union could not continue as half slaveholding and half free.

U.S. senatorial candidates Abraham Lincoln and Stephen Douglas tour the state of Illinois debating the future of slavery and the Union.

## 1859

John Brown raids Harpers Ferry, Virginia (later, West Virginia), with a band of antislavery guerrillas and seizes a federal armory. He is captured by U.S. marines under Col. Robert E. Lee and is eventually hanged.

The U.S. Supreme Court decision *Ableman v. Booth*; *United States v. Booth* reverses a Wisconsin Supreme Court decision that freed an abolitionist who had defied the Fugitive Slave Act of 1850.

## 1860

Adventurer William Walker is executed in Honduras after a second attempt to conquer Nicaragua.

Abraham Lincoln’s Cooper Union speech makes him a potential candidate for the Republican presidential nomination.

Members of the lapsed Whig and American Parties construct the Constitutional Union Party platform as an additional alternative to resolution of the slavery dilemma.

The Pony Express provides mail service from Missouri to California.

The Democratic Party’s convention splits over slavery. Southerners nominate John C. Breckinridge of Kentucky. The Northern faction nominates Stephen A. Douglas, dividing the party’s vote.

Republican Abraham Lincoln is elected as the 16th president of the United States, defeating John Bell, John C. Breckinridge, and Stephen A. Douglas.

South Carolina refuses to accept the results of the presidential election and secedes from the Union on

December 20. Fort Sumter, a Union fort in the harbor at Charleston, South Carolina, is reinforced.

The Crittenden Compromise of 1860, which upheld the resolves of the Compromise of 1850, is a last-ditch effort to stave off civil war.

### 1861

Cochise leads the Chiricahua Apache in raids against white settlers and travelers in the Apache Pass in the Arizona Territory.

The Morrill Tariff Act of 1861 raises protective duties on such materials as iron and wool.

Over the objections of President Lincoln, U.S. Congress passes the Confiscation Act of 1861. The law allows the Union government to seize any property, including slaves, used to aid the Confederacy.

Gen. Frémont's Emancipation Order of 1861 declares martial law in Missouri and allows Union forces to confiscate the property and slaves of rebels.

U.S. Congress admits Kansas into the Union under its antislavery constitution.

Representatives from the secessionist states meet at Montgomery, Alabama, to draft their own constitution and establish themselves as the Confederate States of America. Jefferson Davis is chosen as the Confederacy's provisional president.

Abraham Lincoln is inaugurated as the 16th president of the (now divided) United States.

A memorandum to the president from his secretary of state, William Seward's "Plan to Avoid War," suggests how the president should bring the slavery conflict to a resolution without resorting to war.

Confederate shore batteries under the command of Gen. Pierre G. T. Beauregard begin firing on Fort Sumter, marking the start of the Civil War. The fort's commander, Maj. Robert Anderson, surrenders; he and his troops are allowed to return to the North.

Robert E. Lee resigns his commission in the Union army and becomes a Confederate commander.

President Lincoln calls for 75,000 Union volunteers to put down the Southern rebellion and forms the Army of the Potomac.

Confederates under Gens. Joseph E. Johnston and Thomas J. Jackson rout Union forces at the First Battle of Bull Run. Jackson earns the nickname "Stonewall."

### 1862

Union troops, after driving the Confederates out of New Mexico, begin a campaign, led by Gen. James Carleton and Col. Christopher "Kit" Carson, against the Mescalero Apache and the Navajo.

U.S. Congress passes the Legal Tender Act of 1862 to fund the Union war effort.

U.S. Congress issues the Ironclad Oath, which requires all federal, civil, and military officials—elected or appointed, honorary or paid—to swear allegiance to the U.S. Constitution.

The Morrill Land-Grant Act of 1862 gives states federal lands for the establishment of colleges.

The Homestead Act of 1862 is passed, providing for U.S. settlement of the West.

U.S. Congress passes the Pacific Railroad Act of 1862, which provides land grants and loans for the first transcontinental railroad.

U.S. Congress passes the Confiscation Act of 1862, providing for the seizure of property of rebel slaveholders and the emancipation of their slaves.

The Santee Sioux revolt in Minnesota after their government annuity is delayed; they are led by Little Crow. The uprising is put down by Gen. Henry H. Sibley.

The fight of the ironclads takes place between the *Monitor* and the *Virginia* at Hampton Roads, Virginia.

Jefferson Davis is inaugurated as the president of the Confederacy.

Union troops are ferried to the Virginia peninsula, beginning the Peninsular campaign.

The Confederates conduct a surprise attack on Gen. Ulysses S. Grant's forces in Shiloh, Tennessee. The Union suffers almost 25,000 casualties, but the army maintains its positions.

New Orleans falls to Union forces under Adm. David Farragut.

Confederate general J. E. B. Stuart makes a daring cavalry foray against Union supply lines on the Virginia peninsula, bolstering Southern morale.

Gen. George McClellan repulses a Confederate attack at Malvern Hill in Virginia.

Union general John Pope's forces are dealt a severe blow at the Second Battle of Bull Run. Gens. Stonewall Jackson and James Longstreet command the victorious Confederates.

Confederate general Robert E. Lee's advance into Maryland is halted at the Battle of Antietam, the bloodiest one-day battle in U.S. history.

More than 100,000 Union troops led by Gen. Ambrose Burnside engage Robert E. Lee's Confederate forces at Fredericksburg, Virginia. After a bloody assault, the Union attack is repulsed.

The pro-Union western counties of Virginia form the state of West Virginia.

An entreaty to President Lincoln published in the *New York Tribune*, Horace Greeley's "Prayer of Twenty Millions," urges emancipation for the millions of enslaved blacks.

President Lincoln's reply to Greeley stresses his duty to preserve the Union by any means necessary—with or without emancipation.

**1863**

Abraham Lincoln issues the Emancipation Proclamation, which declares all slaves in Confederate-held territory free; in reality, the proclamation does not free any slaves, but it makes the destruction of slavery a Union goal.

Gen. Ulysses Grant's Order No. 11 expels all Jews from Union-controlled Tennessee. It is Grant's attempt to end war profiteering, which he attributed mainly to Jewish traders.

In an effort to halt hostility and insults directed toward Union troops by New Orleans residents, particularly women, Gen. Benjamin Franklin Butler's Order No. 28 declares that any female insulting or showing contempt for any U.S. officer or soldier should be treated as a prostitute.

The 54th Massachusetts Regiment, the first all-black regiment from the North, loses half of its men in a charge at Fort Wagner, South Carolina.

Gen. Joseph Hooker assumes command of the Army of the Potomac.

The Union suffers a setback in the Battle of Chancellorsville in Virginia. Confederate Gen. Stonewall Jackson is mortally wounded by one of his own men.

Vicksburg is under siege by the Union army.

The pivotal Battle of Gettysburg takes place as Confederate forces under Gen. Robert E. Lee advance into Pennsylvania. Union general George Meade defeats the Confederates in a battle that leaves 50,000 casualties on both sides.

The Union captures Vicksburg, Mississippi; Confederate forces are surrounded on land and on water and are running out of food. They surrender to Gen. Ulysses S. Grant, and Union forces take control of the Mississippi River.

The New York Draft Riots occur, leaving 1,000 people dead or wounded. Blacks are the principal targets of the violence.

Confederate leader William Quantrill raids the pro-Union town of Lawrence, Kansas, slaughtering more than 100 civilians.

Union forces at Chattanooga, Tennessee, are besieged by the Confederate army.

President Lincoln delivers his Gettysburg Address at the dedication of a military cemetery on the battlefield.

U.S. Congress passes the National Bank Act of 1863, which creates a national banking system.

Tennessee is conquered by Northern forces and prepared for its restoration to the Union.

President Lincoln's Proclamation of Amnesty and Reconstruction is an early attempt to create a coherent strategy for reincorporating rebel states into the Union.

In Frances Willard's "Women's Lesser Duties" speech, she stresses that women should learn the arts and domestic duties, as well as be pure, charming, and moral.

The Habeas Corpus Act of 1863 gives the government the power to imprison an individual indefinitely without being charged.

**1864**

Col. John Chivington leads the Colorado volunteers against the Cheyenne and Arapaho in the Sand Creek Massacre, despite the peace agreement at Camp Weld.

Confederate general Nathan Bedford Forrest captures Fort Pillow in Tennessee. Only 14 Confederates were killed and 86 wounded, while the Union forces had 231 killed and 1,000 wounded; many of the Union losses were black soldiers.

Gen. Ulysses S. Grant is given command of all Union forces.

The Spotsylvania campaign leads to a day of fighting at the "bloody angle."

With his direct assaults on Petersburg, Virginia, having failed, Union general Ulysses S. Grant prepares to besiege the city, whose defense is commanded by Confederate general Robert E. Lee.

A cavalry force under Confederate general Jubal Early reaches the outskirts of Washington, D.C., before deciding to withdraw.

The Confederate defenses at Petersburg, Virginia, are shattered by the huge explosion of a mine planted by Union engineers. Union assault troops fail to exploit the mine attack and are shot down mercilessly in the crater left by the explosion.

Adm. David Farragut leads a Union fleet to victory in the Battle of Mobile Bay and closes that port to the Confederacy.

Union troops begin their occupation of Atlanta after four weeks of siege.

Lincoln is reelected.

Union troops under Gen. William T. Sherman begin their destructive advance across Georgia, from Atlanta to the coast.

U.S. Congress passes the severe Reconstruction measure, the Wade-Davis Bill of 1864. It allows rebel states to return to the United States only after a majority of white male citizens take an oath of allegiance to the Union and after the adoption of a state constitution acceptable to the president and Congress.

**1865**

U.S. Congress passes the Thirteenth Amendment to the U.S. Constitution, which abolishes slavery throughout the nation.

Gen. Robert E. Lee surrenders to Ulysses S. Grant at the Appomattox Court House.

In his last speech, Lincoln advocates voting rights for black soldiers.

John Wilkes Booth assassinates President Lincoln; Andrew Johnson becomes president.

Mark Twain publishes *The Celebrated Jumping Frog of Calaveras County* to national acclaim.

Union Republican representative Henry J. Raymond's speech on Reconstruction proposes a moderate strategy for reincorporating rebel states into the Union.

Radical Republican representative Thaddeus Stevens's speech on Reconstruction advocates a harsh, punitive approach to the former Confederate states.

Confederate commander Gen. Robert E. Lee, in his farewell, praises his troops for their courage and devotion to their country.

U.S. Congress creates the Freedmen's Bureau to help educate freed slaves and integrate them into society.

President Johnson proclaims a general amnesty for all but the most prominent ex-Confederates.

A U.S. Congress dominated by Radical Republicans convenes in Washington; the Radicals advocate equal rights for blacks and a harsh Reconstruction program for the South.

The Black Codes (statutes that restrict the rights of African Americans) are passed in Mississippi and quickly spread throughout the South.

### 1866

Fisk University opens in Nashville, Tennessee.

Overriding President Johnson's veto, U.S. Congress passes the Civil Rights Act of 1866, which confers citizenship upon black people and grants the same rights and responsibilities to all persons born in the United States, except Native Americans.

Radical Republican Thaddeus Stevens proposes distributing 40-acre plots of land to freed blacks, but the plan is voted down in Congress.

The Ku Klux Klan, an organization of white Southerners, many of them ex-Confederates dedicated to white supremacy, holds its first meeting in Pulaski, Tennessee. The Klan spreads terror throughout the South for several years.

U.S. Congress adopts the Fourteenth Amendment, which grants full rights of citizenship to blacks.

The Grand Army of the Republic (GAR), an organization of Union veterans, is formed.

Jesse James and his brother Frank form a band of bank robbers.

### 1867

The Republican-dominated U.S. Congress passes two influential pieces of legislation: the Reconstruction Acts of 1867–68, which divide the South into five districts con-

trolled completely by the military, and the Tenure of Office Act of 1867, which makes it impossible for the president to dismiss a cabinet member without Senate approval.

Secretary of State William Henry Seward negotiates the purchase of Alaska from Russia.

Jay Gould becomes director of the Erie Railroad; Gould oversees fraudulent stock sales to ward off a takeover attempt by Cornelius Vanderbilt.

The Peonage Abolition Act of 1867 outlaws involuntary servitude. It is designed to help support and amplify the Fourteenth Amendment to the U.S. Constitution.

Native American tribes in the southwestern Indian Territory cede lands in the Texas Panhandle to the U.S. government. This land was originally granted to the tribes in earlier treaties.

In *Mississippi v. Johnson*, the state of Mississippi seeks to prevent President Johnson from enforcing Reconstruction legislation.

### 1868

In the Treaty of Fort Laramie, the U.S. government guarantees the Sioux exclusive possession of the land in South Dakota west of the Missouri River.

The Fourteenth Amendment to the U.S. Constitution is ratified, granting citizenship to African Americans.

Sioux chief Red Cloud forces the U.S. Army to evacuate three western forts.

President Andrew Johnson, who advocates a lenient Reconstruction policy, fires Secretary of War Edwin M. Stanton. The Radical Republicans impeach Johnson for "high crimes and misdemeanors," and he is acquitted by a single vote.

Republican candidate and former Union general Ulysses S. Grant defeats Democrat Horatio Seymour in the presidential election.

Louisa May Alcott publishes her novel *Little Women*.

### 1869

U.S. Congress adopts the Fifteenth Amendment to the U.S. Constitution, which extends the right to vote to African Americans.

Inventor George Westinghouse applies for a patent on the air brake, which greatly improves railroad safety.

The Central Pacific Railroad, built east from California, connects with the Union Pacific Railroad at Promontory Point, Utah, completing the first transcontinental railroad.

Financier Jim Fisk tries to corner the gold market and causes a financial panic.

Susan B. Anthony and Elizabeth Cady Stanton found the National Woman Suffrage Association (NWSA).

## **“House Divided” Speech (1858)** **Abraham Lincoln**

In Roy P. Basler, ed., *The Collected Works of Abraham Lincoln*, vol. 2 (New Brunswick, N.J.: Rutgers University Press, 1953–55), pp. 461–469

June 16, 1858

Mr. President and Gentlemen of the Convention.

If we could first know where we are, and whither we are tending, we could then better judge what to do, and how to do it.

We are now far into the fifth year, since a policy was initiated, with the avowed object, and confident promise, of putting an end to slavery agitation.

Under the operation of that policy, that agitation has not only, not ceased, but has constantly augmented.

In my opinion, it will not cease, until a crisis shall have been reached, and passed.

“A house divided against itself cannot stand.”

I believe this government cannot endure, permanently half slave and half free.

I do not expect the Union to be dissolved—I do not expect the house to fall—but I do expect it will cease to be divided. It will become all one thing, or all the other.

Either the opponents of slavery, will arrest the further spread of it, and place it where the public mind shall rest in the belief that it is in course of ultimate extinction; or its advocates will push it forward, till it shall become alike lawful in all the States, old as well as new—North as well as South.

Have we no tendency to the latter condition?

Let any one who doubts, carefully contemplate that now almost complete legal combination—piece of machinery so to speak—compounded of the Nebraska doctrine, and the Dred Scott decision. Let him consider not only

what work the machinery is adapted to do, and how well adapted; but also, let him study the history of its construction, and trace, if he can, or rather fail, if he can, to trace the evidences of design, and concert of action, among its chief architects, from the beginning.

But, so far, Congress only, had acted; and an indorsement by the people, real or apparent, was indispensable, to save the point already gained, and give chance for more.

The new year of 1854, found slavery excluded from more than half the States by State Constitutions, and from most of the national territory by Congressional prohibition.

Four days later, commenced the struggle, which ended in repealing that Congressional prohibition.

This opened all the national territory to slavery; and was the first point gained.

But, so far, Congress only, had acted; and an indorsement by the people, real or apparent, was indispensable, to save the point already gained, and give chance for more.

This necessity had not been overlooked; but had been provided for, as well as might be, in the notable argument of “squatter sovereignty,” otherwise called “sacred right of self government,” which latter phrase, though expressive of the only rightful basis of any government, was so perverted in this attempted use of it as to amount to just this: That if any one man, choose to enslave another, no third man shall be allowed to object.

That argument was incorporated into the Nebraska bill itself, in the language which follows: “It being the true intent and meaning of this act not to legislate slavery into any Territory or state, not exclude it therefrom; but to leave the people thereof perfectly free to form and regulate their domestic institutions in their own way, subject only to the Constitution of the United States.”

Then opened the roar of loose declamation in favor of “Squatter Sovereignty,” and “Sacred right of self government.”

"But," said opposition members, "let us be more specific—let us amend the bill so as to expressly declare that the people of the territory may exclude slavery." "Not we," said the friends of the measure; and down they voted the amendment.

While the Nebraska bill was passing through congress, a law case, involving the question of a negro's freedom, by reason of his owner having voluntarily taken him first into a free state and then a territory covered by the congressional prohibition, and held him as a slave, for a long time in each, was passing through the U.S. Circuit Court for the District of Missouri; and both Nebraska bill and law suit were brought to a decision in the same month of May, 1854. The negro's name was "Dred Scott," which name now designates the decision finally made in the case.

Before the then next Presidential election, the law case came to, and was argued in the Supreme Court of the United States; but the decision of it was deferred until after the election. Still, before the election, Senator Trumbull, on the floor of the Senate, requests the leading advocate of the Nebraska bill to state his opinion whether the people of a territory can constitutionally exclude slavery from their limits; and the latter answers, "That is a question for the Supreme Court."

The election came. Mr. Buchanan was elected, and the indorsement, such as it was, secured. That was the second point gained. The indorsement, however, fell short of a clear popular majority by nearly four hundred thousand votes, and so, perhaps, was not overwhelmingly reliable and satisfactory.

The outgoing President, in his last annual message, as impressively as possible echoed back upon the people the weight and authority of the indorsement.

The Supreme court met again; did not announce their decision, but ordered a re-argument.

The Presidential inauguration came, and still no decision of the court; but the incoming President, in his inaugural address, fervently exhorted the people to abide by the forthcoming decision, whatever it might be.

Then, in a few days, came the decision.

The reputed author of the Nebraska bill finds an early occasion to make a speech at this capitol indorsing the Dred Scott Decision, and vehemently denouncing all opposition to it.

The new President, too, seizes the early occasion of the Silliman letter to indorse and strongly construe that decision, and to express his astonishment that any different view had ever been entertained.

At length a squabble springs up between the President and the author of the Nebraska bill, on the mere question of fact, whether the Lecompton constitution was or was not, in any just sense, made by the people of Kansas; and in that squabble the latter declares that all he wants is a fair

vote for the people, and that he cares not whether slavery be voted down or voted up. I do not understand his declaration that he cares not whether slavery be voted down or voted up, to be intended by him other than as an apt definition of the policy he would impress upon the public mind—the principle for which he declares he has suffered much, and is ready to suffer to the end.

And well may he cling to that principle. If he has any parental feeling, well may he cling to it. That principle, is the only shred left of his original Nebraska doctrine. Under the Dred Scott decision, "squatter sovereignty" squatted out of existence, tumbled down like temporary scaffolding—like the mould at the foundry served through one blast and fell back into loose sand—helped to carry an election, and then was kicked to the winds. His late joint struggle with the Republicans, against the Lecompton Constitution, involves nothing of the original Nebraska doctrine. That struggle was made on a point, the right of a people to make their own constitution, upon which he and the Republicans have never differed.

The several points of the Dred Scott decision, in connection with Senator Douglas' "care not" policy, constitute the piece of machinery, in its present state of advancement. This was the third point gained.

The working points of that machinery are:

First, that no negro slave, imported as such from Africa, and no descendant of such slave can ever be a citizen of any State, in the sense of that term as used in the Constitution of the United States.

This point is made in order to deprive the negro, in every possible event, of the benefit of this provision of the United States Constitution, which declares that—

"The citizens of each State shall be entitled to all privileges and immunities of citizens in the several States."

Secondly, that "subject to the Constitution of the United States," neither Congress nor a Territorial Legislature can exclude slavery from any United States territory.

This point is made in order that individual men may fill up the territories with slaves, without danger of losing them as property, and thus to enhance the chances of permanency to the institution through all the future.

Thirdly, that whether the holding a negro in actual slavery in a free State, makes him free, as against the holder, the United States courts will not decide, but will leave to be decided by the courts of any slave State the negro may be forced into by the master.

This point is made, not to be pressed immediately; but, if acquiesced in for a while, and apparently indorsed by the people at an election, then to sustain the logical conclusion that what Dred Scott's master might lawfully do with Dred Scott, in the free State of Illinois, every other master may lawfully do with any other one, or one thousand slaves, in Illinois, or in any other free State.

Auxiliary to all this, and working hand in hand with it, the Nebraska doctrine, or what is left of it, is to educate and mould public opinion, at least Northern public opinion, to not care whether slavery is voted down or voted up.

This shows exactly where we now are; and partially also, whither we are tending.

It will throw additional light on the latter, to go back, and run the mind over the string of historical facts already stated. Several things will now appear less dark and mysterious than they did when they were transpiring. The people were to be left “perfectly free” “subject only to the Constitution.” What the Constitution had to do with it, outsiders could not then see. Plainly enough now, it was an exactly fitted niche, for the Dred Scott decision to afterwards come in, and declare the perfect freedom of the people, to be just no freedom at all.

Why was the amendment, expressly declaring the right of the people to exclude slavery, voted down? Plainly enough now, the adoption of it, would have spoiled the niche for the Dred Scott decision.

Why was the court decision held up? Why, even a Senator’s individual opinion withheld, till after the Presidential election? Plainly enough now, the speaking out then would have damaged the “perfectly free” argument upon which the election was to be carried.

Why the outgoing President’s felicitation on the indorsement? Why the delay of a reargument? Why the incoming President’s advance exhortation in favor of the decision?

These things look like the cautious patting and petting a spirited horse, preparatory to mounting him, when it is dreaded that he may give the rider a fall.

And why the hasty after indorsements of the decision by the President and others?

We can not absolute know that all these exact adaptations are the result of preconcert. But when we see a lot of framed timbers, different portions of which we know have been gotten out at different times and places and by different workmen—Stephen, Franklin, Roger and James, for instance—and when we see these timbers joined together, and see they exactly make the frame of a house or a mill, all the tenons and mortices exactly fitting, and all the lengths and proportions of the different pieces exactly adapted to their respective places, and not a piece too many or too few—not omitting even scaffolding—or, if a single piece be lacking, we can see the place in the frame exactly fitted and prepared to yet bring such piece in—in such a case, we find it impossible to not believe that Stephen and Franklin and Roger and James all understood one another from the beginning, and all worked upon a common plans or draft drawn up before the first lick was struck.

It should not be overlooked that, by the Nebraska bill, the people of a State as well as Territory, were to be left “perfectly free” “subject only to the Constitution.”

Why mention a State? They were legislating for territories, and not for or about States. Certainly the people of a State are and ought to be subject to the Constitution of the United States; but why is mention of this lugged into this merely territorial law? Why are the people of a territory and the people of a state therein lumped together, and their relation to the Constitution therein treated as being precisely the same?

While the opinion of the Court, by Chief Justice Taney, in the Dred Scott case, and the separate opinions of all the concurring Judges, expressly declare that the Constitution of the United States neither permits Congress nor a Territorial legislature to exclude slavery from any United States territory, they all omit to declare whether or not the same Constitution permits a state, or the people of a State, to exclude it.

Possibly, this was a mere omission; but who can be quite sure, if McLean or Curtis had sought to get into the opinion a declaration of unlimited power in the people of a state to exclude slavery from their limits, just as Chase and Macy sought to get such declaration, in behalf of the people of a territory, into the Nebraska bill—I ask, who can be quite sure that it would not have been voted down, in the one case, as it had been in the other.

The nearest approach to the point of declaring the power of a State over slavery, is made by Judge Nelson. He approaches it more than once, using the precise idea, and almost the language too, of the Nebraska act. On one occasion his exact language is, “except in cases where the power is restrained by the Constitution of the United States, the law of the State is supreme over the subject of slavery within its jurisdiction.”

In what cases the power of the states is so restrained by the U.S. Constitution, is left an open question, precisely as the same question, as to the restraint on the power of the territories was left open in the Nebraska act. Put that and that together, and we have another nice little niche, which we may, ere long, see filled with another Supreme Court decision, declaring that the Constitution of the United States does not permit a state to exclude slavery from its limits.

And this may especially be expected if the doctrine of “care not whether slavery be voted down or voted up,” shall gain upon the public mind sufficiently to give promise that such a decision can be maintained when made.

Such a decision is all that slavery now lacks of being alike lawful in all the States.

Welcome or unwelcome, such decision is probably coming, and will soon be upon us, unless the power of the present political dynasty shall be met and overthrown.

We shall lie down pleasantly dreaming that the people of Missouri are on the verge of making their State free; and we shall awake to the reality, instead, that the Supreme Court has made Illinois a slave State.

To meet and overthrow the power of that dynasty, is the work now before all those who would prevent that consummation.

That is what we have to do.

But how can we best do it?

There are those who denounce us openly to their own friends, and yet whisper us softly, that Senator Douglas is the aptest instrument there is, with which to effect that object. They do not tell us, nor has he told us, that he wishes any such object to be effected. They wish us to infer all, from the facts, that he now has a little quarrel with the present head of the dynasty; and that he has regularly voted with us, on a single point, upon which, he and we, have never differed.

They remind us that he is a very great man, and that the largest of us are very small ones. Let this be granted. But “a living dog is better than a dead lion.” Judge Douglas, if not a dead lion for this work, is at least a caged and toothless one. How can he oppose the advances of slavery? He don’t care anything about it. His avowed mission is impressing the “public heart” to care nothing about it.

A leading Douglas Democratic newspaper thinks Douglas’ superior talent will be needed to resist the revival of the African slave trade.

Does Douglas believe an effort to revive that trade is approaching? He has not said so. Does he really think so? But if it is, how can he resist it? For years he has labored to prove it a sacred right of white men to take negro slaves into the new territories. Can he possibly show that it is less a sacred right to buy them where they can be bought cheapest? And, unquestionably they can be bought cheaper in Africa than in Virginia.

He has done all in his power to reduce the whole question of slavery to one of a mere right of property; and as such, how can he oppose the foreign slave trade—how can he refuse that trade in that “property” shall be “perfectly free”—unless he does it as a protection to the home production? And as the home producers will probably not ask the protection, he will be wholly without a ground of opposition.

Senator Douglas holds, we know, that a man may rightfully be wiser to-day than he was yesterday—that he may rightfully change when he finds himself wrong.

But, can we for that reason, run ahead, and infer that he will make any particular change, of which he, himself, has given no intimation? Can we safely base our action upon any such vague inference?

Now, as ever, I wish to not misrepresent Judge Douglas’ position, question his motives, or do ought that can be personally offensive to him.

Whenever, if ever, he and we can come together on principle so that our great cause may have assistance from

his great ability, I hope to have interposed no adventitious obstacle.

But clearly, he is not now with us—he does not pretend to be—he does not promise to ever be.

Our cause, then, must be intrusted to, and conducted by its own undoubted friends—those whose hands are free, whose hearts are in the work—who do care for the result.

Two years ago the Republicans of the nation mustered over thirteen hundred thousand strong.

We did this under the single impulse of resistance to a common danger, with every external circumstance against us.

Of strange, discordant, and even, hostile elements, we gathered from the four winds, and formed and fought the battle through, under the constant hot fire of a disciplined, proud, and pampered enemy.

Did we brave all then, to falter now?—now—when that same enemy is wavering, dissevered and belligerent?

The result is not doubtful. We shall not fail—if we stand firm, we shall not fail.

Wise councils may accelerate or mistakes delay it, but, sooner or later the victory is sure to come.

## First Inaugural Address (1861)

**Abraham Lincoln**

*Landmark Documents in American History*, CD-ROM  
(New York: Facts On File, 1998)

March 4, 1861

Fellow-Citizens of the United States:

In compliance with a custom as old as the Government itself, I appear before you to address you briefly and to take in your presence the oath prescribed by the Constitution of the United States to be taken by the President “before he enters on the execution of this office.”

I do not consider it necessary at present for me to discuss those matters of administration about which there is no special anxiety or excitement.

Apprehension seems to exist among the people of the Southern States that by the accession of a Republican Administration their property and their peace and personal security are to be endangered. There has never been any reasonable cause for such apprehension. Indeed, the most ample evidence to the contrary has all the while existed and been open to their inspection. It is found in nearly all the published speeches of him who now addresses you. I do but quote from one of those speeches when I declare that—

I have no purpose, directly or indirectly, to interfere with the institution of slavery in the States where it exists. I believe I have no lawful right to do so, and I have no inclination to do so.

Those who nominated and elected me did so with full knowledge that I had made this and many similar declarations and had never recanted them; and more than this, they placed in the platform for my acceptance, and as a law to themselves and to me, the clear and emphatic resolution which I now read:

*Resolved*, That the maintenance inviolate of the rights of the States, and especially the right of each State to order and control its own domestic institutions according to its own judgment exclusively, is essential to that balance of power on which the perfection and endurance of our political fabric depend; and we denounce the lawless invasion by armed force of the soil of any State or Territory, no matter what pretext, as among the gravest of crimes.

I now reiterate these sentiments, and in doing so I only press upon the public attention the most conclusive evidence of which the case is susceptible that the property, peace, and security of no section are to be in any wise endangered by the now incoming Administration. I add, too, that all the protection which, consistently with the Constitution and the laws, can be given will be cheerfully given to all the States when lawfully demanded, for whatever cause—as cheerfully to one section as to another.

There is much controversy about the delivering up of fugitives from service or labor. The clause I now read is as plainly written in the Constitution as any other of its provisions:

No person held to service or labor in one State, under the laws thereof, escaping into another, shall in consequence of any law or regulation therein be discharged from such service or labor, but shall be delivered up on claim of the party to whom such service or labor may be due.

It is scarcely questioned that this provision was intended by those who made it for the reclaiming of what we call fugitive slaves; and the intention of the lawgiver is the law. All members of Congress swear their support to the whole Constitution—to this provision as much as to any other. To the proposition, then, that slaves whose cases come within the terms of this clause “shall be delivered up” their oaths are unanimous. Now, if they would make the effort in good temper, could they not with nearly equal unanimity frame and pass a law by means of which to keep good that unanimous oath?

There is some difference of opinion whether this clause should be enforced by national or by State authority, but surely that difference is not a very material one. If the slave is to be surrendered, it can be of but little consequence to him or to others by which authority it is done. And should anyone in any case be content that his oath shall go unkept on a merely unsubstantial controversy as to *how* it shall be kept?

Again: In any law upon this subject ought not all the safeguards of liberty known in civilized and humane juris-

prudence to be introduced, so that a free man be not in any case surrendered as a slave? And might it not be well at the same time to provide by law for the enforcement of that clause in the Constitution which guarantees that “the citizens of each State shall be entitled to all privileges and immunities of citizens in the several States”?

I take the official oath to-day with no mental reservations and with no purpose to construe the Constitution or laws by any hypercritical rules; and while I do not choose now to specify particular acts of Congress as proper to be enforced, I do suggest that it will be much safer for all, both in official and private stations, to conform to and abide by all those acts which stand unrepealed than to violate any of them trusting to find impunity in having them held to be unconstitutional.

It is seventy-two years since the first inauguration of a President under our National Constitution. During that period fifteen different and greatly distinguished citizens have in succession administered the executive branch of the Government. They have conducted it through many perils, and generally with great success. Yet, with all this scope of precedent, I now enter upon the same task for the brief constitutional term of four years under great and peculiar difficulty. A disruption of the Federal Union, heretofore only menaced, is now formidably attempted.

I hold that in contemplation of universal law and of the Constitution the Union of these States is perpetual. Perpetuity is implied, if not expressed, in the fundamental law of all national governments. It is safe to assert that no government proper ever had a provision in its organic law for its own termination. Continue to execute all the express provisions of our National Constitution, and the Union will endure forever, it being impossible to destroy it except by some action not provided for in the instrument itself.

Again: If the United States be not a government proper, but an association of States in the nature of contract merely, can it, as a contract, be peaceably unmade by less than all the parties who made it? One party to a contract may violate it—break it, so to speak—but does it not require all to lawfully rescind it?

Descending from these general principles, we find the proposition that in legal contemplation the Union is perpetual confirmed by the history of the Union itself. The Union is much older than the Constitution. It was formed, in fact, by the Articles of Association in 1774. It was matured and continued by the Declaration of Independence in 1776. It was further matured, and the faith of all the then thirteen States expressly plighted and engaged that it should be perpetual, by the Articles of Confederation in 1778. And finally, in 1787, one of the declared objects for ordaining and establishing the Constitution was “*to form a more perfect Union.*”

But if destruction of the Union by one or by a part only of the States be lawfully possible, the Union is *less* perfect than before the Constitution, having lost the vital element of perpetuity.

It follows from these views that no State upon its own mere motion can lawfully get out of the Union; that *resolves* and *ordinances* to that effect are legally void, and that acts of violence within any State or States against the authority of the United States are insurrectionary or revolutionary, according to circumstances.

I therefore consider that in view of the Constitution and the laws the Union is unbroken, and to the extent of my ability, I shall take care, as the Constitution itself expressly enjoins upon me, that the laws of the Union be faithfully executed in all the States. Doing this I deem to be only a simple duty on my part, and I shall perform it so far as practicable unless my rightful masters, the American people, shall withhold the requisite means or in some authoritative manner direct the contrary. I trust this will not be regarded as a menace, but only as the declared purpose of the Union that it *will* constitutionally defend and maintain itself.

In doing this there needs to be no bloodshed or violence, and there shall be none unless it be forced upon the national authority. The power confided to me will be used to hold, occupy, and possess the property and places belonging to the Government and to collect the duties and imposts; but beyond what may be necessary for these objects, there will be no invasion, no using of force against or among the people anywhere. Where hostility to the United States in any interior locality shall be so great and universal as to prevent competent resident citizens from holding the Federal offices, there will be no attempt to force obnoxious strangers among the people for that object. While the strict legal right may exist in the Government to enforce the exercise of these offices, the attempt to do so would be so irritating and so nearly impracticable withal that I deem it better to forego for the time the uses of such offices.

The mails, unless repelled, will continue to be furnished in all parts of the Union. So far as possible the people everywhere shall have that sense of perfect security which is most favorable to calm thought and reflection. The course here indicated will be followed unless current events and experience shall show a modification or change to be proper, and in every case and exigency my best discretion will be exercised, according to circumstances actually existing and with a view and a hope of a peaceful solution of the national troubles and the restoration of fraternal sympathies and affections.

That there are persons in one section or another who seek to destroy the Union at all events and are glad of any pretext to do it I will neither affirm nor deny; but if there be such, I need address no word to them. To those, however, who really love the Union may I not speak?

Before entering upon so grave a matter as the destruction of our national fabric, with all its benefits, its memories, and its hopes, would it not be wise to ascertain precisely why we do it? Will you hazard so desperate a step while there is any possibility that any portion of the ills you fly from have no real existence? Will you, while the certain ills you fly to are greater than all the real ones you fly from, will you risk the commission of so fearful a mistake?

All profess to be content in the Union if all constitutional rights can be maintained. Is it true, then, that any right plainly written in the Constitution has been denied? I think not. Happily, the human mind is so constituted that no party can reach to the audacity of doing this. Think, if you can, of a single instance in which a plainly written provision of the Constitution has ever been denied. If by the mere force of numbers a majority should deprive a minority of any clearly written constitutional right, it might in a moral point of view justify revolution; certainly would if such right were a vital one. But such is not our case. All the vital rights of minorities and of individuals are so plainly assured to them by affirmations and negations, guaranties and prohibitions, in the Constitution that controversies never arise concerning them. But no organic law can ever be framed with a provision specifically applicable to every question which may occur in practical administration. No foresight can anticipate nor any document of reasonable length contain express provisions for all possible questions. Shall fugitives from labor be surrendered by national or by State authority? The Constitution does not expressly say. *May* Congress prohibit slavery in the Territories? The Constitution does not expressly say. *Must* Congress protect slavery in the Territories? The Constitution does not expressly say.

From questions of this class spring all our constitutional controversies, and we divide upon them into majorities and minorities. If the minority will not acquiesce, the majority must, or the Government must cease. There is no other alternative, for continuing the Government is acquiescence on one side or the other. If a minority in such case will secede rather than acquiesce, they make a precedent which in turn will divide and ruin them, for a minority of their own will secede from them whenever a majority refuses to be controlled by such minority. For instance, why may not any portion of a new confederacy a year or two hence arbitrarily secede again, precisely as portions of the present Union now claim to secede from it? All who cherish disunion sentiments are now being educated to the exact temper of doing this.

Is there such perfect identity of interests among the States to compose a new union as to produce harmony only and prevent renewed secession?

Plainly the central idea of secession is the essence of anarchy. A majority held in restraint by constitutional

checks and limitations, and always changing easily with deliberate changes of popular opinions and sentiments, is the only true sovereign of a free people. Whoever rejects it does of necessity fly to anarchy or to despotism. Unanimity is impossible. The rule of a minority, as a permanent arrangement, is wholly inadmissible; so that, rejecting the majority principle, anarchy or despotism in some form is all that is left.

I do not forget the position assumed by some that constitutional questions are to be decided by the Supreme Court, nor do I deny that such decisions must be binding in any case upon the parties to a suit as to the object of that suit, while they are also entitled to very high respect and consideration in all parallel cases by all other departments of the Government. And while it is obviously possible that such decision may be erroneous in any given case, still the evil effect following it, being limited to that particular case, with the chance that it may be overruled and never become a precedent for other cases, can better be borne than could the evils of a different practice. At the same time, the candid citizen must confess that if the policy of the Government upon vital questions affecting the whole people is to be irrevocably fixed by decisions of the Supreme Court, the instant they are made in ordinary litigation between parties in personal actions the people will have ceased to be their own rulers, having to that extent practically resigned their Government into the hands of that eminent tribunal. Nor is there in this view any assault upon the court or the judges. It is a duty from which they may not shrink to decide cases properly brought before them, and it is no fault of theirs if others seek to turn their decisions to political purposes.

One section of our country believes slavery is *right* and ought to be extended, while the other believes it is *wrong* and ought not to be extended. This is the only substantial dispute. The fugitive-slave clause of the Constitution and the law for the suppression of the foreign slave trade are each as well enforced, perhaps, as any law can ever be in a community where the moral sense of the people imperfectly supports the law itself. The great body of the people abide by the dry legal obligation in both cases, and a few break over in each. This, I think, can not be perfectly cured, and it would be worse in both cases *after* the separation of the sections than before. The foreign slave trade, now imperfectly suppressed, would be ultimately revived without restriction in one section, while fugitive slaves, now only partially surrendered, would not be surrendered at all by the other.

Physically speaking, we can not separate. We can not remove our respective sections from each other nor build an impassable wall between them. A husband and wife may be divorced and go out of the presence and beyond the reach of each other, but the different parts of our country can not do this. They can not but remain face to face,

and intercourse, either amicable or hostile, must continue between them. Is it possible, then, to make that intercourse more advantageous or more satisfactory *after* separation than *before*? Can aliens make treaties easier than friends can make laws? Can treaties be more faithfully enforced between aliens than laws can among friends? Suppose you go to war, you can not fight always; and when, after much loss on both sides and no gain on either, you cease fighting, the identical old questions, as to terms of intercourse, are again upon you.

This country, with its institutions, belongs to the people who inhabit it. Whenever they shall grow weary of the existing Government, they can exercise their *constitutional* right of amending it or their *revolutionary* right to dismember or overthrow it. I can not be ignorant of the fact that many worthy and patriotic citizens are desirous of having the National Constitution amended. While I make no recommendation of amendments, I fully recognize the rightful authority of the people over the whole subject, to be exercised in either of the modes prescribed in the instrument itself; and I should, under existing circumstances, favor rather than oppose a fair opportunity being afforded the people to act upon it. I will venture to add that to me the convention mode seems preferable, in that it allows amendments to originate with the people themselves, instead of only permitting them to take or reject propositions originated by others, not especially chosen for the purpose, and which might not be precisely such as they would wish to either accept or refuse. I understand a proposed amendment to the Constitution—which amendment, however, I have not seen—has passed Congress, to the effect that the Federal Government shall never interfere with the domestic institutions of the States, including that of persons held to service. To avoid misconstruction of what I have said, I depart from my purpose not to speak of particular amendments so far as to say that, holding such a provision to now be implied constitutional law, I have no objection to its being made express and irrevocable.

The Chief Magistrate derives all his authority from the people, and they have referred none upon him to fix terms for the separation of the States. The people themselves can do this if also they choose, but the Executive as such has nothing to do with it. His duty is to administer the present Government as it came to his hands and to transmit it unimpaired by him to his successor.

Why should there not be a patient confidence in the ultimate justice of the people? Is there any better or equal hope in the world? In our present differences, is either party without faith of being in the right? If the Almighty Ruler of Nations, with His eternal truth and justice, be on your side of the North, or on yours of the South, that truth and that justice will surely prevail by the judgment of this great tribunal of the American people.

By the frame of the Government under which we live this same people have wisely given their public servants but little power for mischief, and have with equal wisdom provided for the return of that little to their own hands at very short intervals. While the people retain their virtue and vigilance no Administration by any extreme of wickedness or folly can very seriously injure the Government in the short space of four years.

My countrymen, one and all, think calmly and *well* upon this whole subject. Nothing valuable can be lost by taking time. If there be an object to *hurry* any of you in hot haste to a step which you would never take *deliberately*, that object will be frustrated by taking time; but no good object can be frustrated by it. Such of you as are now dissatisfied still have the old Constitution unimpaired, and, on the sensitive point, the laws of your own framing under it; while the new Administration will have no immediate power, if it would, to change either. If it were admitted that you who are dissatisfied hold the right side in the dispute, there still is no single good reason for precipitate action. Intelligence, patriotism, Christianity, and a firm reliance on Him who has never yet forsaken this favored land are still competent to adjust in the best way all our present difficulty.

In *your* hands, my dissatisfied fellow-countrymen, and not in *mine*, is the momentous issue of civil war. The Government will not assail *you*. You can have no conflict without being yourselves the aggressors. *You* have no oath registered in heaven to destroy the Government, while *I* shall have the most solemn one to “preserve, protect, and defend it.”

I am loath to close. We are not enemies, but friends. We must not be enemies. Though passion may have strained it must not break our bonds of affection. The mystic chords of memory, stretching from every battlefield and patriot grave to every living heart and hearthstone all over this broad land, will yet swell the chorus of the Union, when again touched, as surely they will be, by the better angels of our nature.

### Inaugural Address (1861)

**Jefferson Davis**

In James Andrews et al., eds., *American Voices: Significant Speeches in American History, 1640–1945* (New York: Longman, 1989), pp. 280–282

February 18, 1861

Gentlemen of the Congress of the Confederate States of America, Friends and Fellow-Citizens:  
Called to the difficult and responsible station of Chief Executive of the Provisional Government which you have instituted, I approach the discharge of the duties assigned

to me with an humble distrust of my abilities, but with a sustaining confidence in the wisdom of those who are to guide and aid me in the administration of public affairs, and an abiding faith in the virtue and patriotism of the people.

Looking forward to the speedy establishment of a permanent government to take the place of this, and which, by its greater moral and physical power, will be better able to combat with the many difficulties which arise from the conflicting interests of separate nations, I enter upon the duties of the office, to which I have been chosen, with the hope that the beginning of our career, as a Confederacy, may not be obstructed by hostile opposition to our enjoyment of the separate existence and independence which we have asserted, and, with the blessing of Providence, intend to maintain. Our present condition, achieved in a manner unprecedented in the history of nations, illustrates the American idea that governments rest upon the consent of the governed, and that it is the right of the people to alter or abolish governments whenever they become destructive of the ends for which they were established.

The declared purpose of the compact of union from which we have withdrawn, was “to establish justice, insure domestic tranquility, provide for the common defense, promote the general welfare;” and when in the judgment of the sovereign States now composing this Confederacy, it had been perverted from the purposes for which it was ordained, and had ceased to answer the ends for which it was established, a peaceful appeal to the ballot-box, declared that so far as they were concerned, the government created by that compact should cease to exist. In this they merely asserted a right which the Declaration of Independence of 1776 had defined to be inalienable. Of the time and occasion for its exercise, they as sovereigns, were the final judges, each for itself. The impartial and enlightened verdict of mankind will vindicate the rectitude of our conduct, and he, who knows the hearts of men, will judge of the sincerity with which we labored to preserve the government of our fathers in its spirit. The right solemnly proclaimed at the birth of the States and which has been affirmed and re-affirmed in the bills of rights of States subsequently admitted into the Union of 1789, undeniably recognizes in the people the power to resume the authority delegated for the purposes of government. Thus the sovereign States, here represented, proceeded to form this Confederacy, and it is by abuse of language that their act has been denominated a revolution. They formed a new alliance, but within each State its government has remained, and the rights of person and property have not been disturbed. The agent, through whom they communicated with foreign nations, is changed; but this does not necessarily interrupt their international relations.

Sustained by the consciousness that the transition from the former Union to the present Confederacy has not proceeded from a disregard on our part of just obligations, or any failure to perform any constitutional duty; moved by no interest or passion to invade the rights of others; anxious to cultivate peace and commerce with all nations, if we may not hope to avoid war, we may at least expect that posterity will acquit us of having needlessly engaged in it. Doubly justified by the absence of wrong on our part, and by wanton aggression on the part of others, there can be no cause to doubt that the courage and patriotism of the people of the Confederate States will be found equal to any measures of defense which honor and security may require.

An agricultural people, whose chief interest is the export of a commodity required in every manufacturing country, our true policy is peace and the freest trade which our necessities will permit. It is alike our interest, and that of all those to whom we would sell and from whom we would buy, that there should be fewest practicable restrictions upon the interchange of commodities. There can be but little rivalry between ours and any manufacturing or navigating community, such as the northeastern States of the American Union. It must follow, therefore, that a mutual interest would invite good will and kind offices. If, however, passion or the lust of dominion should cloud the judgment or inflame the ambition of those States, we must prepare to meet the emergency, and to maintain, by the final arbitrament of the sword, the position which we have assumed among the nations of the earth. We have entered upon the career of independence, and it must be inflexibly pursued. Through many years of controversy with our late associates, the Northern States, we have vainly endeavored to secure tranquility, and to obtain respect for the rights to which we are entitled. As a necessity, not a choice, we have resorted to the remedy of separation; and henceforth our energies must be directed to the conduct of our own affairs, and the perpetuity of the Confederacy which we have formed. If a just perception of mutual interest shall permit us peaceably to pursue our separate political career, my most earnest desire will have been fulfilled; but if this be denied to us, and the integrity of our territory and jurisdiction be assailed it, it will but remain for us, with firm resolve, to appeal to arms and invoke the blessings of Providence on a just cause.

As a consequence of our new condition, and with a view to meet anticipated wants, it will be necessary to provide for the speedy and efficient organization of branches of the Executive Department, having special charge of foreign intercourse, finance, military affairs, and the postal service.

For purposes of defense, the Confederate States may, under ordinary circumstances, rely mainly upon the mili-

tia; but it is deemed advisable, in the present condition of affairs, that there should be a well-instructed and disciplined army, more numerous than would usually be required on a peace establishment. I also suggest that, for the protection of our harbors and commerce on the high seas, a navy adapted to those objects will be required. These necessities have doubtless engaged the attention of Congress.

With a constitution differing only from that of our fathers, in so far as it is explanatory of their well-known intent, freed from the sectional conflicts which have interfered with the pursuit of the general welfare, it is not unreasonable to expect that States from which we have recently parted, may seek to unite their fortunes with ours under the government which we have instituted. For this your constitution makes adequate provision; but beyond this, if I mistake not, the judgment and will of the people, a re-union with the States from which we have separated is neither practicable nor desirable. To increase the power, develop the resources, and promote the happiness of the Confederacy, it is requisite that there should be so much homogeneity that the welfare of every portion shall be the aim of the whole. Where this does not exist, antagonisms are engendered which must and should result in separation.

Actuated solely by the desire to preserve our own rights and promote our own welfare, the separation of the Confederate States has been marked by no aggression upon others, and followed by no domestic convulsion. Our industrial pursuits have received no check; the cultivation of our fields has progressed as heretofore; and even should we be involved in war, there would be no considerable diminution in the production of the staples which have constituted our exports, and in which the commercial world has an interest scarcely less than our own. This common interest of the producer and consumer can only be interrupted by an exterior force, which should obstruct its transmission to foreign markets—a course of conduct which would be as unjust towards us as it would be detrimental to manufacturing and commercial interests abroad. Should reason guide the action of the government from which we have separated, a policy so detrimental to the civilized world, the Northern States included, could not be dictated by even the strongest desire to inflict injury upon us; but if otherwise, a terrible responsibility will rest upon it, and the suffering of millions will bear testimony to the folly and wickedness of our aggressors. In the meantime, there will remain to us, besides the ordinary means before suggested, the well-known resources for retaliation upon the commerce of the enemy.

Experience in public stations, of subordinate grades to this which your kindness has conferred, has taught me that care, and toil, and disappointment, are the price of official elevation. You will see many errors to forgive, many defi-

ciencies to tolerate, but you shall not find in me either a want of zeal or fidelity to the cause that is to me highest in hope and of most enduring affection. Your generosity has bestowed upon me an undeserved distinction—one which I never sought nor desired. Upon the continuance of that sentiment, and upon your wisdom and patriotism, I rely to direct and support me in the performance of the duty required at my hands.

We have changed the constituent parts but not the system of our government. The constitution formed by our fathers is that of these Confederate States, in their exposition of it; and, in the judicial construction it has received, we have a light that reveals its true meaning.

Thus instructed as to the just interpretation of the instrument, and ever remembering that all offices are but trusts held for the people, and that delegated powers are to be strictly construed, I will hope by due diligence in the performance of my duties, though I may disappoint your expectations, yet to retain, when retiring, something of the good will and confidence which welcomed my entrance into office.

It is joyous, in the midst of perilous times, to look around upon a people united in heart, where one purpose of high resolve animates and actuates the whole—where the sacrifices to be made are not weighed in the balance against honor, and right, and liberty, and equality. Obstacles may retard—they cannot long prevent—the progress of a movement sanctified by its justice, and sustained by a virtuous people. Reverently let us invoke the God of our fathers to guide and protect us in our efforts to perpetuate the principles which, by his blessing, they were able to vindicate, establish, and transmit to their posterity, and with a continuance of his favor, ever gratefully acknowledged, we may hopefully look forward to success, to peace, and to prosperity.

### Constitution of the Confederate States of America (1861)

Erik Bruun and Jay Crosby, eds., *Our Nation's Archive: The History of the United States in Documents* (New York: Black Dog & Leventhal Publishers), pp. 342–343.

March 11, 1861

We, the people of the Confederate States, each State acting in its sovereign and independent character, in order to form a permanent federal government, establish justice, insure domestic tranquillity, and secure the blessings of liberty to ourselves and our posterity—invoking the favor and guidance of Almighty God—do ordain and establish this Constitution for the Confederate States of America.

#### Art. I

Sec. 1.—All legislative powers herein delegated shall be vested in a Congress of the Confederate States, which shall consist of a Senate and House of Representatives.

Sec. 2. (1) The House of Representatives shall be chosen every second year by the people of the several States; and the electors in each State shall be citizens of the Confederate States, and have the qualifications requisite for electors of the most numerous branch of the State Legislature; but no person of foreign birth, not a citizen of the Confederate States, shall be allowed to vote for any officer, civil or political, State or Federal . . .

(3) Representatives and direct taxes shall be apportioned among the several States which may be included within this Confederacy, according to their respective numbers, which shall be determined by adding to the whole number of free persons, including those bound to service for a term of years, and excluding Indians not taxed, three-fifths of all slaves. The actual enumeration shall be made within three years after the first meeting of the Congress of the Confederate States, and within every subsequent term of ten years, in such manner as they shall by law direct. The number of Representatives shall not exceed one for every fifty thousand, but each State shall have at least one Representative; and until such enumeration shall be made, the State of South Carolina shall be entitled to choose six; the State of Georgia ten; the State of Alabama nine; the State of Florida two; the State of Mississippi seven; the State of Louisiana six; and the State of Texas six . . .

Sec. 9. (1) The importation of negroes of the African race, from any foreign country, other than the slaveholding States or Territories of the United States of America, is hereby forbidden; and Congress is required to pass such laws as shall effectually prevent the same.

(2) Congress shall also have power to prohibit the introduction of slaves from any State not a member of, or Territory not belonging to, this Confederacy . . .

#### Art. IV

Sec. 2. (1) The citizens of each State shall be entitled to all the privileges and immunities of citizens of the several States, and shall have the right of transit and sojourn in any State of this Confederacy, with their slaves and other property; and the right of property in said slaves shall not be thereby impaired . . .

(3) No slave or other person held to service or labor in any State or Territory of the Confederate States, under the laws thereof, escaping or unlawfully carried into another, shall, in consequence of any law or regulation therein, be discharged from such service or labor; but shall be delivered up on claim of the party to whom such slave belongs, or to whom such service or labor may be due . . .

Sec. 3. (3) The Confederate States may acquire new territory; and Congress shall have power to legislate and provide governments for the inhabitants of all territory belonging to the Confederate States, lying without the limits of the several States, and may permit them, at such times, and in such manner as it may by law provide, to form States to be admitted into the Confederacy. In all such territory, the institution of negro slavery, as it now exists in the Confederate States, shall be recognized and protected by Congress and by the territorial government; and the inhabitants of the several Confederate States and Territories shall have the right to take to such territory any slaves lawfully held by them in any of the States or Territories of the Confederate States . . .

#### Art. V

Sec. 1. (1) Upon the demand of any three States, legally assembled in their several Conventions, the Congress shall summon a Convention of all the States, to take into consideration such amendments to the Constitution as the said States shall concur in suggesting at the time when the said demand is made; and should any of the proposed amendments to the Constitution be agreed on by the said Convention—voting by States—and the same be ratified by the Legislatures of two-thirds of the several States, or by conventions in two-thirds thereof—as the one or the other mode of ratification may be proposed by the general convention—they shall thenceforward form a part of this Constitution. But no State shall, without its consent, be deprived of its equal representation in the Senate . . .

#### Art. VII.

1.—The ratification of the conventions of five States shall be sufficient for the establishment of this Constitution between the States so ratifying the same.

2. When five States shall have ratified this Constitution in the manner before specified, the Congress, under the provisional Constitution, shall prescribe the time for holding the election of President and Vice-President, and for the meeting of the electoral college, and for counting the votes and inaugurating the President. They shall also prescribe the time for holding the first election of members of Congress under this Constitution, and the time for assembling the same. Until the assembling of such Congress, the Congress under the provisional Constitution shall continue to exercise the legislative powers granted them; not extending beyond the time limited by the Constitution of the Provisional Government.

Adopted unanimously by the Congress of the Confederate States of South Carolina, Georgia, Florida, Alabama, Mississippi, Louisiana, and Texas, sitting in convention at the capitol, in the city of Montgomery, Ala., on the eleventh day of March, in the year eighteen hundred and sixty-one.

### Homestead Act (1862)

*United States Statutes at Large* (37th Cong., 2d sess., chap. 75), pp. 392–393

May 20, 1862

#### An Act

*to Secure Homesteads to actual Settlers on the Public Domain.*

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That any person who is the head of a family, or who has arrived at the age of twenty-one years, and is a citizen of the United States, or who shall have filed his declaration of intention to become such, as required by the naturalization laws of the United States, and who has never borne arms against the United States Government or given aid and comfort to its enemies, shall, from and after the first January, eighteen hundred and sixty-three, be entitled to enter one quarter section or a less quantity of unappropriated public lands, upon which said person may have filed a preemption claim, or which may, at the time the application is made, be subject to preemption at one dollar and twenty-five cents, or less, per acre; or eighty acres or less of such unappropriated lands, at two dollars and fifty cents per acre, to be located in a body, in conformity to the legal subdivisions of the public lands, and after the same shall have been surveyed: *Provided,* That any person owning and residing on land may, under the provisions of this act, enter other land lying contiguous to his or her said land, which shall not, with the land so already owned and occupied, exceed in the aggregate one hundred and sixty acres.

Sec. 2. *And be it further enacted,* That the person applying for the benefit of this act shall, upon application to the register of the land office in which he or she is about to make such entry, make affidavit before the said register or receiver that he or she is the head of a family, or is twenty-one years or more of age, or shall have performed service in the army or navy of the United States, and that he has never borne arms against the Government of the United States or given aid and comfort to its enemies, and that such application is made for his or her exclusive use and benefit, and that said entry is made for the purpose of actual settlement and cultivation, and not either directly or indirectly for the use or benefit of any other person or persons whomsoever; and upon filing the said affidavit with the register or receiver, and on payment of ten dollars, he or she shall thereupon be permitted to enter the quantity of land specified: *Provided, however,* That no certificate shall be given or patent issued therefor, until the expiration of five years from the date of such entry; and if, at the expiration of such time, or at any time within two years thereafter, the person making such entry; or, if he be dead,

his widow; or in case of her death, his heirs or devisee; or in case of a widow making such entry, her heirs or devisee, in case of her death; shall prove by two credible witnesses that he, she, or they have resided upon or cultivated the same for the term of five years immediately succeeding the time of filing the affidavit aforesaid, and shall make affidavit that no part of said land has been alienated, and that he has borne true allegiance to the Government of the United States; then, in such case, he, she, or they, if at that time a citizen of the United States, shall be entitled to a patent, as in other cases provided for by law: *And provided, further*, That in case of the death of both father and mother, leaving an infant child, or children, under twenty-one years of age, the right and fee shall enure to the benefit of said infant child or children; and the executor, administrator, or guardian may, at any time within two years after the death of the surviving parent, and in accordance with the laws of the State in which such children for the time being have their domicil, sell said land for the benefit of said infants, but for no other purpose; and the purchaser shall acquire the absolute title by the purchase, and be entitled to a patent from the United States, on payment of the office fees and sum of money herein specified.

Sec. 3. *And be it further enacted*, That the register of the land office shall note all such applications on the tract books and plats of his office, and keep a register of all such entries, and make return thereof to the General Land Office, together with the proof upon which they have been founded.

Sec. 4. *And be it further enacted*, That no lands acquired under the provisions of this act shall in any event become liable to the satisfaction of any debt or debts contracted prior to the issuing of the patent therefor.

Sec. 5. *And be it further enacted*, That if, at any time after the filing of the affidavit, as required in the second section of this act, and before the expiration of the five years aforesaid, it shall be proven, after due notice to the settler, to the satisfaction of the register of the land office, that the person having filed such affidavit shall have actually changed his or her residence, or abandoned the said land for more than six months at any time, then and in that event the land so entered shall revert to the government.

Sec. 6. *And be it further enacted*, That no individual shall be permitted to acquire title to more than one quarter section under the provisions of this act; and that the Commissioner of the General Land Office is hereby required to prepare and issue such rules and regulations, consistent with this act, as shall be necessary and proper to carry its provisions into effect; and that the registers and receivers of the several land offices shall be entitled to receive the same compensation for any lands entered under the provisions of this act that they are now entitled to receive when the same quantity of land is entered

with money, one half to be paid by the person making the application at the time of so doing, and the other half on the issue of the certificate by the person to whom it may be issued; but this shall not be construed to enlarge the maximum of compensation now prescribed by law for any register or receiver: *Provided*, That nothing contained in this act shall be so construed as to impair or interfere in any manner whatever with existing preemption rights: *And provided, further*, That all persons who may have filed their applications for a preemption right prior to the passage of this act, shall be entitled to all privileges of this act: *Provided, further*, That no person who has served, or may hereafter serve, for a period of not less than fourteen days in the army or navy of the United States, either regular or volunteer, under the laws thereof, during the existence of an actual war, domestic or foreign, shall be deprived of the benefits of this act on account of not having attained the age of twenty-one years.

Sec. 7. *And be it further enacted*, That the fifth section of the act entitled "An act in addition to an act more effectually to provide for the punishment of certain crimes against the United States, and for other purposes," approved the third of March, in the year eighteen hundred and fifty-seven, shall extend to all oaths, affirmations, and affidavits, required or authorized by this act.

Sec. 8. *And be it further enacted*, That nothing in this act shall be so construed as to prevent any person who has availed him or herself of the benefits of the first section of this act, from paying the minimum price, or the price to which the same may have graduated, for the quantity of land so entered at any time before the expiration of the five years, and obtaining a patent thereto from the government, as in other cases provided by law, on making proof of settlement and cultivation as provided by existing laws granting preemption rights.

Approved, May 20, 1862.

## Pacific Railroad Act (1862)

*United States Statutes at Large* (37th Cong., 2d sess., chap. 120), pp. 489–498

July 1, 1862

### An Act

*To aid in the construction of a railroad and telegraph line from the Missouri river to the Pacific ocean, and to secure to the government the use of the same for postal, military, and other purposes.*

*Be it Enacted by the Senate and House of Representatives of the United States of America in Congress assembled*, That Walter S. Burgess, . . . together with five commissioners to be appointed by the Secretary of the Interior, and all per-

sons who shall or may be associated with them, and their successors, are hereby created and erected into a body corporate and politic in deed and in law, by the name, style, and title of "The Union Pacific Railroad Company;" and by that name shall have perpetual succession, and shall be able to sue and to be sued, plead and be impleaded, defend and be defended, in all courts of law and equity within the United States, and may make and have a common seal; and the said corporation is hereby authorized and empowered to lay out, locate, construct, furnish, maintain, and enjoy a continuous railroad and telegraph, with the appurtenances, from a point on the one hundredth meridian of longitude west from Greenwich, between the south margin of the valley of the Republican River and the north margin of the valley of the Platte River, in the Territory of Nebraska, to the western boundary of Nevada Territory, upon the route and terms hereinafter provided . . .

Sec. 2. *And be it further enacted*, That the right of way through the public lands be, and the same is hereby, granted to said company for the construction of said railroad and telegraph line; and the right, power, and authority is hereby given to said company to take from the public lands adjacent to the line of said road, earth, stone, timber, and other materials for the construction thereof; said right of way is granted to said railroad, to the extent of two hundred feet in width on each side of said railroad, where it may pass over the public lands, including all necessary grounds for stations, buildings, workshops, and depots, machine shops, switches, side tracks, turn-tables, and water stations. The United States shall extinguish as rapidly as may be, the Indian titles to all lands falling under the operation of this act, and required for the said right of way and grants hereinafter made.

Sec. 3. *And be it further enacted*, That there be, and is hereby, granted to the said company, for the purpose of aiding in the construction of said railroad and telegraph line, and to secure the safe and speedy transportation of the mails, troops, munitions of war, and public stores thereon, every alternate section of public land, designated by odd numbers, to the amount of five alternate sections per mile on each side of said railroad, on the line thereof, and within the limits of ten miles on each side of said road, not sold, reserved, or otherwise disposed of by the United States, and to which a preemption or homestead claim may not have attached, at the time the line of said road is definitely fixed: *Provided*, That all mineral lands shall be excepted from the operation of this act; but where the same shall contain timber, the timber thereon is hereby granted to said company. And all such lands, so granted by this section, which shall not be sold or disposed of by said company within three years after the entire road shall have been completed, shall be subject to settlement and pre-emption, like other lands, at a price not exceeding

one dollar and twenty-five cents per acre, to be paid to said company . . .

Sec. 5. *And be it further enacted*, That for the purposes herein mentioned, the Secretary of the Treasury shall, upon the certificate in writing of said commissioners of the completion and equipment of forty consecutive miles of said railroad and telegraph, in accordance with the provisions of this act, issue to said company bonds of the United States of one thousand dollars each, payable in thirty years after date, bearing six per centum per annum interest, (said interest payable semi-annually), which interest may be paid in United States treasury notes or any other money or currency which the United States have or shall declare lawful money and a legal-tender, to the amount of sixteen of said bonds per mile for such section of forty miles; and to secure the repayment to the United States, as hereinafter provided, of the amount of said bonds so issued and delivered to said company, together with all interest thereon which shall have been paid by the United States, the issue of said bonds and delivery to the company shall ipso facto constitute a first mortgage on the whole line of the railroad and telegraph . . .

Sec. 9. *And be it further enacted*, That the Leavenworth, Pawnee, and Western Railroad Company of Kansas are hereby authorized to construct a railroad and telegraph line from the Missouri river, at the mouth of the Kansas River, on the south side thereof, so as to connect with the Pacific Railroad of Missouri . . . upon the same terms and conditions in all respects as are provided in this act for the construction of the railroad and telegraph line first mentioned. . . The Central Pacific Railroad Company of California, a corporation existing under the laws of the State of California, are hereby authorized to construct a railroad and telegraph line from the Pacific coast, at or near San Francisco, or the navigable waters of the Sacramento River, to the eastern boundary of California, upon the same terms and conditions, in all respects, as are contained in this act for the construction of said railroad and telegraph line first mentioned, and to meet and connect with the first mentioned railroad and telegraph line on the eastern boundary of California . . .

Sec. 10. . . the Central Pacific Railroad Company of California, after completing its road across said state, is authorized to continue the construction of said railroad and telegraph through the territories of the United States to the Missouri river, including the branch roads specified in this act, upon the routes hereinbefore and hereinafter indicated, on the terms and conditions provided in this act in relation to the said Union Pacific Railroad Company, until said roads shall meet and connect, and the whole line of said railroad and branches and telegraph is completed.

Sec. 11. *And be it further enacted*, That for three hundred miles of said road, most mountainous and difficult of

construction, to wit: one hundred and fifty miles westwardly from the eastern base of the Rocky mountains, and one hundred and fifty miles eastwardly from the western base of the Sierra Nevada mountains, said points to be fixed by the President of the United States, the bonds to be issued to aid in the construction thereof shall be treble the number per mile hereinbefore provided, and the same shall be issued, and the lands herein granted be set apart, upon the construction of every twenty miles thereof, upon the certificate of the commissioners as aforesaid that twenty consecutive miles of the same are completed; and between the sections last named of one hundred and fifty miles each, the bonds to be issued to aid in the construction thereof shall be double the number per mile first mentioned, and the same shall be issued, and the lands herein granted be set apart, upon the construction of every twenty miles thereof, upon the certificate of the commissioners as aforesaid that twenty consecutive miles of the same are completed: *Provided*, That no more than fifty thousand of said bonds shall be issued under this act to aid in constructing the main line of said railroad and telegraph.

### Emancipation Proclamation (1863) Abraham Lincoln

In John A. Scott, ed., *Living Documents in American History from Earliest Colonial Times to the Civil War*, Vol. 2 (New York: Trident Press, 1963), pp. 644–645

January 1, 1863

Whereas, on the twenty-second day of September, in the year of our Lord one thousand eight hundred and sixty-two, a proclamation was issued by the President of the United States, containing, among other things, the following, to wit:

“That on the first day of January, in the year of our Lord one thousand eight hundred and sixty-three, all persons held as slaves within any State or designated part of a State, the people whereof shall then be in rebellion against the United States, shall be then, thenceforward, and forever free; and the Executive Government of the United States, including the military and naval authority thereof, will recognize and maintain the freedom of such persons, and will do no act or acts to repress such persons, or any of them, in any efforts they may make for their actual freedom.”

“That the Executive will, on the first day of January aforesaid, by proclamation, designate the States and parts of States, if any, in which the people thereof, respectively, shall then be in rebellion against the United States; and the fact that any State, or the people thereof, shall on that day

be, in good faith, represented in the Congress of the United States by members chosen thereto at elections wherein a majority of the qualified voters of such State shall have participated, shall, in the absence of strong countervailing testimony be deemed conclusive evidence that such State and the people thereof, are not then in rebellion against the United States.”

Now, therefore, I, Abraham Lincoln, President of the United States, by virtue of the power in me vested as Commander-in-chief of the Army and Navy of the United States, in time of actual armed rebellion against the authority and government of the United States, and as a fit and necessary war measure for suppressing said rebellion, do, on this first day of January, in the year of our Lord one thousand eight hundred and sixty-three, and in accordance with my purpose so to do publicly proclaimed for the full period of one hundred days from the day first above mentioned, order and designate as the States and parts of States wherein the people thereof respectively, are this day in rebellion against the United States, the following, to wit:

Arkansas, Texas, Louisiana (except the Parishes of St. Bernard, Plaquemines, Jefferson, St. John, St. Charles, St. James, Ascension, Assumption, Terrebonne, Lafourche, St. Mary, St. Martin, and Orleans, including the City of New Orleans) Mississippi, Alabama, Florida, Georgia, South Carolina, North Carolina, and Virginia (except the forty-eight counties designated as West Virginia, and also the counties of Berkeley, Accomac, Northampton, Elizabeth City, York, Princess Ann, and Norfolk, including the cities of Norfolk and Portsmouth) and which excepted parts are, for the present, left precisely as if this proclamation were not issued.

And by virtue of the power, and for the purpose aforesaid, I do order and declare that all persons held as slaves within said designated States, and parts of States, are, and henceforward shall be free; and that the Executive government of the United States, including the military and naval authorities thereof, will recognize and maintain the freedom of said persons.

And I hereby enjoin upon the people so declared to be free to abstain from all violence, unless in necessary self-defence; and I recommend to them that, in all cases when allowed, they labor faithfully for reasonable wages.

And I further declare and make known, that such persons of suitable condition, will be received into the armed service of the United States to garrison forts, positions, stations, and other places, and to man vessels of all sorts in said service.

And upon this act, sincerely believed to be an act of justice, warranted by the Constitution, upon military necessity, I invoke the considerate judgment of mankind and the gracious favor of Almighty God.

## Gettysburg Address (1863) Abraham Lincoln

In John A. Scott, ed., *Living Documents in American History from Earliest Colonial Times to the Civil War*, Vol. 2 (New York: Trident Press, 1963), p. 646)

November 19, 1863

Four score and seven years ago our fathers brought forth on this continent, a new nation, conceived in Liberty, and dedicated to the proposition that all men are created equal.

Now we are engaged in a great civil war, testing whether that nation or any nation so conceived and so dedicated, can long endure. We are met on a great battlefield of that war. We have come to dedicate a portion of that field, as a final resting place for those who here gave their lives that that nation might live. It is altogether fitting and proper that we should do this.

But, in a larger sense, we can not dedicate—we can not consecrate—we can not hallow—this ground. The brave men, living and dead, who struggled here, have consecrated it, far above our poor power to add or detract. The world will little note, nor long remember what we say here, but it can never forget what they did here. It is for us the living, rather, to be dedicated here to the unfinished work which they who fought here have thus far so nobly advanced. It is rather for us to be here dedicated to the great task remaining before us—that from these honored dead we take increased devotion to that cause for they which gave the last full measure of devotion—that we here highly resolve that these dead shall not have died in vain—that this nation, under God, shall have a new birth of freedom—and that government of the people, by the people, for the people, shall not perish from the earth.

## Proclamation of Amnesty and Reconstruction (1863)

Abraham Lincoln

In Henry Steele Commager, ed., *Documents of American History*, 5th ed., vol. 1 (Englewood Cliffs, N.J.: Prentice Hall, 1949), pp. 429–431

December 8, 1863

*Whereas*, in and by the Constitution of the United States, it is provide that the President “shall have power to grant reprieves and pardons for offenses against the United States, except in cases of impeachment;” and

*Whereas* a rebellion now exists whereby the loyal State governments of several States have for a long time been subverted, and many persons have committed and are now guilty of treason against the United States; and

*Whereas*, with reference to said rebellion and treason, laws have been enacted by Congress declaring forfeitures and confiscation of property and liberation of slaves, all upon terms and conditions therein stated, and also declaring that the President was thereby authorized at any time thereafter, by proclamation, to extend to persons who may have participated in the existing rebellion in any State or part thereof, pardon and amnesty, with such exceptions and at such times and on such conditions as he may deem expedient for the public welfare; and

*Whereas*, the Congressional declaration for limited and conditional pardon accords with well-established judicial exposition of the pardoning power; and

*Whereas*, with reference to said rebellion, the President of the United States has issued several proclamations, with provisions in regard to the liberation of slaves; and

*Whereas*, it is now desired by some persons heretofore engaged in said rebellion to resume their allegiance to the United States, and to reinaugurate loyal State governments within and for their respective States:

*Therefore*, I, Abraham Lincoln, President of the United States, do proclaim, declare, and make known to all persons who have, directly or by implication, participated in the existing rebellion, except as hereinafter excepted, that a full pardon is hereby granted to them and each of them, with restoration of all rights of property, except as to slaves, and in property cases where rights of third parties shall have intervened, and upon the condition that every such person shall take and subscribe an oath, and thenceforward keep and maintain said oath inviolate; and which oath shall be registered for permanent preservation, and shall be of the tenor and effect following, to wit:

“I, \_\_\_\_\_, do solemnly swear, in presence of Almighty God, that I will henceforth faithfully support, protect, and defend the Constitution of the United States and the Union of the States thereunder; and that I will, in like manner, abide by and faithfully support all acts of Congress passed during the existing rebellion with reference to slaves, so long and so far as not repealed, modified, or held void by Congress, or by decision of the Supreme Court; and that I will, in like manner, abide by and faithfully support all proclamations of the President made during the existing rebellion having reference to slaves, so long and so far as not modified or declared void by decision of the Supreme Court. So help me God.”

The persons excepted from the benefits of the foregoing provisions are all who are, or shall have been, civil or diplomatic officers or agents of the so-called Confederate Government; all who have left judicial stations under the United States to aid the rebellion; all who are, or shall have been, military or naval officers of said so-called Confederate Government above the rank of colonel in

the army or of lieutenant in the navy; all who left seats in the United States Congress to aid the rebellion; all who resigned commissions in the Army or Navy of the United States and afterwards aided the rebellion; and all who have engaged in any way in treating colored persons, or white persons in charge of such, otherwise than lawfully as prisoners of war, and which persons may have been found in the United States service as soldiers, seamen, or in any other capacity.

And I do further proclaim, declare, and make known that whenever, in any of the States of Arkansas, Texas, Louisiana, Mississippi, Tennessee, Alabama, Georgia, Florida, South Carolina, and North Carolina, a number of persons, not less than one-tenth in number of the votes cast in such State at the Presidential election of the year of our Lord one thousand eight hundred and sixty, each having taken the oath aforesaid, and not having since violated it, and being a qualified voter by the election law of the State existing immediately before the so-called act of secession, and excluding all others, shall re-establish a State government which shall be republican, and in nowise contravening said oath, such shall be recognized as the true government of the State, and the State shall receive thereunder the benefits of the constitutional provision which declares that "the United States shall guaranty to every State in this Union a republican form of government, and shall protect each of them against invasion; and, on application of the legislature, or the executive (when the legislature can not be convened), against domestic violence."

And I do further proclaim, declare, and make known that any provision which may be adopted by such State government in relation to the freed people of such State, which shall recognize and declare their permanent freedom, provide for their education, and which may yet be consistent as a temporary arrangement with their present condition as a laboring, landless, and homeless class, will not be objected to by the National Executive.

And it is suggested as not improper that, in constructing a loyal State government in any State, the name of the State, the boundary, the subdivisions, the constitution, and the general code of laws, as before the rebellion, be maintained, subject only to the modifications made necessary by the conditions hereinbefore stated, and such others, if any, not contravening said conditions and which may be deemed expedient by those framing the new State government.

To avoid misunderstanding, it may be proper to say that this proclamation, so far as it relates to State governments, has no reference to States wherein loyal State governments have all the while been maintained. And for the same reason, it may be proper to further say that whether members sent to Congress from any State shall be admitted to seats constitutionally rests exclusively with the respective Houses, and not to any extent with the Execu-

tive. And still further, that this proclamation is intended to present the people of the States wherein the national authority has been suspended, and loyal State governments have been subverted, a mode in and by which the national authority and loyal State governments may be re-established within said States, or in any of them; and while the mode presented is the best the Executive can suggest, with his present impressions, it must not be understood that no other possible mode would be acceptable.

## Second Inaugural Address (1865)

**Abraham Lincoln**

*Landmark Documents in American History*, CD-ROM  
(New York: Facts On File, 1998)

March 4, 1865

Fellow-Countrymen:

At this second appearing to take the oath of the Presidential office there is less occasion for an extended address than there was at the first. Then a statement somewhat in detail of a course to be pursued seemed fitting and proper. Now, at the expiration of four years, during which public declarations have been constantly called forth on every point and phase of the great contest which still absorbs the attention and engrosses the energies of the nation, little that is new could be presented. The progress of our arms, upon which all else chiefly depends, is as well known to the public as to myself, and it is, I trust, reasonably satisfactory and encouraging to all. With high hope for the future, no prediction in regard to it is ventured.

On the occasion corresponding to this four years ago all thoughts were anxiously directed to an impending civil war. All dreaded it, all sought to avert it. While the inaugural address was being delivered from this place, devoted altogether to *saving* the Union without war, insurgent agents were in the city seeking to *destroy* it without war—seeking to dissolve the Union and divide effects by negotiation. Both parties deprecated war, but one of them would *make* war rather than let the nation survive, and the other would *accept* war rather than let it perish, and the war came.

One-eighth of the whole population were colored slaves, not distributed generally over the Union, but localized in the southern part of it. These slaves constituted a peculiar and powerful interest. All knew that this interest was somehow the cause of the war. To strengthen, perpetuate, and extend this interest was the object for which the insurgents would rend the Union even by war, while the Government claimed no right to do more than to restrict the territorial enlargement of it. Neither party expected for the war the magnitude or the duration which it has

already attained. Neither anticipated that the *cause* of the conflict might cease with or even before the conflict itself should cease. Each looked for an easier triumph, and a result less fundamental and astounding. Both read the same Bible and pray to the same God, and each invokes His aid against the other. It may seem strange that any men should dare to ask a just God's assistance in wringing their bread from the sweat of other men's faces, but let us judge not, that we be not judged. The prayers of both could not be answered. That of neither has been answered fully. The Almighty has His own purposes. "Woe unto the world because of offenses; for it must needs be that offenses come, but woe to that man by whom the offense cometh." If we shall suppose that American slavery is one of those offenses which, in the providence of God, must needs come, but which, having continued through His appointed time, He now wills to remove, and that He gives to both North and South this terrible war as the woe due to those by whom the offense came, shall we discern therein any departure from those divine attributes which the believers in a living God always ascribe to Him? Fondly do we hope, fervently do we pray, that this mighty scourge of war may speedily pass away. Yet, if God wills that it continue until all the wealth piled by the bondsman's two hundred and fifty years of unrequited toil shall be sunk, and until every drop of blood drawn with the lash shall be paid by another drawn with the sword, as was said three thousand years ago, so still it must be said "the judgments of the Lord are true and righteous altogether."

With malice toward none, with charity for all, with firmness in the right as God gives us to see the right, let us strive on to finish the work we are in, to bind up the nation's wounds, to care for him who shall have borne the battle and for his widow and his orphan, to do all which may achieve and cherish a just and lasting peace among ourselves and with all nations.

### **Farewell to His Troops (1865)**

**Robert E. Lee**

In Henry Steele Commager, ed., *Documents of American History*, 5th ed., Vol. 1 (Englewood Cliffs, N.J.: Prentice Hall, 1949), p. 447

Headquarters, Army of No. Virginia  
10th April 1865

### **General Order No. 9**

After four years of arduous service marked by unsurpassed courage and fortitude the Army of Northern Virginia has been compelled to yield to overwhelming numbers and resources.

I need not tell the brave survivors of so many hard-fought battles, who have remained steadfast to the last, that I have consented to this result from no distrust of them.

But feeling that valor and devotion could accomplish nothing that could compensate for the loss that would have attended the continuance of the contest I have determined to avoid the useless sacrifice of those whose past services have endeared them to their countrymen.

By the terms of the agreement Officers and men can return to their homes and remain there until exchanged. You will take with you the satisfaction that proceeds from the consciousness of duty faithfully performed, and I earnestly pray that a merciful God will extend to you His blessing and protection.

With an increasing admiration of your constancy and devotion to your country, and a grateful remembrance of your kind and generous consideration for myself, I bid you all an affectionate farewell.

R. E. Lee  
Gen'l

### **Fourteenth Amendment to the U.S. Constitution (1868)**

Lewis Paul Todd and Merle Curti, eds., *Triumph of the American Nation* (New York: Harcourt Brace Jovanovich, 1986), pp. 211–212

#### **Amendment 14**

#### **Rights of Citizens (1868)**

Section 1. All persons born or naturalized in the United States, and subject to the jurisdiction thereof, are citizens of the United States and of the state wherein they reside. No state shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States; nor shall any state deprive any person of life, liberty, or property, without due process of law; nor deny to any person within its jurisdiction the equal protection of the laws.

Section 2. Representatives shall be apportioned among the several states according to their respective numbers, counting the whole number of persons in each state [excluding Indians not taxed]. But when the right to vote at any election for the choice of electors for President and Vice President of the United States, Representatives in Congress, the executive and judicial officer of a state, or the members of the legislature thereof, is denied to any of the [male] inhabitants of such state, [being twenty-one years of age] and citizens of the United States, or in any way abridged, except for participation in rebellion, or other crime, the basis of representation therein shall be reduced in the proportion which the number of such [male] citizens

shall bear to the whole number of male citizens [twenty-one years of age] in such state.

Section 3. No person shall be a Senator or Representative in Congress, or elector of President and Vice President, or hold any office, civil or military, under the United States, or under any state, who, having previously taken an oath, as a member of Congress, or as an officer of the United States, or as a member of any state legislature, or as an executive or judicial officer of any state, to support the Constitution of the United States, shall have engaged in insurrection or rebellion against the same, or given aid or comfort to the enemies thereof. But Congress may by vote of two thirds of each house, remove such disability.

Section 4. The validity of the public debt of the United States, authorized by law, including debts incurred for payment of pensions and bounties for services in suppressing insurrection or rebellion, shall not be questioned. But neither the United States nor any state shall assume or pay any debt or obligation incurred in aid of insurrection or rebellion against the United States, [or any claim for the loss or emancipation of any slave]; but all such debts, obligations and claims shall be held illegal and void.

Section 5. The Congress shall have power to enforce, by appropriate legislation, the provisions of this article.

# About the Editors

**General Editor: Gary B. Nash** received a Ph.D. from Princeton University. He is director of the National Center for History in the Schools at the University of California, Los Angeles, where he teaches American history of the colonial and Revolutionary era. He is a published author of college and precollegiate history texts. Among his best-selling works are the coauthored *American People: Creating a Nation and Society* (Longman, 1998), now in its seventh edition; *American Odyssey: The U.S. in the Twentieth Century* (McGraw-Hill/Glencoe, 1999), now in its fourth edition; and *The Atlas of American History*, coauthored with Carter Smith (Facts On File, 2006).

Nash is an elected member of the Society of American Historians, the American Academy of Arts and Sciences, the American Antiquarian Society, and the American Philosophical Society. He has served as past president of the Organization of American Historians in 1994–95 and was

a founding member of the National Council for History Education. His latest books include *First City: Philadelphia and the Forging of Historical Memory* (University of Pennsylvania Press, 2002), *The Unknown American Revolution: The Unruly Birth of Democracy and the Struggle to Create America* (Viking, 2005), and *The Forgotten Fifth: African Americans in the Era of Revolution* (Harvard University Press, 2006).

**Volume Editor: Ari Hoogenboom**, professor emeritus, Brooklyn College, City University of New York, received a Ph.D. from Columbia University. He is the coeditor of *The Gilded Age* (Prentice Hall, 1967) and the author of *Rutherford B. Hayes: Warrior and President* (University Press of Kansas, 1995), among other books and articles. His latest book is *Gustavus Vasa Fox of the Union Navy: A Biography* (Johns Hopkins University Press, 2008).

# Foreword

The Encyclopedia of American History series is designed as a handy reference to the most important individuals, events, and topics in U.S. history. In 10 volumes, the encyclopedia covers the period from the 15th century, when European explorers first made their way across the Atlantic Ocean to the Americas, to the present day. The encyclopedia is written for precollegiate as well as college students, for parents of young learners in the schools, and for the general public. The volume editors are distinguished historians of American history. In writing individual entries, each editor has drawn upon the expertise of scores of specialists. This ensures the scholarly quality of the entire series. Articles contributed by the various volume editors are uncredited.

This 11-volume encyclopedia of “American history” is broadly conceived to include the historical experience of the various peoples of North America. Thus, in the first volume, many essays treat the history of a great range of indigenous people before contact with Europeans. In the same vein, readers will find essays in the first several volumes that sketch Spanish, Dutch, and French explorers and colonizers who opened up territories for European settlement that later would become part of the United States. The venues and cast of characters in the American historical drama are thus widened beyond traditional encyclopedias.

In creating the eras of American history that define the chronological limits of each volume, and in addressing major topics in each era, the encyclopedia follows the architecture of *The National Standards for United States History, Revised Edition* (Los Angeles: National Center for History in the Schools, 1996). Mandated by the U.S. Congress, the national standards for U.S. history have been widely used by states and school districts in organizing curricular frameworks and have been followed by many other curriculum-building efforts.

Entries are cross-referenced, when appropriate, with *See also* citations at the end of articles. At the end of most entries, a listing of articles and books allows readers to turn to specialized sources and historical accounts. In each volume, an array of maps provide geographical context, while numerous illustrations help vivify the material covered in the text. A time line is included to provide students with a chronological reference to major events occurring in the given era. The selection of historical documents in the back of each volume gives students experience with the raw documents that historians use when researching history. A comprehensive index to each volume also facilitates the reader’s access to particular information.

In each volume, long entries are provided for major categories of American historical experience. These categories may include: African Americans, agriculture, art and architecture, business, economy, education, family life, foreign policy, immigration, labor, Native Americans, politics, population, religion, urbanization, and women. By following these essays from volume to volume, the reader can access what might be called a mini-history of each broad topic, for example, family life, immigration, or religion.

—Gary B. Nash  
University of California, Los Angeles

# Foreword to the Revised Edition

---

★

“History has to be rewritten in every generation because, although the past does not change, the present does,” writes Lord Christopher Hill, one of Great Britain’s most eminent historians. “Each generation asks new questions of the past, and finds new areas of sympathy as it re-lives different aspects of the experiences of its predecessors.” It is this understanding, that the pursuit of historical knowledge requires new research and new reflections on the past, that undergirds a revised and extended edition of the *Encyclopedia of American History*.

The individual volume editors of this revised edition have made important additions and revisions to the original edition published in 2003. Most important, they have added many new entries—several hundred for the entire 11-volume set. This puts more meat on the bone of what was already a comprehensive encyclopedia that presented four centuries of American history in all its diversity and complexity. For the 10th volume, covering the period from 1969 to the present, new entries cover momentous events and important figures of the last six years. For the other volumes, new entries increase the diversity of Americans covered by biographical accounts as well as events that new scholarship shows have had greater importance than recognized heretofore.

In addition, careful attention has been given to correcting occasional errors in the massive number of entries in the first edition. Also, many entries have been revised to add further details while making adjustments, based on new scholarship, to the interpretation of key events and movements. Consonant with that effort to make the encyclopedia as fresh and usable as possible, the volume editors have added many new recently published books to the “Further Reading” notes at the ends of the entries, and new full-color historical maps help put history in its geographical context.

—Gary B. Nash

# Introduction

---

★

The period from 1870 to 1899 has earned more nicknames than any other period in American history. Having so many aliases is in keeping with its dubious—yet undeserved—reputation, which several of its a.k.a.’s have helped perpetuate. The era’s most enduring name, the “Gilded Age,” was bestowed by Mark Twain and Charles Dudley Warner in a novel of that name. Some of its other names have a positive ring. Historians have noted that the period witnessed the “Emergence of Modern America” or “America in Transition,” or that Americans were involved in a “Search for Order” in the “Age of Energy” or the “Age of Industrialism.” Other names have stressed negative aspects of the time—already implied in the term *Gilded Age*—and have referred to it as the “Age of Excess,” the “Era of Good Stealings,” or the “Age of Betrayal.” Edith Wharton, however, in her most enduring novel, called it the “Age of Innocence.”

The late 19th-century United States was not the unique possessor of these characteristics. Society is always in transition, seeking a semblance of order, becoming more modern, and losing the innocence of its past. People have been making technological advances since before the dawn of history and always have expended energy profligately. Every era has its examples of excess and corruption. Indeed the monumental irresponsibility of major financial institutions in the first decade of the 21st century has been on a scale far beyond the dreams of any Gilded Age “robber baron.”

Nevertheless, the characterizations of novelists and historians contain a germ of truth, if not the whole kernel. The late 19th-century United States experienced the most astonishing expansion of industry in human history. It built the world’s largest network of railroads, and its production of steel outstripped that of Great Britain and Germany, its nearest competitors. There were heavy social costs. Laborers in the United States worked longer and harder on any given day than their European counterparts, but they earned more money and were less inclined toward radicalism. Additionally, the United States was the most democratic nation in the world, and workers participated in the political process. Cities grew rapidly and housing was often inadequate, but over the years most workers improved their lot, and in these small increments the promise of America was kept for immigrants who flocked to the United States. Despite the spectacular and ruthless settlement of the West and the revolutionary changes in agriculture, industrialization and urbanization dominated late 19th-century America.

The rapid development of factories and the monumental growth of cities made 1870 to 1899 watershed years, a period dividing an earlier America from a later America, an age that really was one of “transition” and “emergence.” Agricultural and rural America became industrial and urban America. Local and regional economies gave way to a national economy. An unorganized society of individuals became institutionalized as professionals established national organizations of lawyers, economists, historians, and other groups. A nation that gloried in its isolation in 1870 gloried in its imperialism by 1899. A people whose vast majority had believed literally in the Bible were by 1899 often figuratively interpreting Scriptures to accommodate the Darwinian hypothesis of evolution.

There was enough guilt in an upwardly mobile society, boasting of many self-made people who exhibited *nouveau riche* characteristics, to be called a “Gilded Age.” But there was gold under the gilt. Any age that could boast writers like Mark Twain and Henry James, painters like Thomas Eakins and Mary Cassatt, architects like Henry H. Richardson and Louis Sullivan, engineers like James B. Eads and Washington A. Roebling, inventors like Thomas A. Edison and Alexander Graham Bell, scientists like George Washington Carver and Othniel Charles Marsh, thinkers like Charles S. Peirce and William James, historians like Henry Adams and Frederick Jackson Turner, sociologists like William Graham Sumner and Lester Frank Ward, and reformers like Susan B. Anthony and Ida Bell Wells-Barnett had considerably more value than mere gilt.

Brooklyn, New York

# ENTRIES

## A TO Z

### **Adams, Henry** (1838–1918) *historian*

Born in Boston on February 16, 1838, Henry Adams was both privileged and challenged as the great-grandson and grandson of Presidents John Adams and John Quincy Adams and the son of Charles Francis Adams, who would become Abraham Lincoln's minister to Great Britain. After graduating from Harvard in 1858, Adams spent two years abroad studying and touring. Returning home, he studied law briefly and then accompanied his father as his private secretary to Britain, where he hobnobbed with literary, political, and reform leaders.

Back in the United States in 1868, Adams, inspired by his heritage and by English liberal intellectuals, moved to Washington and wrote political articles that promoted the liberal agenda—CIVIL SERVICE REFORM, free trade, the gold standard, and anti-imperialism—for journals of opinion like *THE NATION*. Adams was disappointed that President Ulysses S. Grant not only failed to adopt this agenda but also distanced himself from its intellectually elite supporters and, worse, cottoned to spoils-minded Republican Party leaders like ROSCOE CONKLING. Adams bitterly attacked Grant and supported the establishment of the LIBERAL REPUBLICAN PARTY, which he hoped would nominate his father for president in 1872, but he was further disappointed when it nominated Horace Greeley. His optimistic dream of leading and guiding (with intellectuals like himself) the American democracy into the paths of liberal reform was destroyed.

In 1870 Adams returned to Boston to accept an assistant professorship in medieval history at Harvard and the editorship of the *North American Review*. He also taught courses in early American history. Reflecting trends abroad, he introduced seminars and encouraged his students to use scientific methods in studying the past. In 1872 he married Marian “Clover” Hooper. Despite his success at Harvard, Adams preferred to be close to the center of power in Washington, and after resigning his editorship in 1876, he gave up his professorship in 1877 and returned to the capital.

Adams had left teaching, but he remained fascinated by history both for its own sake and as a medium for expressing and illustrating his increasing pessimism about the United States. In Washington he began extensive archival research on the early years of the 19th century—the time when his great-grandfather left office and, in Adams's opinion, the time when the seeds of American decline were sewn. The Adamses also travelled abroad, where he examined archives in the major European capitals. In Washington they associated with political leaders—President RUTHERFORD B. HAYES enjoyed their conversation, even with Adams declaring, “Our system of Gov't has failed utterly in many respects”—and were at the core of the scintillating “Five of Hearts,” which also included Clara and author/diplomat JOHN HAY and geologist CLARENCE KING. Adams published biographies of Albert Gallatin (1879) and John Randolph (1882) and the novels *Democracy* (1880) and *Esther* (1884), but in 1885 he was devastated when his wife Clover committed suicide, and his outlook became more bleak. His nine-volume *History of the United States during the Administrations of Thomas Jefferson and James Madison* (1889–91) is beautifully written, carefully researched, and provocative with its suggestion that the material progress of the United States undermined the republican virtues of the Founding Fathers.

His *History* completed, Adams circled the globe from 1890 to 1892 with the artist JOHN LA FARGE, especially enjoying his long stay in Paris. Henceforth Adams spent part of each year there, took up medieval history anew, and used it—as he did American history—to express his pessimistic view of the future. He designed his historical work *Mont-Saint-Michel and Chartres* (1904) to demonstrate the unity he found in medieval culture as symbolized by the Virgin Mary, and he wrote his classic autobiography *The Education of Henry Adams* (privately printed in 1904) to illustrate the multiplicity of the 20th century, symbolized by the dehumanizing powerful dynamo. In his closing years Adams continued to counteract SOCIAL DARWINISM,

## 2 advertising

with its notions of progress derived from biology, by applying physicist JOSIAH WILLARD GIBBS's "Rule of Phase" (stressing the dissipation of energy) to a disintegrating society. Adams died in Washington on March 27, 1918, while World War I raged, and confirmed his dire prophecies.

### advertising

Advertising can be traced back to the earliest days of recorded history, but modern advertising has its roots in the post-Civil War era. The major elements dominating advertising during this period include the rise of popular MAGAZINES; the ascendancy of large, cheap, metropolitan NEWSPAPERS using new technologies to improve their appearance; the growth of consumer-orientated industries; and the creation of advertising agencies, whose profits rested on reaching large audiences for their clients. The most important factor in the evolution of advertising was the existence of a large urban middle class with financial resources allowing them to buy a wide variety of consumer goods. Especially crucial for the rise of advertising was the large number of middle-class women who had time and money to shop.

Of course, newspapers and magazines go back to the 18th century in the United States, and both organs carried advertising. But before the Civil War these ads were uninteresting because the papers were limited by current technologies. New methods of printing led to the multiplication of urban journals known as the Penny Press. By the late 19th century, both newspapers and magazines carried

Advertisement for children's shoes, ca. 1874 (*Library of Congress*)

Advertisement for the Climax mowing machine, ca. 1871 (*Library of Congress*)

photographs and were visually appealing to readers. Newspapers, which before the war consisted of four sheets, were much larger, running 20 or more pages filled for the most part with advertising. Ads by DEPARTMENT STORES, the latest retailing innovation, were the major source of revenue for these papers.

The number of magazines introduced in the late 19th century doubled between 1880 and 1890, with virtually all of them featuring fancy advertisements aimed particularly at women. Cyrus Curtis founded the *Ladies' Home Journal*, which became the base of a publishing empire aimed largely at affluent middle-class buyers. The *Journal* and its many imitators became the vehicle for the sale of a wide variety of food items, cosmetics, and ready-made clothing. Without the advertising in these journals, it is unlikely that new products such as Campbell's Soup would have reached the tables of millions of American homes or that Fels-Naptha would have become the preferred soap of American consumers. The success of Lydia E. Pinkham's Vegetable Compound for "female complaints" was entirely due to its magazine advertisements.

A group of entrepreneurs—including George P. Rowell, F. Wayland Ayer, and J. Walter Thompson—used the revolution in newspapers and magazines to found advertising agencies that established them as middlemen between industrialists, retailers, and publishers. These agencies negotiated rates for advertisers, designed the ads, and did market research to determine the best place to advertise and the efficiency of these ads. Thompson specialized in magazines and in the 1890s placed almost 90 percent of all advertisements in these journals. Larger industries and retailers developed departments devoted exclusively to advertising that worked closely with these agencies.

Advertising in the late 19th century was intimately linked with the development of consumerism and with the creation of a vast array of new products. The purchase of luxury goods was changed by advertising from something that was regarded as un-Christian and immoral to an act that promoted personal and national well-being. It is unlikely that the vast increase in industrialism would have succeeded without advertising. Few would have bought canned soup without the “um um good” advertisements of Campbell’s Soup.

—Herbert Ershkowitz

### Aesthetic movement

The Aesthetic movement describes the philosophy and products of designers who created, as they termed it, “art for art’s sake.” Costly materials, complex craftsmanship, elaborate patterning, and learned references in motifs were emphasized in the fine and decorative arts of the Aesthetic movement, even at the expense of narrative and functionality.

The underpinnings of the movement can be found with design reformers and art critics such as William Morris and Clarence Cook, who were disturbed by the shoddy products of industry. The movement began in Britain and was swiftly disseminated through the burgeoning illustrated media, through international expositions, and through societies and clubs. While the Aesthetic movement was being formulated by artists and luxury craftsmen, its basic stylistic formulas were adopted by manufacturers of goods at all price levels. The Aesthetic movement was fueled by the era’s concern with creating beautiful domestic environments that would foster high levels of aesthetic and moral sensibility. Women, as creators and consumers, were central to the movement.

Multiplicity and synchronicity within single objects and assemblages characterized the Aesthetic movement. Furniture incorporated ceramic tiles, patinated hardware, and painted surfaces within carved woodwork. The Herter Brothers and other interior designers flourished by harmonizing furniture and textiles of their own design with objects commercially produced. Some painters branched out to work in other media: JAMES ABBOTT MCNEILL WHISTLER created the Peacock Room (1876–77, Freer Gallery of Art), and JOHN LA FARGE was an innovator in stained glass. Retailers like Daniel Cottier with shops in

New York City, London, and Sydney promoted aesthetic taste by selling antiques as well as contemporary goods. Industrialists became collectors and sought fine objects from all eras; designers not only incorporated collections into interiors but drew inspiration from them. Classical antiquity, colonial America, Japan, and the natural world were particularly rich design sources; motifs from all places and times were combined elegantly.

Aesthetic-movement objects were made by individual artisans and by large factories. Some influential figures, such as ceramist and metalworker M. Louise McLaughlin, worked largely alone. Others, such as LOUIS COMFORT TIFFANY, designer of interiors, jewelry, and stained glass, were the heads of large firms. Upper-class women with leisure time were actively hand-painting china, carving wood, and creating every sort of textile. At SETTLEMENT HOUSES and through other philanthropic endeavors, leisured women encouraged old-world crafts in the name of the new aestheticism. New technologies in the printing industry led to a bloom of wallpapers with saturated hues and complex patterning. The commercial potteries of Staffordshire in England provided dinner services to the American market, while numerous small art potteries, such as Rookwood in Cincinnati and the Chelsea Ceramic Art Works in Chelsea, Massachusetts, made vases, tiles, and more. Tiffany and Company in New York City sold jewelry and silver in the aesthetic style alongside more traditional models; countless manufacturers and retailers did the same. The Aesthetic movement embraced no single style; it was a philosophy that encouraged manufacturers and consumers to live artfully.

—Karen Zukowski

### African-American churches, growth of

At least one church organized by AFRICAN AMERICANS existed prior to the Declaration of Independence, and free blacks established a few churches in northern cities in the late 18th and early 19th centuries. Slave owners, however, discouraged the establishment of black churches, sensing the inherent threat of assembly and fearing the emphasis that enslaved African Americans might place on God’s support of the Hebrew slaves in Egypt. Nevertheless, African-American slaves embraced evangelical Protestantism and its encouragement to express their feelings by shouting, singing, and dancing, a helpful coping mechanism for their frustrating existence and lot in life. More important, the promise of salvation, of a release from an earthly hell to an eternity of heavenly freedom, offered

## 4 African-American churches, growth of

African-American slaves an immeasurable reward. During the Gilded Age the appeal of evangelical Christianity remained powerful, since freedom from slavery did not bring political, economic, or social equality. Life for blacks remained difficult, the practice and promise of evangelical Christianity still had its rewards, and the proliferation of African-American churches provided bases for improving life in the here and now.

### ***Baptists***

African slaves, who arrived in America as Muslims or followers of traditional African religions, slowly accepted Christianity. The Baptists converted many enslaved persons during a period of great Baptist growth from 1750 to 1850. Slaves usually attended white churches, where they were segregated in separate pews or excluded in a hidden balcony commonly known as “nigger heaven.” The first black Baptist church was organized in 1775 by David George at Silver Bluff, South Carolina, near Savannah, Georgia, but most black Americans were unable to have their own churches in the early years of the 19th century as whites sought to use religion to control them. Many enslaved persons, however, wanted their religious experience to reflect their African and, later, their African-American cultures and traditions. They stole off to canebrakes or woods to worship early in the morning away from the watchful eyes of owners, overseers, or night patrols. Blacks organized Baptist churches in the North, notably the Jay Street Baptist Church (originally known as African Meeting House) in Boston in 1805 and the Abyssinian Baptist Church in lower Manhattan in 1808.

Black Baptist churches flourished after the Civil War as former slaves left the white churches to organize their own. Their growth was enhanced by the establishment of colleges with the assistance of white religious bodies. Many of these historically black colleges were seminaries for the training of ministers and teachers. Among the earlier black seminaries were Wayland Seminary (Virginia Union University) and Raleigh Institute (Shaw University), both founded in 1865. They were followed by the establishment of Augusta Institute (Morehouse College), 1867; Benedict College, 1870; Natchez Seminary (Jackson State University), 1877; Florida Baptist Institute (Florida Memorial College), 1879; and Atlanta Baptist Female Seminary (Spelman College), 1881.

Each Baptist congregation is independent and selects pastors and other church officials. This autonomy helped the Baptist church to spread in the South and elsewhere as African Americans migrated to points North and West. In 1895 the American National Baptist Convention and the Tripartite Union merged to form the National Baptist Convention, U.S.A. (NBC). Two years later the Lott Carey Baptist Foreign Mission Convention was organized by dis-

satisfied parties within the NBC who eschewed white support for mission work. Both became active participants in the African mission field. Among mainstream denominations, the Baptists were more apt to be encouraged by the church’s leadership to express themselves emotionally in worship. The vast majority of African-American Protestants are members of the Baptist Church.

### ***African Methodist Episcopalians (AME)***

Next to the black Baptists, the AME Church is the largest African-American denomination in the United States. Richard Allen was the founder of this denomination. Allen was born a slave in Philadelphia in 1760. He preached to black worshipers in St. George Methodist Episcopal Church until a desire for a church of their own and a racial altercation led to his ejection from a “white” pew, which caused him and his followers to build Bethel AME Church in 1794. The AME Church was incorporated in 1816 with Allen as its first bishop. African Methodism spread to New York, New England, Maryland, the District of Columbia, and the Ohio Valley. Prior to the Civil War, congregations were established in Kentucky, Missouri, and Louisiana. Many churches were founded in the Midwest by missionary Paul Quinn. Other missionaries brought the church to California. During the 1820s a mission was established in Haiti.

At the end of the Civil War, James Lynch and James D. S. Hall were the first two missionaries commissioned to convert the newly freed slaves. In May 1865 Bishop Daniel A. Payne—assisted by Theophilus G. Steward, James A. Handy, and James H. A. Johnson—reestablished the church in South Carolina. (It had been banned in 1822 when African Methodists were implicated in the Denmark Vesey insurrection.) From April 1865 to May 1866 about two-thirds of black members of the Methodist Episcopal Church, South, set up their own churches outside of that denomination. Like the Baptists, many African Methodists took control of church buildings that they had built as slaves for white Christians. To their credit, many whites cooperated and allowed the former slaves to take charge of the buildings. African Methodism spread rapidly to North Carolina, Georgia, Alabama, Florida, and into the Southwest due to the missionary spirit of African Methodist Civil War chaplains HENRY M. TURNER, David Stevens, Garland H. White, and William H. Hunter as well as AME soldiers.

Like the Baptists, the AME Church established seminaries and colleges to train ministers. Among them were Wilberforce University (1856), Allen University (1880), Morris Brown College (1881), Paul Quinn College (1881), and Kittrell College (1886). The British Methodist Episcopal Church, which was organized after splitting from the AME Church in 1856, reunited with the mother church

in 1884, adding congregations in Canada, Bermuda, and British Guiana. Bishop Henry M. Turner organized churches into conferences in Liberia and Sierra Leone in 1891 and five years later in South Africa. Between 1890 and 1916 the AME Church grew from 494,777 members to 548,355, and the number of churches increased from 2,481 to 6,636.

### ***African Methodist Episcopal Zion (AMEZ)***

There were few independent black churches in the late 18th century, when black members of the John Street Methodist Church in New York City felt the sting of racial discrimination. In 1796 Peter Williams and William Miller started a separate congregation. From 1816 to 1824 black Methodists moved to establish a separate denomination. In 1816 a separate circuit was established for African Methodists with a petition from Zion Church and Asbury Church to the Methodist Episcopal Conference of New York. In 1820 they formed a separate conference within the Methodist Episcopal body, but in 1821 they rejected an affiliation with the AME Church. In 1824 the AMEZ conference declared its independence from the Methodist Episcopal Church.

Like other black denominations, the AMEZ Church gained members during the Civil War as its missionaries followed black soldiers. Bishop Joseph J. Clinton commissioned James Hood and others to conduct mission work in the South during and after the Civil War. In the 1870s and following decades, the AMEZ extended mission work to the Midwest, the Far West, Canada, the Caribbean, and Africa. While smaller in numbers and congregations than either the black Baptists or the AME Church, the AMEZ Church made remarkable strides from 1821, when it counted 1,400 members and 22 ministers. By 1871 membership had increased to nearly 400,000. Like other black denominations, the AMEZ used its seminary, Livingstone College, in North Carolina, to train ministers for mission work in Africa. Throughout the late 19th century until the present, Africans have attended Livingstone College, where they further their education to assist in the African mission field.

### **African Americans**

Between 1870 and 1900, the African-American population jumped from about 460,000 to 910,000 in the North and West and from 4.4 million to 7.9 million in the South. In the years following the Civil War, major adjustment problems gripped the South, where both races faced new situations. For African Americans, freedom was an experience to be tasted and tested; for Southern whites, black freedom was a challenge to be circumscribed and, where possible, checked.

By 1870 congressional Reconstruction was in full swing. The former Confederate states were required to write new constitutions, some of which funded public schools, railroad construction, and other public improvements. Abrogating previous restrictive laws, most of these basic documents set a democratic tone for the former Confederacy. The Fifteenth Amendment (1870) to the U.S. Constitution permitted black men to vote, and by 1875 Congress passed the Civil Rights Act prohibiting racial discrimination in public accommodations. Schools for black children and adults were opened across the South, and several colleges, like Howard University in the District of Columbia and Fisk University in Nashville, Tennessee, began somewhat tentatively to offer higher education to black Americans. Supported by federal troops, the offices of the Freedmen's Bureau across the South provided legal and protective assistance to former slaves. Black men not only voted, they were elected to federal and state offices. Two black U.S. senators, Hiram Revels and Blanche K. Bruce, represented Mississippi, while four African Americans were elected to the Congress from South Carolina and Mississippi. At the state level, P. B. S. Pinchback served as acting governor of Louisiana for a short time. Three states elected black secretaries of state, and four elected black state superintendents of education. James Lynch, secretary of state for Mississippi (1869–72), a perceptive and ambitious minister-editor, exemplified the effectiveness of African Americans who served in public office during Reconstruction. In addition to handling routine duties, Lynch began the process of straightening out the confusion over public lands to enable the state to locate taxable lands for schools and internal improvements. Pressured by divisions within and outside the race and by discrimination, Lynch and other black public officials were not always able to realize their full potential.

As the 1870s wore on, the gloss of full citizenship for southern blacks wore off. The number of federal troops was reduced to the point of ineffectiveness. States were slowly "redeemed" (that is, returned to local white control), and whites found ways to undo some of the progress that blacks had achieved. Black schools were underfunded compared with white schools; black officeholders were slowly

## 6 African Americans

squeezed out; and black farmers were pinched by mounting debt. Agriculture was the major employer for blacks, plantations the major unit, and cotton the major crop. Few African Americans could overcome the obstacles to be landowners, so the vast majority were tenants who faced three options. They could work on a cash system and pay rent; they could borrow on credit to buy seeds and other needs, repaying the planter when the crop was harvested; or they could sharecrop, splitting the harvest's income into shares for planter and tenant. The almost inevitable result of these systems was an unbearable debt burden. A black man summed it up for a visitor: "White man sit down the whole year; Nigger work day and night and make crop; Nigger hardly gits bread and meat; white man sittin' down gits all. *It's wrong.*"

The North slowly tired of supporting southern Reconstruction, and by 1876 Republicans were looking for a way out. RUTHERFORD B. HAYES, as their presidential candi-

date, sought to calm the waters by appealing to Southern leaders to treat their racial work force equitably. Historians have characterized Hayes's victory in the disputed election of 1876 as the result of an agreement between him and Southern Democrats to withdraw the remaining troops from the South. The evidence for such a deal is circumstantial at best, but it is true that Hayes was anxious to restore peace within the South and between the North and South. Soon after his inauguration in March 1877, Hayes withdrew federal troops from the two remaining Republican states (South Carolina and Louisiana), formally ending Reconstruction. White Southerners rejoiced and slowly began the process of exercising total control over the black minority, initially by fraud and intimidation and eventually by restrictive JIM CROW LAWS in the 1890s and the early 20th century.

Freedom for many African Americans came to mean scratching for subsistence, and some sought new surround-

African-American children learning about Thanksgiving, Whittier Primary School, Hampton, Virginia (Library of Congress)

ings, moving from plantation to plantation, from rural areas to cities, from state to state. The Louisiana sugar plantations and the Virginia and North Carolina tobacco farms hired workers for wages, but the pay was low and the work seasonal. A few found employment building railroads, mining coal or phosphate, making turpentine, or lumbering. A handful eyed a different kind of freedom available in the North and West and began the slow drift out of the South. In 1879 about 6,000 men, women, and children EXODUSTERS headed for Kansas, an exodus impelled by poverty and widening white terrorism. Most of the migrants put down roots there, overcoming white resistance and poor soil. Northern and western black Americans had full citizenship rights, limited civil rights, and greater mobility than their Southern brethren, but they faced stiff discrimination in employment, housing, and social affairs. In 1883 the U.S. SUPREME COURT invalidated the Civil Rights Act of 1875, and Northern states—following an earlier lead of Massachusetts, New York, and Kansas—began to enact mild statutes to protect the rights of African Americans to be served in restaurants, seated in theaters, and housed in inns and hotels.

The black response to southern oppression and northern indifference was to concentrate on their own well-being. AFRICAN-AMERICAN CHURCHES multiplied, led by black Baptists and Methodists and three black denominations: the African Methodist Episcopal (AME), the AME Zion, and the Colored [later Christian] ME. Colleges for blacks proliferated, offering industrial education and little more than a high-school curriculum. African Americans realized that education was essential to achieve even a limited financial stability. Tuskegee Institute in Alabama, emphasizing industrial education, was established by the state in 1881 with a young Hampton Institute graduate as principal. BOOKER T. WASHINGTON carefully used this position as a springboard to national leadership. He spoke persuasively to the National Education Association in Madison, Wisconsin, in 1884, and 11 years later he delivered his famous Atlanta Compromise speech in Georgia, in which he counseled separation of the races coupled with mutual understanding. "In all things purely social," he asserted, "we can be as separate as the fingers, yet one as the hand in all things essential to mutual progress." The white South happily accepted his separation premise and doggedly rejected mutuality.

Other African-American men and women rose to leadership in the last two decades of the century. IDA WELLS-BARNETT crusaded against lynching here and in England, using her capability as a speaker and her competence as a writer to rally support. Mary Church Terrell and Josephine St. Pierre Ruffin activated the NATIONAL ASSOCIATION OF COLORED WOMEN (1896) to give women a voice in black affairs. Editors T. Thomas Fortune in New York and Harry Smith in Cleveland stood out among an often argumen-

tative group of able editors of weekly black newspapers. Frederick Douglass used his position as an elder statesman to agitate for and mediate within the race. His death in 1895 created a vacuum that was soon filled by Booker T. Washington, whose leadership after the turn of the century was contested by W. E. B. DuBois. The Massachusetts-born DuBois was the first black Harvard Ph.D., and before 1900 he was the author of two substantial books and the editor of a precedent-breaking series of race studies at Atlanta University. DuBois used his considerable skills to oppose Washington's emphasis on industrial education to the exclusion of the liberal arts, his accommodating posture with whites, and his expanding control over black organizations, newspapers, and fund-raising.

By the 1890s white domination over southern blacks was secure. JIM CROW LAWS maintained total segregation, and the U.S. Supreme Court decision in *PLESSY V. FERGUSON* (1896) confirmed their constitutionality. The right to vote was closed down. Terrorism in the form of LYNCHING reached its horrible heights between 1880 and 1900, with an average of 100 reported lynching murders a year and an unknown number unreported. The victims usually were accused, without substantiation, of rape and then killed without a court trial. In the North and West, blacks steeled themselves against an ever-present prejudice and sought refuge among themselves.

During these difficult decades a distinct black culture evolved, derived partly from African origins, partly from the long stretch of slavery, and partly from the race's own creativity. New patterns of religious practice emerged, featuring greater emotional participation. There was also new music in the form of spirituals, gospel, and different vocal and instrumental interpretations. The music was popularized by the Fisk University Jubilee Singers, a student group that entertained throughout the country and abroad beginning in 1876. African-American artists like HENRY O. TANNER, poets like PAUL LAURENCE DUNBAR, and authors like Charles W. Chesnutt achieved national or international reputations. Chesnutt's novels and short stories unflinchingly probed racial subjects, while Tanner's artistic interest was more general. Tanner was a resident of France for most of his productive life, and his success was a model for younger black artists. Dunbar had a short life, but his works often captured the down-home character of southern blacks while occasionally and subtly underlining the race's discriminatory difficulties. One of his best-known poems expresses African-American bitterness and the techniques used to hide it: "We wear the mask that grins and lies. / It hides our cheeks and shades our eyes / . . . With torn and bleeding hearts we smile. . . ." Early in the next century, two national organizations—the National Urban League (NUL) and the National Association for the Advancement of Colored People (NAACP)—were established in part to

## 8 agriculture

encourage African Americans to drop the mask. Both organizations began a sustained campaign to capture citizens' rights for all black people.

The final three decades of the 19th century were discouraging years for African Americans. In differing degrees and with differing methods, whites in the North and South attempted to restrict black livelihood, destroy black personhood, and erode black identity. Despite these efforts, African Americans created strong family and social ties, a vibrant subculture, and the beginnings of an organizational structure to sustain them through the next century.

### agriculture

American agriculture in the late 19th century underwent a profound revolution. Vast areas were put into cultivation; machines and techniques were improved and used more widely; and farmers increased their indebtedness, specialized more and more on money crops, became increasingly dependent on changeable markets, and had less and less control over their profits. With less diversification and greater dependence on a money crop, profits were determined by the elements (more than ever), interest rates, freight rates, and world supply and demand.

#### *Expansion*

From 1870 to 1900 farm acreage jumped from 408 million to 839 million, largely because RAILROADS crisscrossed the nation and connected arable land with markets. Although the Homestead Act (1862) enabled settlers to acquire 160 acres of public land as long as they remained on it for five years, most of the farms created from 1870 to 1900 were on land purchased from railroads and land speculators. The railroads had received land grants from the federal government to encourage them to build in sparsely settled territories. Their acreage was usually more fertile and accessible to their tracks than land available under the Homestead Act, and since the railroads were anxious to attract settlers to increase the volume of their freight, they sold the land for a reasonable price. Since the cost of converting virgin land into a productive farm with its buildings and machinery was high in comparison with the cost of good land, it

was sound economics for farmers to purchase the most productive land available.

#### *Machines*

The basic principles of most of the machines used in the Gilded Age—steel plows, disk harrows, grain drills and corn planters, harvesters, binders, threshers—were patented by 1870. All, however, were significantly improved over the next three decades. For example, from 1868 to 1877 James Oliver developed the modern plow. Sulky plows and steam plows were improved, but steam plows were used only on giant wheat farms in the Far West. Binders were improved in 1878 with a twine knotter that eliminated the need for wire; threshers grew in capacity and utilized steam power; and by 1880 combines were used in California, but not east of the Rockies before 1910. Apart from steam plows and threshers, horses and mules powered farm machinery. Neither the cultivation of cotton nor tobacco was significantly affected by the introduction of machinery in the Gilded Age. An effective mechanical cotton picker was not developed until the 20th century. The dairy industry, however, was revolutionized after 1879 with the introduction of the centrifugal cream separator and the later development of the cream tester.

#### *Techniques*

Manly Miles of the University of Illinois built a silo in 1875, and by 1900 silos were in use throughout the corn belt. Farmers in arid areas relied on irrigation and experimented with methods of dry farming. Federal and state governments established schools and agencies to improve farming techniques. The federal government established the Department of Agriculture in 1862 and elevated it to cabinet status in 1889. The department disseminated information through hundreds of publications, studied plant and animal diseases and their cures, explored how to preserve soil fertility, and collected statistics, among other duties. In 1862 the Morrill Land Grant Act provided for the establishment of agricultural and mechanical (A&M) colleges in each state, and by 1898, 64 had been established with departments of general agriculture as well as specialized departments in animal industry, dairy husbandry, agricultural chemistry, and other areas. These schools also had model demonstration farms. Connecticut set up an agricultural experiment station in 1875, and several states followed suit; in 1887 the federal Hatch Act subsidized these stations in all states and territories. These stations coordinated their work with the A&M colleges and the Department of Agriculture in educating farmers.

#### *Specialization*

Mechanization led to specialization in cash crops for two reasons. Farmers wished to utilize the full productive

This lithograph from the late 19th century asserts the importance of the farmer in American society. (*Library of Congress*)

capacity of their expensive machinery, and they needed cash to pay debts incurred in acquiring those machines. In addition, railroads and refrigerator cars enabled each section of the country to become more specialized. The centers of wheat and corn belts moved west as did hog, cattle, and sheep raising. New England and the middle states were switching from corn and wheat to dairy farming and truck gardening. The South continued to specialize in tobacco and cotton, not because of mechanization but because of the perpetual indebtedness of tenant farmers.

### Markets

Planting more cash crops made farmers more dependent on markets than when their production was more diversified. With rapid urban growth in the Gilded Age, domestic markets grew rapidly, but farm production grew even more rapidly. While the population less than doubled from 40 million in 1870 to 76 million in 1900, corn production more

than doubled from 1.1 billion bushels to 2.7 billion bushels, and wheat also more than doubled from 254 million bushels to 599 million bushels. While cotton and tobacco exports grew at a relatively steady rate, wheat exports fluctuated wildly. In 1870, 37 million bushels were exported and in 1900 102 million bushels, but wheat exports fell as low as 46 million bushels in 1889, only to rise three years later to 157 million bushels.

### Agricultural Depression

From 1870 to 1900 American agriculture was depressed mainly because of overproduction. In the late 1860s wheat sold for over two dollars a bushel and corn for 78 cents a bushel, but in 1870 wheat was barely over one dollar and corn was at 52 cents. By 1895 wheat had fallen to half a dollar while corn in 1896 hit 21 cents.

In 1900 prices had rebounded to 62 cents for wheat and 35 cents for corn. With deflation prices declined, interest

## 10 Alabama claims

rates rose, and debtors had to produce more to pay their debts. Overproduction, however, drove prices lower, and the thousands of individual farmers had no way to control production. Wheat prices, furthermore, were set by worldwide conditions, and American farmers were competing with Canadians, Argentineans, Hungarians, and Ukrainians. Farmers sold their wheat in a world market but purchased manufactured goods in a protected national market. Middlemen profited in buying crops from farmers and in selling goods to farmers. Finally, although railroad rates were declining, farmers felt they were not declining as fast as the prices they received for their crops, and they knew they paid higher discriminatory rates for short hauls than urban shippers, with access to competing lines, paid for long hauls. This agricultural malaise led to the populist revolt of the 1890s.

**Alcott, Louisa May** (1832–1888) *novelist, short story writer*

The author of some of the most popular and enduring juvenile fiction ever, Louisa May Alcott was born in Germantown, Pennsylvania, on November 29, 1832, and grew up in Boston and Concord, Massachusetts. Her father was Bronson Alcott, the educational innovator and transcendentalist. Although he was part of a distinguished intellectual circle—close family friends included Ralph Waldo Emerson and Henry David Thoreau—he was incapable of earning a sustained income, and his family frequently lived in poverty.

As a teenager, to help support her family, Alcott began working as a seamstress, a governess, and a domestic worker, among other jobs. She also began to write for publication. Her first published piece was a poem in *Peterson's Magazine* in 1851, and she followed it up with a variety of thrillers and potboilers that were published anonymously or under pseudonyms in publications like the *Saturday Evening Gazette* and the *Atlantic Monthly*.

In 1862 she briefly became an army nurse and served in a hospital in Washington, D.C., before contracting typhoid fever. She was treated with mercury, which permanently damaged her health, but she used that experience to write *Hospital Sketches*, which appeared in *Commonwealth* (May–June 1863) and was reprinted that same year in book form. In 1864 she published *Moods*, a novel about a young woman who feels forced by circumstance to marry a man she merely likes. Meanwhile, she continued to crank out sensational stories for magazines.

In 1868 she tried her hand at a book for adolescent girls. The result was *Little Women*, which was published in two separate volumes, the first in 1868 and the second in 1869. It was based on Alcott's own family, and Jo, the tomboy heroine who chaffs under pressure to be ladylike, was based on Alcott herself. Within four years, *Little Women* had sold 82,000 copies, unprecedented numbers for juvenile fiction. Its success enabled Alcott to provide for her parents, but it also led to relentless pressure to produce more books, which added to her difficulties in her final years (she died on March 6, 1888) as her health broke down.

Alcott followed up *Little Women* with *An Old-Fashioned Girl* (1870), a novel about a small-town girl trying to hold on to her values during an extended visit to a wealthy family in worldly Boston; *Little Men* (1871), a sequel to *Little Women*, in which Jo and her husband run a boy's school, based in large part on the educational theories of Bronson Alcott; *Eight Cousins* (1875), about a sickly orphan girl whose health improves after she begins to spend time with her boisterous male cousins; *Rose in Bloom* (1876), a sequel to *Eight Cousins*; *Under the Lilacs* (1878), about a circus runaway; *Jack and Jill* (1880), about a boy and a girl convalescing after a sledding accident; and *Jo's Boys* (1886), a sequel to *Little Men*. All were successful, but none matched the sales figures of *Little Women*.

Alcott also published scores of short stories for children and adolescents and two more adult novels: *Work* (1873) and *A Modern Mephistopheles* (1877), about a young poet who sells himself for literary fame. But it was her adolescent books that brought her the bulk of her success and her enduring fame. She did not always enjoy writing them, referring to them at one point as “moral pap for the young,” but their success was no accident—Alcott remembered what it was like to be 14 or 15, and many of the problems her heroines struggled with were universal. In addition, her books hit the market at a time when an entirely new consumer group was emerging: middle-class girls, 12 to 16 years old, who were anxious to read about girls like themselves and had enough money to purchase moderately priced books.

—Lynn Hoogenboom

**Alger, Horatio** (1834–1899) *children's fiction writer, poet*

Born in Revere, Massachusetts, on January 13, 1834, Horatio Alger, the author of moral, melodramatic books for boys,

graduated from Harvard in 1852, sewed wild oats on a trip to Europe, and then for three years worked for local newspapers before attending Harvard Divinity School. After earning his divinity degree, Alger again traveled abroad and in 1864 became minister of the Brewster, Massachusetts, Unitarian church. Two years later, accused of being a ped-erast, he was dismissed.

Having already published sentimental poems and stories as well as sensational—but moral—novels, Alger moved to New York City to make his way as a writer. He did some tutoring for the wealthy and some social work at the Newsboys' Lodging House, where he lived most of the time and drew on his observations in his books for boys. His most successful book, *Ragged Dick: Or Street Life in New York*, appeared in 1867, and Alger produced over a hundred more like it.

In a typical Alger tale, a poor boy of sterling character leaves the farm (perhaps to earn money to help his widowed mother); goes to the city; gets a job in a department store; is honest, diligent, and frugal; and by an extraordinary stroke of good luck comes to the attention of the merchant prince who owns the store.

By the end of the book the boy is on his way to a managerial position. Alger's books have come to symbolize the "rags to riches" American dream. They were enormously popular among boys, not so much for the moralistic lessons and traditional values dispensed, but more for their adventurous and melodramatic character and the assurance that ultimately the hero (who eschewed gambling) would nevertheless hit the jackpot in the world of business.

In 1896 Alger moved to Natick, Massachusetts, to live with his sister and to write a great adult novel, but he failed to begin it before he died on July 18, 1899.

**Further reading:** Carol Nackenoff, *The Fictional Republic: Horatio Alger and American Political Discourse* (New York: Oxford University Press, 1994); Gary Scharnhorst and Jack Bales, *The Lost Life of Horatio Alger, Jr.* (Bloomington: Indiana University Press, 1985).

**Allison, William Boyd** (1829-1908) *lawyer, politician* William Boyd Allison boasted a remarkably long congressional career, serving Iowans eight years in the House of Representatives (1863-71) and 35 years (1873-1908) in the Senate. Shrewd and cautious, he bent sufficiently to survive intense pressures for change and would have been elected for a seventh senatorial term had he not died.

Born in Perry, Ohio, on March 2, 1829, Allison attended the preparatory academy connected with Allegheny College in Meadville, Pennsylvania, taught school near Perry for a year or two, and completed his meager formal education with a year at Western Reserve College, then located

in Hudson, Ohio. Admitted to the bar after having studied law for less than a year, he commenced its practice in Ashland, Ohio, in 1852, and achieved modest success. In 1854 Allison married Anna Carter, daughter of the town's most prosperous citizen. He dabbled in politics, first as a Whig, then briefly as an anti-Catholic Know-Nothing (the nativist American Party), and in 1854 participated in the founding of the Republican Party. Allison remained devoted to it for the rest of his life. In 1856 that party nominated him for Ashland County's prosecuting attorney. Although he ran well in a Democratic county, he lost. Frustrated political ambitions, coupled with a mediocre law practice, decided Allison to move west, and in 1857 he settled in the thriving town of Dubuque, Iowa. Suffering from tuberculosis, his wife, Anna, remained in Ohio and died there in 1860.

In Iowa Allison's law practice served as an entering wedge into politics and enabled him to make contacts with businessmen. Despite his lack of property and his modest means, Allison, who exuded "safeness," was within two years on the board of directors of the Dubuque branch of the Iowa State Bank. In that position he cultivated friends who supported his political ambitions and who anticipated reciprocal favors. Among these was the railroad builder and powerful Republican Grenville M. Dodge. Allison's ambition was rewarded by election to Congress in 1862.

Allison served four terms in the House. By pushing for federal land grants for Iowa RAILROADS, he also served his strong supporters. He joined Radical Republicans and voted for congressional control of the political reconstruction of the South and for the impeachment of President Andrew Johnson, yet he was not an extremist and had the gift of retaining the respect and even friendship of opponents. He remained, for example, the faithful protégé of Iowa senator James W. Grimes even after his deciding vote to acquit Johnson in the 1868 impeachment trial made Grimes a pariah among Iowa Radicals. In 1873 Allison married Grimes's beautiful and accomplished niece Mary Nealley. Unfortunately, she became mentally unstable and committed suicide in 1883.

In 1870 his close association with the unpopular Grimes had prevented Allison from succeeding him in the Senate, but with the support of railroad interests, Allison defeated Senator James Harlan two years later. In addition to his interest in railroads, Allison became expert in currency, finance, and taxation. He was on the Finance Committee for 30 years and chaired the Appropriations Committee for 27 years. Above all else, Allison was, as Senator Nelson Aldrich described him, "a master of the arts of conciliation and construction." To minimize the disappointment of disputants, he managed to adjust differences behind the scenes with much tact and little publicity. The one major act to which his name is attached, the BLAND-ALLISON ACT (1878), illustrates his genius as a compromiser. His

amendment to the House's inflationary Bland bill for the remonetization of silver limited its coinage and kept inflation in check. Neither western silver inflationists nor eastern creditors were completely satisfied, but silver dollars were minted and gold was not driven out of circulation.

Allison's fellow party leaders appreciated his capacity to harmonize contentious voices among Republicans. He was a leading candidate for the presidential nomination in 1888, losing out to BENJAMIN HARRISON. A second try in 1896 failed when WILLIAM MCKINLEY was nominated. By the 1890s Allison was one of "the Big Four" dominating the Senate and determining congressional policy. The other three were Aldrich of Rhode Island, John Spooner of Wisconsin, and Orville Platt of Connecticut.

At heart a conservative, Allison never lost the trust of financiers, manufacturers, and railroaders. His pragmatic compromises, resolving difficult issues, may have impinged on, but did not endanger, their interests. Allison finessed agreements on controversial import duties in the McKinley Tariff (1890) and the Dingley Tariff (1897) and worked with Democrats on the sugar schedule in the Wilson-Gorman Tariff (1894). He was also instrumental in adjusting competing interests in the debate over the 1906 Hepburn Act. The Allison Amendment (which Aldrich, President Theodore Roosevelt, and others probably helped originate) obfuscated and postponed the question of broad versus narrow judicial review of railroad rates to be set by the Interstate Commerce Commission and enabled the Hepburn bill to breeze through the Senate with only three negative votes. Allison, a Republican colleague remarked, "was so pussyfooted he could walk from New York to San Francisco on the keys of a piano and never strike a note."

On August 4, 1908, Allison died at home in Dubuque, leaving a modest estate, unlike his colleague Aldrich, who had parlayed political influence into millions.

### **Altgeld, John Peter** (1847–1902) *politician*

Democratic politician John Peter Altgeld was born to John Peter and Mary Altgeld on December 30, 1847, at Nieder Selters in Nassau, Germany. His parents brought him to the United States and settled in Richland County, Ohio, when he was only three months old. In 1864 he served in the Ohio Home Guards briefly, taught school for two years, and in 1869 at the age of 21 moved west to Missouri. He read law, was admitted to the bar in 1871, and in 1874 he was elected state's attorney for Andrew County with Democratic-Granger support. Despite this apparent success, he resigned and moved to Chicago one year later.

At first Altgeld did not do well in Chicago. He slept in his office for two years before he could afford living quarters.

By 1879, however, he was secure enough to begin speculating in real estate. Over the next 11 years he parlayed a \$500 initial investment into a \$500,000 fortune. During this time he continued to practice law and to write. In 1884 he published *Our Penal Machinery and Its Victims*, suggesting that the poor had a less than equal chance in America. Another publication, *The Immigrant's Answer* (1890), responded to nativist attacks against aliens. He was also an effective politician, elected as a judge for the Superior Court of Cook County in 1886 and, six years later, became the Democratic Party's successful candidate for governor.

Shortly after his inauguration, Altgeld, pressed by Clarence Darrow and other liberals, considered pardoning those convicted of the bombing during the HAYMARKET RIOT. After careful study he pardoned the three who were still alive, in June 1893. Altgeld suggested that the bomb was most likely thrown as an act of individual revenge, because the Chicago police often clubbed strikers who gave no offense. He also dismissed much of the evidence as "pure fabrication," objected to the method of jury selection, and noted the obvious prejudice of Judge Joseph Gary. The press denounced Altgeld as an anarchist, a demagogue, a fomentor of lawlessness, and an apologist for murder.

The outcry did not deter Altgeld from supporting those he considered disenfranchised. He appointed Alzina P. Stevens assistant factory inspector for Illinois and supported her assault upon the sweatshop system. He protested the use of federal troops during the PULLMAN STRIKE of 1894, stating that President GROVER CLEVELAND's action was "unnecessary, unjustifiable, and unconstitutional."

Altgeld played a major role in the Democratic Party's repudiation of Cleveland. At its 1896 convention he helped write its platform, calling for the free coinage of silver (FREE SILVER MOVEMENT), and his influence was so great that he would have been a serious contender for the nomination had he not been born abroad and thus ineligible for the U.S. presidency. The Illinois Democratic Party nominated him in 1896 for a second gubernatorial term, but although he ran well ahead of the Democratic Party's national ticket in Illinois, he lost. Altgeld also suffered financial as well as political reverses, but he remained active as a lawyer and in politics. He was an outspoken advocate of municipal ownership of streetcar lines and an opponent of IMPERIALISM; indeed, he died in Joliet, Illinois, on March 12, 1902, just after delivering a speech attacking imperialism. The poet Vachel Lindsay celebrated Altgeld in his poem "The Eagle That Is Forgotten."

### American Federation of Labor

The American Federation of Labor (AFL) grew out of a conflict between trade unions and the KNIGHTS OF LABOR (Knights). In 1885 the Knights raided the territory of Local 144 of the Cigarmakers International in New York. Outraged, the president of Local 144, SAMUEL GOMPERS, called a conference with other trade unionists to discuss options. The conference demanded, among other things, that the Knights cease recruiting members from established trade unions and stop issuing their own union labels. Knowing that the Knights would not accede to these demands, the group called for another, larger conference. Responding to the call, delegates from 25 labor unions met in Columbus, Ohio, in December 1886 and created the AFL.

An executive council, elected by an annual convention controlled by the national trade unions (each national received one vote for every 100 members), was the AFL's primary policy-enforcing body. The council was responsible for adjudicating jurisdictional disputes among member unions, helping form new national trade unions, and judging the merits of proposed boycotts. It also established state federations and, in some cases, local central bodies to coordinate union activities at those levels. A per capita tax levied on its affiliates provided most of the organization's income.

Since each affiliate retained its autonomy, the AFL had little real power. It tended to determine jurisdictional disputes, for example, in favor of the stronger contender rather than upon the merits of the case. But the best illustration of its weakness was its inability to enforce its constitutional prohibition against discrimination. Although it denied affiliation to the boilermakers union because its constitution contained a "white only" clause, it was powerless against members practicing de facto exclusion. At the turn of the century only one, of its more than 50 affiliates, the United Mine Workers of America, had a sizable African-American membership.

The exclusionary policy of AFL member unions extended to women and the unskilled. By 1895 less than 6 percent of all union members were women. Formed to protect their skilled members from the encroachment of machines, craft unions spurned industrial workers. Moreover, they feared that if industrial workers were permitted membership, the more numerous unskilled laborers would force their skilled brethren into hopeless strikes.

AFL unions believed that collective bargaining, supported by strikes and boycotts, was the best means to improve economic conditions for their members. A series of disastrous strikes such as the HOMESTEAD STRIKE generated questions about the effectiveness of wage-conscious unionism. Led by socialists, those favoring a more political tack attempted to have the 1892 convention convert itself into an independent political party. Gompers, however, defeated the movement. The following year the political actionists defeated Gompers's bid for reelection, but their victory was fleeting, as Gompers was elected president again in 1895. Under his leadership the AFL remained committed to pursuing economic goals while rewarding its friends and punishing its enemies in elections, regardless of party affiliation. Over the years the policy proved effective. The exclusionary practices of most AFL unions, however, limited the beneficiaries of these gains to skilled white males, creating, in a sense, an aristocracy of labor.

### American Protective Association

Nativists flocked to the American Protective Association (APA) in the Gilded Age. American NATIVISM was often linked to anti-Catholicism, which had deep roots in the Anglo-American Protestant culture of the United States. Nativist groups used anti-Catholic rhetoric to arouse the long-standing fears and misgivings that Americans had of Catholics. Several developments in the 1870s and 1880s exacerbated anti-Catholic suspicions: the rise to political power of Irish and German Catholics in some of the nation's major cities; the rapid expansion of parish and parochial schools and the controversy over public aid to those schools; and the perceived Catholic influence over organized labor.

On March 13, 1887, Henry F. Bowers, a self-taught Iowa lawyer, founded the APA, which became the largest American nativist organization of the late 19th century. The APA was an oath-bound organization open to anyone committed to bringing a halt to IMMIGRATION and resisting the so-called Catholic menace. It absorbed many of the smaller nativist societies that had sprung up in the years immediately following the Civil War. By 1894 membership in the APA had reached a reported 500,000 people, with councils (local chapters) in cities throughout the Middle West, Northeast, and Far West.

The growth of the APA was partially the result of new leadership. In 1893 William J. Traynor replaced Bowers as

## 14 American Woman Suffrage Association

the organization's supreme president. Traynor had been the president of the Michigan council and was a vocal, committed nativist who not only had experience in promoting several anti-Catholic groups but also possessed a keen sense of politics. His vigorous leadership, however, was not the sole cause of the increase in membership. The economic depression of 1893 had stimulated anti-Catholic and anti-immigrant feelings in America and served as a powerful recruiting tool. The members of the APA portrayed immigrants as "job stealers" and accused Catholics of plotting to disrupt the nation's economic system and paving the way for the pope to seize power.

By the late 1890s, the APA began to weaken. Not only was the organization beset by internal dissension, but nativism was also being gradually eclipsed by more pressing issues. Like its Know-Nothing predecessor in the 1850s, the APA created much nativist excitement and anti-Catholic anxiety, but unlike the Know-Nothings, it had little political success.

**Angell, James Burrill** (1829–1916) *educator, academic administrator, diplomat*

Born near Scituate, Rhode Island, James B. Angell was renowned as an educator and university president but also edited a newspaper and served as a diplomat. Graduating valedictorian from Brown University in 1849, he excelled in languages, literature, and mathematics. He remained at Brown as an assistant in the library but soon experienced a severe throat problem that, for the rest of his life, required him to speak softly. In search of a cure he embarked on an eight-month horseback tour (1850–51) of the South with a college chum, Rowland Hazard. When his throat did not improve sufficiently for him to train for the ministry, Angell worked briefly as a civil engineer in Boston before embarking with Hazard, in 1851, on a "grand tour" of Europe.

While Angell was abroad, President Francis Wayland of Brown University offered him a professorship in either civil engineering or modern languages. Angell accepted the modern language appointment and from 1852 to 1853, at Paris and Munich, studied language and literature. He entered his work at Brown with gusto. Although Angell gave advanced courses and revised and edited a standard handbook of French literature, Wayland's successor restricted Angell's teaching in 1855 to elementary courses. That same year Angell married Sarah Swope Caswell. They had three children, one of whom, James Rowland Angell, would become president of Yale University (1921–37).

When Angell's friend Henry B. Anthony, who controlled and edited the *Providence Journal*, was elected as a Republican to the U.S. Senate in 1858, he asked Angell to contribute to the paper in his absence. When Angell shortly became the paper's full-time editor (1860–66), he resigned from Brown. He supported the Abraham Lincoln administration and the Republican Party. His articles on European events, foreign policy, and international law were informed by his European studies and his broad reading. After trying unsuccessfully to buy control of the *Journal* from Anthony, Angell accepted the presidency of the University of Vermont in 1866.

At the time that university was a small institution, underfunded by the legislature of a poor state. Raising money from private sources, Angell equipped a laboratory, added a professorship, and improved the physical plant. He filled in where teachers were lacking and taught rhetoric, history, German, and international law. He also campaigned for state support of an agricultural college to take advantage of the federal Morrill Land Grant Act of 1862.

Aware of Angell's hard work, the regents of the University of Michigan appointed him president in 1871. He remained in that post until 1909. In his inaugural address he set forth a breathtaking vision of the mission of a state university. It was "to place the means of obtaining generous culture within the reach of the humblest and poorest child." Angell wanted the University of Michigan, a "Western" school, to be a center of inquiry and advanced study, as well as to instruct undergraduates and offer training for the professions. His dream for Michigan, scarcely a generation removed from a collection of frontier settlements, was to have a university that would advance the frontiers of knowledge. Angell believed that scholarship and teaching were inextricably entwined and that the communication of knowledge depended on its continued acquisition. His vision both guided the development of the University of Michigan and inspired other state universities, especially in the Midwest.

In striving to achieve his goals, Angell's personal qualities were invaluable. He was unpretentious, tactful, considerate, and friendly and quickly became acquainted with his

faculty and student body by observing classes and visiting laboratories. For much of his presidency he knew every student by name, whether or not they took his courses on international law or foreign relations. He wanted his faculty to evaluate students on their daily performance, instead of by a score achieved through cramming for an examination. Rather than introduce radical innovations, Angell believed that lasting improvements came gradually. He was low key rather than forceful, open to new ideas rather than doctrinaire; for example, his embrace of egalitarianism included coeducation, which the university had adopted only six months before his arrival. Angell's modest approach was effective with faculty, regents, and legislators, and the university grew, but his dream of a ground-breaking graduate program was not realized during his tenure.

While president of the University of Michigan, Angell was given four diplomatic assignments by three U.S. presidents. Following his veto of a Chinese exclusion bill in 1878, RUTHERFORD B. HAYES, in 1880, appointed Angell minister to China and the chief negotiator (with two commissioners) to modify the 1868 Burlingame Treaty, which allowed unrestricted Chinese IMMIGRATION to the United States. Reflecting the views of the Hayes administration, Angell wanted to curb the influx of Chinese laborers without jeopardizing the advantages of American merchants and missionaries in China. Working harmoniously, thanks largely to the tact of Angell, his mission and the Chinese plenipotentiaries agreed both on an immigration treaty and a commerce treaty by November 1880. They were ratified in May 1881. The commerce treaty secured new commercial advantages for Americans but prohibited either country from shipping opium to the other. The immigration treaty enabled the United States to regulate, limit, or suspend but not prohibit the immigration of Chinese laborers. In 1882, after Angell returned to the University of Michigan, Congress suspended Chinese immigration for 10 years. That suspension was renewed until 1904, when it was enacted without a terminal date.

GROVER CLEVELAND, as president, asked Angell to serve on two commissions. In 1887–88, along with Secretary of State THOMAS FRANCIS BAYARD and William L. Putnam of Maine, Angell helped negotiate a treaty with Great Britain, settling old disputes over fishing rights off the coast of Canada. Although the Senate rejected it, the arrangements it proposed, pending its ratification, were adopted by both parties. In 1896–97, with Cleveland as president again, Angell served on the Canadian-American Deep Waterways Commission that studied the feasibility of what in the 1950s would become the St. Lawrence Seaway. Angell also spent a frustrating year as President WILLIAM MCKINLEY's minister to Turkey, protesting the treatment of American missionaries and their facilities by Turkish troops, especially during an Armenian uprising.

Angell earned substantial honors in his career. He was president of the American Historical Association (1893–94) and a regent of the Smithsonian Institution. Never one to rest on his laurels, he remarked, just prior to his retirement, “so little done, so much remains to do.” In 1916 Angell died in the president's home at the University of Michigan.

Smith, *James Burrill Angell: An American Influence* (Ann Arbor: University of Michigan Press, 1954).

**Anthony, Susan B.** (1820–1906) *suffragist, women's rights leader*

The most visible force behind the battle for woman suffrage, Susan Brownell Anthony was the daughter of a well-to-do Quaker mill owner. Born in Adams, Massachusetts, on February 15, 1820, she grew up in Battenville, New York. She worked as a teacher from 1839 until 1849, when she left teaching to manage her family's farm and became absorbed in reform movements.

In 1850 she met ELIZABETH CADY STANTON, a leader of the first women's rights convention in Seneca Falls, New York, in 1848. Their mutual interests in abolition and women's issues led to a professional partnership that lasted until

Susan B. Anthony (Library of Congress)

## 16 Anti-Imperialist League

Stanton's death in 1902. Stanton, who had strong writing and oratorical skills, honed the message while Anthony provided the organizational skills.

In the years leading up to the Civil War, Anthony was a primary organizer of a series of WOMEN'S RIGHTS conventions, and from 1854 on she organized yearly petition drives in New York demanding woman suffrage and property rights for married women. From 1856 until the beginning of the Civil War, Anthony was also the principal New York agent (or lobbyist) for the American Anti-Slavery Society. In 1863 Anthony and Stanton organized the Women's Loyal National League, which collected 400,000 signatures on a petition calling for the abolition of slavery. After the war, as the corresponding secretary for the American Equal Rights Association (AERA), Anthony oversaw petitions to Congress advocating universal suffrage and coordinated several campaigns to amend state constitutions.

In 1867 she campaigned in Kansas for proposals for African-American and woman suffrage. Both were defeated, and that campaign opened a rift within the equal-rights movement when, midway through the campaign, the Republican Party withdrew support for the woman suffrage amendment. In order to complete her campaign, Anthony accepted the help of George Francis Train, a Democrat and blatant racist. She and Stanton also accepted his financing of their newspaper, *The Revolution*, which made its debut in January 1868 and lasted only until 1870, when it was turned over to a new owner. It opposed the Fourteenth and Fifteenth Amendments on the grounds that both excluded women, and it departed from the AERA position in favor of universal suffrage by running articles favorable to educated suffrage. With Anthony and Stanton's positions diverging from those of the AERA, they set up their own organization, the National Woman Suffrage Association (NWSA), in 1869. LUCY STONE, disturbed by Anthony and Stanton's hostility to the Fourteenth and Fifteenth Amendments, formed a rival organization, the American Woman Suffrage Association (AWSA), that same year. Subsequently, the sisterly love Anthony and Stone had for each other degenerated into mutual hostility.

Anthony's opposition to the Fourteenth and Fifteenth Amendments, however, did not keep her, and hundreds of other women, from testing the theory that these amendments, which linked voting rights with citizenship, actually had granted women the right to vote. In 1872, after Anthony and a group of followers voted in Rochester, New York, only she was arrested for violating federal law. In *United States v. Susan B. Anthony* (1873), she was tried in the U.S. circuit court, with SUPREME COURT justice Ward Hunt presiding. Without permitting Anthony to testify, he instructed the all-male jury to find her guilty, refused to poll it, and fined her \$100. Even though she did not pay the fine, she was not arrested and therefore unable to

appeal her case to the Supreme Court. Two years later in *Minor v. Happersett* (1875), the Supreme Court followed Hunt's lead and ruled unanimously that the Fourteenth and Fifteenth Amendments did not give women the right to vote.

At the Fourth of July ceremonies at the PHILADELPHIA CENTENNIAL EXPOSITION of 1876, Anthony and four colleagues received a flurry of publicity when they interrupted the official celebration to present the presiding officer with a "Women's Declaration of 1876" for women's rights in fulfillment of the ideals of 1776.

From 1870 to 1900 Anthony lectured everywhere, gave hundreds of interviews to local newspapers, and forged links with various women's organizations, which had burgeoned in the latter half of the 19th century. While few of these organizations endorsed suffrage, they proved willing to work with Anthony on other women's issues and eventually welcomed her as a speaker at their conventions. By the 1890s Anthony had access to the platforms of every significant women's group in the country. She campaigned for a woman suffrage amendment everywhere, taking the skills she had developed in her early campaigns in New York State and reapplying them on a national level. Although she never came close to getting the amendment passed, she did manage to move the issue from the political fringes to the mainstream. And while she had taken the brunt of the ridicule and vitriol that was heaped on suffragists in the early days, by the 1890s she was widely respected, even revered, for her unflinching devotion to her cause.

In 1890 the NWSA and AWSA merged into the National American Woman Suffrage Association (NAWSA). Anthony insisted that Stanton, longtime president of the NWSA, be president of the merged association. When Stanton retired as NAWSA president in 1892, Anthony replaced her and remained president of the organization until 1900, when she was 80. Although she slowed down a bit, she continued to campaign for woman suffrage up until a month before her death on March 13, 1906. As she was dying that day "she suddenly began to utter the names of the women who had worked with her as if in a final roll call . . . and as they went by she spoke to each of them" (Baker, 92).

### Anti-Imperialist League

The Anti-Imperialist League grew out of the opposition to the war with Spain and its consequences. Prominent Americans spoke out against military intervention to free CUBA

from Spain before war was declared in April 1898. Once U.S. forces seized Spain's insular possessions, these spokespeople began to organize to prevent colonialism.

On June 15, 1898, a rally at Boston's historic Faneuil Hall formed a committee of correspondence, which resulted in an Anti-Imperialist League five months later. At first its efforts focused on a petition campaign to block permanent acquisition of the newly conquered territory. The outbreak in February 1899 of the Philippine Rebellion against American rule inspired others to form Anti-Imperialist Leagues. Outside of New England, the Single Tax followers of Henry George were responsible for forming branch offices. Finally, in October 1899 activists established the American Anti-Imperialist League with its national office in Chicago and George S. Boutwell, a former member of Ulysses S. Grant's cabinet, as its president.

The anti-imperialists shared high status and advanced years but lacked a clear-cut alternative foreign policy program. Most were economic conservatives and were uneasy when WILLIAM JENNINGS BRYAN took up the fight against IMPERIALISM as the Democratic presidential candidate in 1900. While Bryan claimed FOREIGN POLICY issues were the center of his candidacy, he continued to advocate Free Silver monetization. This stand alienated such anti-imperialists as ANDREW CARNEGIE and Senator GEORGE F. HOAR. Some defectors in the New York office withdrew to form a nonpartisan organization, while others established Liberty Leagues to advocate Philippine independence.

After 1901 the seven remaining league offices continued to criticize the Philippine-American War, but they were again disappointed when the DEMOCRATIC PARTY chose a lackluster candidate to oppose Theodore Roosevelt in the 1904 election. The national office moved to Boston and the league survived until 1921.

## Apache War

The Apache War was marked by frequent skirmishes and battles from the early 1870s into the 1880s. Apache Indians first clashed with Spaniards during the colonial era, then

with Mexico after Mexican independence, and finally with the United States after it won control of the Southwest from Mexico in 1848. After settlers began to mine copper ore, especially in Arizona, where many Apache lived, the situation deteriorated. To control it the federal government aimed to consolidate the disparate Apache bands at the San Carlos Reservation in eastern Arizona.

In 1871 citizens of Tucson, Arizona, reacted to repeated Chiricahua Apache raids by attacking Camp Grant, a federal government-sponsored settlement, and killing up to 150 Apache, including many women and children. President Ulysses S. Grant, appalled by the vigilantism, ordered General George Crook to stabilize the region. After Apache raids continued, Crook led western forces against the Apache, successfully using Indian "scouts" to fight other NATIVE AMERICANS. Crook led several bloody campaigns against the Apache until a tenuous peace was negotiated with the Chiricahua band in 1874. That same year President Grant put their copper-producing reservation lands in the public domain, opening them up to mining interests. This move led to the resettlement of Chiricahua Apache to the reservation at San Carlos in 1876. Roughly half the Chiricahua complied with the removal order while the remainder fled to Mexico.

Among the recalcitrant Chiricahua Apache, a warrior named GERONIMO emerged as a war leader. Geronimo had fled to Mexico in 1876 and began to use the Ojo Caliente Reservation in New Mexico, where the Warm Springs Apache were located, as a base to organize raids. As a result, the Warm Springs Reservation was shut down by authorities in 1877, and officials began planning to remove 400 Warm Springs Apache and Geronimo's band of Chiricahua Apache to the San Carlos Reservation. Fearing resistance, officials arrested Geronimo and several other leaders. Conditions at San Carlos were abysmal, and the displaced Warm Springs Apache, led by their war chief Victorio, broke away from the reservation in September 1877, eventually crossing the border into Mexico and beginning a three-year period during which the band raided settlements along the border in Mexico and the United States. The raids ended in 1880, when Victorio and his band were killed by Mexican soldiers.

The Warm Springs Apache who had been sent back to San Carlos joined with Geronimo, who had returned there in the interim. During this time officials became increasingly concerned about an Apache rebellion after tribal members began practicing the Ghost Dance religion, which involved communing with ancestors via a trancelike dance. Tension between the Apache and the U.S. Army led to an Apache attack on August 30, 1881. Geronimo again fled to Mexico with other Apache, engaging American troops at the border. Apache warriors reentered the United States in April 1882, attacking reservation policemen at

San Carlos on April 19, during which time Geronimo freed a group of Apache, fleeing to Mexico with the fugitives. Determined to bring peace to the territory, General Crook entered Mexico in 1883 with 200 scouts, and in February 1884 Geronimo surrendered, returning to San Carlos. In May 1885 Geronimo again left San Carlos, this time with 130 fugitives, which set off skirmishes along the border of the United States and Mexico as the two countries joined forces to fight the Apache. In September 1886 Geronimo again surrendered, accepting a deal to relocate the Apache to Florida for a period of two years before being allowed to return to the West. However, Geronimo was not allowed to return, and he died at Fort Sill, Oklahoma, in 1909.

## art and architecture

The growth and diversification typical of America's political, economic, and social life in the late 19th century were also reflected in its art and architecture. As America industrialized and its economic power grew, it became a political power on the world stage, finally becoming an empire with the acquisition of the Philippines. Architecture reflected this growing commercial and political power. The first of the skeleton-frame **SKYSCRAPERS** was designed by William Le Baron Jenny and constructed in Chicago in 1883. That same year, what was then the longest suspension bridge ever built, the Brooklyn Bridge, opened in New York City. The City Beautiful movement promulgated design reform along the lines of models provided by the Roman Empire and France's Louis XIV (the Sun King). Increasing **IMMIGRATION** and increasing specialization of the work force fueled America's economic engine. Class distinctions became more finely drawn, and the arts reflected these hierarchies. Domestic architectural form embodied them, as developers built suburbs of tidy Queen Anne houses along trolley lines and as industrialists erected monumental chateaux and palazzi along Manhattan's Fifth Avenue. Women and men moved in separate spheres, and home life, where children were raised and culture fostered, belonged to women. The cult of domesticity justified art in the home, and civic philanthropy demanded art in museums. Thus were the arts popularized and democratized in the late 19th century.

The most influential Gilded Age architect was **HENRY HOBSON RICHARDSON**. His elaborate adaptations for churches and public buildings of the pre-Gothic architecture of 11th- and 12th-century northern Europe (featuring the round arch and vault)—called “Richardson Roman-

esque”—was widely copied. More important, Richardson inspired a generation of eclectic architects to turn to forms of the past that could be adapted for modern purposes. His influence on Charles Follen McKim and **STANFORD WHITE** was more direct since these distinguished architects served apprenticeships as draftsmen in his office. Their firm of Mead, McKim, and White looked to the past and decided in the late 1880s that classicism was the most appropriate basis for American architecture. Given the widespread belief that Western civilization was rooted in Greek and Roman culture, classicism dominated the architecture of public buildings well into the 20th century. On the other hand, Richardson's emphasis on simplicity and restraint influenced **LOUIS H. SULLIVAN** who stressed that form should follow function, that details and ornamentation should be derived from nature. Building on these ideas Sullivan and the Chicago school rejected classicism and laid the foundation of modern American architecture.

America's painters, sculptors, and architects, its designers of decorative arts, and its landscape designers—all developed a new professionalism in response to these changing social conditions. Training abroad, especially in the *École des Beaux-Arts* in Paris, became imperative. Artists joined established organizations, such as the art academies of the nation's major cities, and formed new ones. Organizations representing specialized constituencies, such as the American Institute of Architects, the National Sculpture Society, and the Women's Exchange, sprang up or consolidated power. These organizations not only defined working practices and standards but through their exhibition facilities also offered opportunities for patronage. American artists vigorously participated in world's fairs, where their work could be measured against that of their European peers. To rid themselves of any association with manual laborers, artists became scholars and connoisseurs. They collected art and displayed it in their studios, they wrote for magazines, and they joined private clubs.

A cosmopolitanism that sprang from academic and aesthetic idealism became the stylistic marker of late 19th-century American art. Earlier, a Ruskinian literalism espousing truth to nature, a confident nationalism, and the prevailing Protestantism had produced an emphatically didactic art. In contrast, late 19th-century art as a body depicted a broader array of subjects, with each work of art being more narrowly focused. Erudite mixing of sources, exquisite technique, and poetic mood were typical of late 19th-century art. Psychological insight replaced mid-century sentimentality, finely tuned understatement replaced drama, and evocation replaced specificity.

Cosmopolitan artists expressed the new tone through historicism and exoticism. These themes were especially apparent in **PAINTING** and **SCULPTURE**, though they were

The William Watts Sherman house, designed by Henry Hobson Richardson and erected in 1875–76, is the prototype of the shingled Tudor manor house in America. (*Library of Congress*)

present in all the arts. Certain cultures and times were rich mines: the American colonial era, 17th- and 18-century England, and the peasant life of Holland and northern France. Artists examined non-Christian cultures and perceived a colorful barbarity and sensuality in the Islamic world and a refined simplicity in still-feudal Japan. Representation of the human form, at the core of the curricula of the academies of Paris, Munich, London, and Rome, was paramount in the arts of painting and sculpture.

Through ethnographic exactitude, history painters sought to make a small moment of the historical past or the geographically remote vividly alive. Charles Sprague Pearce, in his *A Village Funeral, Brittany* (1891, Danforth Museum of Art, Framingham, Massachusetts), shows French peasants gathered to say goodbye to the departed and gives equal attention to the particularity of the women's caps and the universality of their grieving faces. The same sort of exactitude governed Tiffany and Company as it crafted the Viking punch bowl (1892, Metropolitan Museum of Art, New York), a work that incorporates motifs from medieval manuscripts and Viking ships. Not all historicist art was so

exact, however: Daniel Pabst's tall case clock (1884, Wurts House Foundation, Philadelphia) grafted gothic and neo-Greco ornamentation upon Chippendale form. The aim of art with historical and exotic themes was to draw the viewer into another culture and time in order to marvel at its finer moments, finding in it affinities with the modern age.

The classical world—ancient Greece and Rome as well as Renaissance Italy—became the wellspring from which artists fashioned a movement scholars have termed the American Renaissance. Parallels were drawn between America and these cultures, where democracy, empire-building, and commerce were understood to have flourished. Cultural critics such as Harvard professor CHARLES ELIOT NORTON advocated the importance of the classical world. In all the arts, classical models and motifs were investigated, internalized, and reconfigured in a respectful spirit of scientific eclecticism. Abbott Handerson Thayer painted his daughter as Nike, thus making a Greek goddess corporeal. Charles Adams Platt and others adapted the Italian villa garden for the new American country house. The American Renaissance reached its apogee at the WORLD'S COLUMBIAN EXPOSITION in Chicago in 1893. Architect DANIEL BURNHAM supervised the development of a 686-acre site where architecture, sculpture, and urban design were unified by Renaissance ideals and motifs.

Aestheticism, the credo of "art for art's sake," underlay most efforts in the visual arts in the late 19th century. This aestheticism, especially when it found expression in the decorative arts, has been termed the AESTHETIC MOVEMENT. The idea that style, technique, and materials were of more consequence than content or function was promulgated for an American audience by writers such as Matthew Arnold and Oscar Wilde. In his art and his life, JAMES ABBOTT McNEILL WHISTLER also set an early and influential example as an aesthete. Aestheticism was not expressed in a particular style, but sumptuousness, elegance, and bravura craftsmanship were its hallmarks. Historical models displaying virtuosity in all media were revered. Painters went to Holland and Spain to study the brushwork of Frans Hals and Diego Velázquez, while the intricate rococo marquetry of Jean-Henri Riesener was imitated with great success by cabinetmakers. The lily, the sunflower, and the iris became symbols of the aesthetic ideal, serving, too, as motifs for the decorative arts and for gardens. As the emphasis on form and materials progressed, greater abstraction was the result. The muscular "modern gothic" of Frank Furness's architecture and Isaac E. Scott's furniture were only two expressions among many in which nature was schematized by a profound understanding of organic form. The sensuous curves of the female body, sometimes unrecognizable as such, became the leitmotif for Art Nouveau, a style that appeared at the end of the century. Art Nouveau sought to create a new nature-based yet nonreferential art that dis-

titled beauty to its essentials. It was the logical outcome of aestheticism and pointed the way to modernism.

**Arthur, Chester Alan** (1829–1886) *21st president of the United States*

Chester Alan Arthur, the 21st president of the United States, was the son of an aggressive abolitionist Baptist minister. He was born October 5, 1829, in Vermont and grew up in upstate New York. After graduating from Union College in 1848, Arthur taught school and studied law in his spare time before moving to New York City, where he

Chester Alan Arthur (Library of Congress)

clerked and studied in a law office. Admitted to the New York bar in 1854, Arthur participated in the Lemmon Slave case (1852–60), which freed slaves temporarily housed in New York while in transit from one slave state to another. He successfully represented Elizabeth Jennings, an African-American teacher who sued after she was brutally evicted from a segregated streetcar in 1855. The victory of Arthur and Jennings led shortly thereafter to the integration of New York's street railways.

Arthur helped found the New York Republican Party and became a favorite of Governor Edwin D. Morgan, who appointed him quartermaster general of New York during the Civil War. Arthur—with the vast responsibility of feeding, housing, clothing, and equipping thousands of volunteers—was vigorous yet diplomatic, effective yet efficient, and proved to be a superb administrator. When Arthur lost his commission following Republican defeat in 1862, he had already acquired a love of politics; a taste for fine clothes, food, and wine; and shared with his wife, Ellen Herndon, whom he married in 1859, the desire for an elegant residence.

Arthur was lucky in his pursuit of both money and politics. He was a successful lobbyist, served on the Republican state committee, and collected political assessments from civil servants with his friend Thomas Murphy, whom he succeeded as collector of the Port of New York in 1871. As collector he headed the New York customhouse, the largest federal office in the land, which—with its politically active personnel and the campaign assessments they paid—made it the key to the political control of New York. Initially Arthur's princely compensation, mostly in fees and moieties, was approximately \$50,000 annually, but the CIVIL SERVICE REFORM movement in 1874 eliminated the fees and moieties and reduced his salary to a still very comfortable \$12,000 annually. Administering the customhouse with the twin interests of his patron, Senator ROSCOE CONKLING, and the U.S. Treasury in mind, Arthur—an honest spoilsman—was as efficient as possible in collecting tariffs while maintaining Conkling's machine.

President RUTHERFORD B. HAYES, hating Conkling and anxious to remove the New York customhouse from politics and make it a showcase for civil service reform, replaced Arthur in 1878 after a long struggle. Conkling, arguing that senators should control appointments in their states (senatorial courtesy), initially prevented Arthur's removal, but ultimately Hayes prevailed. Ironically, however, when the deadlocked 1880 Republican convention frustrated Conkling and his fellow STALWARTS by rejecting Ulysses S. Grant and nominating JAMES A. GARFIELD, Garfield's friends offered the vice presidential nomination to the New York delegation, and it named Chester A. Arthur. The Garfield-Arthur ticket was elected, and as vice president, Arthur presided over the Senate when Con-

Conkling again challenged a president over naming the New York collector and again lost. Garfield, however, could not enjoy his victory. On July 2, 1881, he was assassinated by a deranged office seeker who claimed to be a Stalwart and proclaimed that Arthur was president. Garfield lingered until September 19, when Arthur, to the dismay of reformers, did become president.

Arthur was a spoilsman and a machine politician, but he was also a good administrator and proved to be an able president. He had the good sense to recognize that Garfield's tragic death circumscribed his actions. His refusal to appoint Conkling to his cabinet alienated his friend, but it reassured all except the Stalwarts and preserved Arthur's independence. He did not call off the investigation and prosecution of those involved in the STAR ROUTE FRAUDS (in the Post Office Department), even though he had worked with them in the 1880 campaign. And while he did not think that appointments to office on the basis of open competitive examinations secured the best people, when Congress passed the Pendleton Civil Service Reform Bill (1883) he signed it and conscientiously enforced it. Arthur's reaction to the huge Treasury surplus resulting from increased foreign trade after the 1879 return to the gold standard was statesmanlike. To reduce revenue he preferred a simplified tariff schedule with more items on the duty-free list. An 1882 commission appointed by Arthur recommended significant tariff reductions in a comprehensive package, but congressmen in a piecemeal fashion revised these proposed rates upward until overall reductions were slight and the rationale for them was lost in the act known as the Mongrel Tariff (1883). Congressmen preferred to dispose of the surplus with a pork-barrel River and Harbor Act (1882), an \$18-million Treasury raid for questionable projects in their districts, which Arthur vetoed to no avail, since Congress overrode his veto. Arthur also vetoed a bill that restricted Chinese immigration for 20 years as an unreasonable length of time, but he did sign into law the Chinese Exclusion Act (1882), which restricted Chinese immigration for 10 years. Less controversial were the appropriations approved by Arthur for the buildup of a modern American navy in place of the few rotting and rusting vessels left over from the Civil War.

Arthur, a large majestic man who looked every inch a president, was actually in poor health. He suffered from Bright's disease, a kidney ailment, and was not a serious candidate for the presidential nomination in 1884. He died on November 18, 1886, a year and a half after leaving the office he had filled far better than virtually everyone expected.

**Atkinson, Edward** (1827–1905) *businessman, economist, anti-imperialist*

Edward Atkinson was born in Brookline, Massachusetts, on February 10, 1827. He was educated in private schools, but the plan to send him to Harvard College went awry with the collapse of his family's fortune. When his formal education ended at the age of 15, he began an apprenticeship in dry goods. His job was to open the store, sweep the floors, and build fires before breakfast and then pack and unpack cases for the rest of the day. His diligence was rewarded. He was promoted to shipping clerk and next to the accounting department, where he demonstrated an unusual capacity with figures.

Having attracted the attention of a cotton goods commission firm, Atkinson in 1851, at the age of 24, became the treasurer and financial agent (in effect manager) of the Ogden Mills. Success at that plant led to his appointment as treasurer and agent of other cotton mills; by 1860 these mills totaled six, with 70,000 spindles and 1,500 looms. He was sufficiently prosperous, in 1855, to marry Mary Caroline Heath, with whom he had nine children, and to support his parents and two unmarried sisters.

Although Atkinson was a self-made man, his family background explains his strong sense of noblesse oblige. He was public spirited and an outspoken reformer. An ardent believer in free labor, Atkinson hated slavery and was a radical abolitionist, who in 1855 raised funds to arm John Brown and his men, who were fighting for "the Free State Cause in Kansas," when that territory was wrecked by civil strife. With the outbreak of the Civil War, Atkinson, in *Cheap Cotton by Free Labor* (1861), argued that cotton could be grown cheaper with free labor—whether black, white, or both—than with slave labor. In 1862 he was the secretary and chair of the finance committee of the Educational Commission (later called the New England Freedmen's Society) to prepare recently liberated slaves in the Sea Islands, on the coast of South Carolina, for responsible and productive citizenship. As a manufacturer desperate for cotton, Atkinson lobbied Abraham Lincoln's administration and Congress, with limited success, against restrictions on trade in Confederate cotton.

For a decade following the Civil War Atkinson continued to manage cotton mills but also remained politically active and wrote prolifically on economic subjects, which he fortified with statistics. He helped found the *NATION* and was a frequent contributor to that influential journal. A highly successful businessman, he was a consistent 19th-century liberal reformer. Laissez-faire economics was for him an article of faith. He believed that maximum freedom and the fullest competition in the market would yield the greatest productivity and the widest prosperity. Even though RAILROADS were monopolistic at most points along their right of way and destructively competitive between

## 22 Atlanta Compromise

most major cities, he opposed the regulatory Interstate Commerce Act (1887). Favoring free trade, he opposed protective tariffs, believing they forced manufacturing into unnatural and less productive channels. He abhorred inflation because the fluctuating prices it produced increased speculation, and he opposed any currency, whether printed greenbacks or coined silver, not redeemed in gold. Desiring a lean, efficient government, Atkinson advocated CIVIL SERVICE REFORM and in 1884 joined the MUGWUMPS to support the Democratic candidate for the presidency, GROVER CLEVELAND.

Although Atkinson sympathized with the individual laborer, he was hostile to labor unions and opposed legislation to reduce the hours of labor. He argued that increased productivity in cotton mills had reduced the 13- or 14-hour day of 1842 to the 10-hour day of 1887 and would in time achieve the eight-hour day. Efficiency in the factory and frugality in the home would further improve the lot of labor. To reduce household expenses, Atkinson invented the insulated Aladdin oven that would cook cheaper cuts of meat at low temperatures over a kerosene lamp. A quart of kerosene, worth a few cents, could cook more effectively than 100 pounds of coal. Neither patenting nor profiting from his invention, he arranged to make it available at cost. With typical enthusiasm, he enlisted ELLEN HENRIETTA SWALLOW RICHARDS, chemist and nutritionist, and others to improve the diet of manual laborers and to promote his Aladdin oven. He collected their experiments and his own in *The Science of Nutrition* (1896). Practicing what he preached, Atkinson regularly served dinner guests meats prepared in his Aladdin oven. He converted reformers such as Jane Addams to his Aladdin ovens, which were used at Hull-House in Chicago, but poorly paid manual laborers resisted them since they were slow and, even at cost, expensive.

Despite his hostility to governmental regulation in an age of burgeoning monopoly, Atkinson campaigned for fire inspection of factories. As president-treasurer of the Boston Manufacturers' Mutual Fire Insurance Company (1878–1905), he insisted that insured factories be inspected and that those at risk be dropped. Since broken lanterns were a chief cause of fires, he successfully called for the development of a safety lantern. For new factories he advocated less flammable floors and roofs and insisted on effective automatic sprinklers. His concerns went beyond the factories his company insured; for example, he urged that fire hazards be eliminated from Boston's historic Faneuil Hall and that public schools be equipped with adequate fire escapes.

A consistent 19th-century liberal, Atkinson was an anti-imperialist. He opposed Cleveland's bellicose stand on the VENEZUELA BOUNDARY DISPUTE (1895) and WILLIAM MCKINLEY's decision to go to war in 1898 (SPANISH-AMERICAN WAR), while conceding that American intervention in CUBA was probably inevitable. The United States was committed to an independent Cuba but not to self-government for the Philippine Islands, which were acquired by the war. American expansionists, exhilarated by the notion of possessing overseas territories and subject peoples and dreams of commercial advantages, wished to annex those islands, while anti-imperialists wanted no colonies. When, in 1898, the ANTI-IMPERIALIST LEAGUE was founded in Atkinson's Boston office, he became one of its vice presidents. An anti-militarist, he lamented both the money wasted on a modern navy and the trouble it caused: If there had been no battleship *Maine*, it could not have been blown up in Havana Harbor, and if there had been no fleet wandering about the globe, the hapless Spanish fleet would still be rusting in Manila Bay and the Spanish flag flying over the Philippines. Atkinson would solve the dilemma of what to do with the Philippines by neutralizing them under a joint treaty with the chief naval powers of the world and providing an open door for trade with all nations. Unlike the imperialists, he believed that the Constitution followed the flag, and, if annexed, Filipinos should be U.S. citizens. When Filipinos resisted American rule in the FILIPINO INSURRECTION, Atkinson denounced the subjugation of those people as murder, arson, and robbery. He wrote three pamphlets, which he attempted to send to prominent persons in Manila and which, to his delight, the panicked McKinley administration removed from the mails in San Francisco. The publicity created a demand for the "seditious" pamphlets and about 135,000 of them were distributed. Atkinson fought a losing battle against IMPERIALISM, but it was consistent with his overall objective of bettering the lot of all humanity. He died on December 11, 1905, in Brookline.

### banking, investment

Financing the enormous industrial expansion of the late 19th century required the marketing of securities—stocks and bonds—which in turn led to the growth of investment banking. Earlier, state governments had financed canals and corporations and built RAILROADS by selling bonds directly to wealthy individuals or to private bankers who would either keep them or resell them to investors. During the Civil War the federal government went \$2.6 billion into debt. Most of it was in bonds, and more than half of those were sold far and wide for a commission by its aggressive agent, the private banking house of Cooke & Company. After the war Jay Cooke organized a syndicate that underwrote (took entire issues of) Pennsylvania Railroad (PRR) bonds, marketed them, and bought those it could not sell. Cooke later agreed to market \$100 million in Northern Pacific Railroad (NP) bonds, and when sales slowed he put Cooke & Company money into the enterprise, only to have his company fail in 1873 and precipitate a financial panic.

Other investment bankers more than took the place of Jay Cooke. Kuhn, Loeb & Company dated from 1867 but came into its own after 1875, when Jacob Schiff, who had extensive contacts with bankers and investors in Germany and elsewhere on the continent of Europe, married Therese Loeb and became a partner in the firm. The most famous of the private banking firms was J. P. Morgan & Company. JOHN PIERPONT MORGAN's father was an American private banker in London, which gave the son valuable contacts in Great Britain. Although most investment banking was handled by private banks, the First National Bank and the National City Bank, both of New York City, also marketed securities.

Immediately after the Civil War investment bankers were primarily concerned with marketing U.S. securities that managed the public debt, but they were soon heavily involved with railroads. Initially the bankers were detached from the management of the railroads whose bonds they

underwrote and sold to clients. But when railroad leaders mismanaged, or plunged their roads into bankruptcy, or forced reorganizations (by investment bankers) that scaled down the value of bonds, the reputation of investment bankers suffered, which made the sale of future bonds most difficult.

To protect their interests and the interests of their clients, Morgan, Schiff, and other bankers shared in management by serving on boards of directors. Morgan, for example, arranged a syndicate in the early 1880s to underwrite the sale of some of W. H. Vanderbilt's stock in the New York Central Railroad (NYC) and also became a member of its board of directors. Morgan promoted order and harmony and deplored cutthroat competition and instability. In the early 1880s, when the PRR and NYC began a costly war by building lines paralleling each other's main lines, Morgan in 1885 (on his yacht in the Hudson River) convinced managers of both roads to make peace, with the NYC abandoning the South Pennsylvania Railroad and Vanderbilt buying the West Shore line up the Hudson. Although not as spectacular as Morgan, Schiff financed, reorganized, and was on the board of directors of several leading railroads, including the Union Pacific (UP), which he reorganized in 1896. Schiff's support of Edward H. Harriman, who controlled the UP and the Southern Pacific, led to a spectacular battle with Morgan and his favorite railroad man JAMES J. HILL, who controlled the Great Northern (GN) and NP, over control of the Chicago Burlington & Quincy (CB&Q). The result was the compromise Northern Securities Company (a holding company), which gave the Harriman-Schiff forces a share in the management of the GN, NP, and CB&Q. The SUPREME COURT, however, declared the Northern Securities Company a monopoly and broke it up in 1904. The ties between Morgan and Hill and between Schiff and Harriman illustrate that railroads and industrial corporations were generally bound to one private banking house and did not move from one investment banker to another.

## 24 barbed wire

Investment bankers in the 1870s and 1880s generally dealt with government or railroad bonds, but in time they began to finance industrial development and combinations by underwriting stock issues. In the late 1870s the House of Morgan became interested in financing THOMAS A. EDISON's electric light, and in 1892 Morgan helped establish the General Electric Company. The most spectacular combinations occurred in the steel industry and were financed by Morgan. In 1898 the Federal Steel Company was capitalized at \$200 million, and in 1901 Morgan financed the creation of the first billion-dollar corporation, United States Steel.

**Further reading:** Vincent P. Carosso, *Investment Banking in America: A History* (Cambridge: Harvard University Press, 1970); Ron Chernow, *The House of Morgan* (New York: Simon & Schuster, 1990).

### barbed wire

Although the Homestead Act (1862) encouraged rapid westward settlement in the latter half of the 19th century, a major obstacle for farmers and ranchers was the high cost of fencing. In some cases, fencing costs equaled that of raising the livestock. A major technological advancement was the invention of barbed wire, which kept costs down for fledgling farmers and ranchers and helped to further populate the West.

Eastern farmers used timber and stones, which were readily available in forested areas, to construct fences. Prairie lands lacked these resources, however, which accounted for the high initial costs of establishing a farm. Although early western farmers used natural borders like streams to protect land from grazing cattle, increased settlement limited these options. Ranchers faced similar problems in preventing their stock from wandering astray. Indeed, ranchers and farmers feuded as to who should pay for fencing. The farmer needed to keep cattle from grazing on his land, while the rancher had to keep cattle from straying. Hedges were used, especially the osage orange plant, but these proved costly as well.

Michael Keely took out a patent for "thorny fence" in 1868, a precursor of barbed wire, but it was Joseph F. Glidden of De Kalb, Illinois, who understood its wider potential. After first seeing the invention at an Illinois country fair, Glidden patented a version in 1874 that featured two small pieces of sharpened wire twisted together in opposite directions around a main strand of wire that was made to be stretched between two fence posts. That same year Glidden patented a second version that became the most successful and popular form of barbed wire. This version featured one small piece of sharpened wire twisted around a main strand, which was then twisted

around a second main strand so that the barb did not slip or twist. Glidden and his partners started manufacturing this barbed wire in 1874, and in 1876 Glidden sold his share to the Washburn & Moen Manufacturing Company of Worcester, Massachusetts. Production of barbed wire grew exponentially during the 1870s, from 2.8 million pounds in 1876 to 80.5 million pounds by 1880. In time Washburn & Moen's virtual monopoly based on Glidden patents passed on to the American Steel and Wire Company, which in the 20th century was a part of the United States Steel Corporation.

The "steel thorn hedge" was cheaper than hedges or wooden fences, preserved valuable soil space by not shading crops, stayed secure under high winds, did not cause snow drifts, and was dog and wolf proof. Barbed wire was "just what the people of the treeless states have needed for years," as a contemporary advertisement noted.

The introduction of barbed wire also allowed for better control of cattle breeding and, in part, contributed to the boom in the agricultural sector in the late 19th century. It also led to the decline of open-range grazing and the long drives of cattle by cowboys to railheads. Another advantage of barbed wire was that it discouraged trespassing. However, overzealous farmers and ranchers sometimes blocked even post roads and water sources with barbed-wire fences, which led to fence-cutting threats, acts of violence by those shut out. To deal with this problem, Congress passed the Illegal Fencing Act of February 25, 1885, the enforcement of which President GROVER CLEVELAND especially urged.

### Barnum, Phineas T. (1810–1891) *show-business entrepreneur, circus innovator*

The son of Philo F. Barnum, a farmer and shopkeeper, and Irena Taylor, Phineas Taylor Barnum was born on July 5, 1810, in Bethel, Connecticut, where he attended public schools until his early teens. Barnum became familiar with the art of salesmanship from an early age by acting as an independent candy peddler. Upon the death of his father when Barnum was 15 years of age, he took a job clerking in a general store and gave early evidence of initiative and imagination by creating and promoting a lottery that offered as prizes discarded bottles he had purchased for almost nothing. He clerked briefly in Brooklyn, New York, and in 1828 he returned to Bethel to open his own fruit and candy store. The next year he married Charity Hallett, with whom he had four children.

Phineas T. Barnum (Library of Congress)

Barnum started an anticlerical and abolitionist weekly newspaper, *The Herald of Freedom and Gospel Witness*, in 1831 and kept it going until 1834. The following year he moved to New York City where, after a stint as a grocer and boardinghouse keeper, he made his entry into show business by purchasing the rights to exhibit Joice Heth, an elderly African American who claimed to be 161 years old and to have been the nurse of George Washington. Her stories of the infancy of the father of the country brought in a good sum, but she died a year later at the age of about 80, according to an autopsy. Subsequent exhibits and enterprises yielded Barnum little until 1841 when for a shoestring he bought Scudder's American Museum. There he showed everything from jugglers and tightrope walkers to bearded ladies and albinos to modern machinery and dioramas. His exhibits included the "Feejee Mermaid," which was obviously a monkey's head stitched to a fish's tail, and the "Great Model of Niagara Falls," which was only 18 inches tall, but the public flocked to his shows. No one complained, even when charged 25 cents to see a strange horse whose head was where its tail should be, but which turned out to be merely a horse backed into its stall. His most popular attractions were a 25-inch-tall midget he called General Tom Thumb, who captivated Europe in 1844, and the Swedish concert singer Jenny

Lind, whom he took on a profitable tour through America in 1850.

In 1871 Barnum opened a circus in Brooklyn, which he billed with characteristic swagger as The Greatest Show on Earth. Ten years later he joined English showman James Anthony Bailey, with whom he developed the first three-ring circus. Featuring aerialists, acrobats, clowns, and side-shows, as well as Jumbo, the largest elephant in captivity, the spectacular ensemble toured the nation successfully by rail. Barnum also served two terms in the Connecticut state legislature, from 1865 to 1869, and was mayor of Bridgeport, Connecticut, in 1875–76.

Barnum has been described as "pure brass without any gilding, yet in picturesque and capable effrontery the very embodiment of the age," and indeed he rejoiced in the self-bestowed title "Prince of Humbugs." He wrote several books, including an autobiography (1855), a history of American swindlers, and a book entitled *The Art of Money-Getting; or Hints and Helps on How to Make a Fortune* (1882), which accurately reflected the brash, cynical, and grandiose spirit of the period. It is estimated that his humbuggery brought him more than \$4 million, and when he died on April 7, 1891, his obituaries received more space than any except for a president of the United States.

—Dennis Wepman

## baseball

By 1870 baseball was considered America's "national game." Baseball had spread from the Northeast to the Midwest, and the National Association of Base Ball Clubs (NAB) had grown to 300 amateur teams. In 1869 the Cincinnati Reds fielded an all-salaried team under player-manager Harry Wright. While the Reds did not return a profit, their undefeated record that season boosted professional baseball and ignited a smoldering dispute between amateurs and professionals, with the amateurs walking out of the 1870 NAB annual meeting. The professionals retaliated in March 1871 by forming the National Association of Professional Base Ball Players (NA), thus destroying the amateur association and starting major-league baseball.

The player-controlled NA, the first professional major league, suffered serious problems and lasted only from 1871 through 1875. Most clubs lost money, as attendance averaged under 3,000 a game. Players jumped contracts, showed poor discipline, and dealt with gamblers. The NA also lacked a fixed playing schedule. Teams played each rival five times, with dates arranged by correspondence.

However, with each team paying an entry fee of only \$10, the outclassed teams frequently dropped out, thus disrupting the schedule. Conflicts arose over playing dates, ticket pricing, the division of gate receipts, and poor officiating by volunteer umpires. The NA lacked competitive balance, too, as evidenced by the Boston Red Stockings, who won four pennants in five years. Nevertheless, the NA popularized professional baseball. The Boston Red Stockings drew large crowds, with their attendance figures peaking at 70,000 in 1875. Boston manager Harry Wright's innovations in equipment procurement, training of players, and park administration set standards for future promoters. Expanded newspaper coverage and annual guides, edited by Henry Chadwick, enhanced fan interest.

In 1876 Chicago promoter William Hulbert organized a new league controlled by club owners. The National League of Professional Base Ball Clubs (NL), limited to eight well-financed teams from cities with populations of at least 75,000, was organized along east-west lines. Hulbert barred liquor sales, gamblers, and Sunday games. Teams were ordered to play each rival 10 times or face expulsion, and a fixed playing schedule was introduced in 1877. Players faced strict disciplinary codes and were bound to teams by rigid contracts. Albert Spalding supplied the league's balls and published its guidebook.

The NL struggled initially with low attendance and low player salaries. Philadelphia and New York were expelled after 1876 for failing to play their quota of games. In 1877 gamblers bribed four Louisville players to throw the NL pennant. The offending players were barred from the NL for life, and Milwaukee replaced the Louisville club. The NL also faced stiff competition from the rival International Association in 1877 and 1878, but the latter folded in 1879. To bind star players to a team, NL owners in 1879 inserted

reserve clauses (the right to rehire players for the following season) in their playing contracts, and in 1883 the NL owners solidified their control by extending the reserve clause to the contracts for all players.

Professional baseball prospered in the 1880s with improved NL attendance and profits. The rival American Association (AA), formed in 1882, featured 25-cent admission prices, optional liquor sales, and Sunday games. The upstart AA also raided the NL roster. The National Agreement of 1883 recognized the AA as a major league, but the AA had to agree to stop roster raids and accept the reserve clause. In 1884 the two major-league organizations crushed a new rival, the Union Association. Attendance at major-league games peaked at 2 million in 1889. Some clubs grossed \$100,000, and playing schedules increased to 140 games. The NL competed in postseason championships with the AA and dominated them after 1886, with the St. Louis Browns, operated by promoter Chris Von der Ahe, winning four consecutive pennants. Von der Ahe increased attendance with sideshows, liquor sales, and Sunday games.

During the 1880s, baseball evolved further by extending the pitching distance to 50 feet, permitting overhand pitching, adopting a single strike zone, and establishing the four-ball/three-strike rule. *The Sporting News* and *Sporting Life* spread the popularity of baseball by reporting the diamond exploits of stars King Kelly, Cap Anson, and Dan Brouthers. In 1887 Chicago sold Kelly to Boston for a record \$10,000.

Baseball, however, was troubled. Salaries averaged \$2,000, with stars earning at least \$5,000. Major- and minor-league clubs excluded black players by 1890. White major leaguers protested the reserve clause, harsh disciplinary rules, and a threatened salary cap. Disgruntled NL players in 1885 joined the Brotherhood of Professional Base Ball Players (BP), led by John M. Ward, a star player and lawyer. The BP in 1887 sought recognition as a collective-bargaining agency, but the owners continued the reserve clause and salary cap. Ward persuaded the BP to field a rival Players League (PL) in 1890 and promised players fair shares of power and profits. But the bitter, costly PL war of 1890 ended major-league baseball's brief golden age. The PL lured most star players and fielded eight well-stocked teams in seven NL cities. The PL outdrew the NL and AA, but financial losses savaged all three leagues. The NL forced the PL to sue for peace at the end of the season, allowing PL players to return to their former clubs without penalties. The AA battled with the NL over reassignment of players in 1891 and collapsed after the 1891 season. The NL emerged victorious, annexing four AA teams and buying out the others for \$130,000.

From 1892 to 1899, the single, 12-team NL dominated major league baseball. Owners became business magnates,

A print showing the game of baseball, ca. 1890 (*Library of Congress*)

but they could not match the old dual leagues in attendance and profits. The Boston, Baltimore, and Brooklyn teams outclassed the others. The NL sought unsuccessfully to boost attendance by staging postseason Temple Cup matches, increasing playing schedules to 154 games, and trying split-season formats. In 1899 the owners dropped the four weakest teams and restored an eight-team format in 1900. Owners limited player salaries to \$2,400 and adopted stricter disciplinary standards. The Baltimore Orioles and Cleveland Spiders boosted fan interest by using aggressive tactics like brawling, umpire-baiting, and bench-jockeying (taunting opponents from the bench). Defense improved with bigger gloves and better catcher's equipment. In 1893 the pitching distance was increased to 60 feet, six inches. Hitters broke batting and home-run marks until pitchers adjusted. By 1900 scientific baseball prevailed, featuring bunting, stealing, hit and run, and sacrificing. Concession stands and Sunday games were standard. The eight-team NL reigned as the only major league, but it was soon challenged by the formation of the American League.

**Bayard, Thomas Francis** (1828–1898) *lawyer, politician*

Senator, diplomat, and secretary of state, Thomas F. Bayard was born to prominence in Wilmington, Delaware, on October 29, 1828. The son, grandson, and nephew of senators, he attended a preparatory school in Flushing, New York. Then, although his father and grandfather were college graduates, he went to work in mercantile houses in New York and Philadelphia before, at about 20 years of age, studying law in Wilmington. Admitted to the bar in 1851, he prospered and in 1856 married Louise Lee, with whom he had nine children. Coming from a border slave state, Bayard, who was a Peace Democrat, opposed secession. In 1869 he succeeded his father in the U.S. Senate.

That Bayard's senatorial career, lasting until 1885, was not distinguished was not his fault. During those years the Republicans controlled the White House and the Senate except for two years, and Bayard led a largely unsuccessful opposition. He denounced Radical Reconstruction of the

South on grounds that it enhanced the power of the federal government in general and of the presidency in particular. He embraced the tenets of 19th-century liberals and denounced subsidies and protective tariffs, opposed inflation, and wanted the United States to return to the gold standard and, after it did in 1879, to remain there. He opposed militarism, worked for efficient government, and opposed the spoils system by supporting CIVIL SERVICE REFORM.

A major leader of a party often in disarray, Bayard was supported for the Democratic presidential nomination in 1876, 1880, and 1884. But he was too reserved to be "magnetic," and Delaware was a small one-party state. When GROVER CLEVELAND, a Democrat, took office in 1885, he appointed Bayard secretary of state. His first task was to stave off the rush of Democrats, eager to represent the United States abroad, after being out of power for 24 years. The 1883 Pendleton Civil Service Reform Act did not include the foreign service under the merit system of competitive examinations, leaving Cleveland and Bayard free to appoint whomever they wished. They did their best to appoint effective representatives, sending to Berlin former senator George Hunt Pendleton (sponsor of the Civil Service Act), who had studied at Heidelberg and was fluent in German, and to Paris Robert M. McLane who had gone to school there and had diplomatic experience in China and Mexico. Bayard and Cleveland actually made fewer changes in consular offices than Republican JAMES ABRAM GARFIELD had after succeeding fellow Republican RUTHERFORD B. HAYES.

Conscientious, courteous, and fair minded, Bayard was a natural diplomat, although success often evaded him while secretary of state. In the long run his ideas helped solve some long-standing difficulties. Several of the questions that occupied him involved Great Britain, because it handled the foreign affairs of its Canadian Dominion. The stickiest question was a perennial one over U.S. fishing rights in northeastern Canadian waters. Bayard was instrumental in the formation of a joint commission (1887–88) on which he and JAMES BURRILL ANGELL served. The compromise treaty it produced promised to solve an old problem and end bickering. Cleveland urged its ratification, but with 1888 being an election year, the Republican Senate rejected the treaty. Even so, the arrangements it proposed were adopted by both parties for two years.

A second problem with Canada, and therefore Britain, was the threatened annihilation of the great fur seal herd that used the Pribilof Islands in the Bering Sea as its breeding ground. The United States could protect the seals in its territorial waters, within three miles of the islands, but when the seals ventured out to sea, they were indiscriminately killed by Russian, Japanese, and especially Canadian sealers. In 1887, when American

authorities seized six Canadian vessels engaged in pelagic (oceanic) sealing, a federal judge upheld that action with the untenable declaration that the Bering Sea was a *mare clausum* (closed sea). To avert trouble with Britain and to save the seals, Bayard seized the opportunity to invite seven nations, including Britain, Japan, and Russia, to cooperate with the United States and end pelagic sealing. All responded positively, but Britain later reneged because of Canada's objections, and nothing more was done on Bayard's watch. His ideas, however, influenced subsequent negotiations. Pelagic sealing was somewhat reduced by arbitration in 1893 and limited more effectively by a 1911 convention, agreed upon by the United States, Britain, Japan, and Russia.

In addition, the Canadians rejected Bayard's efforts to fix precisely the boundary between Alaska and Canada, and his offer to help settle the disputed boundary between Venezuela and British Guiana (now Guyana). Bayard's calm reaction to German, British, and U.S. rivalry that came to a head in Samoa, in 1887, laid the groundwork for a future solution. But in that same year, recognizing the strategic value of HAWAII, the United States acquired the right to build a naval base at Pearl Harbor, and Bayard aggressively defended American interests there by rejecting a British proposal for a joint British, German, and U.S. protectorate for the Hawaiian Islands.

When Cleveland was reelected in 1892, he appointed Bayard ambassador to Great Britain (a new rank more appropriate to a world power than the old rank of "minister"). Bayard's main problem in that post was the VENEZUELA BOUNDARY DISPUTE that he had hoped to resolve when secretary of state. The belligerent note of July 1895 that Secretary of State Richard Olney (with Cleveland's approval) sent Britain, claiming that it was violating the Monroe Doctrine and urging that the border between British Guiana and Venezuela be arbitrated, was one that Bayard never would have written. Consequently, when he read the long (10,000-word) bombastic note to the British prime minister, he failed to emphasize Cleveland's impatience and the necessity of a prompt response. When the British refused arbitration four months later, Cleveland was apoplectic, a war scare followed, and amid the popular attacks on Britain were denunciations of Bayard for his anglophilia. With neither Britain nor the United States wanting war, the calmness Bayard personified triumphed, and the boundary was arbitrated.

At the height of the boundary controversy Bayard infuriated Republicans, in particular, by reaffirming his liberal faith in free trade. In a widely publicized speech he attacked protectionism as "class legislation," which created "inequality of fortune" and corrupted public life. In anger the House of Representatives censured him, proving his point that high-tariff devotees could sink to a low political

level. At the close of Cleveland's term Bayard retired. He died a year later, on September 28, 1898.

Bayard, 1885-1897* (New York: Fordham University Press, 1940).

### **Beach, Amy Marcy Cheney (Mrs. H. H. A. Beach)** (1867–1944) *composer*

Amy Marcy Beach was the first important American woman composer and was considered by some to be the finest composer of her generation. Born Amy Marcy Cheney into a prominent New England family in Henniker, New Hampshire, on September 5, 1867, she was the only child of Charles Abbott Cheney, a paper manufacturer and importer, and Clara Imogene Marcy, a singer and pianist. Amy showed exceptional musical ability as a child. She gave her first public piano recital at age seven, which included works of Handel, Beethoven, and Chopin, as well as her own compositions. The family moved to Chelsea, Massachusetts, in 1871 and settled in Boston in 1875, where Amy studied piano with Ernst Perabo and Karl Baermann, two of that city's leading piano teachers. Her subsequent musical training was somewhat unorthodox. She studied harmony for one year with Junius Hill, but following the advice of Wilhelm Gericke, director of the Boston Symphony Orchestra, she designed her own course of independent study, employing the treatises and compositions of the great masters as models. She made her professional debut at age 16 in Boston on October 24, 1883, playing Chopin's Rondo in E-flat and Moscheles's Concerto in G Minor with an orchestra led by Adolf Neuendorff. In 1885 she performed Chopin's F Minor Concerto with the Boston Symphony Orchestra under the direction of Gericke and Mendelssohn's Concerto no. 2 with the Theodore Thomas Orchestra. Her first published composition, a setting of Longfellow's *The Rainy Day*, was issued in 1883.

In December 1885 she married Henry Harris Aubrey Beach, a prominent Boston physician on the faculty of Harvard Medical School and an amateur musician. He was a widower 24 years her senior. After her marriage, in accordance with her husband's wishes, she concentrated on composition rather than performance, perhaps giving one or two recitals per year.

Her first large-scale composition, the Mass in E-flat, op. 5, was published in 1890 and was premiered by the Boston Handel and Haydn Society in 1892 with soloists, chorus, and orchestra under the direction of Carl Zerrahn. Other important works soon followed. *Eilende Wolken*, a concert aria, was premiered by the New York Symphony Society under Walter Damrosch later that year. The Boston Symphony Orchestra premiered the *Gaelic* Symphony in E minor, op. 32, in 1896 and the Piano Concerto in C-sharp Minor, op. 45, in 1900 with the composer at the piano. These were the first works by a woman composer performed by these organizations. Beach received a number of important commissions, including the *Festival Jubilate*, op. 17, commissioned for the May 1, 1893, dedication of the Women's Building of the WORLD'S COLUMBIAN EXPOSITION in Chicago. She was a prolific composer of songs, and some achieved great popularity, including *Ecstasy*, op. 19, no. 2, and *The Year's at the Spring*, op. 44, no. 1.

Dr. H. H. A. Beach died in 1910 and Amy's mother died the following year. In 1911 Amy sailed for Europe, where she gradually resumed her performing career. From 1912 to 1914 she toured Europe, performing her piano concerto and other works to great acclaim. In 1914 she returned to the United States in triumph, committed to 30 concerts for the 1914–15 season. She lived briefly in New York and San Francisco before settling in Hillsborough, New Hampshire, in 1916. After 1916 she toured extensively during the winter and spent the summers in Hillsborough, at her home on Cape Cod, and after 1921 as a fellow at the MacDowell colony, where most of her later works were completed. In 1942 a two-day festival of her works was organized in Washington, D.C., in honor of her 75th birthday. She died in New York on December 27, 1944, of a heart ailment.

Beach's early works are in the late romantic style, exhibiting the influence of Brahms, Wagner, and her Boston contemporaries. Her first (and perhaps most lasting) success was as a composer of art songs, and these demonstrate her gift for text setting and a fluency of melody that is characteristic of all her work. Yet it was her early large-scale works, such as the Mass and the *Gaelic* Symphony, that established her reputation, both in Europe and the United States, as a composer of the first order. She made frequent use of folk melodies, including American, Inuit, Scottish, Irish, and other European melodies, in her works. Her later compositions reflect the influence of Debussy and impressionism and are characterized by chromaticism, unresolved dissonance, and a leaner harmonic style.

Beach was a highly intelligent, disciplined woman. She spoke fluent French and German; was interested in philosophy, science, and religion; and made an important contribution to the field of ornithology by transcribing bird calls into musical notation. She served as a leader of the Music Teachers National Association and the Music Edu-

cators National conference and, in 1925, cofounded and served as first president of the Society of American Women Composers.

**Beecher, Henry Ward** (1813–1887) *minister, abolitionist, author*

In the late 19th century Henry Ward Beecher was the most famous clergyman in the United States. Born in Litchfield, Connecticut, on June 24, 1813, Beecher was the eighth son of Lyman Beecher (also a clergyman) and the brother of the author Harriet Beecher Stowe. He graduated from Amherst College in 1834, studied at Lane Theological

Henry Ward Beecher (Library of Congress)

### 30 Beecher-Tilton scandal

Seminary (Cincinnati, Ohio), where his father was president, entered the ministry in 1837, and that same year married Eunice Bullard White. After serving two churches in Indiana, he was called in 1847 to the new Plymouth Church of Brooklyn, New York, where he served until his death 40 years later.

Beecher's reputation was based on his melodramatic preaching, which he perfected early in his career. He later wrote that a "sermon succeeds by focusing on the single objective of effecting moral change in the hearer." In his emphasis on moral character over doctrine, Beecher was an early advocate of the liberal theology that would come to dominate the Protestant scene during the last quarter of the century. He also was an early practitioner of social preaching, early on insisting on his right to preach on secular issues such as abolition, suffrage, and labor.

In the first half of his ministry he was so popular that he preached to 2,500 on a regular basis. His dramatic, personal, intimate, spontaneous style helped, but it was his abolitionism that was key to his early popularity, leading some to call Plymouth Church the Grand Central Station of the Underground Railroad. He is perhaps most famous for "auctioning" a slave from his dais, to demonstrate the evils of the "peculiar institution," and it is reported that men threw money and women threw jewelry on stage to redeem the young black woman he presented.

After the Civil War his embrace of liberal theology made him a precursor of the SOCIAL GOSPEL. He advocated evolution as God's plan and accepted the new scholarship of the Bible. He opposed restrictions on IMMIGRATION, supported the right of labor to organize unions, favored CIVIL SERVICE REFORM, and joined the 1884 MUGWUMP defection from the Republican Party to support Democrat GROVER CLEVELAND for president.

In addition to his preaching, he published a weekly column in the *Independent*; edited the *Christian Union*; lectured widely, including the *Yale Lectures on Preaching* (3 vols., 1872–74); wrote a novel (*Norwood*, 1867); and was the biographer of Jesus Christ.

Because he had courted celebrity successfully, the charge in 1872 by VICTORIA WOODHULL in *Woodhull and Claflin's Weekly* that Beecher had seduced the wife of his journalistic protégé Theodore Tilton resulted in the spectacular BEECHER-TILTON SCANDAL. Tilton brought charges against Beecher first in a church trial (1874) and then for alienation of affection in a civil suit (1875). Though Beecher was not convicted, the taint of doubt never entirely left him. After his death on March 8, 1887, a monument celebrating his abolitionist work was erected in downtown Brooklyn.

#### **Beecher-Tilton scandal** (1872–1878)

Lacking only the frankness of modern times, the Beecher-Tilton scandal was in every other sense as lurid and fascinating as any modern sex scandal. And it might have been covered up had not a flamboyant, radical, feminist journalist been in need of a sensational story to recoup her own fortunes. In November 1872 VICTORIA WOODHULL described in *Woodhull and Claflin's Weekly* an adulterous affair between the celebrated preacher HENRY WARD BEECHER and his Plymouth Church parishioner Elizabeth Tilton, the wife of his protégé, the editor of the *Independent*, Theodore Tilton. The affair began in 1866; Elizabeth confessed it to her husband Tilton in July 1870; in December he wrote of it to Beecher and demanded he resign his pulpit; a mutual friend, Frank Moulton, urged both Tilton and Beecher to be silent; and to keep Tilton quiet, Moulton and Beecher bankrolled a publishing venture, *The Golden Age*, for him in 1871. But Tilton—who wrote a campaign biography of Woodhull (published in 1871) for her disastrous 1872 presidential campaign—told her, and Woodhull told the world.

When the affair became public a Plymouth Church committee, appointed by Beecher, investigated, found Beecher innocent, and in 1873 withdrew Tilton's membership for his comments in the press. Moreover, the connection between Tilton and Woodhull, who was notorious as an advocate of free love, enabled Beecher's supporters to attack Tilton's character. Thus goaded, Tilton filed a civil suit against Beecher for alienation of affection. The six-month trial in 1875 was a national sensation and ended on the equivocal note of a hung jury. A virtual acquittal, as far as Beecher was concerned, there was, nonetheless, another church trial in 1876, which also exonerated Beecher. But in 1878 Elizabeth Tilton confessed publicly that she had committed adultery, and Plymouth Church removed her membership. Her estranged husband, unable to make a living because of the scandal, moved to Paris in 1883. Beecher remained minister of Plymouth Church until his death in 1887, diminished but not destroyed.

**Bell, Alexander Graham** (1847–1922) *educator to the deaf, speech and hearing researcher, inventor*

Born in Edinburgh, Scotland, on March 3, 1847, the son of a noted teacher of speech, Alexander Graham Bell, inventor of the telephone, accompanied his parents when they immigrated to Ontario, Canada, in 1870. Ambitious to achieve and surpass his father's distinction, young Bell set up for himself as a teacher of speech to the deaf in Boston, the leading center of American science and technology. That environment reawakened Bell's earlier tentative notion of a system to send several telegraph messages at once over a single wire by means of intermittent currents of different frequencies. Experimenting by night while teaching by day, he circumvented certain snags by using continuous induced "undulatory" currents, which would reproduce both frequency and amplitude instead of frequency alone, as in intermittent currents. Frequency and amplitude are the essential elements of intelligible speech. In summer 1874 Bell recognized the theoretical possibility of thereby transmitting speech electrically, but he assumed it would be too weak to hear. On June 2, 1875, while working on his multiple telegraph, he plainly heard such a sound. After further thought and experiments, he designed and, on March 7, 1876, patented the telephone. The first intelligible sentence heard on it—"Mr. Watson, come here, I want to see you"—was transmitted on March 10, 1876. In June 1876 he successfully demonstrated it to the judges at the PHILADELPHIA CENTENNIAL EXPOSITION. Bell then worked to improve his telephone's performance and range, publicizing it in lecture tours.

In 1877 Bell's father-in-law Gardiner Hubbard organized the Bell Telephone Company and ran it with great success. Bell served as its technical adviser until the early '80s, then turned to other interests. However, he continued on occasion to do the Bell Telephone Company and its successors a vital service by testifying in convincing detail against a number of claimants to priority in conceiving the telephone. The best-known of these was an electrical inventor named Elisha Gray, who captured public attention by virtue of having filed a caveat (stating an untested idea) a few hours after Bell filed a patent application. Since Bell could document his conception as early as October 1874, and Gray only claimed it for his as of November 1875, the verdict for Bell was inevitable.

Bell had received stock in lieu of royalties and sold most of it at an early date. He therefore did not become immensely wealthy, although he was rich enough to remain active as an educator and advocate for the deaf. In later years he also devised the audiometer and studied the genetics of deafness. He invented a device for transmitting telephonic communication by means of a light beam, though it was not then commercially practical. He led a team that greatly improved the usefulness of Edison's pho-

Alexander Graham Bell (Library of Congress)

nograph and spent a score of years after 1891 working on heavier-than-air flight, although the Wright brothers succeeded first. Bell strove unsuccessfully for years to breed a strain of twin-bearing sheep. He was more successful in improving hydrofoil boats and produced one that held the world's speed record for 10 years. He and his father supported the struggling journal *Science* for nearly a decade in the 1880s and 1890s, and he lived to see it develop, in other hands, into the official organ of the American Association for the Advancement of Science and become one of the world's leading general-science journals. Bell also conceived, demonstrated, and patented a system of constructing large bridges and buildings quickly and cheaply from mass-produced tetrahedral frames. Thus he anticipated the space-frame architecture of Buckminster Fuller, but his system's immense usefulness was not grasped at the time. Bell was still conceiving new ideas at the time of his death from diabetes on August 2, 1922.

**Bellamy, Edward** (1850–1898) *writer, utopian socialist*

Edward Bellamy was born on March 28, 1850, in Chicopee Falls, Massachusetts. The son of a minister known for his charitable works, Bellamy developed compassion for the plight of the poor as he grew up in an industrial community. The intense religious training he received at home would be reflected by frequent quotes from the Bible in his later writing. His well-educated mother (she read Greek and Latin) insisted that her children read nonfiction, especially history. Inspired by such heroic military characters as Alexander the Great, Bellamy aspired to a career in the army, but he failed the physical examination for West Point at age 17.

Disappointed, he spent a year with an older brother, Frederick, at Union College pursuing an independent course of study. A two-year (1868–69) sojourn in Dresden, Germany, exposed him to German socialism. Upon his return to America he read law, passed the bar examination in 1871, and opened an office in Chicopee Falls. But his first case, the eviction of a widow, caused him to leave the legal profession. He then became a journalist and a writer, successfully submitting short stories to such magazines as *Scribner's*. The best known of his earlier novels, *The Duke of Stockbridge* (serialized in 1879), accurately described the socioeconomic inequities that sparked Shays's Rebellion.

Bellamy put forth his vision of an ideal society in two books, *Looking Backward* (1888), the best known, and *Equality* (1897). His just society achieved equality and abundance by nationalizing the economy to derive the efficiency of large-scale operations. Everyone, except the lazy, received an equal annual income, determined by dividing the gross national product by the population, issued as a credit in the only surviving bank. Differentiated prices for various items, however, permitted individual lifestyles. Universal public service was required. Everyone was organized into four armies—the industrial, the invalid, the women's (dropped in *Equality*), and the professional—which guaranteed the production of goods and services by those who were able. Nonconformists and the lazy were consigned to solitary confinement until they agreed to work.

Education by example rather than revolution secured this ideal world. The process began with community ownership of public service facilities. The federal government assumed ownership and operation of railroads, coal mines, and other key industries. Impressed with the resulting efficiencies and lower prices, the people demanded continued nationalization until all forms of private property disappeared. The resulting economic equality eradicated greed, corruption, and social inequities caused by competition for private property.

Bellamy's ideas received wide attention in a society dislocated in the 1890s by an economic depression. Soon Nationalist clubs sprang up across the country. At first they emphasized persuasive education through journals and lectures, but later they actively supported the POPULIST PARTY. The idea of a cooperative society also influenced Eugene Debs, a labor leader and perennial presidential candidate for the SOCIALIST PARTY.

**Bennett, James Gordon, Jr.** (1841–1918) *newspaper publisher*

For a decade after 1867, when he inherited the New York *Herald* from his father, James G. Bennett, Jr., was successful in managing it. During these years it was the nation's largest, most sensational, and prosperous newspaper. In the decline that followed, Bennett's flamboyant eccentricities undermined his strokes of journalistic brilliance.

To shield young Bennett from the "calumny" heaped upon his father and to escape it herself, Bennett's mother took him to Paris, when he was 11. Pampered and undisciplined, Bennett was privately tutored and attended the École Polytechnique. As a teenager, he divided his time between his mother in Paris and his father in New York, who gave him a desk alongside his own. Tall, handsome, and a fine horseman with the air of a cultivated Parisian boulevardier, Bennett quickly became a leader of New York's "fast set," among whom he achieved notoriety for his drunken exploits. Supporting his playboy lifestyle, his indulgent father gave him a 160-ton steam yacht, the *Henrietta*.

Bennett was 19 when the Civil War began, and with his father smoothing the way, he called on President Abraham Lincoln to volunteer the *Henrietta* and himself for the war effort. Since the elder Bennett had been willing to recognize Confederate independence, he needed to appear patriotic. Lincoln was equally urgent for the *Herald's* support of the war and saw that the yacht and the younger Bennett entered the Revenue Marine (forerunner of the U.S. Coast Guard). As a third lieutenant, Bennett cruised Long Island Sound with the *Henrietta* in 1861 and in March 1862 was part of the unopposed expedition that captured Fernandina, Florida. When the navy decommissioned the lightly armed *Henrietta* on April 29, Bennett returned to the *Herald* and resumed life as a playboy.

In spring 1866, when Frederic Hudson, the *Herald's* brilliant managing editor, retired, Bennett took his place,

and the following year his father gave him control of the paper. There was no immediate change. The excellent staff stayed, the paper's content remained sensational, and its erratic editorials were politically independent. During Reconstruction it sought a middle ground between Andrew Johnson, whom it generally supported, and Radical Republicans, whom the racist elder Bennett detested. The paper favored the Fourteenth Amendment but opposed black suffrage. When a War Democrat was not nominated in 1868, the *Herald* backed Ulysses S. Grant, whom it regarded as a moderate Republican. Despite its unpredictable opinions, the *Herald* was read for its unsurpassed news gathering from Washington to Wall Street, from the slums and ballrooms of New York to the battlefields and capitals abroad.

Although inexperienced, young Bennett made some brilliant decisions, and the *Herald* prospered. He was responsible, for example, for the journalistic coup of the 19th century: the whereabouts of the Scottish missionary-doctor-explorer, David Livingstone, who was searching for the sources of Africa's Nile River under the auspices of the Royal Geographical Society. Livingstone had not been heard from since 1866. In 1869 Bennett sent an intrepid *Herald* correspondent, Henry M. Stanley, to find Livingstone. After an arduous search Stanley caught up with him on November 10, 1871, at Ujiji on the shore of Lake Tanganyika (in present day Tanzania) and famously inquired, "Dr. Livingstone, I presume?" Bennett also supported the superb reporting of Aloysius MacGahan on the 1870 Franco-Prussian War, the 1871 Paris Commune, and the 1873 Russian campaign, annexing Khiva in the Central Asian Steppes. Hoping that heroic exploration would again yield exotic stories for the *Herald*, Bennett financed the ill-fated polar expedition of George Washington De Long on the *Jeanette* (1879–81). Unfortunately, pack ice crushed the vessel, and neither De Long nor most of the crew survived. Bennett made other astute business decisions; for instance, he joined in the laying of another transatlantic cable, which was profitable and enabled the *Herald* to maintain its leadership in foreign news.

Bennett's inflated ego and erratic nature countered his best moves. His ill-concealed, petty jealousy of both Stanley and MacGahan deprived the *Herald* of their outstanding ability. Even though Bennett was sober during working hours, he brooked no criticism and was cold and aloof. These traits were sometimes modified by a degree of sensibility and practicality, which reined in some of his impulses. When drunk after working hours, however, he was unpredictable, reckless, and outrageous. Since he was incredibly wealthy, tipped generously, and paid handsomely for the damage he caused, Bennett was usually forgiven.

Money, however, could not undo Bennett's behavior on New Year's Day 1877. Arriving drunk at a party at the home of his fiancée, he got drunker and urinated in the fireplace.

He did not apologize, the engagement was broken, and he brawled with the man who would have become his brother-in-law. When the man attempted to horsewhip him, Bennett challenged him to a duel at Slaughter's Gap on the Maryland-Delaware border, where they fired into the air. When New York society ostracized Bennett, he moved to Paris, and his paper's long decline began. He returned to New York only once or twice a year.

Had Bennett been a typical absentee owner, leaving the *Herald* in the hands of his competent staff, it could have maintained its preeminent status. But Bennett remained, in the words of an old *Herald* hand, "as changeable as a chameleon, domineering, hypersensitive and full of whims." He read the *Herald* and its competitors and cabled his displeasure if he thought a rival paper ran a superior story. He insisted on knowing the minutest details of the *Herald's* operation and relied more than ever on the network of spies he had earlier instituted at the paper. He promoted and demoted, rewarded and fired on the flimsy basis of these reports. Members of his staff dreaded a summons to Paris, knowing that Bennett would enjoy their discomfiture as he downgraded or discharged them. The criticism from Paris was hard to bear, and the suspicion and insecurity spawned by Bennett's espionage system devastated morale.

Bennett gradually became more European than American in outlook, which was inappropriate for the editor of a New York paper. Furthermore, the *Herald's* decline was hastened after 1883 by JOSEPH PULITZER's *World*. At first, it combined the *Herald's* sensationalism with public-spirited crusades, and later it combined the YELLOW JOURNALISM of William Randolph Hearst and the loftier aim of the *New York Times* under Adolph Ochs to give the public all the news that was "fit to print." Despite its decline, the *Herald* was still a profitable newspaper as the 20th century began. It continued to support Bennett's princely lifestyle in France, including costly residences; his yacht, *Lysistrata*, with a crew of 100; lavish entertainments; drunken bouts; and liaisons with beautiful women. Throughout his life Bennett drew upon the *Herald* for an estimated \$30 million.

In 1887 Bennett, who loved France, established the Paris *Herald* to foster friendship between France and the United States. With the outbreak of World War I in 1914, he and his newspapers wholeheartedly supported France and its allies. On September 10, 1914, a month after the war began and the day the German advance on Paris was halted, Bennett at the age of 73 married Maud Potter of Philadelphia, the widow of Baron George de Reuter of the news agency family. The previous day Bennett, who had been an anticlerical Roman Catholic, became an Episcopalian. The dissolute bachelor became a devoted husband to the attractive and sensible Maud. Four years later, on May 14, 1918, Bennett died in his villa at Beaulieu on the Riviera. The demise of the *Herald*, which had been losing

## 34 Bering Sea dispute

money, quickly followed. Bennett's executors sold his papers, and the *Herald* was ultimately absorbed by the *Tribune* to form the *New York Herald-Tribune*.

Seitz, *The James Gordon Bennetts Father and Son: Proprietors of the New York Herald* (Indianapolis, Ind.: Bobbs-Merrill, 1928).

### Bering Sea dispute (1892)

This diplomatic conflict between the United States and Great Britain originated in the 1880s when Canadian hunters began harvesting seals in the North Pacific, depleting the herds that nested on Pribilof Islands, a U.S. territory. Those islands, in the Bering Sea north of Alaska's Aleutian Islands, are the breeding grounds of 80 percent of the world's fur-bearing seals. In 1870 the U.S. government gave a monopoly on seal hunting to the Alaska Commercial Company. The agreement stipulated that the company would pay a rental fee and royalties for the harvested skins and was allowed to hunt only 100,000 male seals per year. The killing of females was strictly forbidden. For the next 10 years the company's profits soared and so did the seal population. As the price of sealskins increased, Canadian hunters began to engage in pelagic sealing (killing seals in the open sea) and to kill females. As a result the seal herd declined rapidly. In 1886 the United States, traditionally the defender of freedom of the seas, arrested several Canadian hunters in international waters.

Negotiations aimed at resolving the crisis stalled between Britain and the United States. The Canadians denied they were depleting the seal population and refused to accept any restrictions, while Britain maintained that the Bering Sea was not a "closed" American sea like Chesapeake Bay. To relieve tensions and revive negotiations, Secretary of State THOMAS FRANCIS BAYARD convinced President GROVER CLEVELAND to stop all arrests on the high seas. As a result, on November 22, 1887, a joint commission met in Washington to resolve the issue. Its work resulted in the Bayard-Chamberlain Treaty, signed on February 15, 1888, which the Senate then refused to ratify. Attempting to salvage something from the talks, both nations informally agreed to let American fishermen fish the coastal waters of Canada while Canadians could still engage in pelagic sealing.

This agreement, however, did not last. On March 2, 1889, Congress authorized—and BENJAMIN HARRISON, Cleveland's successor, soon resumed—the arrest of Canadian sealers in the Bering Sea. The British protested, dis-

patched four warships to the Bering Sea, and called for a joint commission to investigate the problem for two years, during which time pelagic sealing was to be prohibited. American seizures subsequently stopped. Despite war talk, diplomacy resulted in the Anglo-American arbitration treaty of February 29, 1892, which created an international (French, Swedish, and Italian) panel to resolve the sealing dispute.

In 1893 the panel denied that the Bering Sea was a closed sea and ruled that the United States owed Canada damages for the sealing vessels it had seized. Pelagic sealing was forbidden within 60 miles of the Pribilof Islands, and sealing on the high seas was prohibited from May 1 to July 31. Damages to Canadian shipping were assessed at \$425,000. When Congress refused to appropriate the money, a joint commission met and increased the damages to \$473,151.26. In June 1898, amid much grousing, Congress paid the amount.

### Bessemer process

For centuries STEEL had been laboriously made from pig iron by beating the hot iron on an anvil until the flying sparks had reduced its carbon content to 2 percent. In 1847 an American, William Kelly, and in 1855 an Englishman, Henry Bessemer—neither one experienced enough in the iron trade to have a closed mind—independently discovered that a blast of air forced through molten iron would burn off its carbon rapidly, and doing so generated enough heat to keep the iron molten. American manufacturers had little faith in the neophyte Kelly or his counterintuitive idea, but Bessemer had already made a fortune and a reputation from other inventions. Bessemer was able to design, construct, and demonstrate a converter in the form of a large, pear-shaped vessel into which a blast of air could be forced and which could then be tilted to pour out a dazzling, white-hot gusher of molten steel. The old process had required a worker to labor 15 days to produce 50 pounds of steel. The Bessemer process turned out five tons of steel in 30 minutes.

The Bessemer process ran into trouble when it was found to work only on low-phosphorus pig iron, the supply of which was limited in England. Swedish ore, however, was low in phosphorus, as were the rich ore deposits in the Marquette region of Michigan, made accessible by the Sault Ste. Marie Canal in 1855. Alexander Holley, an energetic and eloquent American journalist sent to England by

the Union government to report on British technology during the Civil War, saw the Bessemer converter in action and was converted himself. Upon his return he became its foremost prophet and promoter in the United States. He led in forming a pool of the Kelly and Bessemer patents in 1866. Holley also devised major improvements in the design of the converters. He designed six of the 11 Bessemer plants operating in the United States in 1880 and was consulted on three others. The remaining two were copied from one of the first six.

At Chicago in 1885 the world's first true SKY-SCRAPER—that is, one supported not by its walls but by a steel skeleton—used steel from ANDREW CARNEGIE's works for the last half of its framework. By then the age of steel had arrived: Steel was recognized as by far the most available and reliable metal for all kinds of structures and machines.

By the end of the century the Siemens-Martin open-hearth process was outstripping Bessemer's converters. The new process, developed in England and France, was more flexible in the kinds of scrap and ore that could be fed into it and was easier to control. By 1950, 90 percent of the steel produced in Great Britain and the United States was open hearth. After 1960 the newer all-oxygen process replaced both the Bessemer and open-hearth processes. Nevertheless the Bessemer process had secured its place in history by physically transmuting the instruments of industry, transportation, and construction.

## bicycling (1870–1900)

A bicycle craze gripped Gilded Age America. The earliest bicycles were far from safe. Americans originally rode the *vélocipède*, a crude French bicycle. The high two-wheel bike consisted of a wooden frame and tires covered by iron. The bike, called “the bone shaker,” could not be used on streets and caused frequent injuries. Young people saw the Harlan brothers use the bike in acrobatic acts and practiced secretly in barns and abandoned lofts. During the 1870s the English marketed a more popular bicycle in the United States. This bicycle was an iron frame with a huge wheel in front and a small one in back, both with solid rubber tires. Riders, perched about seven feet above the ground, risked permanent injuries from falls.

Bicycling became a popular pastime. Boston lawyer Charles Pratt, the father of American cycling, founded the Boston Bicycling Club and a periodical, *Bicycling World*.

On May 30, 1880, he summoned American bicyclists to Newport, Rhode Island, where they formed the League of American Wheelmen, which soon boasted 10,000 members. The number of cyclists grew from 20,000 in 1882 to over 100,000 by 1890, and clubs formed in most American towns. Bicycle parades, competitive drills, hill climbs, and races became popular. On July 4, 1884, so many riders jammed the Boston Common that the planned race was canceled. Thomas Stevens excited the nation with his bicycle trip around the world, leaving his San Francisco home in April 1883 and arriving in Boston that August. He went on to bike across Europe through the Middle East, India, and the Orient, returning to San Francisco in 1887 amid a wild municipal celebration.

Initially women found bicycle riding difficult because of the high front tire. Manufacturers in the 1880s offered a cheaper, light-frame “safety bicycle” with moderate-sized wheels of equal proportion. The frame was indented in the middle to accommodate fashionable long skirts. Women loved the safety bicycle, which was simple to operate. Their Michaux Club of Manhattan performed intricate bicycle drills to popular music.

The invention of the safety bicycle and a substantial drop in bicycle prices led to a cycling craze in the 1890s. Ten million bicycles were on the road, and countless enthusiasts joined bicycle clubs, read cycling magazines, and attended races. The classic 1890s tune, “Daisy Bell,” popularized the bicycle, too, ending with “But you'll look sweet upon the seat, / Of a bicycle built for two.”

Velodromes for racing sprang up in several eastern cities. Large crowds watched the racers careen around the board tracks at full tilt. Manufacturers paid the racers to promote the Imperial, Monarch, Columbia, and other bikes. Albert Shock excelled at endurance racing, pedaling 1,009 miles in 72 hours. The six-day race also flourished, with contestants completing as many laps as possible in six days. However, the New York State legislature declared these bike races inhumane after it learned that contestants circled the tracks without relief for 144 hours. Charles Murphy in June 1899 pedaled a paced mile in just 57.8 seconds on a wooden track between rails over a level stretch at Hempstead, New York.

Major Taylor, a black racer from Indianapolis, broke the racial barrier in professional bicycling. Taylor, the world's fastest bicyclist, won the national sprint championships in 1898, 1899, and 1900 and broke many world records. Taylor attracted large crowds but frequently faced racial slurs. White riders colluded in throwing him from his bicycle, and he was physically attacked by a white bicyclist after a race. Promoters prohibited him from racing in all southern and several northern tracks. The League of American Wheelmen originally allowed African Americans into membership, but when southern white affiliates began

Lithograph of the Springfield Bicycle Club's exhibition and tournament in Springfield, Massachusetts, 1883 (*Library of Congress*)

withdrawing in the early 1890s, the league restricted memberships to whites in 1894.

The bicycle craze was short lived. In the 20th century, the automobile provided a more convenient mode of getting out into the countryside, and it gradually replaced the bicycle in popularity.

### **Bierstadt, Albert** (1830–1902) *artist*

Perhaps the most renowned American landscape painter of the 19th century, Albert Bierstadt was born at Solingen, Germany, on January 7, 1830. When he was two years

old, he came to the United States with his parents. They settled in the prosperous whaling port of New Bedford, Massachusetts, where his father, a cooper, made casks for whale oil. After his public school education, Bierstadt was inspired to become an artist apparently while working for a picture framer. He became acquainted with local artists and acquired some training from them. By 1850 he had a studio, offered lessons in monochromatic (shades of one color) oil painting, and during the next few years exhibited and sold some of his work. He realized, however, that to excel as a painter he needed training abroad. In 1853 he went to Düsseldorf, Germany (only a few miles from his birthplace), where his mother's cousin, Johann Peter Hasenclever, was an established artist. Unfortunately, Hasenclever died before Bierstadt arrived, but he was befriended by two American art students, Worthington Whittredge and Emanuel Leutze, and studied under the landscape painter Andreas Achenbach. Bierstadt worked diligently; traveled in Germany, Switzerland, and Italy; and in 1857 returned to New Bedford with a trunk full of paintings and

sketches. His reputation grew when he exhibited his *Lake Lucerne* at the 1858 Annual of the American Academy of Design in New York. Critics noted the painting's merits and that it was the largest of the 636 paintings in the exhibition. Bierstadt loved to paint nature on a grand scale.

Eager to experience and communicate the grandeur of the American West, Bierstadt in 1859, accompanied by B. F. Frost, an artist friend, joined the annual expedition of Frederick West Lander, superintendent of the wagon road through South Pass (in present day Wyoming) to the west coast. Traveling with Lander from St. Joseph, Missouri, as far as South Pass, Bierstadt and Frost took numerous stereoscopic (three-dimensional) photographs. Reveling in the beauty of the Wind River Range, they lingered there for a few weeks, before heading back east. Reflecting on what he had seen and prepared to exploit it, Bierstadt declared: "Our own country has the best material for the artist in the world." Although the stereographs were disappointing, Bierstadt's sketches and studies proved invaluable.

Upon his return Bierstadt moved into the Tenth Street Studio Building in New York City. Utilizing his trip, he produced over the next few years large canvases celebrating the West and won praise. With the onset of the Civil War his paintings of spectacular Edens ready for settlement resonated in the patriotic breasts of Northerners. These pictures confirmed their faith in the Manifest Destiny of their nation, a faith that God ordained its westward expansion. Although with Leutze, Bierstadt briefly visited and sketched the Army of the Potomac near Washington, D.C., he was more interested in western scenery than in southern battlefields. Therefore, in 1862 he began planning a second western trip. Sensing a connection between Bierstadt's paintings and the nation's purpose and morale, Senator Charles Sumner predicted that "our country will gain in honor" from such a trip, which "will benefit us all."

In Spring 1863 Bierstadt headed west. He was accompanied by Fitz Hugh Ludlow, the popular author of the autobiographical *The Hasheesh Eater* (1857), who also wrote rave reviews of Bierstadt's paintings for the *New-York Evening Post*. Fond of Ludlow and of his wife, Rosalie, Bierstadt may also have thought the trip would cure Ludlow of his addiction. Bierstadt planned to sketch their journey, while Ludlow wrote it up. Following a more southerly route than on his previous trip, Bierstadt and Ludlow visited Denver and Colorado Springs, Salt Lake City, Yosemite, San Francisco, and Portland, Oregon, before arriving home for Christmas, having come by way of Panama. Bierstadt plunged into work, but Ludlow, still addicted to hashish and alcohol, was divorced by his wife.

Soon Bierstadt was admired as the equal of the great American landscape artist Frederic E. Church. At New York's 1864 Sanitary Fair (which raised money to help the U.S. Sanitary Commission care for sick and wounded sol-

diers), Bierstadt's *The Rocky Mountains* was exhibited opposite Church's *The Heart of the Andes*, in the same room as Leutze's *George Washington Crossing the Delaware*. Just as Leutze took liberties with how Washington crossed the Delaware, both Bierstadt and Church attempted to catch the uplifting spirit of the scenes they depicted rather than to present reproductions of them. Critical acclaim led to sales and prosperity. Bierstadt reputedly sold *The Rocky Mountains* for a record-breaking \$25,000.

Bierstadt enhanced his success by combining admirable personal characteristics with a knack for self-advertisement. Handsome and gentlemanly, kind and generous, he made friends among fellow artists (including Church) and prominent business, political, social, and intellectual leaders. He also increased his sales and exposure by scheduling exhibits of his paintings (charging a modest admission fee). In 1866 in Washington, D.C., Congressman RUTHERFORD B. HAYES, intensely patriotic and prone to exaggerate the virtues of anything western, viewed Bierstadt's *Storm in the Rocky Mountains, Mt. Rosalie* and exclaimed: "By gaslight the effect is incomprehensible, such brilliancy and light and shade." Hayes later, as president, entertained Bierstadt and his wife at the White House, and Bierstadt subsequently gave Lucy Hayes a painting.

By 1866 Bierstadt was at the pinnacle of his profession and a wealthy man. In November he married Rosalie Osborne Ludlow and planned a mansion for her, called Malkasten, at Irvington, New York, overlooking the Hudson River. From 1867 to 1869 he and his wife visited Europe, where he did much sketching, met the emperor of France (who awarded him the Legion of Honor), the queen of England and her prime minister, the pianist Franz Liszt, and the poet Robert Browning. After returning to New York for two years, the Bierstadts spent 1871 to 1873 in California. Bierstadt was in Yosemite with the photographer Eadweard Muybridge and in the Mt. Whitney vicinity with the geologist CLARENCE KING.

In the 1870s tastes in art began to change, and Bierstadt's popularity began to decline. Once admired as grand, his paintings began to be perceived as grandiose. Critics blamed his Düsseldorf training for the exaggerated effects, brilliant coloring, melodramatic scenes, and monumental size of his paintings. While many, including the newspaper publisher JOSEPH PULITZER, still championed Bierstadt's works, their sales slackened. Collectors preferred the non-theatrical Impressionist landscapes, with their nuanced treatment of light and color. Bierstadt's ego sustained a blow when the American selection committee for the 1889 Paris Exposition rejected *The Last of the Buffalo*.

Bierstadt also had personal problems. His wife, whom he loved dearly, was in delicate health and by 1878 required a great deal of attention. Although their income was reduced, she spent almost every winter at an expensive

hotel in Nassau, in the Bahamas, and they made several trips to Europe. In November 1882 their mansion Malkasten burned, destroying many paintings and Native American artifacts. It was a severe blow, but \$125,000 in insurance money helped support their extravagant lifestyle. When Rosalie died at Nassau in 1893, at the age of 52, Bierstadt was in debt. A year later he married Mary Hicks Stewart, a wealthy widow, but she did not bail him out. To satisfy his creditors he sold paintings at reduced prices. He continued to paint on a diminished scale and promoted inventions and improvements. These ranged from Henry Schulhof's pistol through his own designs for railway cars that could be expanded into dwellings (he patented at least six) to an acetylene generator invented by the scientist-philosopher CHARLES SANDERS PEIRCE. Bierstadt died in New York on February 18, 1902.

Ferber, *Albert Bierstadt: Art & Enterprise* (New York: Brooklyn Museum/Hudson Hills Press, 1990); Matthew Baigell, *Albert Bierstadt* (New York: Watson-Guption Publications, 1981); Gordon Hendricks, *Albert Bierstadt: Painter of the American West* (New York: Harrison House/Harry N. Abrams, 1988).

## bimetallism

For most of its existence, the United States recognized gold and silver as the basis for the dollar, adhering to what is known as bimetallism. Beginning in the 1870s, the government's monetary policy changed. The Coinage Act of 1873 demonetized silver by removing the silver dollar from circulation. This law made gold the only monetary standard for the nation. Increased silver production soon caused the price of silver to drop, and if it were coined as in the past, the money supply would be increased and have an inflationary effect. Western silver mining interests and debtor groups referred to the Coinage Act as the CRIME OF '73 and demanded the unlimited remonetization of silver (FREE SILVER MOVEMENT).

By the mid 1870s the demand for a return to bimetallism was gaining momentum, but CONGRESS made only a token response with passage of the BLAND-ALLISON ACT over President RUTHERFORD B. HAYES's veto in 1878. This law required the Treasury to purchase and coin not less than \$2 million or more than \$4 million of silver monthly. As a result silver dollars were again minted, but not in sufficient numbers to drive the United States from the monetary gold standard or to cause inflation. Bimetallists wanted more action from the government.

Congress followed up the Bland-Allison Act with the Sherman Silver Purchase Act of 1890. This law increased the amount of silver coinage in circulation by obligating

the government to purchase 4.5 million ounces of silver per month. Supporters of sound-money principles (the gold standard) feared that the Sherman Silver Purchase Act threatened the stability of the nation's money supply. In 1893 an economic depression set in, and President GROVER CLEVELAND, an advocate of sound-money principles, blamed the financial crisis on the Sherman Silver Purchase Act. Cleveland's view prevailed, and Congress repealed the Sherman Silver Purchase Act on November 1, 1893.

The repeal of the Sherman Silver Purchase Act set the stage for one of the most bitter and emotionally charged political contests in American history. Bimetallists such as William H. Harvey, the author of *Coin's Financial School* (1894), and Ignatius Donnelly led protests against the law's repeal. The PEOPLE'S PARTY (Populist Party) also joined the bimetallist movement. In 1896 the Democrats and the Populists nominated WILLIAM J. BRYAN for president on a platform calling for the "free" (unlimited) coinage of silver. Bryan, however, was overwhelmingly defeated by the Republican candidate, WILLIAM MCKINLEY, who supported the gold standard. Bryan's defeat was a major setback for bimetallism. In 1900 Congress enacted the Gold Standard Act, which recognized the gold dollar as the standard of value in the United States. Bimetallists were silenced until the Great Depression of the 1930s.

## Black Hills gold rush

The first of three SIOUX WARS (the War of the Bozeman Road [which by connecting the Oregon Trail with mining camps encroached on hunting grounds] from 1866 to 1868) ended with the U.S. Army pulling back from its posts along that road and with the Treaty of Fort Laramie (1868) creating the Great Sioux Reservation of western South Dakota, including the Black Hills. Several Sioux leaders, however, did not agree to that treaty. Prospectors suspected that there was gold in the Black Hills, and in 1874 a cavalry expedition under General George A. Custer—supposedly exploring a road route between Forts Abraham Lincoln (Bismarck) and Laramie—happened to have prospectors along who confirmed that there indeed was gold in those hills.

The news that summer that Custer's expedition had discovered gold brought white prospectors flooding into

the Black Hills, trespassing on Sioux (Lakota) land in search of the valuable metal despite Indian hostility. In the winter of 1875–76, there were 15,000 miners at the town of Custer in the heart of the Black Hills. The federal government tried to purchase or lease the Black Hills, but the land was sacred to the Sioux, and the effort failed. Unable to control the swarms of miners descending on the Black Hills, federal officials in December 1875 ordered the uncooperative Lakota to relocate to distant reservations in six weeks (an impossibility in winter) or come under attack. When they failed to comply with the order, the army in March 1876 attacked the Oglala Sioux and their allies the Northern Cheyenne. But in June the Lakota, led by CRAZY HORSE and SITTING BULL, struck back and defeated General George Crook on June 17, 1876, at the Battle of the Rosebud. Eight days later, on June 25, they annihilated Custer's command at the Battle of the Little Bighorn, often referred to as Custer's Last Stand. Despite this initial success, the Sioux resistance was soon broken. Crazy Horse surrendered and Sitting Bull fled to Canada.

The gold rush followed a classic pattern. Thousands rushed from Custer to new diggings at Deadwood Gulch in the summer of 1876. Both towns were plagued by violence, vice, and inflation. Initially, individual miners could do well, since the gold was located in "placer" gravel and easily extracted, but it was not long before large-scale mines appeared, and these required a considerable infusion of capital from financial centers. Nevertheless, many of the miners, attracted by their surroundings, remained in the area.

**Blackwell, Antoinette Brown** (1825–1921) *women's rights activist, ordained minister*

Antoinette Brown Blackwell was the first woman ordained a minister of a congregation in a regular Protestant denomination; she was also a prominent advocate for WOMEN'S RIGHTS. Antoinette Brown was born on May 20, 1825, in Henrietta, New York, where her father was a farmer and justice of the peace. She became a teacher at age 16 and entered Oberlin College at age 21. After graduating from the literary course (which did not award a bachelor's degree) in 1847, she applied to study theology. The faculty refused to allow her regular enrollment, so she became a resident graduate and was not given a degree. After completing her studies in 1850, she decided to hold off on her ordainment until it could take place in a church in which she held pastoral responsibilities.

For the next three years she worked as a lecturer, speaking on women's rights, antislavery, and temperance. In 1850 she attended and spoke at the first National Women's Rights Convention in Worcester, Massachusetts, of which LUCY STONE, a friend from Oberlin, was a primary organizer. In the summer of 1853 she gained national prominence at the World's Temperance Convention in New York when she strove for three hours to be heard over the shouts of angry male delegates. That same year she was ordained as a minister at the Congregational Church in South Butler, New York, but growing doubts about some Congregational tenets led her to resign a year later. She eventually became a Unitarian.

In 1855 she worked as a volunteer in the slums and prisons of New York and wrote about her experiences in a series of articles in the *New York Tribune*. These were collected in a book, *Shadows of Our Social System* (1856). In 1856 she married Samuel Blackwell, whose sister Elizabeth was the first female doctor and whose brother Henry married Lucy Stone. They lived primarily in northern New Jersey and had seven children, five of whom survived to adulthood.

Blackwell was more socially conservative than many of her suffragist colleagues. She was opposed to divorce, and when Elizabeth Cady Stanton and SUSAN B. ANTHONY advocated liberalized divorce laws at the National Women's Rights Convention in 1860, Blackwell led the opposition. In the late 1860s, when Anthony and Stanton's opposition to the Fourteenth and Fifteenth Amendments (on the grounds that women should have been given the vote along with African-American men) caused a split between them and Stone, Blackwell sided with Stone, becoming active in Stone's American Woman Suffrage Association. Unlike Stone, though, Blackwell remained on friendly terms with both Anthony and Stanton.

Blackwell had wide-ranging intellectual interests. She helped found the Association for the Advancement of Women in 1873. In 1878 she requested and received recognition from the American Unitarian Association as a minister. An effective orator, she spoke frequently at suffrage meetings on both the state and national levels, usually on specific resolutions. Between 1869 and 1915, Blackwell wrote six books on theological and scientific issues. These books, including *The Sexes throughout Nature* (1875) and *The Philosophy of Individuality* (1893), were devoted primarily to reconciling her views on theology and feminism with the theories of Darwin and Spencer. She also published a novel and a book of poems.

Blackwell was the only pioneer suffragist to live to see the ratification of the Nineteenth Amendment. In 1920, at age 95, she cast her first vote and died a year later on November 5.

**Blackwell, Elizabeth** (1821–1910) *physician, educator*

The first woman in modern times to earn a medical degree, Elizabeth Blackwell was born on February 3, 1821, near Bristol, England, and moved with her family to the United States in 1832. The Blackwells settled initially in New York, where her father, who had owned a sugar refinery in England, tried to develop the use of beet sugar. His efforts failed, and in 1838 they moved to Cincinnati, where her father died a few months later.

For the next four years Blackwell helped her mother and two sisters run a private school that supported the family. She then taught for a year in Henderson, Kentucky, where she developed a strong interest in pursuing a career in medicine. She continued to teach for two more years while pursuing private medical studies with doctors in Asheville, North Carolina, and Charleston, South Carolina.

In 1847 she began applying to medical schools. After she was turned down by every medical school in New York City and Philadelphia, she began applying to rural schools. She was finally accepted by Geneva College in central New York. The acceptance, she later learned, had been a fluke: The faculty referred her application to the students, confident that they would oppose her admission, and the students, thinking they were dealing with a hoax, voted to accept her.

Her early days in medical school were exceedingly rough. She was ostracized by the townspeople and was initially barred from classroom demonstrations. But her quiet persistence eventually won her a degree of acceptance. She graduated from Geneva on January 23, 1849, and continued her studies in Europe at La Maternité in Paris and St. Bartholomew's Hospital in London. In Paris, she lost sight in one eye after catching purulent ophthalmia from an infant she had treated. That ended her hopes of becoming a surgeon.

She returned to New York in 1851 and found herself barred from practicing in city hospitals and dispensaries. She had few patients, so she began a series of lectures on hygiene. (She had a particular interest in preventative medicine and public health.) Her message appealed to Quaker women, who attended her lectures, became patients, and eventually brought her to the attention of prominent Quaker men whose financial support helped her launch her more ambitious projects.

In 1853 she opened a dispensary in the tenement district. By the end of the first year, she had treated 200 women

there. In 1856 her sister Dr. Emily Blackwell joined her practice, and in 1857 she expanded her dispensary into a hospital, the New York Infirmary for Women and Children. During the Civil War, both she and her sister contributed to the Union effort by selecting and training nurses.

In 1868 Blackwell opened the Women's Medical College of the New York Infirmary. It was not the first medical school for women; by this point there were women's medical colleges in Boston and Philadelphia. But Blackwell, knowing that women doctors would be under greater scrutiny, set unusually high standards, including entrance examinations, longer-than-usual terms, plenty of clinical experience, and an examining board that was independent of the faculty.

Once the college was operating successfully, Blackwell left it in the hands of her sister, and in 1869 she returned to England for good. She set up a successful practice in London, accepting the chair of gynecology at the New Hospital and London School of Medicine for Women in 1875. A year later she began to suffer health problems and reluctantly retired. She remained active in her retirement, however, writing a number of books and articles on medical and behavioral issues and involving herself in reform and in the antivivisection movement. She died on May 31, 1910.

**Blaine, James Gillespie** (1830–1893) *politician*

James G. Blaine, perhaps the most outstanding Republican politician of the Gilded Age, was born on January 31, 1830, in West Brownsville, Pennsylvania, the son of Ephraim Lyon Blaine and Louise Gillespie. Blaine graduated from Washington and Jefferson College (1847) and taught school while studying law. In 1850 he married Harriet Stanwood, with whom he had six children. Blaine settled in Augusta, Maine, in 1854 and became the editor of the *Kennebec Journal*. In 1859 he became chairman of the Republican State Committee and began his first of three terms in the Maine legislature (1859–62), where he served as speaker (1861–62). In 1860 Blaine supported Abraham Lincoln for the Republican presidential nomination even though several members of Maine's REPUBLICAN PARTY favored William Seward.

In 1862 Blaine was elected to the U.S. House of Representatives and began a long and illustrious career in CONGRESS. He served in the House until 1876 (as its Speaker from 1869 to 1875) and as a senator from 1876 to 1881. Blaine also held the office of secretary of state under Presidents JAMES A. GARFIELD (1881) and BENJAMIN HARRISON (1889–92).

Rank-and-file Republicans, especially from the West, adored Blaine. He was a staunch party man but not an extremist. Although Blaine could “wave the bloody shirt” to attract voters, he was a moderate on Reconstruction. He advocated protective tariffs but also supported reciprocity agreements as a means of increasing American trade abroad. Blaine favored sound-money principles but did not lose the support of inflationary minded Republicans.

In 1876 Blaine emerged as a contender for the Republican presidential nomination. However, accusations that he had received \$64,000 from the Union Pacific Railroad (which as Speaker of the House he was in a position to help) for some nearly worthless Little Rock and Fort Smith Railroad bonds tarnished his reputation and cost him the nomination. Shortly thereafter he was elected by the Maine legislature to the U.S. Senate. At the deadlocked 1880 Republican National Convention, Blaine threw his support to James A. Garfield, who was nominated on the 36th ballot. After his election to the presidency, Garfield appointed Blaine secretary of state. In this office, Blaine pursued an aggressive FOREIGN POLICY designed to expand American foreign trade and influence abroad. He was particularly interested in U.S. relations with Latin America and sought to block European influence in that part of the world. Among his foreign policy initiatives, Blaine promoted Pan-Americanism and attempted to gain exclusive control for the United States over any proposed isthmian canal. He resigned as secretary of state following the assassination of President Garfield in 1881.

Despite questions about his character, Blaine remained the most popular Republican in the United States. At the 1884 Republican National Convention in Chicago, Blaine was nominated on the fourth ballot. He faced a difficult battle, since the DEMOCRATIC PARTY nominated reform-minded governor of New York GROVER CLEVELAND for the presidency. Blaine’s questionable reputation and opposition to CIVIL SERVICE REFORM led a small but influential group of reform-minded Republicans known as the MUGWUMPS to bolt from the party and support Cleveland. The ensuing campaign focused more on personal attacks than on the issues. The Republicans charged that Cleveland had fathered an illegitimate child, which he courageously acknowledged. The Democrats answered by accusing Blaine of aiding the railroads at public expense, a charge he unconvincingly denied. Although he was popular in New York, Blaine lost the state by 1,149 votes along with its 36 electoral votes, giving Cleveland a victory of 219 to 182 in the electoral college.

Following the election, Blaine semiretired from public life. In 1888 he refused the Republican Party’s presidential nomination. Instead, Blaine decided to support the nomination of Benjamin Harrison of Indiana. When Harrison defeated the incumbent Cleveland, he rewarded Blaine

by returning him to the State Department. Blaine served under Harrison in that capacity from 1889 to 1892 and focused his attention on protecting American commercial interests overseas. Again he was particularly concerned with U.S. commercial relations in the Western Hemisphere. He organized the first Pan-American Conference (1889–90); tried to obtain a naval base in Haiti; favored the annexation of HAWAII; attempted to negotiate a treaty with Nicaragua for an isthmian canal; favored the Berlin Conference whereby the United States, Great Britain, and Germany agreed to a three-power protectorate over SAMOA; tried to settle a dispute with Great Britain over seal hunting in the Bering Sea; secured a commercial reciprocity amendment to the MCKINLEY TARIFF of 1890; and was instrumental in negotiating reciprocity treaties with several Latin American nations. Thus, Blaine-Harrison policies initiated U.S. expansionism in Latin America, the Caribbean, and the Pacific.

Blaine, however, fell ill after March 1891 and finally resigned from the cabinet in June 1892. He received mild support for the Republican presidential nomination that year, which President Harrison easily won. Blaine died on January 27, 1893, in Washington, D.C.

### Bland-Allison Act (1878)

During the economic depression of the mid-1870s, several groups of farmers and western silver mine operators joined together in urging the government to adopt a monetary policy of BIMETALLISM. The Coinage Act of 1873 had taken the silver dollar out of circulation just before the market value of silver dropped dramatically, when its coinage would have been inflationary. Silver advocates called that act the CRIME OF ’73 and demanded that CONGRESS remonetize silver. The silver issue dominated the American political scene throughout the late 19th century.

The silver movement rapidly gained momentum after 1873. In the fall of 1877, the U.S. House of Representatives passed a bill calling for the “free” (unlimited) coinage of silver at the ratio of 16 parts of silver to one part of gold. Known as the Bland Bill, it was introduced by Representative Richard P. (“Silver Dick”) Bland of Missouri and, had it become law, it would have driven gold (one part of which

was worth more than 16 parts of silver) out of circulation. The bill, however, was amended and weakened in the Senate by WILLIAM BOYD ALLISON of Iowa. In February 1878 the amended Bland-Allison Act was passed over President RUTHERFORD B. HAYES's veto.

The Bland-Allison Act required that the government purchase at market price no less than \$2 million or no more than \$4 million worth of silver monthly and mint it into silver dollars. No administration from 1878 to 1890 ever purchased more than the minimum \$2 million of silver and gold was not driven out of circulation. Despite protests from silver advocates, the Bland-Allison Act remained unchanged until it was superseded by the Sherman Silver Purchase Act of 1890.

**Bowles, Samuel** (1826–1878) *editor, newspaper publisher*

As an editor and publisher Samuel Bowles built the Springfield *Republican*, into the best small city newspaper in America. Born in Springfield, Massachusetts, on February 9, 1826 (less than two years after his father, Samuel Bowles, had founded the *Republican*), young Bowles attended local schools and hoped to go to college. His frugal father, however, thought learning the printer's trade was more useful for a newspaperman than a college education. He was also aware that his son preferred reading the newspapers and magazines that flooded his office than ancient or modern classics. When, at 17, Bowles joined the *Republican*, he was too clumsy to set type but, adept at writing up local news, became a consummate newspaperman. In just a year Bowles insisted that the *Republican*, which was published weekly, become a daily. His father reluctantly agreed, if his son "take the main responsibility" of editing and publishing it, the first Massachusetts daily outside Boston.

The first issue of the daily appeared on March 27, 1844, with Bowles working long hours as its reporter and editor. Never robust, he soon had a physical breakdown and

in early 1845 regained his strength in balmy New Orleans (ironically the unhealthiest city in the United States).

Bowles never learned to be moderate either in his hours on the job or in his opinions in print. His *Republican* was sprightly with its mix of gossip, jokes, statistics, odd bits of information, and views with an aggressive edge. Bowles was charming when milking a source for news or with friends at the dinner table, but to his employees he was demanding, mercurial, and irascible. As both the nation and telegraph lines expanded in the late 1840s, his interests widened and national news began to compete with local interest stories in the *Republican*. In 1848 he plunged into national politics by supporting the Whig candidate for president, Zachary Taylor. During the campaign, he took a few days off to marry a schoolmate, Mary Sanford Dwight Schermerhorn. She came from a wealthy, socially prominent family, and her \$10,000 inheritance, a few years later, relieved Bowles of financial worries.

Bowles's strong reaction to breaking news often made him inconsistent. In 1848 he opposed the expansion of slavery, yet he supported the Compromise of 1850, which condoned the spread of slavery into the New Mexico Territory and counseled obedience to its rigorous Fugitive Slave Law. He attacked abolitionists, because they denounced the Constitution (which condoned slavery), and in 1851 he sympathized with a Springfield mob that threatened the English abolitionist George Thompson and deprived him of his constitutional right of free speech.

The 1854 Kansas-Nebraska Act, however, outraged and transformed Bowles. It repealed the 1820 Missouri Compromise and opened free soil to slavery. That same year he opposed the return to slavery of fugitive Anthony Burns, and as the Whig Party collapsed, he looked for a new political allegiance. Because it would "keep alive prejudices," he fought the anti-Irish, anti-Catholic Know-Nothing Party and in 1855 chaired the Boston meeting that launched the Republican Party in Massachusetts. He regarded as "fool-hardy" John Brown's attempt to spark a slave uprising by raiding the federal arsenal in Harpers Ferry, Virginia, but when Brown (a former Springfield resident, whom Bowles knew personally) was executed, Bowles declared him an innocent hero.

In 1860 Bowles enthusiastically supported Abraham Lincoln for president and scoffed at the notion that the South would secede from the Union if he were elected. When Lincoln was elected and the Deep South seceded, Bowles initially was inclined to let it go in peace. But by January 1861 the crisis over possession of Fort Sumter in the harbor of Charleston, South Carolina, led him to oppose "the destructive dogma that the Union can be broken up by one or more states." With the attack on Sumter, Bowles consistently supported the Lincoln administration's prosecution of the Civil War.

War or no war, Bowles had to travel periodically to recoup his strength. Through the narrow lens of a provincial New Englander, he was a critical observer. In Europe in 1862 he found London as dirty as New York and Paris cleaner but possessing devilish attributes, as well as heavenly ones.

At the end of the Civil War in 1865, Bowles went to California on the Overland Stage Line. In 32 letters to the *Republican*, which were published as *Across the Continent* (1865), he extolled the physical characteristics of the West but took a dim view of its inhabitants. He found the Rockies superior to the Alps and seeing Yosemite Valley was like confronting “God face-to-face,” but he condoned annihilating NATIVE AMERICANS, whom he regarded as cruel and barbaric obstacles to civilization. He was appalled by polygamy and its “degradation of women” by members of the MORMON CHURCH in Utah, troubled by the treatment of the industrious Chinese laborers in California, and more troubled by widespread prostitution in that predominantly male society. His most urgent plea was for the speedy completion of the transcontinental railroad “to marry the Nation of the Atlantic [with] an equal, if not greater, Nation of the Pacific.” A few years later Bowles visited Colorado, was ecstatic about its beauty, and published *The Switzerland of America: Colorado, Its Parks and Mountains* (1868). His travel books sold well, tapping, as did ALBERT BIERSTADT’s paintings, the exuberant American nationalistic fervor for the West.

Travel recouped Bowles’s strength, which he promptly dissipated by overworking on the *Republican*. He backed Radical Republican Reconstruction but, as a conciliatory gesture, urged that no former Confederate be disfranchised. Embracing universal suffrage, Bowles not only supported voting rights for former male slaves but also equal legal and political rights, including the vote for all women. In addition, as a member of Amherst’s board of trustees, he was a hundred years ahead of the times by advocating coeducation at that college.

Bowles’s love for women made his wife uneasy. She had gained weight and was busy raising seven children. He was particularly fond of her distant cousin Maria Whitney, who taught French and German at Smith College; Anna Dickinson, a spellbinding orator for WOMEN’S RIGHTS; and Susan Dickinson (no relation to Anna), the sister-in-law of EMILY DICKINSON, and all three loved him. Emily Dickinson also loved Bowles, but he responded neither to her affection nor to her poetry. Although she sent him many poems, he published only a half-dozen of them anonymously and compounded her anguish of rejected love by tinkering with her poems to achieve conventional rhyme and punctuation.

Bowles remained a staunch Republican until 1872. He had high standards for both politicians and business-

men and was disturbed by corruption in postwar America. While attacking municipal rings, bribed legislators and congressmen, and stock-manipulating railroadmen, he zeroed in on James Fisk, the notorious looter of the Erie Railroad, whom he called a swindler. Fisk countered with a \$50,000 libel suit. Although he did not press charges, Fisk did get a pliant judge to jail Bowles for a night in New York City’s Ludlow Street jail.

Although Bowles had enthusiastically supported Ulysses S. Grant for the presidency in 1868, he was soon disillusioned. He complained about his ineptitude, his poor appointments, his cronyism, and his scheme to annex SANTO DOMINGO (present-day Dominican Republic). By 1872 Bowles joined with CARL SCHURZ and other advocates of CIVIL SERVICE REFORM and tariff reform to create the LIBERAL REPUBLICAN PARTY. At its national convention Bowles with Murat Halstead of the Cincinnati *Commercial*, Horace White of the Chicago *Tribune*, and HENRY WATTERSON of the Louisville *Courier-Journal*, formed the “Quadrilateral” to secure the presidential nomination of Charles Francis Adams.

These newspapermen were frustrated when the convention named their fellow editor HORACE GREELEY. He favored neither civil service nor tariff reform and, since he had embraced numerous fads, was easily lampooned. Bowles voted for Greeley, who, despite support from the Democratic Party, lost the election to Grant. Bowles’s defection from the Republican Party lost the *Republican* both readers and advertisers.

Bowles’s health slowly deteriorated as he overworked to rebuild the *Republican*. He returned to the Republican Party and supported RUTHERFORD B. HAYES for president in 1876, but in 1877 his health worsened. In December 1877 he suffered a severe stroke, and six weeks later, on January 16, 1878, another stroke killed him.

**Boxer Rebellion** See VOLUME VII.

## boxing

Prior to innovations in the Gilded Age, boxing was an unregulated working-class sport dominated by Irish Americans and outlawed in most places. Participants fought with bare knuckles, relying on wrestling skills and brute strength. Rounds ended only when a boxer was struck down by an opponent’s fists or thrown to the turf with a wrestling

hold. Once down, a boxer had 30 seconds to recover before reaching the scratch line in the center of the ring. Bouts ended when a fighter was unable to reach the scratch line or conceded defeat.

The 1865 marquis of Queensberry rules brought more structure to the sport. The rules required the use of gloves, limited rounds to three minutes, provided for 10-second knockouts, and prohibited wrestling holds. The use of gloves appeared to curb brutality, thus making the sport more acceptable. The rules, however, did not win acceptance for nearly three decades in the United States, where New York City served as the boxing center. Charges of corruption hurt the sport's credibility, and even championship fights were farces.

Boxing entered a new era in the 1880s. Richard Kyle Fox, publisher and editor of the notoriously sensational *National Police Gazette*, pleaded for the legalization of boxing. Fox offered belts and other prizes for winners of boxing championships. He also campaigned to unseat heavyweight champion John L. Sullivan and to name champions in six different weight divisions. Key metropolitan saloons, especially Harry Hill's saloon on Bleecker Street in New York

John L. Sullivan, in a lithograph by Currier & Ives, ca. 1883  
(Library of Congress)

City, also promoted boxing. Boxing matches were held at Hill's saloon, where large bets were made and contracts were signed for larger matches elsewhere. Hill was the nation's best-known and most esteemed boxing stakeholder and referee.

Members of athletic clubs in New York, New Orleans, and San Francisco promoted boxing and tried to get politicians to modify state laws or city ordinances that banned prizefighting. As the sport became more fashionable, wealthier young men took sparring lessons. Middleweight champion Mike Donovan taught boxing at the New York Athletic Club, which scheduled the first national amateur boxing championships. The athletic clubs instituted reforms to improve the sport, encouraging a round limit for bouts and using Fox's weight-division system. They also began arranging indoor matches, charging admission, offering purses to the winners, and promoting the growing acceptance of the 1865 marquis of Queensberry rules, which made boxing faster-paced and more commercially appealing.

John L. Sullivan, nicknamed "the Boston strong boy," popularized boxing with his love of fighting and flamboyant lifestyle. Sullivan, born to Irish immigrants in Boston, Massachusetts, became the first truly national sports hero. He gave boxing exhibition matches in Boston theaters and music halls in the 1870s and knocked out Irishman Paddy Ryan in the ninth round for the heavyweight championship at Mississippi City, Mississippi, in February 1882. He launched nationwide tours, offering \$1,000 to anyone who lasted four rounds against him. Only one challenger performed the feat. From January 1884 to December 1886, Sullivan won 14 official fights. In March 1888, Sullivan—who suffered from alcoholism, overweight, and poor health—fought English champion Charley Mitchell to an embarrassing 39-round draw at Chantilly, France. In July 1889 he fought Jake Kilrain in the last bare-knuckle bout. Wrestler-trainer William Muldoon conditioned him for the fight. Sullivan battled Kilrain under the intense Richburg, Mississippi, sun for 75 rounds before Kilrain's seconds conceded. Public interest intensified in September 1892, when Sullivan defended his heavyweight title against James J. Corbett in New Orleans, Louisiana. Sullivan, who had returned to binge drinking and excessive eating and had passed his prime, fared poorly. Corbett knocked him out in the 21st round with a right across the jaw.

The Sullivan-Corbett fight marked a pivotal turning point in boxing history. Major newspapers, locked in circulation wars, began openly supporting boxing. The bout was arranged in the offices of JOSEPH PULITZER's *New York World* rather than in a saloon or Fox's offices. The heavyweight championship fight was the first to be held indoors under electric lights, to use gloves, to employ the marquis of Queensberry rules, and to be sponsored by an athletic

club. Corbett brought greater respectability to boxing, having attended college, worked as a bank clerk, and learned boxing at an elite athletic club. Sullivan remained a celebrity after losing to Corbett, performing in vaudeville acts and giving temperance lectures.

Nevertheless, the fight game remained a working-class, ethnic sport shrouded by shady characters and illegal almost everywhere. Boxing continued as a chaotic, disorderly sport, lacking a national regulatory body or a rational system for determining champions. Fraudulent tactics, such as “carrying” an opponent, “taking a dive,” and “fixing records,” prevailed into the 20th century.

**Brace, Charles Loring** (1826–1890) *social reformer*

Charles L. Brace, the Gilded Age’s outstanding champion of children in need, was born in Litchfield, Connecticut, on June 19, 1826, and grew up in Hartford. His father, the principal of the Female Seminary in Hartford, prepared him for college, and he entered Yale in 1842. Following graduation in 1846, Brace briefly taught school, then prepared for the ministry at Yale Divinity School and Union Theological Seminary in New York City. In 1849 he was ordained a Congregationalist minister. He was deeply religious, but his Christianity stressed actions not beliefs and was practical rather than theological. He stayed on in New York, spending a year (1849–50) ministering to the poor and degraded at the Five Points Mission and at the penitentiary, workhouse, and hospital on Blackwell’s Island (now Roosevelt Island). The appalling conditions and behavior he observed that year determined the course of his life.

On a “grand tour” abroad Brace combined relaxation with preparation for his life mission. In fall 1850 he embarked with FREDERICK LAW OLMSTED, who would become America’s leading landscape architect, and Olmsted’s brother John on a walking tour of England, Ireland, France, and the Rhineland. At Belfast, Ireland, they stayed at the home of the abolitionist Robert Neill. There, Brace was charmed by Neill’s daughter Letitia, whom he married in 1854. After the Olmsted brothers went home, Brace left for Hamburg and Berlin. In Germany, as he had in England, Brace investigated the innovations of social reformers, especially ways for young people to break the cycle of poverty, ignorance, immorality, and crime. He visited some

of the free “ragged schools” reformers had established to get destitute English and Irish children, who were in tatters, off city streets. (Letitia Neill taught in a ragged school and was as committed as Brace to rescuing young children.) Near Hamburg Brace visited a Rauhe Haus (Rough House), where vagrant children were placed in a school that approximated family life by organizing the boys and girls in groups of about 12, looked after by a theology student and a practical assistant. The goal was for children to experience a wholesome home life while learning useful trades and farming. In Germany Brace discovered The Friends in Need organization that placed vagrant city children in rural homes. Brace also visited Hungary, where he endured lice, fleas, and filth for a month when Austrian authorities jailed him as a revolutionary conspirator.

Brace returned to New York City in 1852 and plunged into social work and writing. In quick succession he wrote *Hungary in 1851* (1852), detailing his experience with the Austrian police, and *Home-Life in Germany* (1853), which idealized the warm informality of the German families in contrast with the stiff formality in American homes. Further service at the Five Points Mission convinced Brace that “to reform adults was well-nigh hopeless,” but his travels in England and Germany gave him hope that children could be salvaged. On January 9, 1853, Brace and several civic leaders founded the Children’s Aid Society (CAS), with Brace at its head. Serving as its executive secretary until his death in 1890, he was its leading spirit.

Brace was cut out for the job. He liked the street children, respected them for their independence (a trait he hoped to develop further), and believed that with care their potential for good could be realized. He realized that preaching morality was useless if the only option his listeners had to starvation was stealing or prostitution. To save the lives of “unhappy, deserted, and degraded boys and girls,” Brace emphasized that the best way to “cure . . . defects” in destitute children is an “entire change of circumstances.”

In keeping with Brace’s principles, the CAS established more than 20 industrial schools, a farm school, lodging houses (five for boys and one for girls), reading rooms, and a children’s summer home on Long Island. Brace also influenced the establishment and programs of Children’s Aid Societies in other cities. The housing reformer ALFRED TREDWAY WHITE in 1876 established in Brooklyn the Sea-Side Home on Coney Island, where slum children could receive medical treatment and nutritious food in a vacation atmosphere.

Brace’s most memorable and, in retrospect, controversial program was providing an “entire change of circumstances” by “placing out” poor city children in rural homes. From 1853 to the early 1930s the CAS sent approximately 105,000 children out of New York City on “orphan trains.” The transported children were usually teenagers, probably

a quarter of them had lost both parents, most of them were half-orphans, with their living parent unable or unwilling to support them, and perhaps 10 percent had run away or were abandoned by their parents. Most of these children were sent to rural areas in the Northeast and Midwest in groups of varying sizes, accompanied by a responsible CAS agent. No child was coerced by the CAS to go along, and although they were expected to work until they were 21 in the home or on the farm where they were placed, they were to be treated as family members. If things did not work out, the CAS found them a new home. In some instances things worked out very well; for example, future governors of Alaska and North Dakota rode the same orphan train to Indiana, and riders of other trains ultimately attended prestigious colleges. Analysis of fragmentary CAS records suggests that most orphan-train children grew up to become productive citizens. More than half of them remained with the families they were placed with until they were 21 (with one-fifth, for all practical purposes, being adopted). One-eighth of the children who rode orphan trains returned to New York (mostly to relatives), and a twentieth were jailed.

There was a downside to the CAS's placing-out system. Runaways who claimed to be orphans were taken at their word and shipped to remote points without verification of their status. The selection process at their destination was often humiliating. They were lined up for inspection, which sometimes involved probing questions, feeling muscles for strength, and even poking fingers into mouths. Brace realized that most of the children were taken into homes because their labor was needed, and he intended that doing a reasonable number of tasks would be a fair exchange for a home life. An unknown number of children were exploited, but Brace assumed that unless a specific complaint was made, the vast majority of placed-out children were taken into the wholesome bosom of caring families. Like all reformers, Brace exaggerated the evils he wished to eliminate and the healing effects of his panacea. He was prolific author, but his most famous book was undoubtedly *The Dangerous Classes of New York and Twenty Years' Work Among Them* (1872). To raise funds Brace and the CAS stressed the plight of their worst cases (with street kids embroidering their tales for the willing ears of CAS agents) and overstated the positive effects of the rural havens the CAS found for them.

Even if one discounts the horrendous tales of street children, their lives and the lives of children in orphan asylums were miserable compared to life with a farm family. In attempting to replace life on the streets or in institutions with life in the home, Brace anticipated the foster care system. Compared to the results of present-day hard-case adoptions, Brace's placing-out plan was reasonably successful. When he died on August 11, 1890, he was "the preeminent figure in American child welfare."

### **Bradwell, Myra Colby** (1831–1894) *publisher*

Editor and publisher of the most influential legal journal west of the Alleghenies, Myra Colby Bradwell was born on February 12, 1831, in Manchester, Vermont, grew up in western New York, then moved with her family to Illinois. In 1852 she married James Bolesworth Bradwell; they had four children, two of whom survived to adulthood. At the time of their marriage, her husband was reading for the law, and Bradwell began to study the subject as well. They first lived in Memphis, Tennessee, where they both taught school before moving to Chicago in 1854. Her husband was admitted to the Illinois bar and became a successful lawyer; she worked for his firm, helping with research and writing. In 1861 her husband was elected county judge of Cook County.

In 1868 Bradwell founded the *Chicago Legal News*, the first weekly law journal published in the Midwest. Through her husband's influence, she received a special charter exempting her from the Illinois law that prevented married women from entering contracts, so she was able to run both the business and the editorial sides of her publication. At the same time the Bradwells set up a printing, binding, and publishing firm, Chicago Legal News Company, that printed stationery, legal forms, and briefs as well as publications.

*Legal News* was a resounding success, printing legal news of the entire country and covering local legal matters in depth. In her editorial columns, Bradwell attacked lawyers and judges for incompetence, evaluated legislation and court opinions, and kept a steady watch on the standards of the legal profession. These editorial columns were highly influential among lawyers in the Midwest. She pushed hard for legal and political equality for women and was instrumental in getting Illinois laws passed giving married women the right to their own earnings (1869), making women eligible to hold school offices (1873), giving women equal guardianship of children (1873), and making women eligible to become notaries public (1875).

In the Chicago Fire of 1871, the Bradwells lost all their possessions—except for the subscription book of the *Legal News*, which their 13-year-old daughter alertly grabbed. Three days later, Bradwell managed to publish the *Legal News* on schedule. Back issues saved by downstate lawyers were used to establish legal facts for which all other

evidence had disappeared, and the Bradwells successfully rebuilt their businesses.

In the meantime, Bradwell was conducting an ongoing battle to be admitted to the Illinois bar. In 1869 she passed the examination but was denied admission solely on the basis of her sex. She appealed the case, lost in the state Supreme Court, and took it to the U.S. SUPREME COURT. In 1873, in *Bradwell v. Illinois*, the Supreme Court upheld the Illinois decision. In 1872, however, before that decision was handed down, the Illinois legislature, prodded by Bradwell's case, passed a bill prohibiting the state from enforcing occupational exclusion on the basis of sex.

Bradwell was also active in the woman suffrage movement. She and her husband were involved in the founding of the American Woman Suffrage Association, and for many years she was on the executive committee of the Illinois Woman Suffrage Association. She continued to manage the *Legal News*—and through it to exercise a strong influence over the legal profession—until her death on February 14, 1894.

## bridges

The construction of ever bolder bridges in the late 19th century demonstrated American engineering ingenuity and industrial capability while facilitating the commerce that sustained industrial expansion. A few large masonry bridges were built during this era, including the 23-arch-span “Great Stone Bridge” crossing the Mississippi at Minneapolis in 1883. Wooden covered bridges continued to be built in rural areas, but by and large the era demonstrates the triumph of the iron-and-steel bridge.

The Civil War era marked a change in bridge-building technology from the carpenter-craftsman to engineering mass prefabrication. The Fink through-truss bridge in 1858 was one of the first all-metal truss bridges in the United States, and by the 1870s a number of bridge companies were offering competing truss designs: The Wrought Iron Bridge Company of Canton, Ohio; the King Iron Bridge & Manufacturing Company of Cleveland; the Keystone Bridge Company of Pittsburgh (owned by ANDREW CARNEGIE) and the Phoenixville Bridge Works and Union Bridge Company, both of Pennsylvania; and the Berlin Iron Bridge Company of Connecticut were among the larger companies building railroad and highway bridges. They were

joined by a number of smaller firms offering their wares to local road commissioners. The companies would provide a bridge in “kit” form, with girders and components delivered in a package. The prevalence of the pin-connected “American Standard” bridge design, with tension and compression members joined by swivel pins, facilitated bridge erection by unskilled local labor. Unfortunately, they did not always get it right. In the 1870s and 1880s more than 200 iron bridges failed.

Early truss bridges used wrought iron for tension members and less expensive cast iron for compression beams. With production costs for wrought iron decreasing substantially in the 1870s, wrought iron could be used both for tension and compression members, and cast iron was gradually eliminated as a material in bridge construction. The BESSEMER PROCESS, first used practically in the United States in 1865, dramatically reduced the cost of steel production, and by the 1890s steel was generally replacing wrought iron. Because steel has superior strength compared with wrought iron, it was possible to design longer spans capable of carrying greater loads.

Steel gained an early advantage in the great river crossings, where its strength outweighed its greater cost. John Roebling (1806–69) had used wrought-iron wire in his early designs, including the surviving 1849 suspension-bridge canal aqueduct at Lackawaxen, Pennsylvania, and the 1,000-foot long Covington-Cincinnati suspension bridge in 1866. For his greatest design, the Brooklyn Bridge, he made a controversial recommendation of steel wire, but he died in 1869 from a bridge-related accident before the final decision was reached. His son, Washington Roebling (1837–1926), took over construction and made the decision in 1876 to use Bessemer steel wire for the great cables. Although suffering severely from caisson sickness (or the bends, a painful—even fatal—condition caused by gas bubbles in tissues after too rapid decompression from watertight chambers—caissons—used to dig the bridge's foundation in the East River), Roebling supervised construction from a distance until the bridge was finally opened in 1883.

Prior to the Brooklyn Bridge, steel had first been used extensively in the huge Eads Bridge spanning the Mississippi at St. Louis. JAMES BUCHANAN EADS designed it with three arch spans of 502, 520, and 502 feet, with the main arch members constructed of steel. Other great bridges, including the Poughkeepsie Bridge across the Hudson, were also of steel. The Poughkeepsie Bridge, with a series of truss spans carrying the track 212 feet above the water, was the longest steel bridge at 6,767 feet.

River navigation often requires a movable bridge. The standard design through much of this era was the swing truss. This design requires a central pivot, which narrows the available channel. In the 1890s, the swing truss was

Brooklyn Bridge, ca. 1896 (*Library of Congress*)

replaced by the rolling bascule design, first appearing in 1893 with the Van Buren Street bascule in Chicago.

By the end of the era, steel had replaced iron, and national corporations had replaced the proliferation of bridge companies that flourished after 1870. In 1900 Andrew Carnegie's Keystone Bridge Company and 25 others were consolidated into the American Bridge Company, soon to become part of the United States Steel Corporation.

### **Bright Eyes (Inshtatheamba; Susette La Flesche)**

(1854–1903) *Indian reform activist, lecturer, writer, artist*

A stirring advocate of Indian rights who helped stop the removal of NATIVE AMERICANS to Indian Territory, Bright Eyes, an Omaha, was born on her people's reservation in Nebraska. Her father, Chief Iron Eye (Inchtamaza or Joseph La Flesche), valued education for his children and sent Bright Eyes to the Presbyterian mission school on the reservation. Impressing her teachers, Bright Eyes was awarded a scholarship to Elizabeth Institute in New Jersey to complete her education. After her graduation she returned to her reservation and found that whites had all the teaching jobs. When she protested, she was offered a job in Indian Territory, which Two Crows, her

adopted uncle who was like a second father, would not allow her to accept because of the numerous deaths there from malaria. Two years later, after pointing out in a letter to Washington a neglected provision that stated that a qualified Indian was to be preferred for any Indian service position, she finally became an assistant teacher on her reservation. She got half the pay that white teachers received.

A group of Ponca chiefs, returning from a scouting trip to Indian Territory, stopped briefly with the Omaha, with whom they were closely related. Bright Eyes recognized a kindred spirit in Standing Bear's son, who was accompanying his father. Later, when the Omaha heard that, despite the scouts' negative report, the Ponca had been torn from their ancestral lands and were en route to Indian Territory, Bright Eyes, her father, and eight or 10 other Omaha rushed to catch up with them to offer comfort and bid them good-bye.

Two years later Standing Bear appeared, carrying the body of his son, Bright Eye's kindred spirit. Determined to fulfill his dying wish, to be buried with his ancestors, Standing Bear, his wife, nine men, and 21 women and children traveled 500 miles in 10 weeks in the dead of winter. While they were resting with the Omaha, U.S. troops seized them for having left Indian Territory and jailed them in Fort Omaha. Believing his orders were unjust, General George Crook, the commander in charge, urged Thomas Henry Tibbles, assistant editor of the *Omaha Herald*, to initiate a lawsuit to stay his orders. Tibbles, who took up the Ponca's cause, was also a reformer and a Methodist minister. After alerting big city papers of the Indians' arrest, he brought a writ of habeas corpus for their release. Bright Eyes

answered the letter Tibbles wrote to the Ponca for information and with her father and brother went to Omaha, where they gave more information for the trial before attending it. Presiding over *Standing Bear v. George Crook*, which would become one of the nation's important civil rights cases, was Judge Elmer S. Dundy. He determined that "an Indian is a person within the laws of the United States" and that the government had no right to remove him to Indian Territory.

Having won their first legal battle, Tibbles and the committee formed to help him planned for battles to come. They sent Bright Eyes and her father on a fact-finding visit to the Ponca in Indian Territory. Then Tibbles went east, raising money and securing friends for the fight ahead. When the Episcopal bishop in Omaha persuaded Bright Eyes to speak at an Indian reform rally in his church, she was eloquent and persuasive, despite her innate shyness. Tibbles and the committee asked 25-year-old Bright Eyes to be part of a second eastern tour featuring Standing Bear. On this trip she was accompanied by her 19-year-old brother Francis La Flesche.

Quickly becoming a crusade against the removal of Native Americans from their ancestral lands, their tour drew enormous crowds. They stopped in Chicago, Pittsburgh, Boston, New York City, Philadelphia, and Baltimore before reaching Washington, D.C. There they visited and spoke at the Hayes White House and testified before a Senate committee. Everyone wanted to hear Bright Eyes, so exceptions were made for her at a time when women were seldom allowed to speak in churches or in public gatherings. In Boston she was the first woman to speak in Faneuil Hall and the only woman present when she addressed an audience of 500 at the Board of Trade. Henry Wadsworth Longfellow thought of her as Minnehaha in his poem "Hiawatha" and declared he would give all he possessed to speak the English language with her "simplicity, fluency, and force." Others who became active Indian reformers after hearing her lecture included orator Wendell Phillips, poet Oliver Wendell Holmes, writer HELEN HUNT JACKSON, anthropologist Alice C. Fletcher, and Senator Henry L. Dawes, who fathered the DAWES SEVERALTY ACT.

In 1881 Bright Eyes married Tibbles, whose wife had died two years earlier. She found being a stepmother to his two daughters and living in two worlds difficult. That same year her book, *Ploughed Under, the Story of an Indian Chief*, came out, illuminating the problems Native Americans had living in a changing world. She also presented a paper to the Association for the Advancement of Women, called "The Position, Occupation and Culture of Indian Women." She illustrated Fannie Reed Giffen's *Oo-Mah-Ha Ta-Wa-Tha* and contributed numerous illustrated stories to magazines.

During most of the 1880s Bright Eyes and Tibbles continued their lectures, assisting in the passage of the 1887 Dawes Act, which gave individual American Indians allotments of reservation land and citizen rights. In 1886 they lectured for 10 months in England and Scotland, where to her chagrin she was called an "Indian Princess." Back in the United States they lived briefly in Washington, D.C.; five years in Lincoln, Nebraska; and also in Omaha. They built a small house on Bright Eyes's reservation allotment and did some farming. When Tibbles returned to newspaper work, Bright Eyes sometimes worked with him. They were covering the Ghost Dance in 1890 when it turned into the Battle of Wounded Knee (SIOUX WARS), with soldiers gunning down everyone in sight, including women and children. Tibbles managed to get out the first report of the battle, and Bright Eyes spent the night helping wounded women and children. Tibbles later became very active in the Populist Party and was named its vice presidential candidate in 1904.

Although Bright Eyes's father, Joseph, who died in 1888, was fond of Tibbles, many Omaha resented him when he took sides in their controversies. They seemed to forget that he and Bright Eyes had started the Indian reform movement that kept them and other Native Americans from being removed to Indian Territory. When she was back on the reservation, Bright Eyes thought that Tibbles should have more respect and could not keep from envying her siblings, who had more influence on the reservation than she and Tibbles. Her sister Susan, the first Native American woman to become a medical doctor, had a hospital on the reservation; Marguerete taught school there; and Rosalie, even with seven children, successfully ran the reservation's common grazing area. Her brother Francis, like Alice C. Fletcher, with whom he worked, became a noted anthropologist, tracing the roots and recording the customs of Omaha and other Indians.

Aware of the divided world Bright Eyes had inhabited, Tibbles sat in a nearby room while her family surrounded her on May 26, 1903, the night she died, in their house on the reservation. It was his turn the night before her funeral. He asked a close friend, John G. Neihardt, who would become the poet laureate of Nebraska, to sit up with him. That night Tibbles relived his years with Bright Eyes and said repeatedly to Neihardt, "Look at her. My Bright Eyes. Isn't she beautiful."

**Brooks, Phillips** (1835–1893) *Episcopal minister, bishop*

A superb preacher and an Episcopalian minister renowned for his sermons, Phillips Brooks was born in Boston, Massachusetts, on December 13, 1835. He excelled at Boston Latin School and Harvard College, from which he graduated in 1855. He then taught Latin at Boston Latin School, where he was a poor disciplinarian and was mortified when he was fired. From 1856 to 1859 he attended the Virginia Theological Seminary in Alexandria, from which he received his bachelor of divinity degree. There he read widely everything from the church fathers to literary classics. Theological fine points did not intrigue him, since he believed they were not the key to salvation. His emphasis was on faith and the grace of God and on how to communicate them in sermons.

Ordained in 1859, Brooks served in Philadelphia as rector of the Church of the Advent (1859–62) and then Holy Trinity (1862–69). He was an instant success. He liked people of all ages and conditions and was an excellent pastor, giving freely of his time to counsel and encourage those in need. His eloquent sermons, lasting only 30 minutes, were clear, precise, purposeful, and persuasive. They were not doctrinal but aimed at transforming individuals and inspiring them to emulate Jesus of Nazareth. Apart from abolition and temperance, he was not a social reformer. He disliked the controversy of ritualistic-liturgical-minded Anglo-Catholics versus broad-minded, evangelical Protestants, which was wracking the Episcopal Church. He did not wish to be labeled but privately admitted to being a “Broad Churchman.” His fear was that the “High Church” stress on symbols would impede the free flow of religion and that means would replace ends and prove suicidal for the church. Brooks’s approach was popular, and his churches grew.

Brooks soon attracted attention outside Philadelphia. In his well-publicized April 23, 1865, sermon on “The Life and Death of Lincoln,” he blamed the president’s murder on the sin of slavery. Three months later his short prayer at the Harvard Commemoration of its Civil War dead proved for CHARLES WILLIAM ELIOT, Harvard’s future president, to be “the most impressive utterance” of the day. Experiencing Christmas Eve in the Holy Land inspired Brooks, who often wrote poetry for his own pleasure, to write the familiar carol “O Little Town of Bethlehem,” published in 1868. Its plea to Christ to “Cast out our sin and enter in; Be born in us today” was a recurring theme in his sermons.

In October 1869 Brooks moved to Trinity Church in Boston. He was attracted to and challenged by his new position as Boston was his hometown, and the Episcopal Church had made little impact on New England or his alma mater Harvard. He met these challenges successfully, using the approaches he had honed in Philadelphia, and

his swelling congregation outgrew its building. It acquired a new site on Copley Square and by 1871 had selected HENRY HOBSON RICHARDSON to plan a new church. The need for a new building became acute when the great Boston fire of November 1872 destroyed Trinity Church. It was proof of Brooks’s power as a preacher and his care as a minister that his congregation expanded while occupying temporary quarters. The new Trinity Church, Richardson’s masterpiece, was consecrated on February 9, 1877. Brooks had played a major role in its successful completion by mediating between the church’s building committee and its architect. His cousin HENRY ADAMS centered his novel *Esther* (1884), a roman à clef, on the construction of Trinity Church; its rector, Stephen Hazard, is obviously Brooks; and Esther possibly was the young woman Brooks loved but never proposed to, perhaps because of his commitment to his church.

Brooks worked constantly. He published 10 volumes of sermons, counseled young ministers, and lectured on preaching at Yale and on Jesus in Philadelphia. Brooks traveled and read widely for relaxation and to broaden himself. He was familiar with the evidence compiled by the advocates of EVOLUTION, and rather than perceiving conflict between science and religion, he believed that the findings of scientists confirmed the Christian faith. Conservatives feared his heterodoxy, but religious scientists and liberal Christians trusted Brooks. In 1891 he was elected bishop of Massachusetts over the vehement opposition of conservative, High Church Anglo-Catholics. They objected to his Broad Church ideas and his participation with non-Episcopalians in marriages, ordinations, and other services. His tenure as bishop was short. He died on January 23, 1893, apparently from diphtheria.

**Brown, Olympia** (1835–1926) *women’s rights activist, minister*

Olympia Brown, a minister and a suffragist, was born in Prairie Ronde, Michigan, on January 5, 1835, and grew up on a farm. Her parents were Universalists and valued education sufficiently to send Brown to Mt. Holyoke Female Seminary in Massachusetts in 1854, but she felt stifled by its religious orthodoxy and left after one year. In 1856 she went to Antioch College in Ohio and graduated in 1860. While there, she heard ANTOINETTE BROWN BLACKWELL, a Congregational minister, preach and resolved to become a minister, but it was difficult to gain admission into a divinity school. After several rejections Brown was admitted in 1861 into the Canton School of Theology at St. Lawrence University in New York. Despite encounter-

ing prejudice, she graduated in June 1863, and later that month—after some controversy—was ordained by the Northern Universalist Association. While Blackwell had the distinction of being the first American woman minister ordained by a congregation (1853), Olympia Brown was the first to be ordained by a denomination. Small in stature but large in voice, she was an excellent speaker and preached in several Vermont churches before she was installed in 1864 as the minister of the Weymouth, Massachusetts, Universalist Church.

Brown had been an advocate of WOMEN'S RIGHTS since she was a child, and her parents received—and she read—the weekly edition of Horace Greeley's *New York Tribune*. In 1866, at the invitation of SUSAN B. ANTHONY, Brown attended a woman suffrage meeting in New York City; met Anthony, Elizabeth Cady Stanton, and LUCY STONE, and joined them as charter members of the American Equal Rights Association. The following year Brown spoke in New York State for woman suffrage and, at the behest of Stone and her husband Henry Blackwell, journeyed to Kansas, where from July to October she gave over 200 speeches in support of a suffrage amendment to its constitution. In 1868 Brown organized the meeting in Boston that established the New England Woman Suffrage Association. Differing in tactics, suffragists in 1869 split into two organizations: Anthony's more confrontational National Woman Suffrage Association (NWSA), which was incensed by the exclusion of women from the Fifteenth Amendment (extending the vote to black males, whom, she believed, in some cases, to be less qualified) and advocated immediate redress; and Stone's more patient American Woman Suffrage Association (AWSA), which was unwilling to destroy the prewar abolitionist-women's rights alliance and concentrated its efforts on state and local levels. Brown, although friendly with the AWSA, leaned toward the militant NWSA.

In 1870 Brown accepted a call to be minister of the Bridgeport, Connecticut, Universalist Church. There she met and married in 1873 John Henry Willis, a businessman, and following the example of Lucy Stone, she retained her maiden name. They had two children. Her family, which had been most supportive in her ministerial and reform endeavors, was concerned that marriage might harm her career, but Willis proved to be a helpful mate. In 1878 the family moved to Racine, Wisconsin. In 1887 she gave up her pastoral work and devoted her energies to the cause of woman suffrage.

In 1884 Brown became a vice president of the NWSA and, the same year, was elected president of the Wisconsin Woman Suffrage Association (WWSA), serving until 1912. Broadly interpreting the Wisconsin law as allowing women to vote in elections "pertaining to school matters," Brown in 1887—in the aggressive spirit of the NWSA—

tried to vote in a Racine election but was refused, took her case to court, lost, and ran up a considerable debt for the WWSA. After the NWSA and the AWSA united to form the National American Woman Suffrage Association (NAWSA) in 1890, Brown objected to its emphasis on state campaigns and in 1892 formed the Federal Suffrage Association, but its influence was minimal. In 1912 younger suffragists in Wisconsin, having formed the Political Equality League, eclipsed and then merged with the WWSA. Brown disapproved and resigned her presidency of the WWSA. The following year, however, she was elected to the advisory board of Alice Paul and Lucy Burns's Congressional Union, which later became the National Women's Party. In 1920, thanks to the Nineteenth Amendment for which she had fought so long, Brown finally voted in her first election. She died in Baltimore on October 23, 1926.

**Further reading:** Dana Greene, ed., *Suffrage and Religious Principle: Speeches and Writings of Olympia Brown* (Metuchen, N.J.: Scarecrow Press, 1983); Catherine F. Hitchings, *Universalist and Unitarian Women Ministers*, 2d ed. (Boston: Unitarian Universalist Historical Society, 1985).

**Bryan, William Jennings** (1860–1925) *politician, orator*

William Jennings Bryan, Democratic presidential candidate and secretary of state, was born on March 19, 1860, in Salem, Illinois, the son of Silas Bryan and Mariah Elizabeth Jennings. An 1881 graduate of Illinois College in Jacksonville, Illinois, Bryan also spent two years at Union College of Law in Chicago, graduating in 1883. From 1883 to 1887 he practiced law in Jacksonville. Bryan married Mary Baird in 1884, with whom he had three children.

In 1887 Bryan moved to Nebraska in search of new career opportunities. He rose rapidly in the local DEMOCRATIC PARTY ranks and in 1890 was nominated for the U.S. House of Representatives in a normally Republican district that included Lincoln and Omaha. Although Bryan's main focus throughout the campaign was the TARIFF ISSUE, he also took advantage of Nebraska's newly created PEOPLE'S PARTY (Populist Party) by endorsing some of its proposals, such as the direct election of U.S. senators and BIMETALLISM, and won the election by 6,713 votes.

In Congress, Bryan gained national attention by advocating a federal income tax and strongly opposing repeal of the 1890 Sherman Silver Purchase Act. His relentless criticism of President GROVER CLEVELAND over his demand for its repeal pushed Bryan to the forefront of the FREE SILVER MOVEMENT. Free Silver advocates sought to achieve an inflated currency through the unlimited coinage of silver. It was a hotly contested issue in late-19th-century America, and Bryan rode it to political stardom.

William Jennings Bryan (Library of Congress)

When the 1896 Democratic National Convention met in Chicago, Free Silver advocates were firmly in control. Bryan attended the convention as a member of the Nebraska delegation. He served on the platform committee and was chosen by its members to address the convention on the Free Silver issue. Bryan captivated his audience by stating: "Having behind us the producing masses of this nation and the world, supported by the commercial interests, the laboring interests, and the toilers everywhere, we will answer their demand for a gold standard by saying to them: You shall not press down upon the brow of labor this crown of thorns, you shall not crucify mankind upon a cross of gold." The "cross of gold" speech won Bryan the Democratic presidential nomination on the fifth ballot. In the 1896 presidential election, Bryan faced the Republican candidate WILLIAM MCKINLEY of Ohio. McKinley ran on a platform that endorsed the gold standard and a high protective tariff. Bryan's nomination and the Democratic Party's adoption of Free Silver created a dilemma for the Populists. If they supported Bryan, they could possibly lose their identity as a party, but if they nominated their own candidate, they would split the protest vote and elect McKinley. The Populists decided to

support Bryan but nominated one of their own, Thomas E. Watson, for vice president. McKinley defeated Bryan by 7,104,779 to 6,502,925 popular votes and collected 271 electoral votes to Bryan's 176. Nearly 80 percent of the eligible electorate voted in one of the highest turnouts in American history.

During the SPANISH-AMERICAN WAR (1898), the governor of Nebraska named Bryan colonel of the Third Nebraska Volunteer Regiment. However, the regiment did not serve outside the United States. In December 1898 the Treaty of Paris, which formally ended the war, required Spain to cede the Philippine Islands to the United States in return for \$20 million. Although a staunch anti-imperialist, Bryan surprisingly urged the Senate to ratify the treaty. Bryan had opposed annexation but defended his position by arguing that to reject the treaty would leave the United States technically still at war with Spain and the fate of the Philippines undetermined. He argued that it was better to accept the islands and then grant them independence. His opponents charged that Bryan supported ratification only because he hoped to make the issue the subject of a national referendum in the presidential election of 1900, when he expected to be the Democratic candidate once again. The Senate ratified the Treaty of Paris on February 6, 1899, and Bryan was renominated in 1900.

The Republicans also renominated President McKinley in 1900. The Republicans focused on the nation's prosperity, arguing that it had resulted from the gold standard and the protectionist Dingley Tariff of 1897. Bryan campaigned on a platform that condemned IMPERIALISM and again called for Free Silver. President McKinley won 7.2 million votes to Bryan's 6.4 million and captured 292 electoral votes to Bryan's 155. The election demonstrated that Bryan was less popular in 1900 than he was in 1896, and it failed to revive the silver issue or to condemn imperialism.

Nevertheless, Bryan remained a progressive force in the Democratic Party. He favored a strong national government to regulate big business, advocated woman suffrage, and supported prohibition. Although strongly supported by organized labor, Bryan in 1908 was again defeated for the presidency, but in 1913 he became Woodrow Wilson's secretary of state. After trying to pursue an even-handed policy of neutrality during World War I, he resigned in 1915, since Wilson tilted in favor of the Allies. Bryan did, however, favor American entry into the League of Nations. He was also a fundamentalist Christian opponent of EVOLUTION and, just prior to his death on July 26, 1925, helped convict John Scopes, who had defied Tennessee law by teaching evolution.

**Bryce, James, first viscount Bryce** (1838–1922)  
*scholar, British ambassador*

James Bryce, a keen observer of American democracy in the Gilded Age, was born in Belfast, Ireland, on May 10, 1838, the eldest of five children of James Bryce, a Scots Presbyterian schoolmaster, and Margaret Young. He was educated at the University of Glasgow and at Oxford, where in 1863 he won the Arnold Historical Essay Prize for “The Holy Roman Empire,” which he enlarged and published in book form the following year. Bryce was admitted to the bar in 1867 and served as Regis professor of civil law at Oxford from 1870 to 1893, as a Liberal member of the House of Commons from 1880 to 1907, and as the British ambassador to the United States from 1907 to 1913. Before taking that post he had made four trips to America between 1870 and 1890. On his visits Bryce discussed several topics with many of the leading political, educational, and literary figures of America. Perhaps the most influential of these sources was EDWIN L. GODKIN, editor of the *NATION*. Informed by travels and conversations, Bryce wrote *The American Commonwealth* (1888), which ranks with Alexis de Tocqueville’s *Democracy in America* (1835) for its perceptive analysis of American political institutions.

In *The American Commonwealth*, Bryce gave his readers a keen yet sympathetic insight into American life, expressing his admiration for the American people and their government. He believed America’s uniqueness stemmed from the soundness of its founding principles. Bryce was especially intrigued by the American ideal of equality in economic and educational opportunities and by the formation of political decisions that respected both majority rule and minority rights. He discussed the roles played by political parties and public opinion in American politics. Although he found much to admire in America, Bryce criticized the rapid growth of cities and their lack of individuality. He was also critical of the American political system’s inability to formulate new approaches to solve the nation’s growing social problems; the lack of a legal basis for American political parties; the role of urban political machines; the American drive toward material success; the concentration of power in the central government; the American penchant for exploiting the nation’s natural resources; and the relative weakness of state and local governments.

Bryce retired as ambassador to the United States in April 1913. Elevated to the British peerage as a viscount in 1914, Bryce later that year was appointed to the International Court of Justice at The Hague. During the First

World War, Bryce presided over a British commission investigating alleged German atrocities in Belgium and France. After the war, Bryce advocated the creation of the League of Nations. He died in Sidmouth, Devon, England, on January 22, 1922.

## buffalo, extermination of

Although the buffalo stocks are safe now, the species was once considered all but extinct. The extermination of the buffalo occurred throughout the course of the 19th century, culminating in 10 to 15 years of intense slaughter when the animal was nearly hunted to extinction.

Buffalo, or, properly, the American bison (*buffalo* is the accurate name of African and Asian varieties of the species), were plentiful in North America due to several centuries of climatic change that increased the buffalo’s numbers and expanded the area that it inhabited. Historians estimate that there were once 25 million of the animals in North America. For the Plains Indians, especially the Sioux, who utilized all parts of the animal, the buffalo was sacred. Native Americans eventually traded the animal’s robe, which consisted of a buffalo’s hair attached to its hide, with early European settlers.

By the 1840s drought, overgrazing, and complications from the introduction of horses and cattle (including imported diseases) to the region began threatening native buffalo herds. A particularly devastating drought in 1867 killed many buffalo. Horses not only made hunting the animal easier but also competed with buffalo for grazing lands. The removal to the West during the 1840s of Indians who hunted the animal in the western fringes of its habitat also contributed slightly to diminished numbers there.

By 1870 there were still several million buffalo in North America. The animal became particularly threatened after new railroad service in the plains facilitated moving the meat to far-off markets and built demand for the animal. Further encroachment by white settlers continued to transform western lands into cattle farms, which diminished grazing areas for the buffalo. White settlers also hunted the animal for its meat, tongue, and robe, but since the robe was the main prize, hunters were forced to wait until winter when the robes were especially thick, which helped to replenish stocks. In 1870, however, tanners discovered that buffalo hides were useful, and hunters began shooting the animal for its hide all year, which also contributed to the animal’s quick disappearance. By 1872 more than 500,000 had been killed for only their hides.

By 1880 all the wild buffalo in the southern plains had been killed. The SIOUX WARS (1876–77) delayed extinction in the northern plains, but by 1879 the species was extinct in Wyoming and eastern Nebraska. The last buffalo were killed in Montana and the Dakotas in 1883.

The extermination of the buffalo destroyed the culture and economy of the Plains Indians, forcing them to settle and to turn to agriculture. Recognizing this fact, the U.S. Army encouraged the slaughter of buffalo, whose near extinction was a significant factor in subduing the Plains Indians.

### Buffalo Soldiers

After Union soldiers defeated the Confederate army in the Civil War (1861–65), troops were moved to the West to subdue hostile Native American tribes and clear the way for further western settlement. Most of the more than 2 million Union soldiers during the Civil War were volunteers, and of these, 178,000 were African-American. Faced with a severely understaffed regular army of just 16,000 soldiers and nearly 200,000 NATIVE AMERICANS spread out over an area of 1 million square miles, the U.S. Army continued to enlist African Americans who became known as Buffalo Soldiers. They formed the all-black 9th and 10th Cavalries and the 38th, 39th, 40th, and 41st Infantries. They were called Buffalo Soldiers by Native American warriors who encountered the 9th and 10th Cavalries in Texas in 1867. In 1869 the infantry units were combined into the 24th and 25th Infantry Regiments and assigned to the Texas frontier. There they escorted trains and stagecoaches, built roads and telegraph lines, and guarded water sources and supply lines.

The African-American soldiers earned praise for their discipline and high morale. At the same time, they were hampered by racism within the military and larger society. High-ranking politicians and officers, among them General William T. Sherman, retained prejudices regarding African Americans that ensured that their work would be difficult and underappreciated. Black soldiers also faced discrimination in the communities in which they served, despite the fact that they were protecting civilians. Nevertheless, the use of black soldiers during this period was an important first step on the long road to normalizing race relations in the United States. Throughout their service, desertion rates and numbers of court-martials remained lower than those for white regiments. While in military service, many former

slaves were educated by army chaplains, a vital component in their transition to civilian life.

In 1880, after Texas was deemed relatively safe, the 24th Infantry was transferred to Indian Territory (present-day Oklahoma) and the 25th was moved to the Department of Dakota, serving there and in Montana until the end of the Indian Wars in 1891. A group of African-American soldiers guarded the famous Sioux war chief SITTING BULL when he was imprisoned after surrendering to the army in 1881. In 1888 the 24th was moved to Arizona, where it served until it secured the region. The history of the Buffalo Soldiers was largely forgotten until the 20th century, when historians and African Americans rediscovered the troops, who now are remembered with admiration and pride.

### Burnham, Daniel Hudson (1846–1912) *architect, urban planner*

Designer of the first SKYSCRAPER and construction chief of the WORLD'S COLUMBIAN EXPOSITION (1893), Daniel H. Burnham was born on September 4, 1846, in Henderson, New York. In 1855 his family moved to Chicago, where his father prospered as a wholesale druggist. In school Burnham preferred to draw rather than to study, and, despite intensive tutoring, he failed the entrance examinations of both Harvard and Yale. Bypassing college, he worked briefly as a sales clerk and then as a draftsman in an architect's firm, before spending two frustrating years (1869–70) prospecting for silver and seeking elected office in Nevada. After those experiences Burnham resolved to return to Chicago and become an architect.

Burnham's timing was perfect. The devastating Chicago fire of October 8–9, 1871, destroyed 17,000 buildings and necessitated a vast rebuilding program. After resuming his work as a draftsman, he landed a job with Carter, Drake and Wight in 1872. Peter Wight became Burnham's mentor and disciplined his roving disposition. More important, a fellow draftsman in Wight's office, John Wellborn Root, became his friend and in 1873 his partner in the firm of Burnham and Root.

The panic of 1873 temporarily stopped the building boom, cancelling commissions, and Burnham and Root had difficulty scraping together the \$20 rent for their office. Their luck changed the next year, when their designs for a mansion delighted John B. Sherman, the Chicago stockyards magnate, his wife, and his daughter Margaret, whom Burnham married in 1876. Other commissions from Chicago's social and economic elite followed.

Main Hall of Union Station, Washington, D.C., designed by Daniel Hudson Burnham (*Wikipedia*)

Burnham and Root were a team. Root was shy, retiring, and hesitant, while Burnham was a gregarious, aggressive, architectural entrepreneur, who handled the firm's public relations and secured commissions. He excelled at laying out an overall plan and would jump-start Root, whose imagination created the ultimate artistic form and gave the building its architectural personality. The more practical Burnham had excellent judgment and taste, and his suggestions, which were usually accepted, reined in Root's exuberance.

Burnham and Root's early buildings reflected older architectural traditions, but in the 1880s they were "founders and creators" of a new architectural movement, the rise of the skyscraper. Increasing land values, the development of elevators, and the use of cast iron and, later, of steel for structures created a demand and made a response possible. In 1882 Burnham and Root's revolutionary 10-story Montauk Building was the first to be called a "skyscraper." To provide stability in Chicago's soggy soil, Burnham and Root invented the "floating raft" foundation of reinforced concrete, and they fireproofed the Montauk's cast-iron columns by encasing them in masonry. At the behest of the owner, the Montauk anticipated the Chicago school of architecture, making ornamentation subordinate to usefulness. The austerity delighted Burnham, but not Root.

Other breakthrough buildings followed. Their 10-story Rand McNally Building (1888–90) was the first skyscraper with an exterior masonry curtain, completely supported by a steel skeleton. Their Masonic Temple (1890–92) was at the time the tallest building in the world. Their masterpiece was the grandly austere Monadnock Building (1889–92). Their fellow architect LOUIS H. SULLIVAN called it "an amazing cliff of brickwork . . . with a subtlety of line and surface, a direct singleness of purpose."

When Root died suddenly in 1891, Burnham's work became less original and more uneven, but more renowned. His fame rests primarily on his leadership as director of public works of the World's Columbian Exposition of 1893 in Chicago. This world's fair boasted spectacular technological and artistic attractions, but its "White City," which owed more to Burnham than to anyone else, was a sensation. While Charles Follen McKim was more responsible for its predominantly neoclassical architecture, it was Burnham who primarily achieved the White City's social and aesthetic unity. One critic declared it unequaled "since the Rome of the Emperors stood intact." To the dismay of other critics the White City spawned neoclassical buildings for decades, but it also gave millions of visitors a glimpse of what their cities could be. Burnham's role in achieving the White City's harmony made him America's preeminent city planner and the leader of the "City Beautiful" movement.

After the fair Burnham, with new associates, continued to do commercial buildings. His Reliance Building (1894), with Charles Atwood, caught a glimpse of the future with its breathtaking use of glass hung on a steel skeleton. Burnham's most famous, and for years the tallest building in the world, was New York's triangular, slender, elegant Fuller (Flatiron) Building (1903), which he designed with Frederick P. Dinkelberg. While Burnham produced other gems, for the most part he gave his commercial clients the utilitarian, uninspired structures they wanted.

By 1901 Burnham became more involved in urban planning, after his appointment as chair of a commission that included McKim and the sculptor AUGUSTUS SAINT-GAUDENS to plan the development of Washington, D.C. The commission decided to follow as much of the Pierre Charles L'Enfant 1792 plan as possible. Its major concern was to restore the Mall, which had been broken up between the Capitol and the Washington Monument by railroad tracks and freight and passenger depots, owned by the Pennsylvania Railroad. Fortunately, its president, Alexander Cassatt, brother of the painter MARY CASSATT, had already commissioned Burnham to design a new station on the Mall. Using his persuasive powers, Burnham convinced Cassatt to build north of the Capitol, rather than on the Mall. Reflecting Burnham's love of bold visions and big plans, the commission's recommendations, which in time were realized, envisioned a cleared Mall extending from

the Capitol to the Potomac River, with a Lincoln Memorial at its end. Burnham's neoclassical Union Station (1903–07), facing a plaza leading to the Capitol, formed an integral part of plans for the Mall and was a magnificent gateway to a monumental city.

In the last decade of his life Burnham was the most conspicuous architect in the City Beautiful movement. He planned improvements for Cleveland (1903), San Francisco (1905), and Manila (1905) in the Philippines. Most appropriately, after he spent years promoting ideas to make Chicago more attractive, the Merchants' and Commercial Clubs united to support Burnham's elaborate Chicago Plan, which outlined the city's 20th-century development. It called for thousands of acres of parks on the outskirts, beautification of the lakeshore, widening streets into thoroughfares, and building parkways, playgrounds, and recreational piers out into the lake.

For his public work in Washington, Chicago, and other cities, Burnham accepted no compensation. His clients were the people, not politicians or businessmen, and he was free to do his best for the public. On June 1, 1912, while touring Europe for the seventh time, Burnham died in Heidelberg, Germany.

## business and government

Laissez-faire—nonintervention by government in economic affairs—is an untried panacea. The late 19th century, the Gilded Age, in the United States, is widely regarded as a period of laissez-faire; indeed much lip service was paid to that concept, but government was far from quiescent at that time. Initially, much of the intervention in economic matters benefited substantial business interests, but by the late 1880s the demand for government regulation of RAILROADS and TRUSTS became irresistible.

The post-Civil War industrial expansion was accelerated by government aid to business. The most conspicuous form of governmental intervention in the economy was in protective tariff legislation. Prior to the Civil War the United States was on the road to free trade, with rates of approximately 20 percent, but the 1860 Republican Party platform called for a protective tariff, and the secession of southern states enabled Congress to pass the Morrill Tariff in 1861 and subsequent revisions from 1862 to 1869 that raised rates to 47 percent. In the 1870s and 1880s the tariff was reduced slightly, but the protective feature was retained. The McKinley Tariff of 1890 raised rates to 49.5

percent and provided the flexibility of reciprocity to either raise or lower rates to secure favorable trading agreements with other nations. The Wilson-Gorman Tariff of 1894 was a hodgepodge that lowered rates, but in 1897 the Dingley Tariff jacked rates up to 57 percent, where they remained until lowered to 38 percent in 1909 by the Payne-Aldrich Tariff. The protective tariff was a substantial subsidy levied by the federal government on American consumers for the benefit of American business. The tariff effectively excluded foreign manufacturers from the enormous and rapidly expanding American market.

The federal government in the post-Civil War era also disposed of much of the vast national domain in order to develop the West rapidly. This largesse primarily benefited business interests. Mineral and timberlands were sold at ridiculously low prices. In 1873 Congress approved the sale of land rich in iron ore deposits for \$1.25 an acre, and its Timber and Stone Act of 1878 allowed for the sale of timberland at \$2.50 an acre. Transcontinental railroads were by far the greatest beneficiaries of federal largesse. Although railroads forfeited some acreage by failing to fulfill requirements, they were given approximately 130 million acres of the national domain. In addition, states gave railroads about 49 million acres of state lands. These land grants were justified because the roads were to be built through territory sparsely populated by Native Americans and not likely to produce any freight until settled by whites. As a result, the land-grant railroads became agents of colonization. Although Congress called a halt to land grants in 1871, railroads benefited from them into the 20th century. Just how necessary the grants were has been questioned because, without a land grant, JAMES J. HILL built the Great Northern Railway to the Pacific by 1893 on the profits of settlements he developed along his right of way. Yet if the building of the Union Pacific and the Central Pacific had been delayed until the regions through which they ran matured, the first continental railroad may not have been completed until the 1890s.

The federal government did not as a rule give outright cash subsidies to industries from its treasury. The tariffs subsidized industry out of the pockets of consumers, and the federal government gave railroads land, not cash. It did advance money to the Union Pacific and Central Pacific, but those loans were paid back in the 1890s. The federal government did, however, subsidize the ailing American merchant marine with generous mail contracts for steamship lines connecting the United States with South America, Japan, and China via Hawaii. In addition, the Merchant Marine Act of 1891 gave a small per-mile bounty (66⅔ cents to \$4.00, depending on the size of the vessel) on outward bound voyages. These subsidies did little to arrest the decline of the once proud American merchant marine.

The federal government also regulated—albeit not harshly—as well as subsidized industry. A NATIONAL BANKING SYSTEM had been created during the Civil War that gave the federal government some control over the banking system and did provide more financial stability. Banks could issue banknotes secured by government bonds deposited with the comptroller of the currency, and a death tax of 10 percent on state banknotes eliminated them from circulation. National banks, however, served the monetary needs of the Northeast better than those of the South and West, where there were not enough banknotes available. The reserve requirements of the national banks also enabled a few great New York banks to centralize the system. Decentralization and greater federal control would come with the Federal Reserve System in 1913.

Since railroads were monopolies in most rural areas and competitive where they converged in urban areas, they charged less where they encountered competition and more where shippers had no alternative transportation. Railroads also would offer large-volume shippers rebates while requiring shippers of small amounts to pay the published rate. Freight-rate discrimination angered farmers, small business owners, and communities because it diminished their profits and even threatened their survival. In the late 1860s and the 1870s the Grangers advocated RAILROAD REGULATION and secured legislation creating tough commissions to set nondiscriminatory rates. The SUPREME COURT in *Munn v. Illinois* (1877) upheld state regulation of railroads even if they were engaged in interstate commerce. In 1886 the Court reversed itself in *Wabash v. Illinois*, declaring that the regulation of interstate commerce is the responsibility of Congress. In 1887 Congress responded with the Interstate Commerce Act (ICA), which prohibited rebates, the long-and-short-haul abuse; called for “reasonable and just” rates; outlawed pools of freight and earnings; and established the Interstate Commerce Commission (ICC) to investigate, recommend and, if ignored, go to the courts to compel obedience. The passage of the ICA marked the shift of the federal government from promoting railroads to restraining railroads. The ICC was reasonably successful in administering the ICA until 1897 when the Supreme Court, in the *Maximum Freight Rates* case, denied that the ICC could set rates and, in the *Alabama Midland* decision, undermined the effectiveness of the long-and-short-haul clause. Effective railroad regulation was postponed until the 20th century.

The development in the Gilded Age of huge industrial combinations called TRUSTS gave rise to a significant anti-monopoly movement that the federal government could not ignore. Yet while virtually everyone—farmers and laborers, reformers and most businesspeople—was hostile to trusts, virtually everyone favored individualism, suspected strong government, and opposed economic equal-

ity. They wanted equality of economic opportunity and for the government to regulate business to restore the competition that existed in an earlier era. Although by the 1890s 15 states had constitutional provisions against monopolies and 27 states had laws against them, these prohibitions were ineffectual. By 1890 it was obvious to Congress that federal action was necessary, and with virtual unanimity it passed the SHERMAN ANTITRUST ACT, which reiterated the common-law prohibition of monopolies, combinations, or conspiracies in restraint of trade. The wording of the act was vague, but it put Congress on record as opposed to monopoly the same year it increased significantly the protective tariff. The Sherman Act was to be enforced by the attorney general, and violators were to be prosecuted in the courts. Prior to the administration of Theodore Roosevelt (1901–9) the act was ineffectual. Given the merger mania that swept the United States in the 1890s, neither attorney generals nor the Supreme Court seriously challenged monopolies. The Sherman Act was invoked only 18 times from 1890 to 1901, and four of those times it was used against organized labor. The Supreme Court, in *U.S. v. E. C. Knight Company* (1895), denied that the American Sugar Refining Company, which controlled 98 percent of the nation’s sugar refining capacity, was restraining trade. Taking a narrow view, the Court regarded manufacturing—even of commodities shipped across state lines—as separate from commerce and trade. The Sherman Act, nevertheless, was law and would be available in the Progressive Era.

**Further reading:** Morton Keller, *Affairs of State: Public Life in Late Nineteenth Century America* (Cambridge, Mass.: Harvard University Press, 1977); Edward C. Kirkland, *Industry Comes of Age: Business, Labor, and Public Policy, 1860–1897* (New York: Holt, Rinehart and Winston, 1961).

## business cycles

In the decades between 1870 and 1900 the United States experienced remarkable economic growth—averaging about 4 percent a year—a process that helped to raise the standard of living per capita by about 2 percent a year. The population also grew from 40 million in 1870 to 76 million in 1900, while the labor force increased at an even greater rate, expanding from 13 million to 29 million. During these years industry hurtled past AGRICULTURE as the major engine of economic development. In 1870 the agricultural sector supplied 47 percent of the value added to the economy while industry took a 43 percent share. By the end of the century the figures were entirely reversed, with industry garnering 65 percent of value added while agriculture was reduced to 35 percent.

This rapid growth, and industry's rise to dominance, did not take place smoothly or without sharp ups and downs but proceeded within a context of what economists would later call "business cycles," pronounced periodic swings in output, employment, and prices. Laypeople would term these swings "boom-and-bust" cycles, and the Gilded Age economy seemed to be pockmarked with them, especially the busts that ranged in duration from many months to several years and in severity from mild to deep. Notable among them were the depression following the panic of 1873, the panic of 1884, and the depression after the panic of 1893. To some contemporary critics of the new industrial society, these periodic spasms of mass unemployment, bankruptcies, and social insecurity were evils endemic to industrial capitalism. EDWARD BELLAMY made this point in his utopian novel *Looking Backward* (1888). "Your system," he wrote, "was liable to periodic convulsions, overwhelming alike the wise and the unwise, the successful cutthroat as well as its victim. I refer to the business crises at intervals of five to ten years, which wrecked the industries of the nation."

Contrary to what Bellamy implied, such economic crises were not unique to the Gilded Age. In the early decades of the 19th century, when agriculture was preeminent, boom and bust fluctuations were frequent and extensive. In the years between 1816 and 1847, two economic downturns of great severity, the panics of 1819 and 1837, followed periods of prosperity and roiled the American economy with widespread bankruptcies, deflation, severe unemployment, and general social distress. And although the nation enjoyed a long period of prosperity after 1843, the two decades preceeding the Civil War also witnessed a sharp crisis in 1854 and a brief, nasty depression from 1857 to 1858.

Yet, the business cycles of the Gilded Age were different in some ways from their predecessors. As industrial capitalism transformed the country, what had formerly been an economy dependent on agriculture and exports of cotton and wheat for its prosperity now became a self-sufficient economy of complex characteristics. Because of this fundamental shift, the business cycles of this period took another shape and displayed unique attributes. In the preindustrial era, cyclical fluctuations arose largely because of excessive speculation in new agricultural lands and an unstable money supply, currency, and banking system. In the Gilded Age, however, business cycles were mainly due to changes in the rate of investments in factories, railroads, and mines and to alterations in the supply of money brought about by structural changes in the banking and financial systems. Also, as a result of dramatic improvements in COMMUNICATIONS and transportation—the invention of the TELEPHONE, widespread usage of the telegraph, the expansion and integration of the RAILROADS—and the

economic and geographical interdependency arising therefrom, changes in business activity more easily and forcefully rippled through the economy. As a consequence, the two major depressions of the Gilded Age, beginning in 1873 and 1893 (the panic of 1884 was not as severe), were two of the worst downturns the nation had ever experienced. And although they were different in detail, each, including that of 1884, followed the same general pattern of development and were linked to investment swings in the new, dynamic sectors of the economy, particularly the railroads.

The depression of 1873 began with the collapse of the country's leading brokerage house, Jay Cooke & Company, an event that reverberated throughout the nation. Jay Cooke, known as the "financer of the Civil War," had expanded his activities following the conflict beyond that of handling government securities. He became a major broker and financer of ventures in coal, iron, and especially railroads. These and other investments stimulated rapid growth in transportation, mining, and large-scale cattle raising. But as was often the case in periods of prosperity and profit-making, there were excessive investments in speculative enterprises. Too many railroad lines were built; too many cattle ranches put too many cattle out to pasture; and too much silver was mined. And as billions of dollars in foreign capital flowed into the country, there was a constant drain of gold to service the burgeoning debt. With the unexpected failure of Jay Cooke, panic ensued. Commodity prices and prices for manufactured goods plunged. The stock exchange closed for 10 days; credit dried up; and stunned depositors initiated runs at hundreds of banks. Between 1873 and 1878, there were almost 50,000 bankruptcies, with losses estimated in the billions. The panic soon turned into a severe retrenchment, then a depression, and unemployment skyrocketed to levels never seen before. All segments of the increasingly integrated economy appeared to grind to a halt. For the first time in history, the majority of Americans appeared to be caught in the coils of an economic crisis not of their making and over which they had no control.

Many analysts regard this depression as the worst of all the economic downturns of the 19th century and, with the possible exception of the Great Depression of 1929, the most severe in the nation's history. But hard statistical data that accurately measures the severity of the depression of 1873 is lacking. It was not until the 1880s and 1890s that many state and local governments, especially in the East, began to establish agencies to collect data on such things as employment, housing, and immigration. As a result, the depression beginning in 1893 offers a better window into the economic crises of the period.

While perhaps not as serious as the 1873 contraction, the depression of the 1890s appeared to be, by almost any measure, a bad one. Perhaps 20 percent if not more of

the workforce experienced unemployment at one time or another. Almost 50 percent of all businesses failed. More than 156 railroads, controlling 30,000 miles of track and with a capitalization in excess of \$2.5 billion went under. At its worst, the economy is estimated to have contracted about 25 percent below its pre-depression level.

The factors responsible for this downturn were similar to those of 1873, although this time it was the collapse of the great British banking house, Baring Brothers, which helped trigger the crisis. Having overextended itself in Argentina, Baring was forced to liquidate its holdings in American securities, particularly railroads. This precipitated a heavy outflow of gold, which put a strain on American banks. The banks might have been able to withstand the drain on their gold reserves but for the fact that, for political reasons, the Treasury Department was then engaged in trying to support the price of silver by buying 4.5 million ounces of that metal per month under the terms of the recently enacted Sherman Silver Purchase Act (1890) and issuing Treasury notes, redeemable in gold, for those purchases. This required a large supply of gold to maintain redemption. Bankers, concerned about their falling gold reserves, petitioned the Treasury for conversion of greenbacks and other paper into gold. But the government's gold reserves were clearly inadequate to the task, and the possibility that the government might have to suspend payments in gold sent shivers through Wall Street and set off a panic in the spring of 1893. Again the financial panic spread disruption to other areas of the economy. Railroads went under. Investors found that many of their holdings were worthless. As prices for their goods fell, manufacturers of all sorts retrenched or closed their doors, banks failed, and credit became scarce. Once more the economic system seemed to be in disarray after another boom-and-bust cycle.

But was the underlying economy truly in such bad shape or were all of these crises just a lot of sound and fury signifying nothing? One recent historian has advanced the argument that the panics and depressions of the era

were largely mirages of little economic significance. When viewed from the perspective of long-term growth trends during the period, he claims, the depressions were not "of any great seriousness or duration." To be sure, the pace and rate of economic activity fluctuated and was erratic. And, yes, factories might close for short periods of time, unemployment might increase, and public confidence might fall. "But it was," he concludes, "in the main, a time of rapid expansion," and it was that expansion of production that had a much greater impact on American history and development than the downturns that accompanied it.

Still, whatever their long-term significance, those periodically recurring business cycles and breakdowns were real, and economists in the 20th century have analyzed them extensively and developed numerous theories seeking to explain their causes. One of the pioneers in the understanding of business-cycle behavior was Wesley C. Mitchell, who presented a theory of self-generating cycles. Basically, his theory held that when prospects for profits improved, business activity increased, and when prospects became less certain, business declined. After a period of depression, the stage was set anew for a revival and a combination of forces then converted incipient prosperity into another boom, which once again eventuated into a bust. Other scholars have built on Mitchell's analysis, some looking for the key initiating forces or starters of the process, others constructing theories to explain the cycles on the grounds of monetary or investment factors. But however much economists might differ in their analysis of the whys and wherefores of the business cycle, all students of the phenomena agree that it is deeply embedded within the capitalist system and must be taken into consideration by policy makers if its worst tendencies are to be avoided.

### Canada and the United States

Unresolved issues stemming from America's Civil War and the persistence of dreams of annexation framed the diplomatic agenda involving Canada and the United States in the postwar years. Briefly, the Americans wanted compensation from the British for building Confederate commerce raiders that disrupted Union shipping. The U.S. government also resented the Canadians for harboring Confederate guerrillas, and the Canadians resented raids by Irish nationalists (called Fenians). Fearful of their economic future, Canadians sought to consolidate their separate provinces, while British policy makers wanted to discourage American expansionist ambitions. As a result, the British North American Act created the Dominion of Canada out of four colonies in 1867 as a semiautonomous federation, with foreign policy remaining in the hands of Great Britain. From 1870 to 1900 and beyond, Canadians believed—with some justification—that Britain sacrificed their interests in controversies with the United States to promote Anglo-American accord.

Annexationists in CONGRESS, such as Senate Foreign Relations Committee chairman Charles Sumner, unrealistically urged that the British surrender Canada to settle American claims for merchant ships destroyed by Confederate raiders built in Britain and to recoup the enormous cost of prolonging the war. But President Ulysses S. Grant and his secretary of state, Hamilton Fish, unwilling to antagonize Britain, did not press for annexation and settled instead for the arbitration of outstanding disputes with Britain and Canada in the TREATY OF WASHINGTON of 1871. The treaty gave the United States fishing rights in Canadian waters and navigation rights on the St. Lawrence River, while Canadians could fish in less-productive waters as far south as Delaware Bay. Arbitrators awarded the United States \$15.5 million to settle the *Alabama* claims for

lost shipping; Britain received \$5.5 million to make up for the unequal fishing rights the Canadians received; and the United States got the disputed San Juan Islands between the present state of Washington and Canada's Vancouver Island in the Pacific Northwest.

Congress, however, was unhappy with the 1871 fisheries settlement and withdrew from the agreement as of July 1, 1885. Canadians fell back on an 1818 treaty and began arresting American fishing boats; Congress retaliated with threats against Canadian imports. Canada, amid economic difficulties, wanted to resolve the fisheries dispute and to secure a reciprocity treaty that would allow agricultural products to enter the United States duty-free, which would help to restore prosperity and stave off sentiment in Canada for annexation. A further complication arose with the BERING SEA DISPUTE over American seizures of Canadian schooners caught killing seals in international waters. That dispute was resolved by an 1892 arbitration treaty (the United States had to pay damages for illegal seizures), but attempts to negotiate a solution to the ongoing fisheries dispute failed until 1909, and reciprocity—because it was tangled up in the question of annexation—was delayed well into the 20th century.

**Carnegie, Andrew** (1835–1919) *businessman, philanthropist*

Born in Dunfermline, Scotland, on November 25, 1835, industrialist and philanthropist Andrew Carnegie was the son of a handloom weaver who had married into a prominent radical family active in the Chartist movement,

Andrew Carnegie (*Library of Congress*)

which advocated sweeping parliamentary reform, and harbored antimonarchial republican views. Steam-powered looms soon impoverished the family, and upon the insistence of Margaret, Carnegie's strong-minded mother, they migrated to Allegheny City (now Pittsburgh's North Side), Pennsylvania, where Carnegie, at 12 years of age, got his first job as a \$1.20-a-week bobbin boy in a cotton textile factory. Despite living in a slum, Carnegie reveled in the political equality and economic opportunity of his adopted country. With only four years of schooling, Carnegie took advantage of the practice of Colonel James Anderson, founder of the James Anderson Library Institute of Allegheny City, of allowing working boys to use his large personal library free of charge. On the lookout for better jobs, Carnegie tended a steam engine; delivered telegrams; became a telegraph operator; and, as one of the first to take messages by ear, had the good luck to be discovered by THOMAS A. SCOTT, head of the western division of the Pennsylvania Railroad, who hired him as his telegrapher and secretary at \$35 a month. Scott made Carnegie his protégé, tutoring him on investments. When Scott became the railroad's general superintendent in 1859, Carnegie became superintendent of the western division. By 1865 Carnegie had so expanded his investments that he left the railroad to manage them.

His most interesting venture was the Keystone Bridge Company, which specialized in building railroad BRIDGES, the most famous of which is the JAMES B. EADS Bridge over the Mississippi at St. Louis. To secure iron beams for Keystone, Carnegie in 1864 created the Cyclops Iron Company, and the following year he forced a competitor to merge and form Union Mills. The insistence by Eads that Keystone supply steel rather than iron for his bridge and the preference of railroads for British steel rails made by the BESSEMER PROCESS to American iron rails led Carnegie in 1872 to commence building the largest Bessemer plant in the United States. Within a decade, Carnegie headed the incredibly efficient Carnegie Steel Company and dominated the steel industry. The company was a partnership, not a corporation, with Carnegie owning more than half of it and exercising complete control, while his partners owned a small percentage and worked extremely hard to cut production costs. Carnegie rewarded efficiency, eliminating inefficient managers, destroying labor unions, installing the latest machines, and adopting new technology to maintain a competitive edge. He also cut costs by expanding vertically, acquiring iron mines, coal fields (for coke), and steamships and a railroad to transport iron ore from the Great Lakes to the Pittsburgh district.

Carnegie's mixed heritage of his father's radical idealism and his mother's aggressive, acquisitive realism (honed by the family's struggle to survive) account for his complex, contradictory nature. His mother's spirit dominated his business career, but his father's generous, humane spirit was not eradicated. It surfaced in 1886 when, in a magazine article, Carnegie recognized labor's right to organize; but in 1892 he was his mother's boy when he ordered his partner HENRY CLAY FRICK to break the Amalgamated Association of Iron and Steel Workers, thus provoking the bloody HOMESTEAD STRIKE. While engaged in his relentless pursuit of profits, Carnegie feared that the accumulation of wealth was a form of idolatry, but in 1889 he rationalized his wealth by espousing the idea of stewardship in his article "The Gospel of Wealth." He argued that those who had the talent to acquire a fortune were best equipped to distribute it most beneficially for society. In 1901 Carnegie sold his company to U.S. Steel for \$480 million (his own share was \$225 million), which allowed him to engage full time in philanthropy.

An avid reader from childhood, he donated 2,811 buildings for public libraries upon the condition that community taxes would maintain the buildings and purchase books. He provided pensions for Carnegie Steel workers and also for college teachers. Carnegie was an anti-imperialist and an advocate of peace, and he created the Carnegie Endowment for International Peace. He also built the Pan-American Union Building in Washington, D.C., the Central American Court of Justice in Costa Rica

(to arbitrate disputes), and the Hague Peace Palace in the Netherlands to house the World Court. Since so much of his fortune was made in Pittsburgh, he focused many of his philanthropic efforts there, forming the Carnegie Institute, which supported a concert hall, art museum, and library. He also supported Pittsburgh's Carnegie Institute of Technology. Finally, he established the Carnegie Corporation of New York to administer what was left of his fortune. Carnegie's optimistic hopes for the arbitration of disputes and peace were dashed in 1914 by the outbreak of World War I, which left him badly shaken. He died on August 11, 1919, at his vacation home in Lenox, Massachusetts.

**Carver, George Washington** (ca. 1864–1943)  
*agricultural scientist, researcher, educator*

George Washington Carver, an African-American scientist and educator, devoted his life to improving southern agriculture. Born to enslaved parents in Diamond Grove, Missouri, Carver's father apparently died before he was born, and his mother was abducted by slave raiders. Consequently, Carver was raised and tutored by his mother's former owners on their small farm. When Carver went off to school at nearby Neosho in the mid-1870s he knew as much as his teacher, so he moved to Kansas and then Iowa, working, homesteading, and trying to secure an education. He was a multitasking young man who was an able pianist and especially interested in both growing and painting plants. He enrolled in 1890 as an art major at Simpson College in Indianola, Iowa, but although an able artist (one of his paintings would be exhibited at the WORLD'S COLUMBIAN EXPOSITION), he realized that opportunities for a black artist were severely limited. In 1891—at approximately 27 years of age—he entered Iowa State University of Science and Technology at Ames and found his life's work.

Carver was an excellent student, earning his bachelor of science degree in 1894 and his master of science in 1896. He impressed and was impressed by outstanding agriculturalists associated with that institution, including three future U.S. secretaries of agriculture: James Wilson, Henry C. Wallace, and Henry A. Wallace, who was six years old when Carver introduced him to plant fertilization. At the time, Carver was in charge of the college greenhouse and conducting experiments on plant propagation.

Carver was not patronized because of his race; he deserved the recognition he received and could have joined

the Iowa State faculty. Instead, he accepted the invitation and challenge of BOOKER T. WASHINGTON to head the agricultural work at Tuskegee Institute in 1896. He soon also became director of Tuskegee's agricultural experiment station. For almost 50 years he taught and experimented and became a legend in his own lifetime. He was intensely interested in educating African-American farmers in methods of cultivation and the necessity of a balanced diet. A movable school of agriculture and home economics in a well-equipped wagon set forth from Tuskegee to carry these messages to impoverished rural black farm families.

Carver soon realized that the southern farmers were plagued by overspecialization in cotton, which produced soil exhaustion. To counter this problem, he advocated crop diversification, specifically the planting of peanuts and sweet potatoes in place of cotton. To popularize their growth, he conducted experiments in his laboratory at Tuskegee to counter the diseases peanuts were prone to and to identify new uses for peanuts and sweet potatoes. Both became major commercial crops in Carver's lifetime.

Carver was selfless. He never took out any patents on the uses of the peanut or sweet potato he discovered because he wanted them to be widely and freely used. He could have left Tuskegee for well-paying jobs elsewhere. Indeed, despite his low salary at Tuskegee, he sometimes refused to accept raises in pay. A devout Presbyterian, Carver was one of the rare individuals who in every way lived up to the Christian ideal. He died on January 5, 1943.

**Cassatt, Mary** (1844–1926) *painter, printmaker*

Mary Cassatt applied the stylistic tenets of avant-garde French art to the themes of motherhood and childhood. Born in Allegheny City (now Pittsburgh's North Side) on May 22, 1844, into an affluent Pennsylvania family, Cassatt matriculated at the Pennsylvania Academy of the Fine Arts in 1860. After the Civil War, she went to Paris with her family for further study. As a woman, she was barred from the École des Beaux-Arts, but she studied privately with one of its most important teachers, Jean-Léon Gérôme. She received additional training from other French painters and worked in several French art colonies. After 1875 she divided her time between Paris and the French countryside, returning to America for only a few short visits. She never married, and for most of her life lived with family members. After exhibiting in the Paris Salon six times, she became disillusioned with its politics and aesthetics, and in 1879 she showed with the impressionists. She exhibited three more times with them and then with a similarly dis-

## 64 cattle kingdom

sident group, the Société Français des Peintres-Graveurs. She was influenced by her friends Edgar Degas, Auguste Renoir, and Berthe Morisot and by Japanese art. A retrospective exhibition in 1893 at the gallery of Paul Durand-Ruel in Paris established Cassatt as a major figure in modern painting and launched her acceptance in the United States. She was forced to stop making art in 1914 when her eyesight became clouded by cataracts, and she died in Mesnil-Theribus, France, on June 13, 1926.

Throughout her career Cassatt painted portraits mainly of family members (including her brother Alexander, president of the Pennsylvania Railroad). These, such as *Lady at a Tea Table* (1883, Metropolitan Museum of Art, New York), are quiet, straightforward, even unflattering portrayals of the sitter. Around 1880 she began to focus on women and children in neutral domestic settings, developing the theme in both oils and pastels. She displayed a genius for capturing prosaic but telling postures and facial expressions in images of mothers holding or washing children, and women reading, crocheting, and taking tea. After seeing a large exhibition of Japanese prints in 1890, she began working in drypoint and aquatint, inking the plates herself. The resulting series of 10 prints inaugurated her continued work in the medium and influenced other printmakers. She produced a mural for the Women's Building at the WORLD'S COLUMBIAN EXPOSITION of 1893 in Chicago. Titled *Modern Woman*, it showed women and girls picking apples, their bright, contemporary dresses brilliantly lit.

Like the other Impressionists, Cassatt wanted to forge a style for the depiction of modern life. In simple compositions using flat planes of color pushed close to the picture plane, she made icons of timeless themes. Her prints combine color and line, ignoring Western conventions for depicting space. Both paintings and prints became increasingly abstract. In *The Boating Party* (1893–94, National Gallery of Art, Washington, D.C.) a family, oars, and a sail are arrayed in a set of diagonals, and *Under the Horse Chestnut* (1896–97, Museum of Fine Arts, Boston), a print showing a half-reclining woman holding a nude child, is composed of little more than flat planes of blue, green, yellow, and beige tones.

## cattle kingdom

Cattle raising became an important industry in the Gilded Age. The Spanish brought the first cattle to the New World in the 16th century and later raised them in the Rio Grande

Valley and along the California coast. These original stocks were the ancestors of the Texas longhorn. After the United States annexed Texas in 1848, the growth of the cattle industry was interrupted only by the Civil War (1861–65). After 1865 the “cattle kingdom” in the West expanded greatly, aided by the suppression of western Indian tribes and the extermination of the buffalo. Although it tended to be lean and its meat tough, the Texas longhorn was the favorite breed in the cattle kingdom. It proved to be a resilient animal that could withstand cold temperatures and travel great distances with little water to shipping points.

RAILROADS that had expanded west following the Civil War facilitated moving the meat to markets as Europeans and easterners invested in cattle during the late 1870s. By the early 1880s the cattle industry had become a lucrative trade. Texas cattle were driven north by cowboys (rough-hewn ranch hands) on cattle trails to open-range pastures in the Great Plains, where the animals could graze on abundant and free grasslands. Abilene, Kansas, the terminus of the Chisholm Trail, was served by the Kansas Pacific Railroad and became one of the first big transfer points for Texas cattle. The cattle kingdom contributed to the decline of the buffalo, since both cattle and buffalo competed for grassland. The Texas longhorn also brought Texas fever, a disease carried by ticks, which harmed buffalo and other local cattle.

By 1880 there were over 4 million cattle in a swath of land stretching from Texas to Montana and the Dakotas. During the Gilded Age the MEATPACKING industry in midwestern cities perfected a process whereby cattle were slaughtered and the carcasses prepared for shipment to eastern markets via refrigerated railroad cars. By the mid-1880s the number of cattle had almost doubled to 7.5 million, and overgrazing became a significant problem, only

Cowboys branding a calf, 1888. Photograph by John C. H. Grabill (*Library of Congress*)

to be compounded by a series of mild winters, which led to further overgrazing. The wide distribution of BARBED WIRE beginning in 1884 helped to shut out grazing cattle from farmlands, further limiting available grassland. Fence cutting became a problem, leading to federal legislation regulating fencing. Meager grazing areas meant that cattle needed more and more acreage to survive, which contributed to the degradation of grasslands in the plains. The winters of 1885–86 and 1886–87 were particularly brutal, and many cattle froze to death, which led to further problems in an already flagging nationwide economy with ranchers unable to pay their creditors. By the 1890s cattle drives were becoming a thing of the past as railroads expanded and ranchers began to grow hay to feed cattlestocks, starting a dependency on irrigation and a new set of problems over water allocation.

### chain stores

By the late 19th century a national transportation system had developed, communications were more rapid, a greater number of commodities were produced, and the purchasing power of the masses had improved. Markets had become national rather than local or regional, and most shoppers were no longer members of a wealthy elite but, rather, represented a broader spectrum of society. These changing conditions enabled chain stores to flourish. Direct purchases of large orders at low prices from manufacturers, which were then sold with small markups at several similar (chain) stores, achieved efficiency by eliminating middlemen and, because of enormous volume, yielded substantial profits. Although chain stores existed prior to the Gilded Age, two of the most spectacular examples expanded enormously in that period: the Great Atlantic and Pacific Tea Company (A&P) and the five-and-ten-cent stores of Frank W. Woolworth.

In 1863 George F. Gilman and George Huntington Hartford started the Great American Tea Company with a flamboyantly decorated store in New York City. They imported tea directly from China in ships owned by Gilman's father, and by eliminating intermediaries they could sell tea at one-third the price of their competitors. They soon opened more stores, added coffee, spices, and other commodities to their wares, and had 25 stores in operation by 1865. Hartford developed "Thea Nectar" from damaged

tea; cheap to produce and sold at a low price, it became a very popular and profitable product. In 1869 Gilman and Hartford formed the A&P on the basis of a handshake. Their friendship and respect for each other was such that they felt no need for a legal partnership. They expanded their stores to other cities throughout the Northeast and as far west as St. Louis and St. Paul, growing to 100 stores by 1880 and almost 200 stores by 1900. When Gilman died in 1901 the A&P was grossing \$5.5 million annually. In 1902 Hartford reorganized the A&P as a corporation, but in his and his son's hands it remained a family-owned business. In the 20th century the A&P continued to expand (16,000 stores in 1930), established economy stores in 1912, and in 1913 began selling foods under its own labels.

In 1879 Woolworth opened his "Great 5-Cent Store" in Utica, New York, but it failed because of its poor location. Later that year a second venture, in Lancaster, Pennsylvania, proved successful, but of three further ventures over the next three years, one was a moderate success and the other two failures. Woolworth, however, persisted and established more stores, utilizing partners to minimize his risk. He pioneered mass retailing and made his stores attractive by displaying merchandise on counters for customers to inspect. In 1886 he moved his headquarters to New York to facilitate large purchases of goods for cash directly from manufacturers, thus securing a bargain price and eliminating intermediaries. Dealing directly with a manufacturer, for example, enabled him to retail a quarter of a pound of candy for five cents. Always on the lookout for cheap sources of merchandise, Woolworth, on his first trip to Europe, discovered that German toys and Christmas decorations and Bohemian crockery could be imported and sold at bargain prices. By 1900 Woolworth had 59 uniformly decorated (in red) five-and-ten-cent stores in the United States and Canada. By 1912 Woolworth's stores had multiplied 10-fold to 596, and in 1913 the Woolworth Building—then the tallest and still one of the most beautiful SKYSCRAPERS in the world—was dedicated by President Woodrow Wilson. It cost \$13 million, and Woolworth paid for it from the profits of his five-and-tens.

Nichols, *The Chain Store Tells Its Story* (New York: Institute of Distribution, 1940); Andrew Seth and Geoffrey Randall, *The Grocers: The Rise and Rise of the Supermarket Chains* (London: Kogane Page, 1999).

### Chase, William Merritt (1849–1916) painter

Well known for his portraits, landscapes, and still lifes, William Merritt Chase was one of the Gilded Age's most versatile painters. He was also one of the most prominent

figures in the bustling art world of New York City, active as a collector and a teacher, and an outstanding artist. Born on November 1, 1849, and raised in Indiana, Chase was in New York City by 1869, studying painting at the National Academy of Design. In the autumn of 1872 Chase enrolled in the Royal Academy of Munich, where Karl von Piloty became his mentor. Over the next six years, Chase and a contingent of American classmates painted and traveled together to study the great paintings.

One of the first of his generation to establish himself in the United States after European training, Chase returned to New York City in 1878 as an instructor for the newly formed Art Students League. He opened a studio filled with an intriguing assortment of furniture, fabrics, artworks, and pets, including a Russian wolfhound, and he frequently depleted his bank account to purchase these furnishings. He became a kingpin in artists' organizations, especially the Society of American Artists. Chase married Alice Gerson in 1886 and eventually became the father of eight children, all of whom lived to adulthood. The elements of Chase's orbit—studio, students, colleagues, family, and home—appeared frequently on his canvases.

Even while maintaining a prodigious output of his own paintings, Chase became one of the country's most important teachers. In 1896 he founded his own school of art in New York City, where he taught until 1907. Supported by a group of wealthy amateur painters, from 1891 to 1902 he conducted a summer school of painting in Shinnecock on Long Island in New York. He also maintained long affiliations with the Art Students League and the Pennsylvania Academy of the Fine Arts. Work with Chase included not only classroom instruction but trips to museums, his own studio, and, in the summer, to Europe to look at old-master paintings. Chase had hundreds of pupils, including many women and future modernists, such as Charles Sheeler and Georgia O'Keefe.

When he was a young man, Chase was asked by potential backers if he would like to travel to Europe for further study. Chase replied: "My God . . . I'd rather go to Europe than to heaven." Indeed, a bravura style assimilated from a variety of European artists of various eras became Chase's hallmark. Chase admired Velázquez's brushwork, Frans Hals's chiaroscuro, and the modern conflation of space practiced by Edouard Manet and Alfred Stevens. To these techniques Chase added his own powers of observation, demonstrating an unerring ability to convey texture and light and an unfaltering ability to craft exquisite compositions. Among the best-known of Chase's works are his landscapes depicting the sandy dunes near Shinnecock, such as *Idle Hours* (1894, Amon Carter Museum, Fort Worth, Texas), portraits such as that of JAMES ABBOTT MCNEILL WHISTLER (1885, Metropolitan Museum of Art, New York), and numerous fish still lifes, such as *An English Cod*

(1904, Corcoran Gallery of Art, Washington, D.C.). Chase died on October 25, 1916, in New York City.

## Chautauqua Institute

The Chautauqua Institute began as an adult summer-education program located at a campsite on Lake Chautauqua in western New York State. It was started in 1869 by Methodist Episcopal bishop John H. Vincent (1832–1920) and Lewis Miller, a businessman from Akron, Ohio. The Institute's founders initially designed it for Sunday-school superintendents and teachers who wanted to improve their programs, but they soon broadened its goals.

The Chautauqua Institute reflected the American faith in popular education and the belief that a democratic republic needed citizens who could join in private organizations for mutual improvement. The origins of the Chautauqua Institute can be found in the early 19th-century lyceums, which sponsored lectures, debates, and concerts and which bridged the gap between a community's tiny number of college graduates and the vast majority of literate adults with a common-school education.

As the lyceum movement waned after the Civil War, the Chautauqua leaders adopted its approach and began to offer secular programs in art, music, literature, science, and social issues to summer vacationers who wanted to combine physical relaxation with mental stimulation. Speakers at Protestant churches encouraged attendance by families as well as single persons at the institute, where the joys of healthy, clean, rural living would be combined with the virtues of listening to great speakers address the issues of the day. Between lectures concerning such topics as the tariff, women's voting rights, or the implications of Darwinian thought on American society, participants enjoyed bountiful meals, boating, swimming, and church services. Easily accessible by rail, Chautauqua was visited by comfortably wealthy, intellectually active Americans.

In 1878, under the leadership of William R. Harper, a Yale University Hebrew scholar who later became president of the University of Chicago, Chautauqua developed a year-round home-reading program that also promoted its summer program. Between 1880 and 1900 Chautauqua participants (both home study and summer) increased as the number of well-to-do educated Americans with leisure time increased. During the first quarter of the 20th century, traveling Chautauqua programs (including drama

and popular music) appeared throughout the country and appealed to educated Americans of all ethnic and religious backgrounds. By 1930, however, with the coming of radio and the movies and the spread of high schools throughout the country, summer attendance and home-reading enrollment in Chautauqua programs drastically declined.

### Chilean-American relations

Located far down the Pacific coast of South America, Chile had a stormy relationship with the United States in the last quarter of the 19th century. The ill will stemmed from the tensions surrounding the War of the Pacific (1879–84), during which Chile fought Peru and Bolivia for control of the nitrate-rich regions of Arica and Tacna. The war started when Bolivia, in violation of a treaty, raised taxes on Chilean nitrate companies operating in the Antofagasta region of Bolivia. Chile responded by invading the region. Bolivia declared war and was joined by Peru, with whom Bolivia had a secret defense treaty. Chile's highly trained army quickly knocked Bolivia out of the war, captured Arica and Tacna, and went on to occupy Peru's capital, Lima.

Great Britain had a great amount of money invested in Chile and attempted to negotiate a peace settlement. The United States saw those overtures as a threat to its plans for increased economic and political influence in the Americas and sought to solve the situation itself. It did not want Chile to acquire land by force of arms, fearing that the precedent would launch South America into a chaos of land grabbing. In 1881 JAMES G. BLAINE, secretary of state under President JAMES A. GARFIELD, attempted to rally the other Latin American nations to force Chile to relinquish the captured regions, but his efforts only further antagonized Chile.

Blaine's levelheaded and methodical successor, Frederick Frelinghuysen, adopted a more conciliatory approach when he took office in December 1881. Knowing full well that the United States—given the state of its army and navy—could not intervene, the new secretary did not try to prevent Chile from keeping the nitrate fields as part of the 1883 Treaty of Ancon with Peru and the 1884 Treaty of Valparaíso with Bolivia. Although Chile achieved its goals, it would resent American diplomatic efforts to prevent its expansion for years to come.

Problems with Chile arose again in 1891. At the time Chile was embroiled in a civil war, with congressional forces revolting against those of President José Manuel Balmaceda. The rebels purchased weapons in the United States and were shipping them out of San Diego on a freighter named the *Itata*. The United States sought to detain the ship and, although it slipped away, eventually recovered it only to have American courts free it as improperly detained. Back in Chile the Congressionals forced Balmaceda to flee and seek the protection of the American embassy. The Congressionals became furious when the American minister Patrick Egan refused to surrender the Chilean president and other refugees to the mob outside the legation.

Although Balmaceda committed suicide on September 19, 1891, the situation deteriorated even further when on October 16 a fight broke out in Valparaíso at the True Blue Saloon. Two American sailors from the USS *Baltimore* were killed and several were injured by a mob of Chilean sailors and civilians who apparently were assisted by the Chilean police in the attack. President BENJAMIN HARRISON considered the incident an affront to national honor and demanded that Chile express regret for the incident and offer reparations. The Chilean minister to the United States, Manuel Antonio Matta, refused to oblige, and the newly installed president of Chile, Pedro Montt, denied that Chile was at fault and countered that the United States was guilty of provocations and indiscretions. On January 25, 1892, Harrison requested CONGRESS to authorize the use of force against Chile if Matta did not admit to wrongdoing. The U.S. Navy (significantly stronger since 1881) had been preparing for an attack for months and had a fleet of 17 warships ready for action in the event Montt refused to apologize. But when Harrison sent his bellicose message to Congress, Chile's apology rescinding its accusations had been received and was being decoded. The apology ended the crisis. Just before Christmas of 1892 the refugees were allowed to leave the legation and board an American warship, and although a Chilean court ultimately exonerated the police of any wrongdoing in the *Baltimore* incident, Chile paid a \$75,000 indemnity that effectively put the entire matter to rest. The Chilean imbroglio of 1891–92 was the first

## 68 Chinese Exclusion Act

use of naval power by the United States to enhance the effectiveness of its diplomacy.

Pletcher, *The Awkward Years: American Foreign Relations under Garfield and Arthur* (Columbia: University of Missouri Press, 1962); Alice F. Tyler, *Foreign Policy of James G. Blaine* (Hamden, Conn.: Archon Books, 1945).

—Timothy E. Vislocky

### Chinese Exclusion Act (1882)

Congress designed the Chinese Exclusion Act to halt the flood of Chinese IMMIGRATION into the country and to deport Chinese who were allegedly living in the United States illegally. The presence of Chinese immigrants had been an issue for some time in western states, where Chinese settled in large numbers during the gold rush of the 1850s. As heavy competition and the dwindling number of gold fields winnowed out all but the most resourceful of miners, the Chinese began to move into the vast railroad construction projects that sought to unite the two coasts of the nation. The completion of the transcontinental railway decreased the cost of eastern-manufactured goods and forced western manufacturers to look for a source of low-cost labor. They found it in the thousands of now-unemployed Chinese railroad workers.

Agitation for limiting Chinese immigration began during the depression of 1873. Jobs were scarce and competition for them was fierce. White laborers saw the hiring of Chinese workers at low wages by cost-conscious manufacturers as acts of job theft. Anti-Chinese riots erupted in several western cities. Mob violence, especially in California, was accompanied by political action as western politicians sought to end Chinese immigration. Congress produced such a bill in 1879, but it was vetoed by President RUTHERFORD B. HAYES on the grounds that the bill would force the United States to abrogate a provision of the Burlingame Treaty, which allowed unrestricted Chinese immigration. Hayes subsequently negotiated a new treaty with China that regulated immigration.

The issue came up again in 1882 when Republican senator John Miller of California proposed a bill that would have restricted Chinese immigration for 20 years and made the Chinese residing in the United States ineligible for citizenship. President CHESTER A. ARTHUR vetoed the bill as undemocratic, but a revised bill passed by wide margins in the House and Senate and was reluctantly signed by Arthur. The moratorium was reduced to 10 years, but the Chinese were still barred from becoming citizens. In order to maintain good trade relations,

This cartoon by Thomas Nast shows a Democratic tiger and a Republican elephant joining forces to remove a Chinese immigrant who hangs on desperately to a tree labeled "Freedom to all." (*Library of Congress*)

Arthur's secretary of state, Frederick Frelinghuysen, tried to curb California racists and lobbied for a ban on American exports of opium to China. The Chinese minister was mollified, and relations between the United States and China remained cordial.

### Christian Science

Along with the MORMON CHURCH, Adventism, and Pentecostalism, Christian Science is one of a few large, successful American religious groups and was the creation of one person, MARY BAKER EDDY. *Christian Science* is the term used by Eddy, but the germ of her ideas originated with Phineas Quimby. Following years of ill health and emotional precariousness, she was treated by Quimby, who promoted a mystical Christianity that could effect physical healing. He used the phrases “science of health” and “Christian science” to describe his theories. Eddy found herself healed and became a disciple of his ideas, but his sudden death in January 1866 and a personal accident turned her from disciple into apostle.

Eddy dated the religion of Christian Science from her fall on ice in February 1866, which injured her back. She had a revelation “on the third day” after reading Matthew 9:2 (associating a young man’s palsy with his sins), and she arose, like him, from her bed. The next decade was spent in poverty as she elaborated on what she had learned from Quimby, developed her own ideas, and began to envision a Christian Science Church. Its first worship service was held in June 1875, and that fall she published the first edition of *Science and Health*, her principle work. The Church of Christ (Scientist) was chartered in 1879. Eddy, however, was a difficult person, and the new church was plagued with crises, splits, and lawsuits. The faithful few who remained loyal made her, at the age of 60, their pastor.

Eddy was a gifted teacher, and through the Massachusetts Metaphysical College, which she chartered in 1881, she attracted several hundred students eager to learn her insights, namely that matter—including sickness and death—is an illusion, and to be trained as “practitioners” to deal with the illusion of illness. These students became de facto missionaries who could and would organize Christian Science societies. In 1882 there were only 50 members of the original congregation, but by 1890 there were 110 churches and societies, 250 practitioners, and the *Journal of Christian Science*. Concerned by defections, Eddy reorganized the church, terminated the Metaphysical College in 1889, and dissolved the Christian Science Association in 1892, centralizing denominational affairs in the new “Mother Church” in Boston (dedicated in 1895). All other Christian Science churches were branches of it. Twelve “charter” and 20 “first” members controlled membership, and the church was run by a board of directors appointed by Eddy. An agency of the board also assumed the functions the college had performed.

Christian Science continued to grow rapidly and by 1910 exceeded 100,000 members. Ironically as the church grew, Eddy became more secluded and frail, lending her an air of mystery and encouraging a reverence that held her followers’ loyalty across the country. She died in 1910, but Eddy noted that the world of the sense is mere “belief. . . . Matter and death are mortal illusions.”

Although Eddy was a commanding personality, circumstances in New England and the United States contributed to the success of Christian Science. One was its appeal to and empowerment of women, who had begun to demand new roles in the 19th century. Another was its understanding of prosperity as a sign of spiritual health, which appealed to the new middle class. A third was its focus on health which, while metaphysical, had a rational and empirical emphasis and contrasted with emotional faith healing. And finally, thanks to Eddy, Christian Science was well organized.

### cities and urban life

The three decades from 1870 to 1900 constituted a period of astounding urban growth, reflected in the increased number of larger cities and the growing portion of the population that lived in larger cities. The U.S. population increased from 40 to 76 million, an increase of 91 percent. The rural population grew by 17 million, from 28.7 to 45.8 million, and the urban population increased by 20.3 million, from 9.9 to 30.2 million. Thus, while the rural population increased by 60 percent, the urban population more than tripled.

In 1870, 14 cities exceeded the 100,000 mark; by 1900, there were 35. Combined, these larger cities grew by 238 percent and accounted for 27 percent of the nation’s total population growth from 1870 to 1900. Residents in these 35 cities comprised more than 18 percent of the entire population of the United States, or one of every five and one-half people. These larger cities were heavily concentrated in the Northeast, Middle-Atlantic, and upper Midwest. Indeed, in 1900 there were more cities larger than 100,000 in New Jersey (three) than in either the Old South or the Far West.

This growth was even more concentrated, because the 10 largest cities in the country accounted for 16 percent of the total national population growth; by 1900 one in eight Americans resided in these 10 largest cities. Moreover, the

five largest cities accounted for 13 percent of the nation's total population growth, with the result that in 1900 one in every 10 persons in the United States lived in one of these five cities. Finally, the three largest cities from 1880 to 1900 were New York, Chicago, and Philadelphia, with populations of 3.4, 1.7, and 1.3 million, respectively, in 1900. Together these three were responsible for one-ninth of the nation's total population growth, and one in 12 of all U.S. residents lived in them.

IMMIGRATION fueled much of this urban population growth, especially in eastern and midwestern cities. Between 1880 and 1900 nearly 9 million immigrants came to the United States. While the immigrant stream had first flowed from the northern European countries, by 1900 the larger portion was arriving from eastern and southern Europe. This immigrant stream dramatically affected larger cities: One-third of the residents in the five largest cities in 1900 were foreign-born, and two-fifths of the residents reported that at least one parent was foreign-born.

But the combination of foreign-born and those with at least one foreign-born parent comprised over three-fourths the population in many industrial cities, including Milwaukee (where it constituted more than four of every five residents), Detroit, Chicago, New York, and San Francisco.

Why were all these people moving to cities? The answer was simple: jobs and perceived opportunity. Trade and manufacturing expanded dramatically, creating strong demand for labor. Manufacturers set up shop either close to the materials needed to produce their goods or close to their markets. Transportation access was crucial, so virtually all the burgeoning cities were on the sea coasts, rivers, or the Great Lakes. Those not located on navigable bodies of water were amply served by railroads, which had also become crucial even for the continued growth of cities with excellent water transportation. As cities grew, they became their own generators of economic and employment opportunity. The construction of factories, housing, offices, and infrastructure were major activities as cities doubled in size

Fifth Avenue and 42nd Street, New York, ca. 1885. Photograph by Adolph Wittemann (*Library of Congress*)

during a single decade. At the turn of the century, construction trades often accounted for one-third of the jobs in a city.

This rapid growth strained existing urban systems and created the need for new services and the delivery of services on an unprecedented scale. The needs were so compelling they demanded resources: human, material, and financial. Solutions involved application of new technologies, attracting and then placing restrictions on the resources of private investors, developing the political will to raise the necessary public funds, and creating the organizational mechanisms for supplying and maintaining these services. Ultimately, such efforts called for the conception of the city as a system of systems, a view that was not always realized. Town planning still consisted largely of street layouts created by private developers, usually in a grid form—the easiest way to subdivide and market land—without any particular sense of their relationship to the entire city.

Rapid, large-scale urban growth could not have occurred without new and improved transport systems. Only main streets were paved at the outset of this period, and as development spread outward most new streets were not paved. Few cities could keep up with the pace of growth outward, so street conditions remained problematic, especially in the rapidly growing cities in the West and Midwest. Moreover, many streets and roads were in a perpetual state of chaos due to the continuing additions to and maintenance of gas lines, electric lines, water and sewer mains, and streetcar tracks. Horsecar lines and, by the late 1880s and 1890s, electric streetcar lines extended the distances residents could travel, especially for work. These conveyances both followed and stimulated the extension of residences beyond previously imposed travel limits.

Provision of sanitary sewers and a dependable, safe water supply were other imperatives for this new scale of urban living. Most new urban housing was still single-family dwellings on small plots of land, though in the larger cities substantial portions of the population lived in varying forms of multifamily structures. One general characteristic of the various forms of housing for the huge new additions of workers was crowding, as many people were forced by financial constraints to live in small spaces. This crowding together created additional strains on sewer and water resources. At the outset of this era, private wells were the main source of water and septic systems the main means of sewage disposal, both usually on the same small plot. By the 1870s an increasing number of places accepted the concept of the city as a self-flushing mechanism powered by water. Thus, if water were continuously delivered to households, water closets could replace backyard privies, and the flow of water would create self-cleansing sewers that could supplant septic tanks and cesspools. These concerns were part of the larger issues of public health and the

perceived connection between open filth and the spread of diseases. Periodic urban outbreaks, most notably the 1878 yellow fever epidemic in Memphis in which one of every nine residents died, gave a strong sense of immediacy to the issue of sanitary reform throughout this era.

This era also saw the gradual transition from volunteer firemen to the establishment of professional municipal fire departments. Cities were ever-increasing masses of combustible materials, with buildings largely made of wood, masonry structures with wooden roofs, and even sidewalks and streets of wood. Inadequacies of the water supply meant few and scattered fire hydrants. The quantity, maintenance, and technical adequacy of fire-fighting equipment were generally problematic. A number of conflagrations called attention to these shortcomings. Boston suffered a fire on November 9–10, 1872, that destroyed 766 buildings in a 60-acre swath, including seven wharves and several ships tied there. The fire department was virtually helpless to combat the flames. The most famous fire was in Chicago on October 8–9, 1871. A long drought and strong winds exacerbated the inadequate condition of fire-fighting equipment and shortage of manpower; the fire finally ended because it was blown to the shores of Lake Michigan, and a steady rain fell through the second day. The burnt district encompassed a 2,000-acre area four miles long and three-quarters of a mile wide. Some 18,000 buildings were gone; the estimated death toll was 300; and 90,000 people were rendered homeless.

Ironically, the dynamism and growth pressures present in Chicago turned the horrible event into a development opportunity. The previous two decades of development that had seen the city grow from 30,000 to 300,000 had paradoxically made the land more valuable without structures than with them. So, trade continued to increase, and real estate values quickly attained and surpassed those before the fire. Major urban fires provided powerful impetus to enact and/or tighten building codes, boost investment in fire-fighting equipment, increase the number and training of full-time firefighters, and improve the system of water distribution.

In the 1890s the slogan that “municipal government is business, not politics” was promoted by business leaders and other civic reformers and made its way into the political-governmental vocabulary. The growth of cities required increasing technical preparation and competence to address the delivery of necessary public services. There was a need for foresight and vision and for leaders who would look at the “big picture” beyond narrow parochial interests. By century’s end there was a growing sense that cities ought to become more beautiful, more efficient, and healthier places in which to live and do business. Yet because cities had become such diverse, multifaceted collections of people, activities, and interests, the

## 72 Civil Rights Act of 1875

allocation of resources and provision of services required more political sensitivity than mere technical preparation could deliver.

### Civil Rights Act of 1875 See VOLUME V.

#### *Civil Rights Cases* (1883)

Congress passed the Civil Rights Act of 1875, which prohibited discrimination on account of color, race, or previous condition of servitude on railroads or other forms of public conveyances, or in theaters, restaurants, inns, or other forms of public accommodation. Convicted persons were subjected to fines of not less than \$500 and possible imprisonment. In 1883 five cases of violation were examined by the U.S. SUPREME COURT: AFRICAN AMERICANS had been denied service in a Kansas City restaurant, a seat in the dress circle of a San Francisco theater, admission to a New York City opera house, accommodations in a Missouri hotel, and a seat in the ladies car of a railroad train in Tennessee.

The Supreme Court ruled 8-1 that the 1875 Civil Rights Act was unconstitutional. Justice Joseph Bradley declared for the majority that the Thirteenth Amendment, which abolished slavery, was not applicable to the law and that the Fourteenth Amendment “interdicted discriminatory action only by the states and not by private persons.” He added that the act of denying accommodation by an owner of an inn, a public carrier, or place of amusement is not tantamount to “imposing any badge of slavery or servitude upon the applicant.” Bradley noted that slavery could not be cited as the cause of every act of discrimination because blacks were no longer slaves nor were they any longer “the special favorite of the laws.”

In his lone dissent Justice JOHN MARSHALL HARLAN—a former slaveholder from Kentucky—said Bradley’s opinion was “narrow and artificial” and that the Thirteenth Amendment not only abolished slavery but in conferring freedom gave Congress the power to destroy the “badges of slavery.” He noted that railroad corporations, inns, theaters, and other public facilities were “agents or instruments of the state” and thereby liable.

Black activists and their supporters, aware that the Court’s decision would encourage segregation, were dismayed. Timothy Thomas Fortune, editor of the *New York Globe*, wrote that “the colored people of the United States feel today as if they had been baptized in ice water,” and the *Detroit Plain Dealer* noted that the Court’s ruling “comes like an avalanche carrying our fondest hopes down the hill of despair.”

Indeed, the decision of the Supreme Court emboldened southerners who opposed racial integration. In less than two decades the Court’s decision in *PLESSY V. FERGUSON* and the enactment of JIM CROW LAWS would effectively create a rigid segregated system in the southern states that would not be seriously challenged until the Civil Rights movement of the 1950s and 1960s.

#### civil service reform

With the rise of mass-based parties in the era of Andrew Jackson, politicians used civil servants to organize and finance their political campaigns. Public employees were assessed a percentage of their salaries for party purposes and—especially those in the field service outside Washington—performed the tasks of running conventions, campaigning, conveying supporters to the polls, and manning those polls. The appointment of civil servants was a vital concern for senators and congressmen because their political lives depended on patronage, and since the “spoils” of office belonged to the victors, civil servants had to reelect their patrons to keep their jobs. With each change of party, civil servants were rotated out of office and replaced by political appointees who, except for their inexperience, were like the previous appointees. The “spoils system” made the public service inefficient at best and corrupt at worst. Still, the major political parties—especially the party in power—argued that the American democracy, the one with the widest suffrage and most complex elections in the world, could not function without it.

The Civil War caused an extremely high turnover of civil servants (many of whom were suspected of treason) at the same time that the service was being subjected to unprecedented demands. Shortly after the war ended, Representative Thomas A. Jenckes, a Rhode Island Republican, inaugurated a movement to reform the civil service by introducing a bill requiring that nonpolicy-making civil

servants be appointed on the basis of competitive examinations open to all. The idea of a nonpartisan civil service appealed to intellectuals sickened by the hurly burly of political campaigns and to merchants angered by incompetent and corrupt customhouse employees. Although the Jenckes bill never passed, CONGRESS in 1871, recognizing the strength of the reform movement, enabled President Ulysses S. Grant to appoint a commission to devise rules for examining applicants for positions in the civil service. Prior to the 1872 election Grant favored the idea, and his commission, headed by George William Curtis, drew up rules. After the election Congress starved the commission, and Grant departed from the rules to appoint ROSCOE CONKLING's candidate as surveyor of the New York customhouse rather than promote the deputy surveyor. Curtis resigned, Grant abandoned the rules completely, and "spoilsmen" rejoiced.

Civil service reform was set back, but not for long. Shortly after President RUTHERFORD B. HAYES took office in 1877, he forbade assessments of civil servants and their management of caucuses, conventions, and campaigns. Following a long struggle, he removed Conkling's lieutenant CHESTER A. ARTHUR as head of the New York customhouse and then insisted that it be made a showcase for reform. Although Hayes's successor, JAMES A. GARFIELD, moved to restore the spoils system in the New York customhouse, he was assassinated by a deranged office seeker before that was accomplished. The civil service reform movement, headed by George William Curtis, capitalized on Garfield's tragic death by blaming the spoils system for his murder and calling for passage of a reform bill as a memorial for the slain president. Congressmen and senators, reluctant to give up their patronage (which provided the political soldiers in their electoral campaigns), would not pass the Pendleton Civil Service Reform Act until Republicans suffered a severe defeat in the 1882 congressional election. The "lame duck" Congress in 1883 passed the reform bill, which prohibited political assessments of all civil servants and "classified" 10 percent of the service under the "merit system" of open competitive examinations for appointments to office. Subsequent presidents enlarged the classified service to freeze their political appointments under existing civil service rules until, in 1900, roughly 45 percent of all civil servants were classified.

By 1900 the Pendleton Act had a significant effect. A previously unprofessional civil service was becoming a professionalized bureaucracy. Civil servants were better educated, and loyalty to a patron in Congress and concerns over local politics were giving way to concerns of a federal office whose interests were national. Since civil servants were no longer forced to contribute time and money to political campaigns, political parties turned

increasingly to corporations for political contributions, with a corresponding increase in corporate influence over public policy.

The civil service mirrored the development—in late-19th-century American society—of professionalism, nationalism, and the power of businesspeople. On the other hand, the reformed bureaucracy had acquired the capacity to accomplish the wide range of regulatory tasks assigned to it during the 20th century. Civil service reform was the fundamental reform for the Progressive Era.

### class consciousness

In comparison to Europe, the United States has been relatively free of class consciousness, but Americans have been acutely aware of race and ethnicity, with racial and ethnic prejudices often reinforced by differences in status. This tendency was strong in the Gilded Age in large part because of the huge influx of immigrants from eastern and southern Europe and China and by the migration of AFRICAN AMERICANS from the country into the city. The newcomers for the most part secured "foreign jobs"—the least desirable tasks at the lowest pay—and lived in poor housing in ethnic enclaves in city slums. Their poverty added to the contempt in which they were regarded (because of their Catholicism, Judaism, skin color, or strange tongues) by the children of earlier immigrants. Irish Americans were caricatured unmercifully in *Harper's Weekly* by THOMAS NAST (an immigrant from Germany), while eastern Europeans were disparaged as "Hunkies," southern Europeans as "Dagos," and Jews as "Sheenies."

Ironically, while racial and ethnic prejudices were strengthened by status in the society at large, the same prejudices were echoed even within the working class, which was also divided by ethnic and religious differences. Employers like Captain William Jones, who managed ANDREW CARNEGIE's J. Edgar Thompson Steel Works, preferred to hire "young American boys judicially mixed" in ethnic backgrounds. However, this was not easily accomplished in the 1880s in Pennsylvania's anthracite regions. The KNIGHTS OF LABOR was predominantly Irish, and the Amalgamated Association of Miners was English, Welsh, and German. Both unions tried, unsuccessfully, to attract either Slavs (who were mostly Poles) or Italians. By 1897, following the Lattimer massacre of immigrant strikers, the United Mine Workers had managed to unite the various

ethnic groups. Even then, their leader John Mitchell still had to remind them that the coal they dug was not Irish coal or Slavic coal, but simply coal.

Industrial conditions were sufficiently harsh during the Gilded Age for workers to join labor unions, but workers were not class conscious enough to create a significant radical labor movement to overthrow, either peacefully or violently, the capitalist system. Apart from divisive ethnic and religious diversity, working-class consciousness was also hampered by the widespread belief in and hope for upward social mobility, a dream shared by virtually all Americans. Although very few individuals rose from rags to riches—Carnegie was a spectacular exception—modest gains were registered. The children of immigrants were often more skilled and enjoyed better housing than their parents, and their children were apt to be better educated, to own property, and to climb a rung up the social ladder. The American dream was realized, not spectacularly, but in small increments over generations, and these gains were sufficient to keep the hopes of all alive. Americans were also extremely mobile, and their frequent moves were made in anticipation of a better life.

The American political system also served to mute working-class consciousness. With universal male suffrage (blacks voted in large numbers in the South from the 1860s to the 1890s), most workers had the vote and thus were courted by the major parties. Although both the Republicans and Democrats had elitist leaders, they paid sufficient attention to labor to discourage the growth of labor or socialist parties. For example, both parties stressed that their opposite views of the **TARIFF ISSUE** would benefit workers and their families. The labor vote divided between the two major parties and was further subdivided into ethnic and religious groups with little love for each other. Moreover, there was no solidarity between rural and urban laborers. Attempts to build a farmer-laborer political alliance failed most spectacularly in the 1896 presidential campaign of **WILLIAM JENNINGS BRYAN**. Workers felt more comfortable with **WILLIAM MCKINLEY**'s promises of industrial prosperity with sound money and protection than Bryan's promise of farm relief through inflation.

**Clemens, Samuel Langhorne** See **TWAIN, MARK**.

**Cleveland, Grover** (1837–1908) 22nd and 24th president of the United States

Grover Cleveland, a two-term president of the United States, was born in Caldwell, New Jersey, on March 18, 1837. He was the fifth of nine children born to Richard Falley Cleveland, a Presbyterian minister, and Ann Neal. Cleveland had only a rudimentary formal education. The death of his father in 1853 removed any hope Cleveland may have had of attending college. In 1855 he settled in Buffalo, New York, where he studied law and joined the **DEMOCRATIC PARTY**. He was admitted to the New York bar in 1859. Cleveland remained a bachelor until June 1886, when he married Frances Folsom in the Blue Room of the White House. They had five children.

In public life Cleveland was noted for his honesty and frugality. In 1863 he became the assistant district attorney for Erie County, New York, and in 1871 was elected sheriff. Between terms in public office, Cleveland became one of the most successful private attorneys in Buffalo. His meteoric rise to the presidency began in 1881 when he was elected mayor of Buffalo with the support of a coalition of Democrats, reform-minded Republicans, and independents. As mayor, Cleveland stopped an attempt to defraud the city of \$200,000 on a street-cleaning contract and vetoed several bills passed by Buffalo's aldermen that he felt perpetuated political graft. Rising above partisan politics as mayor earned Cleveland both the nomination and election in 1882 as governor of New York.

Cleveland brought to the governor's mansion the same dedication to "good government" and independence that he had shown as mayor of Buffalo. Most state governments at this time operated on the spoils system, whereby politicians in office gave government jobs to those members of their party who had assisted them in getting elected. However, Cleveland appointed people to office based not on their party affiliation but on their skills. As governor, Cleveland signed the first state **CIVIL SERVICE REFORM** law in America. He also liberally used his veto power on appropriations bills and often challenged **TAMMANY HALL**, New York City's Democratic machine.

In 1884 the Republicans nominated **JAMES G. BLAINE** of Maine for president. Political pundits of the day realized that the candidate who carried New York would win the election. At their 1884 national convention, the Democrats nominated Cleveland for president. In a bitterly fought campaign, Cleveland narrowly won New York, defeated Blaine by a count of 219 electoral votes to 182, and became the first Democratic president since the Civil War. As president, Cleveland extended the merit system (civil service reform) for federal employees, promoted a policy of tariff reduction, was an advocate of "sound money" principles, and used the presidential veto power to reject bills that he believed would drain the national treasury. By scrutiniz-

Grover Cleveland (Library of Congress)

ing veterans pensions bills closely, he offended the powerful GRAND ARMY OF THE REPUBLIC (GAR) veterans organization.

Cleveland was renominated by the Democrats in 1888 but lost the election to BENJAMIN HARRISON. Although Cleveland led Harrison in the popular vote 5,540,050 to 5,444,337, Harrison carried the electoral college by a vote of 233 to 168. Clever exploitation of the TARIFF ISSUE, however, enabled Cleveland to defeat Harrison in the 1892 election and become the only president in American history to serve two nonconsecutive terms in office (1885–89, 1893–97).

Within four months of Cleveland's second inauguration a panic gripped Wall Street that plunged the nation into a severe depression. The nation's gold reserve, which had been dwindling as a result of the Sherman Silver Purchase Act of 1890, dropped below the \$100-million mark just prior to the panic, and after the onset of the panic it fell rapidly to \$80 million by the end of 1893, threatening to drive the United States from the gold standard. Cleveland believed that the cause of this financial crisis was fear of inflation caused by agitation over Free Silver. He was firmly opposed to any schemes of currency inflation and called for the repeal of the Sherman Act, which obligated the govern-

ment to purchase 4.5 million ounces of silver monthly that could be redeemed in gold. In 1893 the law was repealed as several Republicans and northeastern Democrats sided with the president. Cleveland's campaign against that act alienated southern and western Democrats. They were further alienated by bond sales in 1894 and 1895 to bankers at exorbitant rates to shore up the gold reserve, which fell as low as \$41 million in early 1895. Cleveland saved the gold standard but at an enormous political cost.

Conflicts between business and labor also marked Cleveland's second administration. During the PULLMAN STRIKE (1894) the American Railway Union, led by Eugene V. Debs, protested a cut in wages at the Pullman Palace Car Company, called for a boycott of Pullman cars, and paralyzed the major midwestern rail lines. In response to the crisis, Cleveland broke the strike by deploying federal troops on the pretext that the strikers had impeded the delivery of the U.S. mail.

In foreign affairs, Cleveland steadfastly refused to aid rebel movements in HAWAII and CUBA. In 1895 he invoked the Monroe Doctrine to force an arbitrated settlement of a boundary dispute between British Guiana and Venezuela. The dispute was settled a year later by an arbitration commission.

Cleveland's stubborn independence led to his repudiation by the Democratic Party. In 1896 it embraced inflation, nominated WILLIAM J. BRYAN for president, and went down in defeat. Cleveland retired from public office to Princeton, New Jersey, where he died on June 24, 1908.

**Cody, William Frederick (Buffalo Bill)** (1846–1917)  
*scout, showman*

William Cody was born in Scott County, Iowa, on February 26, 1846, but in 1854 his family moved to the vicinity of Fort Leavenworth, Kansas. His schooling was sporadic at best, and after his father died in 1857 he worked as a messenger and as a teamster, joined the Pikes Peak gold rush to Colorado in 1859, turned to trapping, returned to Kansas broke in 1860, and then rode for the Pony Express. When the Civil War began he joined the antislavery guerrillas called Jayhawkers, and in 1863 the Ninth Kansas

Cavalry employed him as a scout in its campaigns against the Kiowa and Comanche. Cody then volunteered for the Seventh Kansas Cavalry in early 1864 and soldiered in Tennessee, Missouri, Arkansas, and Kansas. After the Civil War Cody married Louisa Frederici in St. Louis in 1866 and then returned to Kansas. From 1867 to 1868 he earned the nickname of Buffalo Bill by supplying the construction gang of the Kansas & Pacific Railroad with the meat of 12 buffalo a day. He then returned to scouting, again as a civilian employee, for the Fifth Cavalry of the U.S. Army in campaigns against the Plains Indians.

Cody's life took a melodramatic twist in 1869 after an interview with Ned Buntline, the pseudonym of Edward Z. C. Judson, writer of DIME NOVELS. Buntline, who never let the facts get in the way of an adventurous tale, wrote *Buffalo Bill: King of the Border Men*, which bore no resemblance to Cody's experiences but made him a celebrity. Exploiting

the popularity of the Buffalo Bill he created, Buntline wrote the play *Scouts of the Prairies*, which opened in Chicago in December 1872 with Cody playing himself. Over the next decade until the 1882–83 season, Cody was on the stage playing himself in dramas that mingled facts and fiction. Cody continued to scout and risked his life on the frontier in mild weather and then acted heroic on urban stages in winters. For bravery in an April 1872 battle with NATIVE AMERICANS, Congress awarded him the Medal of Honor (rescinded in 1916, since Cody was a civilian employee and that medal is intended for military personnel), and in July 1876 he killed Yellow Hand, the son of a Cheyenne chief, in a celebrated duel that he subsequently reenacted countless times as he toured the country. His theatrical career enabled Cody to acquire a substantial ranch in Nebraska, but his career as a scout led him to move to Wyoming. In 1894 he served as a guide for a fossil-gathering expedition

William F. (Buffalo Bill) Cody (shown standing, sixth man from the left) (Library of Congress)

of Professor OTHNIEL C. MARSH in the Big Horn Basin. Cody was attracted to that area and received a substantial grant of land from Wyoming on which he developed an even more celebrated ranch.

In 1883 Cody began touring with the “Buffalo Bill Wild West Show” and continued to do so until 1912. The show re-created exciting scenes like an Indian raid on a stagecoach, celebrated the daring of Pony Express riders, and exhibited skillful riders, ropers, and marksmen. Cody himself was an expert horseman and a great shot, but the most famous marksman in the show was a woman named Annie Oakley. And Cody’s most famous celebrity was SITTING BULL, who toured with the show in 1886, just 10 years after he and the Sioux wiped out George Armstrong Custer and his command at Little Big Horn. The Wild West Show toured Europe with great success, and it was a hit at the Chicago WORLD’S COLUMBIAN EXPOSITION in 1893. The show created and perpetuated myths about the West in general and about Buffalo Bill in particular, and it had an incalculable influence on how Americans have perceived cowboys and Indians and the settlement of the West. Cody died in Denver, Colorado, on January 10, 1917.

### Coeur d’Alene miners’ strike (1892)

The primary cause of the Coeur d’Alene miners’ strike was technological change. Silver and lead mine operators in the Coeur d’Alene district of northern Idaho began installing steam-powered drilling machines in their mines. The new machines increased the number of low-skilled jobs such as shovelers while eliminating the jobs of highly skilled hand-drill miners. In contrast with other American labor unions that insisted on a wage differential based upon skill, the strong labor movement in the area reacted to technological displacement by winning a standard wage, the rate paid skilled miners, for all underground employees.

The uniform wage removed the cost efficiencies the operators hoped to gain by replacing their skilled men, and in an industry suffering from falling prices, labor costs were an important issue. Not surprisingly, the operators decided to destroy the union and its uniform wage scale. In 1891 they organized the Mine Owners Protective Association to ensure a united front against labor. The Protective Association hired the Pinkerton Detective Agency to infiltrate the union.

As the PINKERTONS gathered inside information, the operators ceased all mining in the region in January

1892. Although it was a ploy to force lower railroad rates, the shutdown had the additional effect of depriving the mine workers of an income, thus weakening their ability to resist employer aggression. On March 18 the mine owners announced that since the railroads had granted them rate relief, they would reopen the mines on the first of April. But they also announced a new wage scale that would be based upon skill. The union rejected the new wage scale and management responded by stating that the mines would remain closed until June.

But within a few days of this announcement, the operators began importing strikebreakers. Confrontation between union members and the strikebreakers and their heavily armed guards escalated on July 11 with a five-hour firefight at the Frisco mine that ended with the strikers dynamiting the processing mill. In another gunfight at a nearby mine five men were killed. Later that day a small army of armed strikers gained control of a third mine and threatened to destroy it if the strikebreakers were not fired.

The violence prompted Governor Norman Willey to order the National Guard into the region and to request and receive additional help from the federal government. Martial law was declared in the region, and the military force pursued a decidedly promanagement course. It removed local officials who were sympathetic to the strikers, arrested more than 300 union men and placed them in unsanitary “bull pens,” closed down the union commissary, and protected the imported strikebreakers. The governor finally lifted martial law on November 19 when the strike was broken.

The strike’s failure, however, inspired the union movement among the hard-rock miners. In May 1893 representatives from the broken union attended a meeting with delegates from other unions in the Rocky Mountain region to form the Western Federation of Miners, which would recruit more than 200,000 members by the turn of the century.

### communications

By 1870 most American communities were in instant touch with each other by telegraph, and as RAILROADS expanded during the Gilded Age people and products could move from one corner of the nation to another in days. A generation earlier—prior to the revolution in communications—

months were required to send messages, goods, or travel across the nation. The economic effects of cheap and fast communication were profound. Local and regional markets gave way to a national market (indeed, a world market for growers of wheat). Manufacturers secured their raw materials from far and wide and, if anything, distributed their less bulky and more valuable products even further. Orders could be placed instantly, delivered speedily, and paid for promptly, thus providing a quicker return on capital invested than in times past. The social effects of the communications revolution echoed the economic effects. It made possible the two great population shifts in the Gilded Age: the settlement of the West and the growth of huge cities. It also helped reduce provincialism in America by binding its regions closer together with wire and rails.

The growth of a nationwide rail network was the key factor in the rapid movement of goods and people. In 1870 there were 53,000 miles of railroad track (the transcontinental railroad had been completed the year before), and by 1900 trackage had almost multiplied four times to 193,000 miles. Railroads also made possible the vast improvement in mail service in two ways. They not only moved the mail much more quickly than in the past, but also gave rise in the 1860s to the railway post office: mail cars on passenger trains, where the mail was sorted while moving down the track. Montgomery Blair, Lincoln's postmaster general, not only authorized the first railway post office but also home delivery in cities and a money-order system. In addition, in 1879 Congress aided rural Americans and mail-order houses when it provided that packages of up to four pounds could be mailed throughout the country at the flat rate of one cent an ounce. These innovations all had their greatest impact in the Gilded Age. The 468 million postage stamps sold in 1870 increased to almost 4 billion in 1900, indicating a dramatic increase in personal and business letters, which exerted a powerful cultural, social, and economic centripetal force.

The first practical telegraph line (from Washington to Baltimore) that went into operation in 1844 was owned by the federal government, but by 1847 the government had decided not to provide telegraph service as it did mail service and sold the line to private interests. Initially the telegraph industry was chaotic with numerous companies, but by 1870 the Western Union Telegraph Company consolidated over 90 percent of the business into one system that it continued to expand. In 1870 it had 3,972 offices and 112,000 miles of wire; by 1900 these had grown to 22,000 offices and 933,000 miles of wire. The telegraph was of importance to business in general, especially after the invention of the stock ticker in 1866, and of great value to newspapers. It led to the establishment of the New York Associated Press, which transmitted news items to subscribers throughout the country over the Western Union

wires. At times during the Gilded Age, Western Union's position as the sole transmitter of business and general news caused alarm and led to calls for a postal telegraph system as an alternative to the Western Union monopoly. Postmaster Generals John A. J. Creswell in the 1870s and John Wanamaker in the 1890s advocated the postal telegraph, but nothing came of their efforts.

ALEXANDER GRAHAM BELL's telephone made a great impression when demonstrated at the PHILADELPHIA CENTENNIAL EXPOSITION in 1876, but its significant impact awaited the widespread distribution of telephones in operation. Although in 1878 President RUTHERFORD B. HAYES had a telephone in the White House that connected with one in the Treasury Department, the White House's nerve center was not a switchboard but its telegraph office, and it would remain so until the 20th century. Telephones, however, did proliferate until there were 1.4 million in 1900 (one for every 54 Americans), making 7.7 million local calls but only 193,000 toll calls daily. Long-distance calls were limited in the Gilded Age. Service between New York and Chicago was instituted in 1892, but transcontinental service between New York and San Francisco was not available until 1915. Among businesses, newspapers were quick to utilize the telephone. The telephone was on its way to becoming the "nervous system" of the 20th-century metropolis—the conqueror of time, space, and solitude, and an instrument used to bring the human family into closer touch.

**Compromise of 1877** See PRESIDENTIAL CAMPAIGNS.

**Comstock, Anthony** (1844–1915) *moral crusader*

Anthony Comstock, the zealous guardian of public morals, was born on March 7, 1844, in New Canaan, Connecticut, the son of Polly Lockwood Comstock, who died when he was 10 years old, and Thomas Anthony Comstock, a farmer and sawmill owner. Anthony Comstock was raised in a strict household of limited financial means, attended Wykoff's Academy in New Canaan, and spent one year in high school in New Britain, Connecticut, before lack of funds forced him to leave in 1861. He worked as a grocer's

clerk for the next two years, and when an older brother died in the Battle of Gettysburg, he volunteered to take his place in the 17th Connecticut Volunteer Infantry, where he served until 1865. After his discharge, he returned to his grocery-store job, traveled briefly in New England and the South, and around 1871 moved to New York City, where he took a job as a porter in a commission house.

Always concerned about public morals, Comstock was deeply distressed by the dissolute life he found in the city and by the government's failure to control it. In 1873 he initiated a personal crusade against pornography and, with the support of such prominent New York citizens as J. PIERPONT MORGAN, created a committee of the Young Men's Christian Association (YMCA), of which he was an active member, to combat it. So fierce were his efforts that some members of the YMCA accused him of entrapment, and he called on his supporters to help organize an independent New York branch of the London Society for the Suppression of Vice. As the secretary and main agent of the society, unpaid until about 1907, he devoted himself full time to social reform. That year he was made a special agent of the U.S. Post Office Department, which authorized him to cull the mail for improper material, and his organization lobbied CONGRESS successfully to pass a law against sending obscene material through the mails. By the end of his life, he boasted that the New York Society for the Suppression of Vice had been responsible for the arrest of 3,670 criminals and the destruction of 160 tons of obscene literature and pictures.

Although he was chiefly known for his campaign against what he considered obscene literature and art, Comstock also opposed abortion, birth control, gambling, fraudulent banking schemes, and medical quackery, and he inveighed against popular romances and adventure books, which he called "vampire literature" and believed led young readers into sin. He wrote *Frauds Exposed* (1880), reporting on his crusade against the use of the mail to promote swindles and immoral social practices, and *Gambling Outrages* (1887), about the pernicious influence of horse racing.

In both he defended his ruthless and often devious methods of trapping and persecuting the evildoers he perceived as corrupting society. His efforts at suppressing George Bernard Shaw's 1905 play *Mrs. Warren's Profession*, a sympathetic presentation of prostitution, led that playwright to coin the term *comstockery*, which entered the language as a synonym for narrow-minded prudery and moralistic censorship. Comstock died on September 21, 1915.

## Congress

In the division of power among Congress, the president, and the SUPREME COURT, Congress had the largest share throughout the late 19th century. The ebb and flow of power within the federal government is the product of the times, personalities, and traditions. The Civil War (1861–65) required President Abraham Lincoln to enhance the power of the executive, but the policies and behavior of his inept successor Andrew Johnson (1865–69) eroded presidential prestige and enabled Congress to dominate the Reconstruction process. By 1870, although President Ulysses S. Grant was very popular, Congress had reoccupied its traditional position as the maker of laws and the president was, once again, primarily the administrator of those laws. Presidents did address problems and call for legislation in their annual messages to Congress, but Congress responded to those pleas in its own way or not at all.

Congressional power, in large part, depended on congressional dominance of the political process. Presidents, presidential nominees, and national committees were only nominally at the head of their political parties. The national parties were loose alliances of highly organized state and local parties that were, for the most part, firmly in control of senators and congressmen. In playing their dual roles as legislators and party leaders, they tended to emphasize organization rather than issues. To staff their political machines they relied on civil servants (postmasters, customhouse officers, internal revenue collectors, and so on) in their states and districts. Civil service appointments, nominally in the hands of the president and heads of departments, were actually made—especially outside Washington—on the recommendation of senators and representatives. CIVIL SERVICE REFORM was anathema to virtually all of them, since appointments on the basis of competitive examinations open to all would result in a politically neutral civil service and destroy their machines.

The outstanding political leaders of the late 19th century were often found in Congress but were rarely identified with a cause or a principle. The most prominent Republican of that era was not a president, but was JAMES G. BLAINE, who spent 20 years in Congress, was nominated for the presidency (and lost), and was a two-time secretary of state. Blaine actually did embrace some issues

(protective tariff, Pan-Americanism, IMPERIALISM), but he was idolized by Republican regulars as a party organization man. Most members of the House of Representatives served only a few two-year terms before moving on to the Senate, like ROSCOE CONKLING, or to a governorship, like RUTHERFORD B. HAYES. Senators, in contrast, served for much longer periods because they were elected for six-year terms by state legislatures, which as heads of state parties they dominated. Conkling, a Republican senator from New York (1867–81), was perhaps the most prominent member of the Senate in the 1870s, but he is identified with no issue, bill, or act of Congress and is remembered for resigning the Senate in a petulant rage after being denied the patronage of the New York customhouse. Conkling is an extreme example, but virtually all senators and representatives paid close attention to patronage matters.

Organization remained important, but the trend in the 1880s and especially in the 1890s was toward the embracing of issues. Rapid industrial and urban growth and economic depressions spawned problems and pressures that could not be ignored. In addition, civil service reform legislation (1883) reduced the patronage and dried up the flow of cash from civil servants into party coffers. At the same time, industrialists increased their contributions and, as a consequence, their influence in politics. Senator Nelson Aldrich, a Rhode Island Republican who served from 1881 to 1911, championed the interests of big business in general and the protective tariff in particular while a loan from the American Sugar Refining Company enabled him to build his personal fortune. Along with Aldrich, Representative WILLIAM MCKINLEY was a major influence on the 1890 MCKINLEY TARIFF, and although the latter's identification with that measure led to an initial defeat, it also led to his ultimate nomination and election as president in 1896. On the other hand, the plight of America's farmers led WILLIAM JENNINGS BRYAN, who in the 1890s served briefly in the House, to advocate Free Silver (see FREE SILVER MOVEMENT), which in 1896 secured for him the Democratic nomination for the presidency.

Congress, while moving to embrace issues in the 1880s and 1890s, was not particularly influenced by the presidency. Congress legislated but did so under pressure from constituents. Presidents played little or no role in formulating, and at times opposed, major legislation. Responding to demands for currency expansion, Congress in 1874 passed a mildly inflationary bill, which President Grant vetoed. In 1878 Congress passed the BLAND-ALLISON ACT—providing for the coinage of 2 million to 4 million silver dollars monthly—over Hayes's veto. Under the lash of public opinion, Congress adopted the 1883 PENDLETON CIVIL SERVICE REFORM ACT, which was written by Dorman B. Eaton of the New York Civil Service Reform Association. Although he did not like it, President CHESTER A.

ARTHUR felt compelled to sign it into law. President GROVER CLEVELAND approved the Interstate Commerce Act (1887) but had nothing to do with either its form or its passage. After the Supreme Court declared state regulation of interstate commerce unconstitutional, public opinion again forced Congress to act.

Congress, reflecting local business interests, all but ignored presidential pleas when constructing tariff legislation. Arthur's call for a 20 percent reduction resulted in minor reductions in the Mongrel Tariff (1883), and Cleveland's calls for reductions were either ignored (Mills Bill, 1888) or decimated (Wilson-Gorman Tariff, 1894). The reciprocity feature of the 1890 McKinley Tariff reflected Secretary of State Blaine's views, but its high rates and the even greater protectionism of the 1897 Dingley Tariff were the creations of Congress.

By 1900 Congress remained the paramount branch of the federal government, but it was more disciplined than in 1870, and an economic crisis and a war in the 1890s had by 1900 enhanced the power of the presidency. Speaker of the House THOMAS B. REED (1889–91, 1895–99) forced the adoption of rules that expedited legislation, and the Senate by the late 1890s was led by Aldrich and a few other long-term Republican cohorts. But while Congress became more focused, the modern presidency, exploiting issues and rallying public opinion, began to emerge with William McKinley and would flower with Theodore Roosevelt and other 20th-century presidents who would dominate Congress.

Rothman, *Politics and Power: The United States Senate, 1869–1901* (Cambridge: Harvard University Press, 1966).

### **Conkling, Roscoe** (1829–1888) *politician*

Although he served in both houses of Congress, Roscoe Conkling's renown is not as a legislator but as the quintessential spoilsman of the Gilded Age, the political boss of New York. Born in Albany, New York, on October 30, 1829, Conkling was the son of Alfred Conkling, a federal district judge (1825–52) and minister to Mexico (1852–53). Roscoe Conkling studied law in Utica, New York, passed the bar examination in 1850, entered politics as a Whig, joined the Republicans with the demise of the Whig Party, and became mayor of Utica. In 1858 Conkling was elected to CONGRESS, serving in the House (1859–63, 1865–67) and the Senate (1867–81).

Although regarded as a leader of the Senate during the 1870s, Conkling is not associated with any acts of Congress

or even bills before it. Handsome, vain, and arrogant, he was a skilled debater and an eloquent orator, but he was more inspired by politics than by issues. His speech opposing the Legal Tender Act of 1862 (Conkling consistently opposed currency inflation) was exceptional; the speeches his auditors remembered to their dying day, and which are still quoted, were made at political conventions. At the 1877 New York State Republican Convention, for example, Conkling vehemently attacked the editor and civil service reformer George William Curtis, lecturing him “that parties are not built up by deportment, or by ladies’ magazines, or gush” and sneering that “when Dr. Johnson defined patriotism as the last refuge of a scoundrel, he was unconscious of the then undeveloped capabilities and uses of the word reform.”

Conkling was infuriated with Curtis, reformers, and especially President RUTHERFORD B. HAYES because they threatened his control of the New York Republican Party, which was based on his control of the New York customhouse, post office, and other federal patronage plums awarded him by President Ulysses S. Grant, with whom Conkling was closely allied. In 1877 Hayes had not only banned political assessments of civil servants and ordered them to cease their management of political conventions and campaigns, but he had also moved to fire Conkling’s lieutenant, CHESTER A. ARTHUR, as head of the New York customhouse. Conkling fought back, arguing “senatorial courtesy” (the established practice of allowing senators to designate appointees to field offices in their states), and for a time he prevented Senate confirmation of a successor to Arthur, but Hayes ultimately prevailed and, to Conkling’s chagrin, made the customhouse a showcase for CIVIL SERVICE REFORM.

Conkling, however, hoped to regain control of the customhouse with the next administration. He and fellow STALWARTS worked mightily to secure Grant’s nomination for a third term in 1880 (Conkling’s nominating speech was perhaps the greatest of his career) but failed. Although disappointed with the Republican nominee, JAMES A. GARFIELD (and not at all happy that Arthur accepted the second place on the ticket), Conkling and his followers, after initially sitting on their hands, campaigned and Garfield triumphed. The Stalwarts were activated by what they took to be the promise of patronage—specifically the New York customhouse—but President Garfield awarded the customhouse to a lieutenant of Conkling’s arch enemy, JAMES G. BLAINE. Conkling once again appealed to senatorial courtesy and once again went down to defeat. He resigned his seat, expecting the New York state legislature to reelect and vindicate him, but it failed to do so.

Out of politics and practicing law in New York City, Conkling ironically had a greater influence on policy (as distinct from politics) than he had had as a senator. In 1882 he argued before the SUPREME COURT that the DUE PRO-

CESS CLAUSE should apply to corporations as well as to individuals, an interpretation the Court subsequently adopted. Conkling died in New York City on April 18, 1888.

## conservation

The American conservation movement from 1870 to 1900 is marked by several significant federally sponsored acts, including the congressional establishment of the first national park, Yellowstone National Park, in 1872; the founding of the National Forest Reserve program in 1891; and the creation of government offices to oversee natural resources. For the first time in American history, federal legislation protected wildlife by establishing refuges and encouraged the careful management of natural resources.

Two sometimes conflicting goals defined conservation efforts at the end of the 19th century: preservation and conservation. Economic growth following the Civil War and the continuing westward expansion stripped the land of forests and wildlife. The rapid depletion of natural resources, as well as a belief in the sanctity of nature, inspired preservationists like JOHN MUIR to call on policy makers to preserve wilderness for its own sake. Conservationists, influenced by utilitarian ideas, recognized the economic incentives in successfully managing the environment, specifically timber resources, as they moved to maximize yield and profit. During this time, scenic tourism, outdoor activities such as hiking and bird watching, and landscape architecture grew in popularity as Americans embraced nature and both the conservation and preservation movements.

CONGRESS established initial federal stewardship positions under either the Department of Agriculture or the Department of the Interior. The Interior Department oversaw the U.S. GEOLOGICAL SURVEY, which was established in 1879. At the state level, in 1885 New York created the Adirondack Forest Preserve and the New York State Reservation at Niagara Falls. Capitalizing on tourism at Niagara Falls, New York retained the services of noted landscape architects Frederick Law Olmsted (1822–1903) and Calvert Vaux (1824–95) to beautify the surrounding area to draw more visitors. In 1892 New York created Adirondack Park, amending its constitution in 1894 to ban logging activities there, which was a victory for preservationists.

The federal push to manage logging and protect forests started in earnest in the late 1880s. In 1886 Congress established the Division of Forestry in the Department of Agriculture, the forerunner of the U.S. Forest Service.

Congress then passed the Forest Reserve Act in 1891, which allowed the president to create forest reserves, a pre-

cursor of the national forest system. President BENJAMIN HARRISON immediately took advantage of this legislation, setting aside land in Wyoming for reserves. In 1896 the American Academy of Sciences established a committee on forests, calling for a scientific forest management policy to manage timber resources, a shift from preservation goals. In response, Congress passed a forest management act in 1897, also known as the Organic Act, that designated forest reserves as resources for timber, mining, and grazing. In 1898 Gifford Pinchot (1865–1946), who headed the Academy of Sciences committee on forests, was appointed chief of the Division of Forestry in the Department of Agriculture. Pinchot had studied forestry in Europe, where the stress was on management principles rather than preservation, and he focused on bringing together public-interest and forest-industry groups as he built support for the academy's ideas about scientific forest management. Pinchot would eventually clash with John Muir over the issue of grazing rights and conservation policy.

Strong initiatives to promote economic wildlife management also date to the late 1880s. Congress established the Division of Economic Ornithology and Mammalogy under the auspices of the Department of Agriculture in 1886; the office would later become the Bureau of Biological Survey. In 1889 Congress moved to protect Alaskan salmon fisheries, and in 1891 President Harrison created the first national wildlife refuge in Alaska: the Afognak Forest and Fish-Culture Reserve. In 1894 Congress banned hunting in Yellowstone National Park, thus setting a precedent for species preservation in national parks.

Other large national parks conceived during this era include California's Sequoia and Yosemite National Parks, which were established by Congress within days of each other in 1890. Mount Rainier National Park in the state of Washington was established in 1899. Several still-extant private organizations dedicated to preservation began in the 1890s, an indication of public support for an early form of environmentalism. In 1892 John Muir founded the Sierra Club and in 1896 the first Audubon Society was established in Massachusetts. At the close of the 19th century, the National Park movement had become a global phenomenon, with national parks established across the British Commonwealth, Mexico, and Russia.

## contract labor

The term *contract labor* generally refers to alien workers imported under the Contract Labor Act of 1864. Designed to address the labor shortage accompanying the Civil War, the law permitted employers to recruit workers in Europe and advance them the cost of their transportation to America. The loan was secured by a lien, for not more than 12 months, against the immigrants' wages and all property that they might acquire in the United States. As a further inducement, the law exempted immigrants from the military draft.

Organizations such as the American Emigrant Company, capitalized at \$1 million, quickly formed to recruit workers and supply them to manufacturers. Established immigrants also took advantage of the law, using their knowledge of English and American customs to exploit their compatriots after they arrived. Some of the most unscrupulous brought over entire families, placing the men in jobs, forcing the women into prostitution, and driving the children into the streets to shine shoes, beg, or steal for them.

Although contract laborers were relatively few in number, American workers blamed them for lowering wages and denounced them as strikebreakers. Both the National Labor Union and the KNIGHTS OF LABOR agitated for the repeal of the 1864 law, and their efforts finally resulted in the passage of the Foran Act in 1885. That act, however, contained a major loophole in that it forbade only prevoyage contracts. But even without this loophole, the act was difficult to enforce. The exact number of immigrant contract laborers is unknown, but the practice most likely continues to this day.

Convicts were another form of contract labor as governments sought to recoup the cost of keeping prisoners. In some instances prisons became factories manufacturing products for general consumption. Some states even leased their inmates to employers on a per diem basis. Organized labor protested that consumer goods produced by convicts represented unfair wage competition and demanded that it be stopped. Northern states began abolishing their convict labor systems in the 1880s, and the federal government stopped contracting its prisoners in 1887. By 1900 the system prevailed only in the South.

## corruption, political

In the popular imagination as well as in scholarly works, the Gilded Age is perceived as an especially debased period of

American history. It was corrupt and its corrupters were often blatant, but it also abounded in active and vociferous reformers who publicized and at times exaggerated the shortcomings of the day. The Gilded Age, however, was not the only era in which politicians rigged elections, policy-making officials accepted bribes, administrators awarded padded contracts for public works and services, and civil servants extorted or stole money.

Prior to the adoption of the secret ballot in the 1890s, voters were frequently purchased in swing states like Indiana or marched to the polls on company time in Pennsylvania, where they voted as directed by their coal mine or steel mill boss. Lax registration procedures in cities enabled the Republican machine in Philadelphia, for example, or the Democratic machine in New York, to use “repeaters” who cast votes for fictitious names and for those long since dead. Voters were also “colonized” across state lines. Ballot boxes were “stuffed” with votes no one had cast legitimately. While some northern industrialists intimidated employees, southern white supremacists intimidated blacks. In the most violent and disgraceful election in American history they gained control of Mississippi in 1875 by threatening, beating, and murdering blacks to keep them from voting. By 1900 the secret ballot had reduced cheating at the polls, but southern blacks were totally disfranchised.

Throughout the country, however, most potential voters could vote and most votes were cast legitimately, but a close election could be determined by fraud or violence, and the four elections from 1876 to 1888 were close. Republican fraud prevailed over Democratic violence in the disputed presidential election of 1876, but it is impossible to determine who would have won if all enfranchised voters had been allowed to vote and their votes accurately counted. It is impossible to say whether or not zealous Republicans threw out too many Democratic votes to make up for intimidated black Republicans. In 1888 the successful Republican nominee BENJAMIN HARRISON thanked God for his victory, but his cynical campaign manager Matthew Quay observed that God had nothing to do with it, quipping that a number of men risked the penitentiary to put Harrison in the White House.

With the spectacular rise of industry in the late 19th century, businesspeople were anxious to curry favor with powerful politicians who were in a position to make or break a venture. Railroads, some of which were dependent on land grants and all of which were subject to some governmental regulation as public carriers, were especially active in influencing politicians, but so too were large-scale importers and distillers. These supplicants attempted to seduce power brokers using a variety of methods, ranging from flattery in mansions and on boats to investment opportunities, generous loans, exorbitant fees, and outright bribery. JAY GOULD and James Fisk of the Erie Railroad in

This cartoon parodies the strife and corruption within the New York Democratic Party (*Harper's Weekly*)

1868 bribed the New York state legislature with \$1 million to legitimize the issuance of watered stock. The following year—after entertaining and temporarily duping President Ulysses S. Grant—they briefly cornered the gold market, sold short, made \$11 million, and ruined many. During the Gilded Age, the Pennsylvania Railroad dominated the government of Pennsylvania, and the real capital of California reputedly was not Sacramento but the offices of the Southern Pacific Railroad.

Congressmen were also corrupted. Several accepted stock in the Credit Mobilier, the construction company controlled by insiders that made exorbitant profits in building the Union Pacific Railroad with federal funds. Speaker of the House JAMES G. BLAINE received \$64,000 from the Union Pacific (which he was in a position to help) for some nearly worthless Little Rock & Fort Smith Railroad bonds, a payment that cost him the presidency. JAMES A. GARFIELD, however, gained the presidency despite having received a \$329 Credit Mobilier dividend (he said it was a \$300 loan) and a \$5,000 fee from a paving firm that he helped secure a contract for Washington streets. That fee was chicken feed compared with Boss William M. Tweed's \$1 million from the Erie Railroad for his legal services or the \$5 million loan to Senator Nelson Aldrich—the major architect of Gilded Age tariff rates—from the American Sugar Refining Company, the major importer of the nation's most valuable import.

Garfield was not alone in making money from a government contract. The New York County Courthouse built by the TWEED RING for \$12 million (three times what it should have cost) enriched insiders by padding contracts. Construction projects were especially lucrative for local politicians, and some like George W. Plunkitt of Tammany Hall differentiated between honest and dishonest graft. Plunkitt would have no part in outright stealing,

but he saw no harm in profiting personally from the inside information politicians were often privy to. Urban bosses regularly awarded transportation franchises in exchange for hefty political contributions. The most spectacular example of padded contracts on the federal level were the STAR ROUTE FRAUDS. In the late 1870s contracts for mail service in remote corners of the West were fraudulently increased by approximately \$2 million, and this money helped finance the 1880 Republican presidential campaign. Postal officials who perpetrated the star route frauds—and urban bosses who padded contracts and sold franchises—funneled most of the money they realized into political party organizations in an effort to perpetuate their power.

Civil servants involved in collecting taxes often took bribes. The New York customhouse was notorious in the 1870s among New Yorkers for taking advantage of importers, but non-New Yorkers claimed it allowed New York firms to skirt regulations and achieve an advantage over competing merchants in other cities with honest customs officials. In St. Louis a group of distillers and internal revenue agents with ties to Grant's personal secretary defrauded the government of large sums of money in a conspiracy known as the Whiskey Ring.

With the passage of the 1883 Pendleton Act, CIVIL SERVICE REFORM decreased blatant political corruption. As public officers became less partisan and more professional, and with the outlawing of political assessments, politicians depended less and less on civil servants (and what by hook or by crook they could realize from their positions) for funding campaigns. And as the public service became politically neutral, politicians turned instead to businessmen for contributions and became increasingly amenable to their demands, further blurring the line between a contribution and a bribe.

### Coxey's Army (1894)

In 1893 the United States experienced one of the greatest financial collapses in its history, and one of its results was Coxey's Army. The panic of 1893 brought about the most severe economic depression the nation had yet experienced. All across the United States, businesses filed for bankruptcy, banks failed, factories and mines shut down, agricultural prices declined, and a large number of Americans were laid off from their jobs. The economic depression undermined the public's confidence in the economy and caused social unrest among the nation's unemployed. Several small groups or "armies" of the unemployed began

to organize demonstrations and called on the government to take measures to relieve unemployment.

In 1894 Jacob S. Coxey, an Ohio businessman, social reformer, and Populist concerned about the families of unemployed Americans, began to advocate a vast program of public works financed by inflated currency to provide jobs for the unemployed. He demanded that CONGRESS authorize the federal government to print and distribute \$500 million in paper money to state and local governments to hire unemployed workers for road construction projects. Individuals hired to work on government-sponsored construction projects would receive at least \$1.50 a day in wages. In spring 1894, Coxey planned to gather a large group of unemployed workers and "send a petition to Washington with boots on." He envisioned an enormous grassroots march to the capital to promote his ideas.

On Easter Sunday, Coxey left Massillon, Ohio, with several hundred followers. The group became known as "Coxey's Army" and drew nationwide attention. Other "armies" sprang up about the country and headed for Washington hoping to persuade Congress to authorize federal programs that would provide work. Conservatives feared that the demonstrators would swell to more than 100,000 people and foment a revolution, but their fears were exaggerated. Of all the armies that set out for Washington, Coxey's Army was the only group to actually reach the nation's capital.

When Coxey's Army arrived in Washington on May Day, it numbered only 500 instead of the threatened 100,000. The marchers found armed police lining the streets and blocking the approaches to the Capitol. When Coxey and two others tried to reach the Capitol, the police clubbed and then arrested them for trespassing. Coxey's followers were dispersed by club-wielding police and detained in makeshift camps. Coxey was sentenced to 20 days in jail. The callous treatment of Coxey and his supporters convinced many unemployed Americans that the government had little interest in their plight. Although Coxey's Army and others like it were disbanded, public discontent over the government's response to the economic crisis remained. Ironically, the essence of Coxey's major idea was later implemented during the Great Depression of the 1930s.

### Crane, Stephen (1871–1900) *novelist, journalist*

Realistic novelist Stephen Crane was born on November 1, 1871, in Newark, New Jersey, the 14th and last child of Jonathan Townley Crane, a Methodist minister and writer

of religious books who died when the boy was eight years old, and Mary Helen Peck, a correspondent for religious newspapers. In 1882 his family settled in Asbury Park, New Jersey, where he attended Pennington Academy; he later went to the Hudson River Institute in Claverack, New York, a military academy, and spent a term each at Lafayette College in Pennsylvania and Syracuse University in New York. While in college he helped finance his education by selling articles to the *Detroit Free Press* and the *New York Tribune*, and in 1891 he left school for New York to make his living as a writer.

Crane spent the next few years struggling to support himself as a freelance reporter, placing occasional stories with the *Herald* and the *Tribune*, but his imaginative accounts of news events were seldom acceptable to editors. Living in the poorest neighborhoods, he became acquainted with city life at the bottom of the social and economic scale, and during this period he rewrote a novel he had sketched out while in college. Set in the New York slums, *Maggie: A Girl of the Streets* was too harshly realistic to find a publisher, and in 1893 Crane borrowed \$700 to have it printed privately under the pseudonym Johnston Smith. It sold only 100 copies, but its powerful picture of the degradation of city life won the respect of several important writers, including WILLIAM DEAN HOWELLS, then the dean of American letters, and HAMLIN GARLAND.

Crane's novel *The Red Badge of Courage*, an account of a terrified young recruit's first experience of battle, was published with Howells's help in 1895. It established Crane's reputation as a writer of extraordinary psychological insight but earned him only \$90. It did, however, win him many newspaper assignments. He traveled in the West and Mexico for a newspaper syndicate and, in addition to travel articles, wrote several distinguished short stories. In 1897 he was hired to report on the rebellion in CUBA and was sent to Greece to write about that country's war with Turkey. The next year he reported the SPANISH-AMERICAN WAR. In 1898, while battling an illness contracted in his strenuous travels as a correspondent, he married Cora Taylor, the madam of a brothel in Jacksonville, Florida.

Strongly influenced in his prose by the French naturalist writers, he was also affected by the poetry of EMILY DICKINSON, whom he was one of the first to appreciate. In 1895 he published *The Black Riders*, a volume of highly personal free verse viewed by many critics as a forerunner of imagism in American poetry. His collection *War Is Kind* (1899) provided further inspiration for modernism in American verse. In 1899 Crane, now seriously ill, moved with his wife to England, where he came to know such literary figures as HENRY JAMES and Joseph Conrad. Deeply in debt, he frantically wrote potboilers during his last year but also produced some of his best work, including *The Monster and Other Stories* (1899), an exploration of rac-

ism. His reputation as America's first major realist writer has continued to grow since his death at age 28 on June 5, 1900.

### **Crazy Horse (Tashunca-uitco)** (ca. 1840–1877)

*leader in the Sioux wars*

A renowned Oglala Sioux warrior, Crazy Horse is best known for defeating General George Armstrong Custer at the Battle of the Little Bighorn in 1876, part of the SIOUX WARS. Crazy Horse was born to an Oglala father and a Miniconjou mother near what is modern-day Rapid City, South Dakota. The warrior spent time with both the Oglala and Brulé Sioux Indian tribes, and he received his name, translated as His Horse Is Crazy, from his father, who believed his son would grow into a great warrior.

Crazy Horse became a hunter and warrior at a young age and soon led raids against rival tribes and white settlers. In 1868 Crazy Horse, while still in his early 20s, earned his status of a "shirt-wearer," or head warrior, among the Oglala. (He would later lose this honor in 1870 after being shot by the jealous husband of a woman with whom he was romantically linked.) Crazy Horse rose to prominence during the War for the Bozeman Trail (1866–68), fighting alongside Oglala warrior RED CLOUD against the U.S. Army over the establishment of Fort Phil Kearny at the base of the Bighorn Mountains. The Sioux were successful in earning a stalemate against the army, which led to the 1868 Treaty of Fort Laramie that recognized the Black Hills and the Yellowstone River Basin as Oglala Lakota territory and established a Sioux reservation in South Dakota. Red Cloud accepted the treaty and peace, but Crazy Horse accepted neither and became the leader of the nontreaty Sioux, hostile both to rival tribes and white incursions.

Following the economic crisis stemming from the panic of 1873, white settlers, who suspected that the Black Hills region of the Oglala's land was a potential source of gold, called on the federal government to purchase the area from the tribe. At the same time, the army wanted to establish a strategic base in the Black Hills to guard against Indian attacks, which led to General Custer's expedition into the Black Hills region in July 1874. When the expedition discovered gold, white prospectors rushed into the Black Hills. The U.S. government subsequently attempted to lease the Black Hills from the Oglala, but when the tribe declined, the government tried in the dead of winter to force all Oglala to a reservation out of the region. In 1876

troops attacked the Oglala who had not complied, beginning the Sioux War of the Black Hills (1876–77). During the early stages of the war, the army did badly. Through his personal links, Crazy Horse brought together other Lakota as well as the Northern Cheyenne Nation and successfully defended the upper Rosebud portion of the Black Hills in the Battle of Rosebud Creek on June 17, 1876. Crazy Horse's subsequent charges on June 25, 1876, annihilated General Custer's command at the Battle of the Little Bighorn (Custer's Last Stand).

Although successful in ensuing battles, Crazy Horse and his forces surrendered on May 5, 1877, at Camp Robinson, Nebraska, brokering an agreement to establish a reservation for the Oglala Sioux. This arrangement failed to materialize, and General Crook, worried that Crazy Horse might escape to lead another uprising, ordered his imprisonment. In carrying out that order a soldier bayoneted and killed Crazy Horse on September 5, 1877, at Camp Robinson.

### Crime of '73 (1873)

Up to 1873 the United States had followed a monetary policy of Bimetallism, which recognized both gold and silver as the basis for the dollar. The government had coined silver at the ratio of 16 to one: there was 16 times as much silver in a silver dollar as there was gold in a gold dollar. The 16-to-one ratio, however, had undervalued silver ever since the 1849 California gold rush lowered the price of gold. Subsequently, silver-mine owners sold their product commercially rather than to the government for coins, virtually taking silver dollars out of circulation. Since the silver dollar had almost disappeared, several monetary experts urged Congress to stop the coinage of silver and place the United States on the gold standard.

The Coinage Act of 1873 demonetized silver and made the gold dollar the monetary standard for the nation. Ironically, just as the Coinage Act passed, the discovery of new silver mines in Nevada and other parts of the Far West increased the production of silver, thus leading to a decline in its price. In 1873 the United States also entered a period of economic depression. The American farmer was struck hardest as agricultural prices plummeted. Because of declining agricultural prices and the desire of western silver producers to see the demand for silver increase, farming

and western silver interests joined together in demanding the “free” (unlimited) coinage of silver at the 16-to-one ratio. Farmers supported the FREE SILVER MOVEMENT to increase the nation's money supply, which they believed would bring about the recovery of agricultural prices. Western silver-mine operators simply wanted the government to purchase their surpluses.

Free silver advocates described the Coinage Act of 1873 as the Crime of '73. They insisted that the law was at the center of a conspiracy orchestrated by eastern creditors (bankers and financiers) to control the money supply and prevent price recovery. This conspiracy, it was said, intended to replace silver, which represented the “people's money,” with gold, the currency of bankers and big business. Defenders of the Coinage Act argued that it was enacted in anticipation of a decline in silver prices because of the new discoveries made in the Far West. These discoveries had increased the silver supply by 20 percent. It was argued that if silver had not been demonetized, then bimetallism at the 16-to-one ratio would have caused a run on the nation's gold reserve and driven gold out of circulation.

Advocates of Free Silver urged the restoration of the “free and unlimited coinage” of silver at the 16-to-one ratio, but they had only limited success. The Coinage Act was partially repealed by the BLAND-ALLISON ACT (1878), which authorized the government to purchase, at market prices, not less than \$2 million and not more than \$4 million worth of silver monthly and mint it into silver dollars. It in turn was superseded by the Sherman Silver Purchase Act (1890, repealed 1893), which required the government to purchase 4.5 million ounces of silver monthly. Neither act drove the United States from the gold standard.

### Crummell, Alexander (1819–1898) *Episcopal minister, African-American rights activist, educator*

Alexander Crummell, pan-African advocate, was the son of Boston Crummell, who had been kidnapped in West Africa and enslaved in New York. Boston declared himself free to his owner without any reprisals. After marrying Charity Hicks, a free woman, Boston established an oyster house at 6 Varick Street in Manhattan. It was at this location that *Freedom's Journal*, the nation's first black newspaper, was published in 1827. Alexander Crummell, who was born on March 3, 1819, attended the African Free School in Man-

hattan and then Noyes Academy in Canaan, New Hampshire, where a mob forced the integrated school to close. He transferred to Oneida Institute in Whitesboro, New York. Encouraged by Reverend Peter Williams, a cofounder of *Freedom's Journal*, Crummell applied for admission to the General Theological Seminary of the Protestant Episcopal Church but was rejected because he was black. Crummell, nevertheless, studied privately for the ministry and in 1844 was ordained. He experienced poverty while shepherding small groups in Providence, Philadelphia, and New York and working in the antislavery movement. In 1847 he went to England to raise a building fund for the New York Church of the Messiah. Supported by British philanthropists, Crummell studied at Queens College, Cambridge University, graduating in 1853.

Unwilling to return to the United States and endure racism within the church, Crummell—who was influenced by Peter Williams's black nationalist ideology—immigrated to Liberia, where for nearly 20 years he worked as a missionary, educator, and a public moralist. A victim of Liberia's colorphobia politics (light-complexioned mulattoes dominated society), the dark-complexioned Crummell returned to the United States in 1872 and remained in Washington, D.C., until his death on September 10, 1898.

Crummell, stern and unyielding in his beliefs, was most passionate about uplifting the black race. Crummell noted in 1875, in "The Social Principle Among a People; and Its Bearing on Their Progress and Development," that black men needed to engage in a cooperative spirit to establish farms, businesses, and mechanical enterprises. He told them never to forget that they were colored men or to "give up all distinctive effort, as colored men, in schools, churches, associations and friendly societies." He eschewed agitation, which he viewed as mainly "wind and vanity." Instead, Crummell proposed that blacks needed to gain superiority to end racial prejudice. He argued that as their character rose, whites would forget that they were people of color. While he recognized that AFRICAN AMERICANS needed power, he believed that it came from character and that "character is the product of religion, intelligence, virtue, family order, superiority, wealth and the show of industrial forces. THESE ARE FORCES WHICH WE DO NOT POSSESS," he proclaimed.

Crummell was an early supporter of colonization programs, but he later became disdainful of African values and traditions, preferring the value system of upper-class New Englanders. Despite his own immigration to Liberia, Crummell in later years was critical of emigration schemes proposed by HENRY M. TURNER and others. Crummell believed that individuals had a responsibility to uplift the masses from ignorance and that salvation would come from their own resources rather than from either white philanthropists or an appeal to white guilt. He was proud of being

an African American and considered "colored," then popular among the elite (and which he had used earlier) as a "milk bastard term." Crummell organized the American Negro Academy in 1897 as an organization to advance the race through the leadership and contributions of "a talented tenth." While he did not wish to neglect industrial education, he argued that the race needed scholars and thinkers who were willing to use their intelligence "to transform and stimulate the souls of a race of a people." He noted that intelligent scholars must be inspired with "the notion of leadership and duty . . . for all true and lofty scholarship is weighted with the burdens and responsibilities of life and humanity." Crummell, an inspirational advocate of black self-reliance and a pioneer of pan-Africanism, believed that the key to African-American leadership lay in a thorough grounding in the classics, social sciences, and liberal arts. After his death on September 10, 1898, the academy attracted a who's who of black America throughout the first two decades of the 20th century.

—William Seraile

## Cuba

Located 90 miles off the coast of Florida, Cuba was a colony of Spain that became the principal battlefield of the SPANISH-AMERICAN WAR. In the late 19th century Cuba twice attempted to throw off the yoke of Spanish domination. In 1868 a band of free whites and mulattoes touched off an insurrection, subsequently called the Ten Years' War, that would involve upwards of 12,000 combatants and eventually capture several large towns. The United States refused to intervene, considering the whole affair an internal problem of Spain.

But the insurrectionist cause had great sympathy among the American public that was translated into action. The rebels were aided by arms and by American soldiers of fortune known as filibusters, much to the annoyance of the Spanish authorities. In 1873 a former Confederate blockade runner, the *Virginius*, loaded with arms and filibusters, was captured by the Spanish. The governor of Santiago, Captain-General Juan Burriel, convened a court-martial that convicted the crew and passengers of piracy and sentenced them to death. When the United States learned that 53 people had been executed, the Grant administration demanded that Spain return the ship and its survivors to the United States, pay an indemnity, and punish Burriel. If such action were not taken within 12 days, the U.S.

minister to Spain was instructed to close the legation and return home. One day after the deadline Spain agreed to the demands and paid an \$80,000 indemnity. Spain delayed punishing Burriel for four years, by which time the general had passed away. The *VIRGINIUS AFFAIR* served to increase anti-Spanish feeling among Americans but did not lead to intervention.

The Ten Years' War ended in 1878, but another insurrection began in 1895. Spain responded by sending General Valeriano Weyler y Nicolau, a ruthless soldier of mixed Prussian and Spanish ancestry, who adopted a policy called *reconcentrado*. The plan involved herding the populace into fortified towns in order to prevent them from supplying aid to the rebels. Villagers were burned out of their homes and farms. The plan caused widespread starvation and disease as people lost their means of feeding themselves. The plan did little to abate the insurrection, but American sympathy for the rebels was progressively increased by the Cuban junta, a propaganda machine operated by revolutionary exiles that lobbied the American press and CONGRESS for Cuban independence. When the rebel leader General Máximo Gómez responded in kind and began burning the plantations of the rich Creoles, Cuba quickly descended into a hopeless cycle of violence. The chaos also threatened the nearly \$50 million worth of American investments in the island, most of it in sugar plantations and railways. Although Congress passed resolutions in support of the rebels, President GROVER CLEVELAND maintained a strict noninterventionist policy regarding Cuba.

Matters boiled over in 1898 when a series of events triggered the Spanish-American War. On February 9, 1898, the *New York Journal* published the DE LÔME LETTER. The Spanish minister to the United States, Enrique Dupuy de Lôme, wrote the letter to an acquaintance in Havana. In the letter he described Cleveland's successor WILLIAM McKINLEY as "weak and a bidder for the admiration of the crowd." The furor over the letter forced de Lôme to resign. Two weeks later the battleship USS *Maine* was destroyed in Havana Harbor. When a naval court of inquiry determined that it had been sunk by a mine but failed to identify who perpetrated the deed, the press and public insisted on attributing the sinking to Spanish treachery. On April 19, 1898, Congress declared war on Spain but added the Teller Amendment, which pledged that the United States would not annex Cuba. Despite logistical mistakes, American troops landed in Cuba on June 22 and within four months had captured Santiago and forced the Spanish to surrender. The Americans suffered a minimal amount of battle casualties during the Cuban campaign, but nearly 5,000 died from tropical diseases.

As a result of the Teller Amendment and the 1898 Treaty of Paris with Spain, Cuba became independent. But the unsettled condition of the island and fears that a

European power (especially Germany) might get a foothold there gave rise to second thoughts about annexation. Although the Teller Amendment prevented annexation, the Platt Amendment to the 1901 Army Appropriation Act (which the United States insisted Cuba incorporate into its constitution) gave the United States the right to intervene in Cuban affairs to preserve its "independence." Cuba remained a quasi protectorate of the United States until 1934, when it abandoned the Platt Amendment.

### currency issue

The composition of the nation's currency was a major political issue of the late 19th century. BIMETALLISM (currency based on gold and silver) was federal monetary policy until 1873. The government coined silver at the ratio of 16-to-one; the silver dollar contained 16 times more silver than there was gold in a gold dollar. During the Civil War, however, the government printed \$450 million in paper currency called "greenbacks," a fiat currency that was not backed by any specie. Greenbacks could not be redeemed in gold, and as their value declined they drove gold and silver out of circulation. In addition, national banks were allowed by the National Banking Act of 1863 to issue \$300 million in notes redeemable in greenbacks, thus making these notes, in effect, equal to greenbacks.

The suspension of specie payments did not sit well with bankers and other creditors. Following the war, they called for the retirement of greenbacks and a resumption of specie payments. Such a policy would lead to deflation by keeping the value of the dollar—and thus interest rates and the value of debts owed to creditors—high. Debtor groups, especially in the cash-strapped South and West, pressured the government to further inflate the currency supply by placing more greenbacks into circulation. They believed the ensuing inflation (rise in prices and lowered interest rates) would make it easier to pay off their debts.

A major issue tied to the currency question was the constitutionality of the Legal Tender Act of 1862, which authorized the Treasury to issue the greenbacks. At the time it was argued that this measure was necessary to finance the Union war effort. Following the war, proponents of sound, or hard, money—a currency based on the gold standard—called for the resumption of specie payments. In 1866 Congress passed the Contraction Act, which

initiated a policy of gradual reduction of the greenbacks in circulation. Debtors immediately attacked the law because it made their debts harder to pay off. Others blamed it for the worsening economic conditions of 1867. The constitutionality of the Legal Tender Act was finally taken up by the SUPREME COURT in a set of cases known collectively as the LEGAL-TENDER CASES (1870–71). In *Hepburn v. Griswold* (1870), the Court decided that the greenbacks issued during the Civil War were not legal tender for debts incurred prior to the act's passage in 1862, but the Court quickly reversed the *Hepburn* decision in *Knox v. Lee* (1871), holding that greenbacks were valid legal tender for pre- as well as post-1862 debts. Although the *Knox* decision dealt hard-money advocates a serious setback, they would not allow themselves to be defeated.

In 1873 Congress enacted the Coinage Act, which effectively demonetized silver, making the gold dollar the monetary standard for the nation. The 16-to-one ratio had undervalued silver ever since the 1849 California gold rush lowered the price of gold. As a result, silver-mine operators sold their product commercially rather than to the government at a loss, virtually taking the silver dollar out of circulation. Since silver was being used for purposes other than coinage and the silver dollar had almost disappeared from circulation anyway, experts urged Congress to demonetize it. Two years after Congress demonetized silver, it enacted the Specie Resumption Act, authorizing the Treasury to resume, by January 1, 1879, the redemption of greenbacks in gold. As of that date the United States was back on the gold standard.

Reacting to the Specie Resumption Act, the advocates of “soft money” (greenbacks) conferred in Cleveland and Cincinnati, Ohio; held a convention in May 1876 in Indianapolis, Indiana; and organized a National Independent (Greenback) Party. These Greenbackers—farmers, labor reformers, and businessmen—called for the repeal of the Specie Resumption Act and nominated the 85-year-old philanthropist Peter Cooper for president. Cooper received only 80,000 votes, but the GREENBACK-LABOR PARTY was far more successful in the congressional elections of 1878, polling more than 1 million votes. In 1880 the party's presidential candidate General James B. Weaver of Iowa polled 300,000 votes. However, by the mid-1880s the Greenback Party began to disintegrate. As a consequence, Greenbackers joined with another group of currency inflationists, the advocates of Free Silver, to create a powerful political movement in late-19th-century America.

Shortly after Congress enacted the Coinage Act, new mines in Nevada and other parts of the Far West increased the production of silver and thus lowered its value. If the government had kept silver in circulation, the subsequent deflationary price spiral might not have occurred. Instead, the nation entered a period of economic depression, with

This cartoon depicts Senator John Sherman delivering silver “eggs” to Secretary of the Treasury John G. Carlisle, who will turn them into gold. (New York Public Library)

American farmers struck the hardest as agricultural prices declined. Because of falling farm prices and the desire of western silver producers to see demand for their product increase, debtor farmers and western silver-mining interests began to call for the remonetization of silver at the old ratio of 16-to-one. The removal of the silver dollar from circulation and the redemption of greenbacks were viewed as part of a larger scheme orchestrated by bankers and other financiers (chief supporters of the hard-money philosophy) to control the money supply and prevent price recovery.

In 1878 silverites won a partial victory when Congress passed the BLAND-ALLISON ACT authorizing a limited, but not free, coinage of silver. The law required the government to buy no less than \$2 million or more than \$4 million worth of silver monthly and then to mint it into silver dollars. The Sherman Silver Purchase Act of 1890 increased the amount of silver coinage in circulation by obligating the government to purchase 4.5 million ounces of silver monthly. The silver was to be paid for in Treasury notes of full legal-tender value that could be redeemed in “coin” at the discretion of the government. Treasury officials interpreted this provision as meaning redemption in gold, placing a great strain on the nation's gold reserve.

When the economic depression following the panic of 1893 set in, hard-money advocates blamed the downturn on the Sherman Silver Purchase Act. President GROVER CLEVELAND, a hard-money advocate, called for and secured its repeal in 1893 with the support of several congressional Republicans and Democrats (mostly from the

Northeast), thereby alienating the southern and western factions of both parties.

The calls for the free coinage of silver became more strident following the repeal of the Sherman Silver Purchase Act and set the stage for one of the most bitter and emotionally charged political contests in American history. Between 1894 and 1900 pro-silver literature flooded the nation. From William H. Harvey's *Coin's Financial School* (1894) and Ignatius Donnelly's *The American People's Money* (1895) to L. Frank Baum's classic *The Wonderful Wizard of Oz* (1900), authors argued the virtues and merits of silver. In 1896 both the Democratic Party and the PEOPLE'S PARTY (Populists) adopted Free Silver as their main campaign theme and nominated WILLIAM JENNINGS BRYAN for president. However, Bryan was defeated that year by the Republican presidential candidate WILLIAM MCKINLEY, who ran on a platform supporting the gold standard. Bryan's defeat was a major setback for the FREE SILVER MOVEMENT from which it never recovered. In 1900 Congress passed the GOLD STANDARD ACT, which declared gold the nation's monetary standard of value and ended the silver controversy.

**Dana, Charles Anderson** (1819–1897) *journalist, newspaper editor, government official*

An idealistic youth, later to become an aggressive assistant secretary of war and at last a cynical newspaper editor, Charles A. Dana was born in Hinsdale, New Hampshire, on August 8, 1819, and grew up in upstate New York. Although a descendant of Richard Dana (in 1640 a prominent resident of Cambridge, Massachusetts), Charles Dana's father failed as a merchant and farmer and lacked the social position of distant relations. This fact apparently gave rise to Dana's ambition, as well as his antipathy to wealth and privilege and an awareness of the "increasing poverty of the producing classes." Before beginning work at the age of 12 in a general store in Buffalo, Dana had learned Latin on his own and used his evenings to read the classics and pick up Greek. By dint of his own efforts, Dana matriculated at Harvard at the age of 20 and did well before lack of money forced him to teach school and eye problems interfered with his studies. He completed only a year's work, but he met George Ripley, who in 1841 established in West Roxbury, Massachusetts, the Transcendentalist Brook Farm experiment in communal living.

On Ripley's invitation Dana hastened to Brook Farm. There he taught German and Greek; contributed articles on social problems to the Brook Farm weekly, *Harbinger*; farmed; supervised the community kitchen; and with his business experience became a managing trustee. Given Dana's hostility to individualism and competition and his desire to reform society, he favored Brook Farm's conversion into a more radical, regimented, socialistic, "Fourierite Phalanx." For five years, until the disastrous fire of March 6, 1846, ended the experiment, Dana was, as THOMAS WENTWORTH HIGGINSON remarked, the best all-around man at the farm. Coincidentally, the day of the fire Dana married Eunice MacDaniel, a Brook Farmer, in New York City.

HORACE GREELEY, a supporter of Fourierism, immediately gave Dana a job at the *New York Tribune* where he soon became city editor. Although Greeley wanted him to stay in New York, Dana in 1848 and 1849 covered revolutions in France and Germany from a sympathetic, American, republican perspective, but observing working-class violence chipped away some of his faith in cooperative utopian socialism. Upon Dana's return to New York, Greeley, despite Dana's insubordinate streak, made him the *Tribune's* managing editor. In that position for over a decade, Dana honed his skills and when Greeley was absent, edited with an iron hand everything in the *Tribune*, including what Greeley sent in. Even though he secured Karl Marx as a correspondent, Dana wished to ameliorate industrial conditions through cooperation between capital and labor rather than by a class struggle, and he began to crave the wealth he had found contemptible. He also enjoyed the power he wielded as an influential editor.

Beneath the surface Dana had problems with Greeley, whose wishes he sometimes ignored. Dana essentially agreed with Greeley's politics, favored protective tariffs, and opposed the expansion of slavery, but Greeley did not like his independence, and a rift developed during the secession crisis. Greeley was willing to let the South go in peace, while Dana thought secession was unconstitutional. With the outbreak of the Civil War, Dana was responsible for the *Tribune's* demand: "Forward to Richmond!" When the disaster of Bull Run occurred, many readers blamed the *Tribune*, and Greeley blamed Dana. By March 1862 Greeley earned Dana's enmity by forcing him out of the *Tribune*.

Grateful for Dana's editorial support, Secretary of War Edwin M. Stanton immediately asked him to investigate alleged corruption among contractors supplying Union armies in the Mississippi Valley. While on this temporary assignment at Memphis on July 4, 1862, Dana met and was impressed by General Ulysses S. Grant and was struck by the easy money to be made by trading with Southerners for

cotton. In fall 1862 Dana returned to the Memphis area to engage in that trade. He soon agreed with Grant, however, that cotton speculators, like himself, were aiding the Confederacy and told Stanton that trade with the enemy should cease. In early 1863 Stanton appointed Dana a commissioner to investigate the payroll service and sent him west to spy on Grant, who was rumored to be drinking in excess. Dana's reports extolled Grant's aggressiveness and sobriety, although he had seen Grant drunk. Dana's reports enabled Grant to emerge as the victorious Union general and satisfied Stanton, who appointed Dana assistant secretary of war in June 1863.

After the war Dana returned to journalism. He briefly edited the *Chicago Republican* (1865–66) on Reconstruction. While in Chicago, he angled unsuccessfully for the powerful and lucrative post of collector of the port of New York. In 1867, backed by prominent Republicans, he purchased the *New York Sun*, whose readers were working-class Democrats, and edited it until his death three decades later. Striking a balance between his backers and his readers, Dana promised that while presenting a clear, "lively," daily picture of the world, the *Sun* would be an "advocate of the laboring masses" and would be politically independent. Abandoning his Radical Republican stance, Dana called for a quick return of the South to the Union and for the election of his friend Grant as president in 1868.

Dana was a brilliant editor, who made the *Sun* scintillating and amusing. If a humorous angle could be found in a news story, the *Sun* found it. Those whom Dana despised, and there were many, he made appear ridiculous. Since Greeley lusted after political appointments, Dana, for laughs, nominated him for everything from prison inspector to president of the United States. To Dana's chagrin Greeley got the latter nomination. The *Sun* also warmed hearts with human interest stories and loved scandals, especially the BEECHER-TILTON SCANDAL, featuring the hypocrisy of the celebrated Protestant minister HENRY WARD BEECHER.

Dana was playful but also vindictive, petty, and cynical in his erratic political behavior. When Grant, after his election, failed to appoint Dana to the New York collectorship, he attacked him as the "great gift-taker," inferring that he sold offices. But Dana rejected anti-Grant Liberal Republican reformers, as self-righteous snobs, even though some of them had been his warm friends. When in 1872 they nominated Greeley for president and the Democrats followed suit, Dana supported him as the lesser of two evils but damned him with ludicrous praise.

Nominally independent, Dana pleased his readers by usually supporting Democrats, although often critical of them. SAMUEL J. TILDEN was his ideal presidential candidate, and when he was defeated in the disputed 1876–77 election by RUTHERFORD B. HAYES, Dana was bitterly

disappointed and blamed his loss on the machinations of a powerful railroad lobby. He supported GROVER CLEVELAND for New York governor in 1882 but became his bitter enemy after Cleveland gave an office to Beecher's nephew rather than to the son of a *Sun* staff member. When Cleveland received the Democratic nomination in 1884, Dana supported neither him nor the Republican nominee JAMES GILLESPIE BLAINE, backing the Greenback-Labor nominee Benjamin F. Butler, who went down to ignominious defeat.

The circulation of the *Sun* also took a beating. At 145,000 in 1884 it was New York's leading daily, but its circulation dropped to 80,000 in three years. Dana's support of Butler coincided with the rise of JOSEPH PULITZER's *New York World*, which also catered to working-class Democrats. It did not have the *Sun*'s whimsy but, at eight pages, was twice as large with a more attractive layout, more sensational news, and more earnest crusades. Dana responded with vicious anti-Semitic attacks on "Judas Pulitzer," while enlarging the *Sun*, improving its appearance, serializing fiction, covering sports, and appealing to a more prosperous, conservative Democratic constituency. In the late 1880s the *Sun*, no longer the worker's friend, opposed strikes, the eight-hour day, and radicals. Despite his own farm background, by the 1890s Dana had sympathy for neither the plight of farmers nor their organizations. He was appalled when the Democratic Party embraced the panacea of Free Silver and nominated WILLIAM JENNINGS BRYAN for president in 1896. For the first time in 28 years, Dana supported a Republican, WILLIAM MCKINLEY. The revamping and repositioning of the *Sun* by Dana had increased its circulation to 120,000 by October 17, 1897, the day he died.

**Darwinism** See DARWINISM AND RELIGION; EVOLUTION; SCIENCE; SOCIAL DARWINISM.

### Darwinism and religion

The intellectual challenge of 19th-century science appeared to erode the basis of Judeo-Christian RELIGIONS. Scientific methods, discoveries, and theories in geology, biology, and history questioned the literal text of the Bible, but the challenge of biology provoked a major religious controversy. When Charles Darwin in his *On the Origin of Species* (1859) theorized (on the basis of evidence) that plants and animals evolved over eons through natural selection and were not created by God in a few days, the effect was unsettling. As the implications of Darwinism became apparent, Chris-

tians divided into liberal and orthodox groups. The liberals accommodated their theology to the new scholarship, while the orthodox adhered to their faith that the Bible was literally the word of God. For liberals, John Fiske's *Outlines of Cosmic Philosophy* (1874) reconciled theism and evolution by arguing that there was no conflict between science and religion. He relegated religion to what the leading apostle of evolution, Herbert Spencer, called "the Unknowable." Indeed, liberals came to view EVOLUTION as God's plan. HENRY WARD BEECHER associated evolution and progress with Christianity and civilization. By 1900 preachers were citing evolution as a proof of Christianity rather than a challenge to it.

The extent of liberal acceptance of the implications of Darwinism varied. Some saw religion as a natural phenomenon, with Christianity subject to the same tests of integrity as any other faith or secular idea, but most liberals still believed that Christianity was special and not just one among many valid religions. By 1900 the seminaries and urban ministers of the major Protestant denominations were comfortable with an evolutionary philosophy that apparently confirmed the superiority of Christianity because it seemed to be the "most" evolved of the world's religions. Ironically, Darwinism was initially perceived as a threat by Protestants and then used a generation later by JOSIAH STRONG and others to sustain a belief in American Protestant Anglo-Saxon superiority and to inspire missionary activity.

Orthodox Protestants, who tended to be rural and working class, also varied their responses as they rejected evolution. The entire South was orthodox, while in the North mainstream Protestant denominations had orthodox and liberal wings or factions. The acceptance of Darwinism in scholarly seminaries and in fashionable churches led to a resurgence of millennialism within mainstream churches and in the growth of new denominations like the Seventh-Day Adventists and Jehovah's Witnesses. The emphasis on prophecies of the imminent second coming (advent) of Christ and the end of the world led to an emphasis on the literal, not the metaphorical, truth of the Bible.

Adventism was also embraced by those in mainstream churches who reacted against modernity. Orthodox scholars organized two Prophecy Conferences (in 1878 and 1886) and an annual Niagara Bible Conference to share in recognizing signs of the end and to uphold a literal belief in the Bible. Through their Bible study they decided that God had ordained a system of "dispensations" or eras following upon each other and ending with the last days. A close associate of DWIGHT L. MOODY, Cyrus Ingerson Scofield (1843–1921), was its chief advocate. Scofield, a Congregational minister, consolidated the dispensational scheme into seven ages concluding with the Great Sabbath or the Millennium of Christ ushered in by the Second Coming and the end of days. His work endures today in

the popular *Scofield Reference Bible* (1909). Vital to the dispensational analysis of history and the Bible is the need to assert the literal and infallible authority of the Bible, and from that need, the 20th-century Fundamentalist movement developed.

### Dawes Severalty Act (1887)

Public sentiment toward the plight of NATIVE AMERICANS combined with the desire of western interests to obtain more land led to the Dawes Act of 1887. It dissolved tribes as legal entities, opened up Indian lands to individual ownership, and broke the Native American tradition of collective landholding. The act, which at the time was considered a humanitarian reform, formed the basis of U.S. policy toward Native Americans until the 1930s.

The Dawes Act of 1887 allowed reservation land to be distributed among individual members of Native American tribes. The author of the act was Massachusetts senator Henry L. Dawes (1816–1903), who was long interested in ameliorating conditions for poverty-stricken Native Americans. For several years, advocacy groups such as the Indian Rights Association pushed for the passage of the law, which until the 1880s never had sufficient political support. By the end of 1886, however, both the secretary of the Interior and commissioner of Indian Affairs supported enacting a lands-in-severalty law, and it was narrowly approved by the House. President GROVER CLEVELAND signed the bill into law on February 8, 1887.

Under the act every head of a family in the tribe would receive 160 acres of land and 40 acres for each minor child. Adults without a family (and orphans) would receive 80 acres. If the land was suitable only for grazing the acreage was to be doubled. Native Americans were allowed to choose which land to take title to, and land was put in a trust title whereby the federal government retained full title for a period of 25 years, during which the land could not be sold or taxed. At the expiration of that period Native Americans received full title to their land and full U.S. citizenship (which would also assimilate Indians into the larger American society). Oklahoma's so-called Five Civilized Tribes (the Cherokee, Choctaw, Chickasaw, Creek, and Seminole) and the Osage tribe were exempt from the act until 1898, when western land was at a premium. The Burke Act of 1906 allowed the secretary of the Interior to waive the 25-

year trustee period and sped up the process of achieving full ownership and citizenship. Although most Indians had achieved full citizenship before 1924, in that year Congress conferred citizenship on all Native Americans.

Reformers believed that passage of the Dawes Act would help Native Americans realize the benefits of individual land ownership and help them participate fully in the life of the United States. Its goal was assimilation rather than self-determination. Western cattle interests, which had leased portions of the land for grazing, tended to oppose the legislation, but governments in the West widely supported the act, since the surplus land was opened up to white settlers.

The act undermined the collective, communal tradition within tribal structures and imposed an individualistic concept of land ownership. Even Dawes remarked that if the act was abused or administered incorrectly it would lead to minimal or even negative effects for Indian tribes. Indeed, over time, the long wait for full title to land was considered an impediment, and reservation land decreased dramatically; reservation land just before the passage of the law amounted to 137 million acres, but by the 1930s only 50 million acres were still owned by Native Americans.

The Dawes Act did not realize the hopes of its humanitarian authors. Its lack of success was due in part to a dearth of government support, especially for western tribes without a strong farming tradition. Native Americans often quickly lost their land once full title was taken. The land was sometimes bought by speculators, who in turn sold it to settlers. Indians also faced problems paying the taxes that were levied after full title to the land was granted. Because of the act, by the 1930s two-thirds of Native Americans were without property, and a large proportion of them were reduced to receiving government support to live. Defenders of the Dawes Act, however, stress that had it not been passed, the vast reservation lands would have been seized by white settlers (as in the past), and Native Americans would have ended up with even less land than the Dawes Act salvaged for them.

#### de Lôme letter (1898)

The Spanish minister to the United States, Enrique Dupuy de Lôme, wrote a letter to an acquaintance in CUBA that contained insulting references to President WILLIAM

MCKINLEY. Written in December 1897 after McKinley's annual address to Congress, the letter accused the president of being "weak and a bidder for the admiration of the crowd, . . . a would-be politician who tries to leave a door open behind himself while keeping on good terms with the jingoes of his party." The letter, stolen in the Havana post office and published by William Randolph Hearst's *New York Journal* on February 9, 1898, under the screaming headline "WORST INSULT TO THE UNITED STATES IN ITS HISTORY," could not have come at a worse time. Tensions had been growing between the United States and Spain. The conduct of Spain's seemingly endless and brutal campaign to squash Cuba's independence movement offended American sensibilities and threatened its economic interests in the island. At the same time Spain fumed at the inability of the United States to prevent arms from flowing from American shores to the Cuban rebels.

McKinley quite properly ignored the letter, realizing that to respond to insults was beneath the dignity of the office of chief executive. Actually, de Lôme was mistaken about McKinley; he was a clever, effective politician who had survived four years of bloody Civil War battles and would not lightly go to war. De Lôme realized he had blundered and resigned the day after the letter was published, sparing himself the indignity of being recalled. But the effects of the letter did not die down with the Spanish minister's departure. Talk of resolutions to award belligerency status to the Cuban rebels and declarations of war were bandied about in the halls of CONGRESS until Spain officially apologized on February 14. The apology, however, did little to curb the growth of anti-Spanish feeling among the American people.

**Further reading:** Ivan Musicant, *Empire by Default: The Spanish-American War and the Dawn of the American Century* (New York: Henry Holt, 1998); Joseph E. Wisan, *The Cuban Crisis as Reflected in the New York Press, 1895–1898* (New York: Columbia University Press, 1934).

—Timothy E. Vislocky

#### Democratic Party

The immediate post–Civil War years were crucial to the development of America's major political parties. The Republicans emerged from the war as the victorious defenders of freedom and the Union. Their firm grip on CONGRESS assured them of control over the direction of southern Reconstruction as well as the federal government for at least a decade. Conversely, the Civil War weakened and discredited the Democratic Party. Slavery, secession, and war had split the party, but emancipation, union, and peace settled those issues, and Democrats in the North and South reunited in opposition to Radical Reconstruction

policies. As white supremacists gained control of the South and with negrophobia alive in the North, the Democratic Party had become a formidable force by 1876.

As with all major parties, there was much diversity among the Democrats. For the most part, they were Americans who were growing tired with the course of Reconstruction and were troubled by the changes to society brought on by rapid industrialization. Although Republicans were far from centralized, the Democratic Party was an especially loose collection of state and local parties. Lacking cohesion, it was difficult to impose unity on the party's membership. Among the Democratic partisans were small farmers, industrial laborers, small businessmen, and Irish and German Catholic immigrants, but the party also included some bankers, railroad operators, and industrialists. Each of these constituencies brought their own agenda to the party, but the party's most consistent base of political support was the **SOLID SOUTH** and urban political machines such as **TAMMANY HALL** in New York City. Ultimately, the Democratic Party's diversity made it unstable.

The Democrats developed neither leaders nor an agenda that could unite the disparate elements of the party. They failed because the party returned to the traditional doctrines of states rights, decentralization, fiscal conservatism, and limited government. Following such a political strategy, Democrats developed remedies to the country's complex problems—business regulation, political reform, and labor legislation—based on local circumstances and individual initiatives. This approach succeeded on the state level, but these were limited victories. The emphasis on local and state government weakened the Democratic Party's ability to develop national leaders. Instead, the party depended on a group of powerful regional political leaders who were unwilling to subordinate local interests to make the national party cohesive and competitive.

Because they lacked national leaders, the Democrats found themselves under the political control of one or more competing factions. By the 1880s, the views of its conservative wing, the so-called **Bourbons**, began to take precedence. The Bourbons were centered mainly in the Northeast and had ties to the nation's financial and corporate communities. They called for a reduction in tariff rates, a currency system based on the gold standard, and "administrative economy." Simply put, the Bourbons wanted to restrict government activity to a minimum. The Bourbons were joined by several southern Democrats who advocated a **NEW SOUTH** based on industrial development and laissez-faire economic principles.

The reliance on Bourbon ideology led to intraparty strife. Democrats who were concerned with the social inequities caused by the nation's rapid industrialization believed that the Bourbons were aiding the destruction of the small

Lithograph of democratic nominees Grover Cleveland and A. G. Thurman, ca. 1888 (*Library of Congress*)

family farm and the exploitation of American workers. This liberal faction led movements calling for federal regulation of large corporations and the **RAILROADS**. Intraparty strife also arose over the **CURRENCY ISSUE**, with Democrats in the economically depressed rural regions of the South and West advocating a policy of currency inflation by increasing the supply of paper money (greenbacks) in circulation or through the unlimited coinage of silver (**FREE SILVER MOVEMENT**). Another persistent issue with Democrats in these regions, as well as in the cities of the Northeast, was the availability of federal appropriations and subsidies that the Bourbons, as advocates of administrative economy, opposed. The **TARIFF ISSUE** also sparked division among the Democratic faithful.

Despite the intraparty differences, the Democrats slowly began to close the political gap between themselves and the Republicans. They won the House of Representatives in 1874 and the Senate in 1878. **SAMUEL J. TILDEN** won the popular vote for the presidency in 1876 (but lost the vote in the electoral college), and the election of 1884 brought **GROVER CLEVELAND** to the White House. Cleveland was the first Democrat elected president since James Buchanan in 1856, and he has the further distinction of being the only president in American history to serve two nonconsecutive terms in office (1885–89, 1893–97). For the Democratic Party, Cleveland's election meant an end to 24 years of political impotence on the national level. Unfortunately for Cleveland and the Democrats, they controlled the presidency and Congress when the panic of 1893 inaugurated a devastating economic depression.

The erosion of Democratic power during the depression was confirmed in 1896 when the rural, southern-western faction recaptured the party under the leadership of **WILLIAM JENNINGS BRYAN**. Bryan and his supporters attacked

both the Republicans and the Bourbons for manipulating government power for the benefit of the wealthy, industrial elite. They shared with the PEOPLE'S PARTY (Populists) the belief that increased federal regulation of railroads and public utilities, currency inflation based on the Free Silver ideal, and the abolition of the NATIONAL BANKING SYSTEM could restore balance within America's economic system. Such policies could especially help small farmers living under the pressure of declining agricultural prices and high shipping costs. Furthermore, Bryan espoused an antiurbanism that alienated the Democratic political machines in the nation's major cities. These machine organizations had provided the party with a major core of constituents among immigrants and Catholics, and their lack of support for Bryan and his ideals contributed to his defeat in the 1896 presidential election. After Bryan's defeat, the Democrats remained the minority party until the 1930s.

## department stores

In the late 19th and early 20th centuries, large stores selling every imaginable type of product, both domestically produced and imported, dominated retailing in the United States. Department stores were found in every major city in the country, and many of these metropolises had four or more of these giant outlets. By 1900 department stores gave the downtown areas much of their romantic look, attracting shoppers (particularly women) from rural and suburban areas and even acting as a magnet for tourists. In the pre–World War I period, these department stores also helped pioneer the gothic architectural appearance that came to dominate urban centers until the 1940s.

Before the Civil War, peddlers, general country stores, and small, specialized urban shops dominated retailing in the United States. A few stores displayed greater stability and developed local and even national reputations, such as Tiffany's and Brooks Brothers in New York City. Alexander H. Stewart was the most famous merchant, selling a large array of women's dry goods out of his Marble Palace on Broadway. Although Stewart's three-story building introduced a number of innovations such as a nonnegotiable price for all items and the customer's ability to return unwanted goods, his merchandise was quite limited

in scope. While Stewart was a model for many merchants, the major influence on American retailing was Paris's Bon Marché, a true department store that sold all kinds of goods for women, children, men, and the home.

American entrepreneurs such as John Wanamaker of Philadelphia; Adam Gimbel of Milwaukee, Philadelphia, and New York; Edward Filene of Boston; and Marshall Field of Chicago imitated the French model. They created stores with multidepartments, each headed by a buyer who had autonomy in picking merchandise and hiring and firing employees within their own specialty. JOHN WANAMAKER served on the board of the PHILADELPHIA CENTENNIAL EXPOSITION in 1876 and was so impressed by the wide array of merchandise sold there that he opened a department store to capitalize upon that event in 1877. An innovative merchandiser, Wanamaker soon had departments selling everything from artwork to pianos, from Paris women's clothing to ready-made menswear. Because of his use of technology—escalators, indoor electric lighting, and pneumatic tubes for sending cash—the Philadelphian became a model for other retailers.

Nathan Straus, who bought Macy's, and Marshall Field became the other major promoters of department stores. Each of these merchants and many of the approximately 500 retailers who opened emporiums in virtually every state in the Union turned their stores into entertainment centers, fashion galleries, and theaters. Wanamaker, for example, brought Leopold Stokowski to conduct in the store and had an exhibit of hundreds of photographs taken of Native Americans in the West. Straus brought models from France to exhibit the latest Paris fashions. Something was going on almost every day in Marshall Field's. Prices in these stores were quite competitive, driving many small-store owners out of business.

Department stores underwent major changes in the 20th century. The Great Depression of the 1930s forced many of these stores either into bankruptcy or to become a part of an emerging department store conglomerate like Federated Stores. After World War II, suburbanization made the central business district increasingly irrelevant for the retail shopper. To cope with this problem, major department stores cannibalized their business by building small suburban stores, which were pale reflections of their former palaces. By 2000 most of the older chains such as Macy's, Wanamaker's, and Filene's were part of a larger organization and had lost their identity, and the retailing boom of discount shopping threatened even these stores.

**Dewey, George** (1837–1917) *admiral*

Admiral George Dewey is renowned for having defeated a Spanish fleet at the Battle of Manila Bay in 1898 during the SPANISH-AMERICAN WAR. Born in Vermont on December 26, 1837, Dewey entered the United States Naval Academy in 1854 and graduated in 1858. With the outbreak of the Civil War he was promoted to lieutenant and was the executive officer on the sidewheel steamer *Mississippi* in Admiral David Farragut's fleet that captured New Orleans.

The post–Civil War period was a dark time for Dewey, since CONGRESS allowed the navy's ships to either rot or rust. Promotion was slow and opportunities for distinction were nonexistent. Dewey commanded steam sloops (a naval "sloop" was a vessel with guns on one deck) and served on shore in the Lighthouse Service and in 1895 as president of the Board of Inspection and Survey. In that capacity he supervised inspections of the navy's new battleships. Dewey pined after greatness and feared that he would only be known as "George Dewey who entered the Navy at a certain date and retired as Rear Admiral at the age limit."

But Dewey was saved from obscurity on October 21, 1897, by Assistant Secretary of the Navy Theodore Roosevelt, who selected him as the commander of the navy's Asiatic Squadron. The strong possibility of war with Spain soon became a reality on April 20, 1898. Dewey had already been ordered to be ready for battle and was cabled a few days later to "use his utmost endeavor" to capture or destroy the Spanish fleet in the Philippine Islands. On May 1 at 5:22 A.M. Dewey spotted the Spanish fleet off Cavite in Manila Bay. When the American fleet was within 5,400 yards he coolly told the captain of his flagship *Olympia* "you may fire when you are ready, Gridley." After shelling the hopelessly outgunned Spanish squadron for two hours, all 10 of its ships were sunk or disabled and 381 of her seamen were either dead or wounded. At 12:30 P.M. the battle ended when the Spanish hoisted white flags above the shore batteries at Cavite. For his success Dewey was promoted to rear admiral.

After the war Dewey was promoted to admiral and Congress passed special legislation that allowed him to

serve past the navy's mandatory retirement age. From 1900 until his death on January 16, 1917, Dewey served on the General Board of the Navy.

**Dickinson, Emily** (1830–1886) *poet*

Emily Elizabeth Dickinson was a daughter of Edward Dickinson, a prominent attorney and scion of one of the most distinguished families in his community, and Emily Norcross, and was born on December 10, 1830, to a family of culture and privilege in Amherst, Massachusetts. Her formal education was limited to attendance at the Amherst Academy and a single year at Mount Holyoke Female Seminary when she was 17. From the time she left school in 1848, she rarely left Amherst except for an occasional trip to Philadelphia or Boston between 1851 and 1855 and one to Washington when her father was elected to the U.S. House of Representatives in 1854. From the age of 25 until her death she almost never went farther from the family home than her garden gate.

Finding the religious atmosphere of her community oppressive, Dickinson became increasingly reclusive as she grew older, rejecting at once the smug sanctimoniousness of the New England puritanism around her and the cultural pretensions of the academic life in her college town. She was recognized by family and friends as an original and talented woman, but she made few attempts to win public esteem for the brief, seemingly fragmentary poems she began to write around 1858, preferring to copy them out on pages she stitched together by hand and kept hidden in her bureau drawers.

The intensity of the lyrical expression in her elliptical and often gnomic verse has given rise to speculation about a star-crossed love that never came to light. She did love SAMUEL BOWLES, editor of the Springfield *Republican*, but he loved neither her nor her poetry. Of the many poems she hopefully sent him, he published only a half dozen anonymously and compounded her anguish of rejected love by tinkering with them to achieve conventional rhyme and punctuation. Apparently these were the only poems by Dickinson published in her lifetime. Her social life dwindled to nothing, and her personal relationships were apparently limited to family, a few close friendships, and correspondence with literary celebrities of the time. THOMAS WENTWORTH HIGGINSON, a frequent

contributor to the *Atlantic Monthly*, generously praised her work and gave her advice, which she usually ignored, to help “clarify” her deliberately ambiguous verse. Her personal isolation increased during her 30s, and she earned a local reputation for eccentricity as she refused to meet visitors, wore nothing but white, and sent gifts of food to neighbors accompanied by cryptic messages.

After her death on May 15, 1886, nearly 1,800 of her brief, enigmatic lyrics were discovered in her bedroom, and her sister Lavinia induced a family friend to publish a selection of them in 1890. Critical response was mixed, but the work was generally dismissed as crude and obscure. Derided in the press for its “hit or miss grammar and appalling rhymes,” her lyrics on pain and death, love and loss, nature, and the quest for God nevertheless met with considerable popular success, and 11 editions sold out in the year of its publication. Two more collections and a selection of her letters appeared in 1894 and 1896 and were praised by WILLIAM DEAN HOWELLS and other arbiters of literary taste. Admired by later poets of the modernist school for her innovative prosody, rebellious spirit, and emotional depth, Dickinson has had few imitators but has taken her place as one of the most influential poets in American literature.

## dime novels

Between 1870 and 1900 dime novels were the principal, though not exclusive, form of mass-produced popular fiction in the United States. Demand for inexpensive, unsophisticated novels was a by-product of 19th-century school laws, which had increased literacy among the working classes. Improvements in printing technology and shipping made it possible for enterprising publishers to profit by supplying fiction for the masses. “Story papers,” which emerged during the 1840s and 1850s, initiated the mass distribution of popular fiction. Robert Bonner’s *New York Ledger* and Street and Smith’s *New York Weekly* were the industry leaders, but as many as 50 weekly story papers had national circulations that exceeded 100,000. The papers provided serialized fiction, usually sentimental romances and melodramatic tales of NATIVE AMERICANS, at five cents per issue. To get a complete novel, readers would have to acquire four or five issues. By comparison, dime novels supplied the entire novel right away and at half the price.

Dime novels first came to prominence during the 1860s, though the new format did not entirely displace story papers until the 1880s. Publisher Erastus Beadle struck gold when he launched a series of 10-cent novels in a new format, initially 4-inch-by-6-½-inch pamphlets of about 100 pages. The covers were burnt-orange or salmon colored, and the paper was cheap. The books sold well, especially among Union soldiers, who found them to be entertaining, accessible, and convenient.

The earliest Beadle dime novel was *Malaeska, the Indian Wife of the White Hunter* (1860), by Ann Sophia Stephens, a popular novelist and prominent editor of women’s magazines. The success of Beadle’s first series soon inspired competitors to launch their own lines of dime novels. Other leading publishers of the new cheap fiction were George Munro, Robert DeWitt, Norman Munro, Frank Tousey, and Street and Smith. Beadle and the others assembled stables of hack writers, many of them recruited from the story papers. The more prolific of these authors could turn out 1,000 words an hour for 12 hours at a time. They produced standardized assembly-line literature for mass consumption.

Though best known as a format for Westerns and urban detective stories, many dime novels were set during the American Revolution, the War of 1812, and the Mexican War. The stories were typically tales of adventure, whether on the high seas, the Great Plains, or the forests. They took their heroic ideal from James Fenimore Cooper’s early 19th-century Leather-Stocking Tales. Eventually, the dime novel generated its own stock heroes, most notably frontiersmen Deadwood Dick and Buffalo Bill and detective Nick Carter.

Although his books frequently depicted violence and bloodshed, Erastus Beadle insisted that his authors adhere to Victorian standards of virtue and taste. But dime novels promulgated a new class of heroine that departed from the genteel notions of womanhood associated with VICTORIANISM. Popular fiction broke new ground by occasionally presenting assertive, even Amazonian women. Frequently dressed as men, these heroines sailed on pirate ships, tamed wild animals, confronted death, and overcame difficult physical challenges. Like their male counterparts, they were self-reliant, resourceful, and virtuous.

Dime novels may have created a new heroine, but they also exploited negative stereotypes of Native Americans. Mass fiction displayed a fascination with Indians, but typically depicted them as menacing, deceptive, untrustworthy, vengeful, and backward but cunning. The effect was to establish the moral and physical superiority of the books’ white protagonists.

Altogether, dime novels conveyed a distorted image of the American past. As literary historian Jack Salzman has observed, “the dime novel provided the new working class

The 1912 cover of a reprinted dime novel by Prentiss Ingraham (1843–1904), a prolific dime novelist (Denver Public Library)

with tales of adventure and excitement that were . . . implicitly political in their nationalism and patriotic fervor—as well as their racism and sexism.”

Just as dime novels misrepresented the past, so too did they misconstrue the present, most notably in HORATIO ALGER’s popular tales of newsboys and bootblacks who rose from rags to respectability through a combination of luck and pluck. Alger simply ignored the social ills and inexorable economic forces identified by contemporary journalists and novelists, such as STEPHEN CRANE and Frank Norris. But if sales were any indication, Alger’s view of America eclipsed the harsh visions of Crane, Norris, and other realists. Scholars attribute to Alger no fewer than 119 titles, with combined sales of approximately 20 million.

To meet the tremendous demand for cheap fiction, the publishers of Alger’s books and other dime novels devised efficient production and distribution strategies. They typically printed a first run of 40,000 to 60,000 copies of a single title, though it was not unusual for demand to require additional printings of between 400,000 and 1 million copies. Publishers sold their books at newsstands using circulation systems already in place for the marketing of newspapers and magazines. The American News Company, for instance, was for many years the principal

distributor of dime novels, especially the Beadle line. During the peak years of the dime novel, the larger publishers issued thousands of titles that collectively sold in the millions. Given their impact on the publishing business and on American culture, Beadle and his fellow publishers were, as historian Henry Nash Smith has pointed out, the cultural equivalent of industrial magnates like ANDREW CARNEGIE and John D. Rockefeller.

**Donnelly, Ignatius Loyola** (1831–1901) *lawyer, politician, writer*

Controversial politician, reformer, and author, Ignatius Donnelly was born in Philadelphia on November 3, 1831. There he attended Central High School, read law with the distinguished attorney Benjamin Harris Brewster, embarked on a mediocre law career, married Katherine McCaffrey in 1855, and entered politics as a Democrat. The son of Irish Catholic immigrants, he was hostile to the nativist “Know-Nothings,” who had been absorbed into the Republican Party. In 1856 he moved to Minnesota to promote Nininger City, which failed with the Panic of 1857, leaving Donnelly heavily in debt with large landholdings.

Forced to practice law anew, Donnelly, who preferred to practice politics and was antislavery, became a Republican. In 1859 Alexander Ramsey, the Republican gubernatorial nominee, with whom Donnelly was associated in land dealings, selected Donnelly to run for lieutenant governor. A superb stump speaker, Donnelly was an asset to the campaign, and the Republicans triumphed.

Subsequently, Donnelly went to the U.S. Congress (1863–69), where he advocated Radical Republican Reconstruction measures and generous land-grant subsidies for western RAILROADS. He also called for the creation of a national bureau of education to assure equal educational opportunities for all children and introduced legislation encouraging forest growth, which was a forerunner of the 1873 Timber Culture Act. Donnelly lost his seat in the House of Representatives when he became Ramsey’s rival and tried to capture his Senate seat.

Capitalizing on his support of railroads, Donnelly turned to lobbying for John C. Fremont's Atlantic and Pacific Railroad and Jay Cooke's Northern Pacific Railroad. Lobbying left him "comparatively poor" and embittered against railroads since he blamed Cooke and the Northern Pacific for his failure to return to Congress in 1870, as an Independent with Democratic support.

Continuing his independent course, Donnelly supported the LIBERAL REPUBLICAN PARTY in 1872 and by 1874 ran successfully for the Minnesota state senate as an anti-monopolist, heading a coalition of GRANGERS and Democrats. With his insider's knowledge he had since 1871 attacked the power of railroad monopolies and established a newspaper, the *Anti-Monopolist* (1874–79). In 1878 he ran for U.S. Congress as a Greenback-Labor and Democratic fusion candidate against the flour-milling magnate William D. Washburn, who used bribery, fraud, and intimidation to defeat Donnelly.

Disillusioned with politics, Donnelly turned to writing and lecturing. Popularizing legends and theories that scholars scorned, his writings were closer to the science fiction of Jules Verne than the insights of geologist Louis Agassiz or naturalist Charles Darwin. His *Atlantis: The Antediluvian World* (1882) was an enormous success, with W. E. Gladstone, the prime minister of Great Britain, writing him a four-page handwritten fan letter. *Atlantis* argued that Plato's island had existed and flourished. Donnelly followed up *Atlantis* with *Ragnarok: The Age of Fire* (1883), which claimed that a prehistoric comet, not glaciers, was responsible for Earth's large deposits of sand, gravel, and clay. Approaching his subjects as a defense attorney, Donnelly uncritically synthesized supporting views and ignored contrary evidence.

Donnelly's popularity as a writer reawakened his political ambitions. But when his 1884 bid for Congress as a Democrat was unsuccessful, he continued to write provocative books, which sparked a demand for him as a lecturer. In *The Great Cryptogram* (1887) he claimed to have found a mathematical cipher (a message in code) in the plays of William Shakespeare, proving they were written by Francis Bacon. Advocates of the Baconian theory were delighted, while their critical opponents exposed Donnelly as an inaccurate mathematician.

Success in politics in 1887 (he was elected to the state legislature by a combination of farmers and laborers) changed Donnelly's literary interests. He abandoned idiosyncratic, controversial scholarship to write critical social novels, reflecting his concern that America was degenerating, rather than progressing, as SOCIAL DARWINISM argued. To combat monopolists' exploitation of producers he became a leader of the Minnesota Farmers' Alliance and a champion of labor. In 1890 he anonymously published his bleak, utopian novel *Caesar's Column: A Story*

*of the Twentieth Century*, which prophesied that a Jewish elite would oppress and degrade the farming and laboring masses, bringing on a violent revolution in 1988. Although Donnelly was not personally anti-Semitic, his unfortunate choice of villains encouraged anti-Semitism for years to come. As if to prove he was not prejudiced, Donnelly, in *Doctor Huguet* (1891), showed how society failed to recognize the worth of a virtuous, capable, successful white doctor when he assumed a black skin.

Literary prominence, political ambition, and a genuine commitment to reform enabled Donnelly to play a major role in the emergence of the PEOPLE'S PARTY (Populist Party) in the 1890s. That party grew out of the FARMERS' ALLIANCES and the dying KNIGHTS OF LABOR. In 1892 the Populists, at their national convention, adopted the OMAHA PLATFORM, calling for the secret ballot, a graduated income tax, nationalization of the transportation system, unlimited (free) coinage of silver, a flexible national currency, direct election of U.S. senators, the initiative to compel a legislature to consider a measure, and the referendum to enable voters to adopt or reject a measure. The Omaha platform became the most renowned political platform in American history. Donnelly wrote its stirring preamble and hoped its proposed reforms would reverse the trend toward the polarization of American society into "paupers and millionaires" that he had perceived in *Caesar's Column*. In 1892 the Populists enjoyed success in the Midwest, but Donnelly was defeated for governor of Minnesota.

Donnelly was a middle-of-the-road Populist. Although he supported Free Silver in his novel *The Golden Bottle* (1892), he preferred neither an inflationary nor deflationary federally managed monetary system that would provide adequate currency for all sections of the country. Nevertheless, when in 1896 the DEMOCRATIC PARTY nominated WILLIAM JENNINGS BRYAN for president on a Free Silver platform, Donnelly, rather than split the reform vote, supported Bryan on a fusion ticket. Not only was Bryan defeated, but also the Populist Party was severely crippled. In 1900 its remnants nominated Donnelly for vice president. Less than two months after he lost that election and only a few moments into the new century that he feared would be cataclysmic, Donnelly died on January 1, 1901.

### due process clause (1868)

After the Civil War the United States SUPREME COURT interpreted the due process clause of the Fourteenth

Amendment, passed initially to protect the rights of AFRICAN AMERICANS, to shield private property from state government regulation. The Fourteenth Amendment provides that no state shall “deprive any person of life, liberty, or property, without due process of law.” The Court narrowed the protection of the due process clause for individuals in the 1883 *CIVIL RIGHTS CASES* (denial of equal access to public accommodations was a private, not a state, matter) and in the 1896 *PLESSY V. FERGUSON* decision (state-mandated segregation did not violate due process). While the Court reduced the protection of human rights by the due process clause, some justices—initially a minority—found in that clause, beginning in the 1870s, the means of protecting property rights from state regulation.

In the *Slaughterhouse Cases* of 1873, the Court limited the application of the Fourteenth Amendment. The state of Louisiana law gave the Crescent City Live Stock Landing and Slaughterhouse Company a monopoly over the butchering trade in New Orleans. A rival group of independent butchers sued, claiming that the law deprived them of their “privileges and immunities” as citizens without due process of law. By the slim margin of 5 to 4, the Court rejected the claims of the independent butchers. The majority held that the protections guaranteed by the Fourteenth Amendment, in particular that of due process, were intended to apply to former slaves and not to questions of economic regulation. But among the dissenters was Justice STEPHEN J. FIELD, who argued for a broader definition of due process that would narrow state “police power” and would protect property rights from state regulation. In the most famous of the Granger cases, *Munn v. Illinois* (1877), the Court upheld an Illinois Warehouse Act on the grounds that states had the authority to regulate private property when it was used in the public interest. Again, in a stinging dissent, Field argued that the due process clause protected private business from state regulation. His dissent in this case anticipated the future direction of the Court in its definition of the Fourteenth Amendment.

By the 1880s, the Court adopted Field’s broad interpretation of the due process clause. In the case of *Santa Clara v. Southern Pacific Railroad Company* (1886), the Court accepted the argument that the word “persons” in the Fourteenth Amendment applied equally to corporations and individuals; therefore, corporations could enjoy the same benefits of due process and equal protection as did individuals. The due process clause thus insulated corporations from unreasonable state regulation and also protected freedom of contract to the extent that the Court, in time, overturned maximum hour and minimum wage legislation. From the end of the 19th century to well into the 20th century, the Court was a bastion of judicial conservatism and a champion of laissez-faire capitalism.

**Dunbar, Paul Laurence** (1872–1906) *poet, novelist*

Born on June 27, 1872, in Dayton, Ohio, the son of former slaves, Paul Dunbar edited the high school newspaper, wrote his class’s song, and graduated with honors. Unable to find a job in journalism, he became an elevator operator in his hometown and spent his spare time writing poetry. He came to the attention of and was encouraged by several white men, including the Indiana poet James Whitcomb Riley. Before his 21st birthday he had published his first book of poetry, *Oak and Ivy*. His second book, *Majors and Minors*, received a favorable review from WILLIAM DEAN HOWELLS, editor of the prestigious *Harper’s Monthly*, who then gladly wrote an introduction to Dunbar’s third volume of poetry, *Lyrics of Lowly Life* (1896). He praised Dunbar’s dialect poems as artistically “literary interpretation[s]” but dismissed Dunbar’s poetic English offerings as “very good” or better, but not really a “contribution” to American poetry.

Dunbar’s short life was scarred by financial pressures, tuberculosis, alcoholism, and a failed marriage. Two

Paul Laurence Dunbar (Library of Congress)

intense compulsions added complications to these wounds: The first was reflected in the Howells introduction; Dunbar wanted to be honored for his straight, not his dialect, poetry, but such recognition never came. His despair echoes in two stanzas of “The Poet,” which begin “He sang of life, serenely sweet / With, now and then, a deeper note” and closed with the lament “But, ah, the world, it turned to praise / A jingle in a broken tongue.” Dunbar wrote dialect poetry to earn a living, to satisfy a publishing market. Recent scholars now acknowledge his supreme artistry in reproducing southern black speech. No other author or poet has matched his accuracy.

Dunbar’s dialect poetry resonates when read aloud. The rhythm of “When Malindy Sings” suggests the beauty of Malindy’s voice, “But fu’ real melojous music / Dat jes’ strikes yo’ hea’t and clings / Jes yo’ stan’ an’ listen wif me / When Malindy sings.” The poem flows like music. Critics have complained that Dunbar’s dialect paints AFRICAN AMERICANS as ignorant and servile. The dialect in Dunbar’s poetry mirrored the speech of some southern blacks in his time. It was not demeaning. Every once in a while Dunbar slipped in a race-pride allusion. In “When Malindy Sings,” for example, the narrator tells Miss Lucy to “Put dat music book away,” because no matter how hard she tries, she’ll never be able to sing like Malindy.

Race pride, or what one scholar has called “racial fire,” was a second compulsion in Dunbar’s life. He felt the oppressive prejudice of the day, as evidenced by his many letters to newspapers. A few of his poems reflect his heated resentment at the way blacks were treated. “Rights Security” demonstrates this feeling with subtle intensity: Whatever blows might fall, we praise “that man who will not compromise with wrong / . . . Minorities, since time began / have shown the better side of man.”

In a more revealing mood Dunbar wrote his well-known “We Wear the Mask,” which “grins and lies” while “With torn and bleeding hearts, we smile.” Dunbar was neither cheerleader nor apologist for his race. His poetry probed a variety of human thoughts and emotions, including pride of race and repugnance of prejudice.

A friend wrote that though Dunbar was courtly in manner, polished in speech, and modest in behavior, he carried “a sac of bitterness” born of his reception as an artist, his ill-fated marriage to the talented Alice Moore (later Alice Dunbar-Nelson), his painful illness, and the pinch of finances. Animated in personality, he was an appealing performer who read his poems with expressive passion. He was also a prolific writer, producing more than 400 poems, four novels, four volumes of short stories, and collaborating on several musical revues. His last and best novel, *The Sport of the Gods* (1902), one of the first to tackle the theme of northern migration, followed a southern black family to Harlem, where the gilt and glamour almost destroy them.

Largely forgotten for most of the 20th century, Dunbar’s poetry is now slowly gaining acknowledgment for its lyrical quality, its careful but courageous racial fire, and the beauty of what the contemporary poet Nikki Giovanni, calls “plantation speech.” Dunbar was, Giovanni concludes in a telling phrase, “a natural resource for our people.” Dunbar died on February 9, 1906.

## **Eads, James Buchanan** (1820–1887) *engineer*

Perhaps the most distinguished American engineer in the Gilded Age, James Eads was born beside the Ohio River in Lawrenceburg, Indiana, on May 23, 1820. He became a steamboat clerk on the Mississippi in 1839; when his boat sank, he perceived business opportunities in cargo salvage. He designed a diving bell in 1842 and started a salvage business. He later expanded into clearing river snags, made a fortune, and retired in 1857. During the Civil War, Eads designed and built ironclad gunboats for the Union, and these played a key role in gaining control of the Mississippi and its tributaries.

In 1866 Eads's proposal for a bridge across the Mississippi at St. Louis was adopted, and he became its engineer-in-chief in 1867. A major problem was constructing piers from bedrock up through the sandy bottom of the river. Eads used a pressurized caisson, floated into position and sunk to the bottom, within which excavators could work with compressed air to keep out the water. The first caisson reached bedrock 100 feet below the river surface in 1870. Records show that 119 men suffered from "the bends," and 14 died before it was learned that slow decompression was necessary after working under compressed air. In 1873 laborers began erecting the steel arches of the bridge. With three spans, each more than 500 feet long, the bridge marked the first extensive use of steel in bridge construction.

The great bridge officially opened on July 4, 1874, after Eads demonstrated its strength by driving 14 locomotives back and forth across it. An estimated 300,000 people attended the celebration, a municipal triumph for St. Louis. The bridge would carry increasingly heavy trains for 100 years. Closed to rail traffic in 1974, it reopened in 1993 to carry light-rail Metrolink trains across the Mississippi. The bridge is not only a vital transportation link; its functional beauty also inspired the architectural work of LOUIS SULLIVAN.

In 1873 Eads began investigating another problem: how to maintain navigation for ocean ships at the shallow

mouth of the Mississippi. He argued against proposals for a canal to bypass the shallow sandbars and suggested building jetties to direct the river flow and scour a channel. Despite opposition, Eads's proposal was accepted in 1875. Construction of the jetties began the same year, and by 1879 the channel was 30 feet deep and routinely used by oceangoing steamers.

Eads's final great project, never accomplished, was to have been a multitrack ship railway to carry ocean liners from the Gulf of Mexico across the Isthmus of Tehuantepec to the Pacific. Eads began investigating the possibility in 1879 as an alternative to an ill-conceived proposal by the French promoter Ferdinand de Lesseps to construct a sea-level isthmian canal across Panama. Eads would lobby for his project until his death in 1887. Not until 1914 would the Panama Canal (with locks) be opened to traffic.

In 1920 Eads was elected to the Hall of Fame for Great Americans, and in the 1932 the deans of the American colleges of engineering named Eads one of the five greatest engineers of all time, ranking him alongside Leonardo da Vinci and THOMAS ALVA EDISON.

## **Eakins, Thomas** (1844–1916) *painter, photographer, sculptor*

Best known as a painter, Thomas Eakins also used the mediums of photography, sculpture, and watercolor to conduct uncompromising explorations of the human form. Eakins's life and art are linked with Philadelphia, where he was born on July 25, 1844. The son of a master calligrapher, Eakins excelled at mathematics and mechanical drawing in high school. He studied art at the Pennsylvania Academy of

Thomas Eakins's *Max Schmitt in a Single Scull*, 1871 (Metropolitan Museum of Art)

the Fine Arts and anatomy at Jefferson Medical College. In 1866 he began four years of studying painting and sculpture in Paris, his only significant time away from Philadelphia. Along with Eadweard Muybridge, Eakins did pioneering work in motion photography in the late 1870s. As a teacher at the academy, Eakins championed the study of anatomy for both men and women, and by the early 1880s the school was one of the most progressive institutions worldwide. In 1886, however, Eakins removed a male model's loincloth in a women's or mixed life-drawing class, and he was fired. The incident, often cited as an archetype of Victorian prudery, was only one among Eakins's unconventional tactics, which also included a domineering manner, vulgar speech, and nude photography sessions involving himself and his students. Upon Eakins's dismissal, loyal pupils founded the Art Students' League of Philadelphia, and Eakins taught there until 1893. He also taught anatomy at other institutions in Philadelphia, New York, and Washington. Most of Eakins's art was uncommissioned and he sold few works; crucial financial support came from his father. Eakins's rep-

utation as the consummate American realist was only established after his death on June 25, 1916, in Philadelphia.

Hallmarks of Eakins's style, which varied little over the course of his career, include a limited tonal palette, dark shadows cut by shafts of light, and a great wealth of specific detail. In oils, watercolors, and sculpture Eakins executed portraits and genre topics, such as American colonial themes, an Arcadian series, and the sports of sculling, hunting, sailing, and boxing. His realism was built upon a laborious armature of preparation that included perspective drawings and wax mannequins for the study of light. Figure studies, some with frankly erotic themes, were conducted with photography; these were private, study works. All these methods were investigations into the underpinnings of appearances.

Eakins's first masterwork was *The Gross Clinic* (1875, Jefferson Medical College, Philadelphia). In a crowded surgical amphitheater, Dr. Samuel Gross removes diseased bone tissue from the thigh of a prone patient, the incision and his bloody hands making shocking red points amid

Rembrandtesque shadows. Most critics could not commend the painting; one noted, “power it has, but very little art.” In *The Swimming Hole* (ca. 1883–84, Amon Carter Museum, Fort Worth, Texas) Eakins constructed a pyramidal composition of five nude youths diving, swimming, and lounging, moving the prosaic scene back to an idyllic age. In the searing *The Artist’s Wife and His Setter Dog* (1884–ca. 89), Metropolitan Museum of Art, New York), a thin Susan Macdowell Eakins sits slumped in a chair, red-rimmed eyes and an empty, upturned palm almost beseeching the viewer. It takes its place among Eakins’s brutally frank, meditative, melancholy portraits, which remain his most memorable works.

**Further reading:** William Innes Homer, *Thomas Eakins: His Life and Art* (New York: Abbeville Press, 1992); John Wilmerding, *Thomas Eakins (1844–1916) and the Heart of American Life* (London: National Portrait Gallery, 1993).

—Karen Zukowski

**Eastman, George** (1854–1932) *inventor, businessman, philanthropist*

George Eastman, inventor, entrepreneur, and philanthropist, was born on July 12, 1854, in Waterville, New York, the son of a nurseryman and educator who moved with his family to Rochester, New York, when George was five, and died two years later, leaving the family poor. Eastman quit school at age 13 to help support his mother and sisters. Methodical, efficient, and bent on self-improvement, he worked up from office boy to bank clerk. When, in 1877, he happened to take up photography, he added to his qualities a passionate single-mindedness verging on obsession. Photography still required the preparation and development of a wet-plate negative on the spot and at the time of an exposure, a process involving a bulky camera, tripod, plates, paper, storage box, a tent used as darkroom, and a wide array of chemicals and chemical apparatus. To carry and cope with all this demanded unusual patience, skill, and muscle. Eastman had all those, but he was also determined to find a better way. In 1878 he found it in the dry-plate process just developed in England, whereby plates could be prepared in advance and taken at leisure to a fixed laboratory for development.

Eastman experimented tirelessly with the process and began selling plates to others. In 1880 he patented an improved apparatus and in 1881 opened a factory in Rochester. He faced stiff competition, but he also saw the potential in exploiting a vast market of unhandy amateurs by continually making the process simpler and cheaper. He invented roll film, a roll holder attached to the camera, and bromide printing paper suitable for darkroom development. He also demonstrated a brilliant grasp of marketing,

coining the catchy brand name “Kodak” (based on a feeling that “K” was a “strong” letter), reaching out to a world market (beginning with a London branch in 1885), and spending lavishly on advertisements for which he wrote most of the copy. In 1888 he introduced a portable box camera, which held a roll for 100 photos, and urged buyers to send their rolls and cameras to Rochester for development. He wrote a slogan that became a worldwide catch phrase: “You press the button, we do the rest.” Constant improvement led to the “Brownie” camera of 1900, which sold for a dollar and came in a bright yellow package, a triumph of product identification.

In a series of acquisitions and reincorporations, Eastman’s personal fortune reached the million-dollar mark by the end of the century. He gave a third of it to Eastman employees worldwide, and he subsequently pioneered in employee benefits: medical insurance, pensions, and profit sharing. In 1901 he organized his enterprises as a holding company. This drive toward monopoly ran up against federal antitrust laws, but he preserved his dominance in photography by strategic concessions. After 1901 he diverted more of his energies to philanthropy, which he had engaged in since his teens. Eventually, being a lifelong bachelor, he distributed the bulk of his \$100 million fortune for the benefit of the public, avoiding personal publicity. He gave the Massachusetts Institute of Technology \$20 million as a gift from “Mr. Smith.” He also helped support African-American education through Tuskegee and Hampton Institutes, classical music (in which he delighted), medical research, dental clinics, parks, local political reform, and improvements in the city of Rochester. As a debilitating spinal affliction came upon him in his 70s, he put his affairs in order, bequeathing his estate to worthy causes. On March 14, 1932, leaving a terse note—“My work is done. Why wait?”—he shot himself through the heart.

**Eddy, Mary Baker** (1821–1910) *Christian Science founder*

Mary Baker Eddy, the founder of CHRISTIAN SCIENCE, was born on July 16, 1821, near Concord, New Hampshire. Although she was an emotional, sickly child who attended school irregularly, she had a aura of excitement about her and after age 12 occasionally published poetry. In 1843 she married George Washington Glover, who died six months later, leaving her pregnant and penniless. After returning to her parents’ home in poor health, she gave birth to a son, who grew up abandoned by her and illiterate. Despite her

ill health, in 1853 she married Daniel Patterson, an itinerant dentist. They were divorced in 1873.

Eddy's search for health brought her in 1862 to Phineas Parkhurst Quimby of Portland, Maine, whose direct mental healing hinted at modern psychological theories. Without denying illness, he maintained that its cause was often in the mind of the sufferer. Blooming under his guidance, Eddy became physically strong and a convert to his beliefs, copying out his manuscripts (one of which he called "Christ or Science"). When Quimby died four years later, Eddy reluctantly prepared to proclaim his healing message.

Working alone, without financial backing and estranged from her family and husband, Eddy wrote and in 1875 published *Science and Health*, the handbook of the Christian Science movement. Insisting that the mind could triumph over illness, her book made a religion of Quimby's theories, which she called her own and in many instances plagiarized. In her book's 381 revisions, Eddy gradually altered Quimby's teachings, linking them to the Bible. Unlike him, she denied the reality of illness and death, claiming they

were not of the "Father Mother God" who created everything. When her followers appeared ill, they were to seek help from Christian Science practitioners, not medical doctors. Possessing bad teeth and needing glasses, Eddy allowed Christian Scientists to see dentists and optometrists. A believer in demonology, she blamed problems and deaths (including that of Asa Gilbert Eddy, whom she married in 1877 and who died in 1882) on the "malicious animal magnetism" of disgruntled former followers.

Eddy was both an energetic teacher and a pragmatic organizer. She formed the Christian Science Association in 1876 and chartered the Church of Christ (Scientist) in 1879 and, in 1881, the Massachusetts Metaphysical College, which granted degrees for nearly a decade. For \$300 tuition (making Eddy the highest paid teacher of her day), adherents could attend her lectures and become teachers and healing practitioners. The trainees (mostly women, including numerous widows) acquired a lucrative profession and brought new believers to the movement, particularly after 1883 when the monthly *Journal of Christian Science* publicized their triumphs. Valuing good publicity, Eddy established in 1898 the weekly *Christian Science Sentinel* and in 1908 the daily *Christian Science Monitor*.

Eddy shrewdly shaped her denomination to increase her power, and during the last 20 years of her life she was the most famous woman in America. Annoyed by deteriorating health and her church's everyday problems, she began secluding herself in 1887, but nevertheless tightened control of her denomination by creating in 1892 "The Mother Church" with a self-perpetuating board of directors. In semiretirement, her emotional outbursts, her consulting with doctors and taking morphine to relieve her painful kidney stones, and her increasing paranoia were less noticed. She died on December 3, 1910, and left most of her \$2.5 million estate to her church, which, despite numerous lawsuits and unfavorable publicity, had grown to nearly 100,000 members.

### **Edison, Thomas Alva** (1847–1931) *inventor*

Thomas Edison, the most renowned inventor of the Gilded Age, was born on February 11, 1847, in the small town of Milan, Ohio. He did not have an easy start in life: Edison lost part of his hearing as a boy, his family fell on hard times, and his formal schooling was meager. He peddled candy and newspapers on railroad trains and set up a small

Thomas Alva Edison, with phonograph (Library of Congress)

electrical lab in a baggage car. Able to overhear the clicking of a railroad telegraph, he became a skilled operator and, in the tradition of the craft, moved from job to job. In 1868 he arrived in Boston, the center of American science and technology, where he resolved to be a full-time inventor. His first invention, an electric legislative vote recorder, was not wanted by politicians, who needed time to dicker during a vote. Edison thus learned to study the market before inventing for it. He also devised an improved stock ticker. When his Boston credit ran out in 1869 he moved to New York City. There he sold his stock ticker rights for enough to finance his own business in Newark.

From 1870 to 1876 Edison concentrated on improving telegraphy, in 1874 producing his most complex and notable invention in that field, the quadruplex telegraph, which could send two messages each way over a single wire. In 1876 he set out to establish an “invention factory” that would turn out “a minor invention every ten days and a big thing every six months or so.” The plain two-story wooden building in the hamlet of Menlo Park, New Jersey, foreshadowed the modern industrial research laboratory. Edison put together and brilliantly led a dedicated team of skilled workers and scientific specialists. There and elsewhere in New Jersey over the next 15 years he changed

the world and called whole new industries into being with a succession of inventions unequaled by any one person before or since, including his carbon-button telephone transmitter, phonograph, electric light, and integrated system of electrical generation and transmission. The public mythologized him as “the wizard of Menlo Park.” Ultimately more than 1,000 patents bore his name, though not all were primarily his creation.

After the 1880s Edison changed his style. He came up with no more strikingly original and fundamental inventions, although his team did much to develop motion pictures. Instead, perhaps sensing that the day of the great independent inventors was passing or perhaps because his own incandescent genius was fading as he aged, he turned to massive projects such as ore separation and cement manufacture, both processes that required giant machinery and heavy infusions of capital. He struggled to join the American pantheon of great industrialists, but the new role was not natural to him and he failed, losing much of his fortune. Nevertheless, his triumphs in basic invention have made him a figure of undying fame and legend in American history. The technology he created is, and is likely to remain, an indispensable and inextricable part of human life. When Edison died on October 18, 1931, it was suggested that in observance of his death all dynamos be stopped momentarily, but the cost and disruption of even so fleeting an event was recognized as unthinkable.

—Robert V. Bruce

## education

Two themes dominated American education from 1870 to 1900. One was the great expansion in the number of schools and people in both teaching and learning. Education became increasingly important as the nation’s population grew from natural expansion and IMMIGRATION, and millions of people entered school. The other theme was that the local village, town, or city shaped the educational experience of young Americans. They were not educated by a centralized school system as in Germany, Japan, France, or Great Britain. The minimal federal aid given to education helped establish land-grant agricultural and technical universities under state control. Many Republican congressmen wanted federal funds to be spent on local community schools in impoverished districts, to subsidize the education of black children in particular, but their efforts never became law. Furthermore, in most states, governors, legislators, and judges had little direct influence on students and teachers. Public education was locally controlled.

Schools aimed to prepare students for a place in a rapidly changing society while building personal and civic character. Between 1870 and 1900 the United States continued the rapid industrialization and urbanization that had begun a generation earlier. By 1880, for example, 50 percent of New Jersey's population lived in communities of more than 2,500 people, and the revolutions in transportation, marketing, and communications were creating a national integrated economy that affected even small rural villages. Local farm producers and their markets were facing competition from rail-transported meat and flour from Chicago and Minneapolis. Fruit shipped from Washington and Oregon to eastern urban centers was sold cheaper than products grown 20 miles away.

Despite the national economy, American children did not have a common educational experience. With the federal Constitution silent about education, that function fell to the states and, in practice, to the thousands of dissimilar communities that formed local school systems. Moreover, schools for AFRICAN AMERICANS and NATIVE AMERICANS were different from those of other children. In 1900, 90 percent of the nation's black children lived in the South and attended segregated schools deemed constitutional by the SUPREME COURT's 1896 *PLESSY V. FERGUSON* "separate but equal" decision. Outside the South, African Americans often attended integrated schools, especially in rural areas and small towns. Native Americans, whose schools were a federal responsibility, were the most poorly educated seg-

One-room schoolhouse and its attendees, Hecla, Montana, 1893 (*Library of Congress*)

ment of the population. Schools on reservations were inadequate, and those children who attended the few Indian boarding schools, like the one at Carlisle, Pennsylvania, were intentionally far removed from their community to promote their assimilation into white society. Women of all races had fewer opportunities for education beyond the eighth grade, although only 5 percent of all graduates—regardless of race or gender—went on for more education. Nevertheless, growing numbers of women were going on to teacher education (normal schools), commercial, and nursing schools. Less than 1 percent of the 18- to 22-year-old female population went to the recently created women's colleges, such as Vassar, Smith, Radcliffe, Bryn Mawr, or Mills.

Why did parents send their children to school? Why did states foster schools and permit local communities to raise taxes for their operation? What influence did the rapidly changing economy have on these decisions? Historians have widely differing answers to these questions. Some believe that community schools were created to preserve and protect traditional American beliefs during a time when many Americans were leaving their farms and small towns for new homes in cities or for new farms and small towns on the frontier. With mobility undermining the ties of family, church, and community, education would provide some social glue, an element of stability. Schools could help young citizens adjust to changes and provide them with a common experience. Children could become individuals caring for their own interests as well as patriotic citizens preserving common national goals.

Other scholars believe that schools, especially in cities, were designed to control those who were poor and those who were recent arrivals. The rich desired to use education to “tame the poor” by getting them to accept inequality as an economic reality. Other “school controllers” were motivated by fears of moral decline. They saw Christian society threatened by drinking, prostitution, crime, political corruption, and—a more immediate temptation for youngsters—undesirable children's books. Through discipline and the teaching of high ideals, schools could counteract these influences and set children on the right path.

These theories, however, are not relevant for the majority of Gilded Age children who went to school in rural communities rather than in growing cities. From 1870 to 1900, 25 to 40 percent of all Americans lived in towns of more than 2,500. Rural schools were not created to cope with immigration, to respond to rapid economic change and population shifts, to shield the innocent minds of children from sin, or to teach poor children to accept inequality and not be influenced by foreign ideas to overthrow the government and reconstitute society.

Rural schools had three basic objectives. First, they wanted to train students to become self-reliant citizens

who were thrifty, sober, orderly, serious, and competitive. Local taxpayers, loosely controlled by state governments, gave almost every child (the exceptions were among African-American and Indian children) an opportunity for a common-school, eight-year education so that they could become free citizens in charge of their own futures. Second, although the schools were secular, American republican and democratic ideals were taught to the point that they had religious overtones. America was the redeemer-savior-nation (one that could rescue a world of decadent monarchies), and children could carry out both their personal ambitions and responsibilities as citizens within God's plan. Finally, as either farmers or small business owners, young Americans needed education so that they could compete with producers at home and abroad. The careful education of children would enable a well-regulated society to balance its need for stability with the individual's desire for success.

Educational goals were carried out primarily in state-regulated community schools. Between 1865 and 1900 every state established requirements for minimal annual attendance, teaching certificates, basic curricula, and graduating tests. Local communities could tax and receive state aid if they carried out these minimal requirements. Very few other state regulations affected students and teachers. Many states also sponsored two- or three-day meetings where teachers could convene and learn new skills. Every small rural location had an elementary school teaching children through the eighth grade. Only 5 percent of the nation's children attended high schools, which were located in larger towns. Talented high school students from rural communities often had to board in larger towns and either pay tuition or establish residency.

The most salient change in Gilded Age primary schools was that more women than men taught school. In New Jersey, for example, male teachers outnumbered female teachers before the Civil War, but at its close in 1865 almost twice as many women were teaching as men, and by 1895 women outnumbered men by six to one. Teaching was a rapidly growing field for ambitious and qualified women who preferred it (especially with opportunities in rural areas or small towns) to urban employment as nurses or in business. However, few teachers remained in their jobs for more than a few years. In many counties the teaching force changed by 90 percent or more within a five-year period. Low wages for the largely female teaching force—and their individual desires to marry and raise a family—account for this shift.

Parochial schools were the most important trend in private education. A Roman Catholic educational system emerged in many urban areas following the call of the 1883 Council of Bishops in Baltimore for the expansion of Catholic schools in as many dioceses as possible. Catholics

were unable to convince state legislatures that their schools merited state aid, even when bishops were willing to admit non-Catholic students (who would not participate in religious education) and to place their schools under state regulations. The expansion of private Catholic education paralleled the less significant growth of Protestant-based private schools.

Formal public and parochial school systems were not the only alternatives; there were also informal arrangements. An occasional bright teenager could be prepared for college entrance examinations by a tutor. Educational opportunities for adults existed. Farmers could learn the newest techniques by attending county fairs or by contact with agents of state departments of agriculture. In cities, businesspeople could pick up information at trade expositions, while any citizen could take courses sponsored by the CHAUTAUQUA movement or at Young Mens Christian Associations (YMCA) and SETTLEMENT HOUSES. Courses were also available for immigrants who needed basic reading skills and knowledge to pass citizenship tests (which contained questions like What is a ballot?).

Between 1870 and 1900 publicly funded schools and informal educational opportunities could be found in every state and territory in communities of all sizes and wealth. A basic, locally administered common-school education was a national experience for nearly all children. The amount of money spent on public education varied greatly from state to state and from community to community within a state, and no state helped poor school districts by equalizing expenditures statewide. Virtually all Americans received a common-school education, but its quality varied considerably.

### education, federal aid to

Through its land policy, the federal government from its inception supported common schools, but education was regarded as a state responsibility, exercised by local communities subject to state oversight. Using the sale of public lands to support education had its origins in the colonial period and was adopted by the Congress of the Articles of Confederation. Its Land Ordinance of 1785 created a

system for surveying western lands into six-mile-square townships. In each township, one of its 36 sections was designated to support common schools. In the late 19th century, two sections (and in the early 20th century, four sections) in each state as it entered the Union were set aside for education.

In the late 19th century reformers tried to secure substantial federal aid for impoverished school districts, primarily in the South and West. Republican senator Henry W. Blair introduced a bill in 1881 to distribute among states, on the basis of illiteracy, \$120 million over a 10-year period. The chief beneficiaries would be African-American children. Although the Senate passed the bill three times, it was killed in the House of Representatives by racist southerners and parsimonious northerners and never passed.

The federal government also supported higher education and research. Prior to the Civil War, public land granted to states as they entered the Union resulted in the establishment of state universities in Michigan, Indiana, and Wisconsin. In the 1840s and 1850s numerous advocates of an increased federal role in improving agricultural methods studied European models and petitioned CONGRESS for the funding of research and teacher training. In 1857 Republican senator Justin Morrill of Vermont introduced a bill encouraging the growth of higher education through the sale of public lands, and by 1859 it passed Congress only to be vetoed by President James Buchanan, who believed it would unconstitutionally encroach on states' rights by expanding federal power over education. Southern Democrats prevented an override of the veto.

In May and July 1862, with the nation at war and southern Democrats absent, the Republican Congress, with President Abraham Lincoln's approval, created the Department of Agriculture (which immediately began research on seed development and plant diseases) and signed Morrill's Land-Grant College Bill into law. The Morrill Act gave each state 30,000 acres of land for each senator and representative in Congress, and the states were free to sell these lands and use the proceeds to establish agricultural and mechanical colleges. As a result, land-grant institutions were created in every state, but the Morrill Act never provided enough money for the total support of a school. The federal government also provided special land grants for normal schools, schools of mines, military institutes, and segregated schools. An additional Morrill Act (1890) gave \$25,000 annually to each land-grant college for studies related to the "industries of life." This term was used to prevent diverting the money to the liberal arts departments that existed in those institutions.

The 1887 Hatch Act, which gave states money for agricultural research stations, grew out of the work of land-grant universities and the Department of Agriculture. Department officials and college professors had for years

been meeting in efforts to disseminate the results of agricultural experimentation to farmers. The research stations were designed to meet that need. By 1899, 56 research stations based in farming areas produced 445 reports and bulletins reaching more than a half-million farmers.

During the Gilded Age—a period of unparalleled agricultural and industrial expansion—the federal government recognized the value of technical training and scientific experimentation and, in limited but precise and important ways, encouraged higher education and the distribution of useful information.

### education, higher

From 1870 to 1900 the number of American institutions of higher learning jumped from 563 to 977, and the percentage of 18- to 21-year-old students increased from 1.7 to 4.1. These colleges and universities fall into three categories: privately endowed universities offering graduate as well as undergraduate programs; a large number of small, usually church-sponsored, liberal arts colleges; and public-supported state universities and land-grant colleges (encouraged by the Morrill Act of 1862), as well as the unusual City College of New York, established in 1847. Public-supported institutions offered technical and liberal arts training.

Graduate training expanded from 1870 to 1900. Before 1870, Harvard's Lawrence Scientific School and Yale's Sheffield Scientific School, as well as their schools of law and medicine, offered postgraduate training but few doctor of philosophy (Ph.D.) degrees. Aspiring American scholars went to Europe, especially Germany, for the Ph.D. until Johns Hopkins University, from its inception in 1876, emphasized graduate studies. Its president, DANIEL COIT GILMAN, made research the "soul" of the university and strived to combine the strengths of a traditional liberal arts college with a graduate program designed not only to preserve knowledge but also to discover and apply scientific knowledge. The Hopkins medical school, established in 1893, applied Gilman's concepts. Its outstanding faculty, high admission standards (open to women), affiliation with a teaching hospital, and sound financial footing made it the preeminent medical school in America in 1900.

During the last three decades of the 19th century, many American colleges and universities began offering their students a wide variety of majors and courses they could elect to meet degree requirements. This elective system was controversial. CHARLES WILLIAM ELIOT, Har-

vard's president, argued that the changing American economy and society needed college graduates who had been free to choose their course of study. Yale's president, Noah Porter, countered that while the elective system might benefit some earnest students, the vast majority were neither mature nor informed enough to make such crucial choices. He believed that a uniform college program should concentrate the attention of students on history, literature, and science before they began the pursuit of money through technical training. Porter also believed that the elective system would be costly, difficult to manage, and—by reducing common experiences—blur the identity of, and the camaraderie within, a college class. In 1885 James McCosh, the president of Princeton, took a moderate position combining Eliot's flexibility and Porter's rigidity. McCosh said the student should elect the college and major of his choice, but the faculty should determine the appropriate sequence of courses leading to a degree. All students at Princeton, whatever their major, had to study the trinity of language and literature, science, and philosophy.

Trends in higher education reflected the phenomenal growth of American agriculture and industry. The establishment of graduate programs, agricultural and mechanical colleges, and more flexible, practical curricula served the needs of a society organizing and reshaping itself. Despite the greater availability of higher learning in the late 19th century, only one out of 25 American youths attended college in 1900.

In particular it was difficult for AFRICAN AMERICANS to obtain a higher education, although colleges such as Oberlin and Harvard did admit a few qualified students. Even where colleges did not discriminate, inferior segregated primary and secondary schools made it difficult for black Americans to meet entrance requirements. To train leaders and to promote economic well-being for African Americans, government and philanthropic organizations established institutions of higher learning. In 1868, under the auspices of the federal Freedmen's Bureau, General Clinton Bowen Fisk set up a school in Nashville, Tennessee, to train African-American leaders, which evolved into Fisk University. The following year the Freedmen's Bureau established a sister school in Washington, D.C., under the leadership of General O. O. Howard. Given its location, it continued to receive congressional support and, as Howard University, developed into the most prestigious black university. Hampton Institute, founded in 1868 by the American Missionary Society, was a nonsectarian, coeducational school headed by General Samuel C. Armstrong. It was an agricultural and normal school, stressing courses in farming and elementary education, but also gave practical instruction in business, home economics, and skilled trades. Its most distinguished alumnus was BOOKER T. WASHINGTON, who started Tuskegee Institute in 1881, which he devel-

oped into a major industrial-education school, while not neglecting the liberal arts. In the North some institutions for blacks, such as Cheyney University of Pennsylvania (1837) and Wilberforce University in Ohio (1856), had been established prior to the Civil War, but mostly they flourished in the Gilded Age.

### education, philanthropy and

Following the Civil War, money from wealthy American philanthropists, especially businessmen, began to influence both private and public education in the United States. These funds were directed toward primary education in the impoverished and war-devastated Southern states and higher education elsewhere. Antebellum Southern states had invested little in common schools. After the war, if they were to teach theretofore neglected white and black children, they would have to rebuild, expand, and rethink their educational systems. This was a tall order in the postwar Reconstruction period, and Northerners recognized the need to raise private funds from churches and individuals to supplement the educational efforts of the federally financed Freedmen's Bureau.

Private and federal funding for Southern education focused on the secondary and college level to train teachers (black and white) for common, agricultural, and trade schools. Between 1865 and 1869 the American Missionary Association cooperated with the Freedmen's Bureau to establish Howard University in Washington, D.C., and seven other black institutions, including Fisk University in Nashville, Tennessee, and Atlanta University in Georgia. Individual philanthropists joined in this federal-religious effort to rebuild Southern education. Beginning in 1867 George Peabody, a London, England, merchant and financier by way of Massachusetts and Baltimore, set aside \$3.5 million to establish the Peabody Education Fund. Peabody's aim was to "benefit the destitute areas of the South" and especially to aid the "children of the common people" by rebuilding its school system. He hoped that educational opportunity could bind the republic's wounds and improve the Southern economy. The Peabody Fund was administered by a board of trustees that included Presidents Ulysses S. Grant and RUTHERFORD B. HAYES. It was ultimately used to establish the George Peabody College for Teachers in Nashville (now part of Vanderbilt University).

In 1882, inspired by Peabody's example and the successful work of the fund's managers, John Slater, a Con-

necticut textile industrialist, donated \$1 million to create the Slater Fund for "the uplifting of the lately emancipated population of the Southern States." Hayes chaired the Slater Fund trustees, and under his leadership the fund invested in secondary and industrial training schools across the South, including Hampton Institute in Virginia, to produce prosperous black artisans, farmers, and businessmen. The Slater Fund also supported the efforts of individual scholars such as W. E. B. DuBois, who went to Germany to further his graduate training in Berlin.

With few exceptions white southerners welcomed the support of these funds because their industrial education focus was nonthreatening. The funds carefully followed local social customs and did not attempt to integrate schools or, as was the case of the Peabody Fund, support the mixed-race common schools that existed in New Orleans until the mid-1870s. Although the Slater Fund aided DuBois, the funds ignored his elitist notion that educational investment should concentrate on the "black talented tenth" who would attend universities and lead the black race. Between 1870 and 1900 northern philanthropy was a conservative but constructive force in southern society. In 1870, 80 percent of the African-American population 10 years or older was illiterate; by 1900 illiteracy had been reduced to 45 percent.

Philanthropists also established innovative universities in the post-Civil War years. Ezra Cornell founded Cornell University in 1868 by combining his \$500,000 endowment with New York State's Morrill Act land grant. The new institution was unusual in that instruction was offered in agriculture and engineering, as the Morrill Act intended, as well as in the liberal arts; the classics were taught, but students could substitute German and French for Greek; it was open to the poor as well as to the rich and, starting in 1872, to women as well as to men; and there were no religious requirements for either faculty or students. Cornell was noted for its "liberal, progressive, and practical spirit."

Among other philanthropists, Johns Hopkins endowed both Johns Hopkins University and Johns Hopkins Hospital, which he intended to be a teaching hospital for the university's medical school. Hopkins died before the university opened in 1876, but unlike other American universities, it emphasized a graduate program designed to advance rather than to preserve knowledge. Leland Stanford endowed Stanford University, opened in 1891, with the largest American philanthropic gift up to that time. Stanford was coeducational and nonsectarian from its beginning, and Leland Stanford wished it to offer a broad curriculum in the arts and sciences as well as manual training. In the 1880s industrial training was in vogue not only for former slaves but also for the children of the affluent. John D. Rockefeller began contributing heavily to the University of Chicago in 1889 (\$35 million by 1910), but unlike

most philanthropists, he made no effort to influence its trustees, president, faculty, or curriculum.

Although virtually all American children were educated in public schools, philanthropic aid helped reduce illiteracy by training more teachers. And while states, complying with the Morrill Act, established universities with broad-based practical curricula, philanthropists established private universities that differed from traditional institutions such as Harvard, Yale, and Princeton.

### elections, conduct of

With the exception of largely ineffectual federal Enforcement Acts, late 19th-century elections—federal, state, and local—were controlled by the states. In 1870 there was no secret balloting in the United States, although oral voting survived in only a few places in the South. Printed ballots, which with many elective offices tended to be lengthy, were prepared by political parties with only their candidates and none of their opponents listed. Voting a split ticket required the erasing (“scratching”) of a candidate and writing in his opponent’s name while party regulars at the polls, at the very least, glared their disapproval. Understandably, straight party voting was the rule and scratchers were rare. Voters were not only subjected to peer pressure but also economic pressure. Employers, making certain they hired the votes as well as the labor of their workers, supplied them with ballots and marched them to the polls. In large cities, political machines falsified registration lists with names from tombstones and often sought to discourage respectable voters by siting the polls at disreputable locations. Civil servants whose jobs depended on the outcome of the election, or those who wanted to replace them, effectively got out the vote.

By 1900 some significant changes had occurred. Purchasing and influencing voters through economic or peer pressure was greatly reduced and split-ticket voting greatly increased by the use of the Australian or secret ballot, which had been adopted by all states. Government-printed ballots listed all candidates, and voters marked the ballots in the privacy of a booth. Stringent voter registration requirements reduced fraud, but this also discouraged lower socioeconomic groups from voting. In addition, black southerners, who had exercised universal male suffrage in 1870, were by 1900, despite the Fifteenth Amendment, completely disfranchised by intimidation, literacy tests, poll taxes (in every southern state by 1904), or by the GRANDFATHER CLAUSE in their constitutions, which denied the

vote to the descendants of those who could not vote in 1867 (in South Carolina [1895] and Louisiana [1898]). Thanks to CIVIL SERVICE REFORM, government employees were no longer active in getting out the vote, and that factor—along with registration laws, the “solid” Democratic South, and huge Republican majorities in the rest of the country—led to lower voter turnout. But as a harbinger of a more democratic era for them, women had won the vote by state action in the western states of Wyoming, Colorado, Utah, and Idaho by 1900.

**Eliot, Charles William** (1834–1926) *higher education reformer, president of Harvard University*

The most renowned university president in the Gilded Age, Charles W. Eliot was born in Boston on March 20, 1834. He attended Boston Latin School and entered Harvard College (where his father was treasurer) at the age of 15. There, as he excelled in chemistry and mathematics, he was introduced to the scientific method of forming and evaluating hypotheses by experiments and observation. In 1854, the year after his graduation, Harvard appointed him a tutor in mathematics and in 1858 an assistant professor of mathematics and chemistry for five years. That same year he married Ellen Derby Peabody. Eliot was a good teacher, a productive researcher, and a gifted administrator who soon assisted President James Walker.

Despite his talents Eliot was not promoted to full professor in 1863 and decided to study educational practices and chemistry in Paris, France, and Marburg, Germany. Experience abroad heightened his appreciation for the scientific method as the foundation of a college education and for faculty research in order to provide superior instruction for advanced students. Although the Massachusetts Institute of Technology appointed him professor of chemistry in 1865, Eliot returned to Europe by 1867, hoping to improve the health of his wife, who in 1869 died of tuberculosis. Eliot tailored his observations of European educational institutions for an American audience in an influential two-part article, “The New Education: Its Organization,” for the February and March 1869 issues of the *Atlantic Monthly*. He argued that the American university

“will not be a copy of foreign institutions, . . . but the slow and natural outgrowth of American social and political habits.” He wanted the U.S. university to meet America’s need for engineers, architects, and chemists in technical schools, while developing broad culture and “the love of learning and research for their own sake” in its liberal arts school. The new education stressed pure and applied sciences, modern languages (rather than Greek and Latin), and mathematics. Students should take a core of required courses, upperclassmen would be free to elect studies in a chosen specialty, and professional training on a graduate level would be available in technical schools.

Eliot’s article became a campaign document in the movement to name him Harvard president. Despite Eliot’s abrasive personality and the opposition of traditionalists, the Board of Overseers elected him president of Harvard on May 19, 1869. His inaugural address confirmed the fears of the traditionalists, as he called for a broader curriculum, improved teaching, higher standards, recruitment of poor as well as rich students, and the admission of women into advanced university courses. Attempting to quell the fears of traditionalists, Eliot declared:

This University recognizes no real antagonism between literature and science, and consents to no such narrow alternatives as mathematics or classics, science or metaphysics. We would have them all, and at their best.

“We are going to have new times here at Harvard,” JOHN FISKE, the historian, hopefully predicted, “No more old fogysm.”

Fiske was right. During his 40-year tenure Eliot transformed Harvard into a modern university. More than a teacher or researcher he was an administrator and a leader. Harvard in 1869 was an incoherent agglomeration of Harvard College, the parallel undergraduate Lawrence Scientific School and the Divinity, Law, Medical, and Dental (professional) Schools. Each school had its own admissions policy and functioned with little guidance from the president of the university. Eliot’s long-range goal was to create a coherent whole by moving all undergraduate instruction into the nucleus of Harvard College and surrounding it with professional- and research-oriented graduate schools. Eliot worked persistently toward his goal, and by the time of his retirement, he had substantially achieved it.

Eliot was strong-minded, but he did listen to his faculty and did take advice. He favored scientific research that would yield practical applications, until Johns Hopkins University, under DANIEL COIT GILMAN, distinguished itself in pure scientific research and Harvard’s faculty demanded a similar emphasis. Eliot also improved the quality and quantity of Harvard’s faculty. In 1869 there were 60 teachers for 1,000 students and by 1909 there were 600 teachers

for 4,000 students. Not only was the teacher-student ratio improved, but teaching loads were reduced and research opportunities increased. In his quest for the best Eliot angered other college presidents by luring away outstanding scholars.

Eliot is remembered primarily for his championship of the elective system. He backed it on philosophic (indeed patriotic) grounds as well as on practical ones. He viewed liberty and freedom of choice as quintessentially American values in one’s choice of religion, politics, and occupation, and he believed liberty and freedom should apply to one’s education as well. On the practical side Eliot perceived that required courses could not possibly cope with the variety of new fields of study. Pedagogy would improve if professors could teach elective courses in their fields of research, and students would learn more if they could choose their classes. As with the reorganization of the university, Eliot moved gradually, with seniors enjoying full choice by 1872 and freshmen by 1885. By then he believed that choice of electives was a student right.

Eliot also influenced secondary education and the intellectual development of the public at large. He advocated basing college admissions not on Greek and Latin but on a broad range of scholarship, including modern languages and science, and was instrumental in establishing the College Entrance Examining Board in 1900. In retirement he edited the “five-foot shelf” of *Harvard Classics*. Eliot, who loved to row, was an avid sailor on the coast of Maine. He died at his summer home in Northeast Harbor, Mount Desert Island, Maine, on August 22, 1926.

**Ely, Richard Theodore** (1854–1943) *economist, reformer*

Richard T. Ely was born in Ripley, New York, on April 13, 1854, and grew up on a farm near Fredonia, New York. His father, an austere Presbyterian, believed in equality and social reform, while his artist mother tempered his father’s stern nature with boundless love. Educated in the local public schools and Fredonia Academy, Ely taught school for a year before entering Dartmouth College in 1872. After his freshman year he transferred to Columbia, where, upon his graduation in 1876, he won a three-year scholarship for study abroad.

In Germany, Ely studied philosophy at the University of Halle but soon fell under the spell of Professor Johannes Conrad, who belonged to the German Historical School of economics, which rejected the mechanistic laws of classical economics. Conrad's scholarship appealed to Ely's youthful idealism, and he decided economics was where he could keep his "feet on the ground" while speculating on how to improve society. After a year Ely transferred to the University of Heidelberg, where he studied under Karl Knies, a founder of the Historical School of economics, and earned his Ph.D. in 1879. Ely was guided throughout his life by Knies's insistence that people, rather than unchangeable laws, should be at the center of economic study and that economists should devise formulas that were ethical and realistic.

Ely spent most of the third year of his scholarship in Berlin. There he became acquainted with academic socialists and met ANDREW DICKSON WHITE, president of Cornell University, who was the U.S. minister to Germany. White encouraged Ely to study the administration of the city of Berlin and prepare a report, which the State Department published, on the acquisition of private railroads by the Prussian state. Germany profoundly influenced Ely. In addition to the inspiration and training of Conrad and Knies, Ely admired German scholarship and universities, and he was impressed by the efficiency of German bureaucracy and the capabilities of a powerful state.

Returning to the United States in 1880, Ely was unemployed for a year until DANIEL COIT GILMAN, thanks to White's recommendation and Ely's railroad report, offered him an instructorship in "political economy" at Johns Hopkins University. Ely assured Gilman that his goal was not to teach a specific economic doctrine but "to explain the origin of various economic schools." That goal, coupled with his commitment to "use every opportunity to benefit those who suffer," pursued at the nation's leading graduate school, placed Ely at the forefront of the assault on classical economic doctrines. His interest in and support of individual students and his reformist zeal soon attracted outstanding students, including sociologist and economist Thorstein Veblen, economist John R. Commons, historian FREDERICK JACKSON TURNER, and President Woodrow Wilson. While on vacation in Virginia in 1883, Ely fell in love with Anna Morris Anderson, and they married on June 25, 1884. While on their honeymoon at the company town of Pullman, Illinois, Ely characteristically researched an article about that place. With charm and understanding, Anderson was an enormous asset to her workaholic husband.

With other proponents of the "new economics" Ely helped establish the American Economic Association in 1885, was its secretary from 1885 to 1892, and its president from 1900 to 1901. Having rejected the laws of classical economists (from which truths were to be deduced), Ely

urged his students to approach economics scientifically, to "look and see," to collect information about social conditions, and to base economic principles on the needs of society. What especially attracted students to Ely was his concern for the underprivileged, which stemmed from his commitment to Christian idealism. He rejected his father's rigid Presbyterianism but not his father's ardor for equality and social reform. He became an Episcopalian and embraced the SOCIAL GOSPEL and Christian Socialism. His economic ideas were subject to change, since they were the means to achieve a "kingdom of righteousness," which for him was an egalitarian society.

Ely's support of organized labor and "gas-and-water socialism" provoked controversy in and out of academia. His *Labor Movement in America* (1886) refused to regard labor as a commodity subject to an iron law of wages. Finding virtue where others saw evil, Ely praised the spirit of brotherhood in unions and argued that unions, by making labor more equal to management, promoted industrial peace and staved off violent strikes. The *NATION*'s hostile review of this book inspired John R. Commons to come to Johns Hopkins to study under Ely. But Ely's colleague, the astronomer Simon Newcomb, declared him unfit to hold a Hopkins professorship.

Ely left Johns Hopkins in 1892 to head the newly formed School of Economics, Political Science, and History at the University of Wisconsin. Two years later he was under attack there, as a result of a letter to *The Nation* claiming that Ely, "the college anarchist," gave advice to a strike organizer and masked the "pernicious doctrines" of SOCIALISM in his writings. Ely was not a radical socialist and, with his admiration of a powerful state to achieve reforms, was the antithesis of anarchism. He favored public ownership of natural monopolies, such as utilities and RAILROADS, but believed in competitive private enterprise. A committee of the Board of Regents investigated the charges and exonerated Ely. As an afterthought, the committee asserted in ringing terms the right of academic freedom (which had not been an issue since Ely denied the allegations), and the case assumed a landmark status.

Early in the 20th century Ely participated in the Progressive movement. He was an adviser, along with other University of Wisconsin colleagues, to the reform governor Robert M. La Follette. He also founded the American Association for Labor Legislation and served as its first president from 1906 to 1908. That organization made a major contribution to the 1937 Social Security Act. Ely's support of the decision by his former student Woodrow Wilson to enter World War I caused him to break with La Follette and isolationist Progressives.

In the 1920s Ely became more conservative. He abandoned his gas-and-water socialism and having speculated in land shifted his interest to land economics and justified

profiting from increased land values. After the death of his wife in 1923 and with La Follette's continuing hostility, Ely moved to Northwestern University in 1925. On August 8, 1931, he married a former student, Margaret Hale Hahn, and the next year moved to New York. Although he received research support from real estate and public utility interests, they were not always pleased with his findings. Despite his investments he remained a reformer. To ensure intelligent use of land, he advocated government planning of land development and government ownership of mineral and timber lands. Ely died in Old Lyme, Connecticut, on October 4, 1943.

### entertainment, popular

The second half of the 19th century was an age of mass entertainment in the United States. Urban audiences had ready access to THEATER, minstrelsy, vaudeville, and other popular amusements, while showboats, touring troupes, tent shows, repertory companies, circuses, and Wild West shows took comedy, drama, MUSIC, and action to the hinterlands. In addition to this wide array of live entertainments, there were technical marvels such as dioramas, panoramas, cycloramas, and—by the end of the century—motion pictures, not to mention the wonders and oddities on display at museums and expositions.

Minstrelsy was the principal form of popular entertainment in America during the middle third of the 19th century. Unlike most musical or theatrical performances of the period, minstrelsy was largely, though not exclusively, indigenous entertainment. It was, as Eric Lott has written, “the national art of the moment.” Minstrel shows typically included songs, dances, instrumental specialties, comic dialogues, novelty acts, parodies of “stump speeches,” and burlesques. The performers were white entertainers who mimicked AFRICAN AMERICANS by wearing burnt-cork makeup (blackface), speaking in exaggerated dialect, exploiting well-established stereotypes, and performing music that ostensibly originated in the slave communities of antebellum plantations. Some black troupes (who also performed in blackface) toured the eastern states during the antebellum period and the Civil War, often appearing before abolitionist groups, but minstrelsy was essentially a white enterprise. Even the black companies came under white management by the 1870s. Managers, actors, and songwriters were typically northerners who had little or no knowledge of African Americans or of the plantation life that they romanticized.

This ignorance hardly mattered to either the performers or the audiences, for minstrelsy did not strive for authenticity; its function was to entertain and lampoon. In so doing, minstrels depicted plantation blacks as shiftless, ignorant (but cunning), and contented. Northern blacks were dandies, con men, gamblers, and womanizers. Black women, on the other hand, were not subjected to such derision. The comedy was not limited to African-American stereotypes. The stump speech, for instance, mocked pomposity, verbosity, and bogus intellectualism while satirizing abolitionism, temperance, women's rights, and other current issues. The burlesque numbers enabled minstrels to lampoon high culture—Shakespeare, opera, and classical music.

Minstrelsy reached its peak about 1860, when there were about 100 companies nationwide, 10 in New York City. By 1880 the number of companies had declined to about 30. The content and format had begun to change during the 1870s. One company, Primrose and West, kept the basic structure but dispensed with blackface altogether, dressing its performers as 18th-century French courtiers. Another promoter, J. H. Haverly, combined four companies into one and promoted his United Mastodon Minstrels as a spectacle, comparable to the circus. He included tightrope walkers, acrobats, clowns, bareback riders, and a brass band. Over time the comedy routines made less use of African-American stereotypes; the new objects of ridicule were immigrants, especially the Irish. Cultural historians attribute the decline of minstrelsy to many factors, including the panic of 1873, the rise of variety, burlesque, and vaudeville shows, as well as postbellum concerns about African Americans. Race was no longer a laughing matter; the theatrical depiction of slave life had become the preserve of reformist melodramas such as *Uncle Tom's Cabin*.

Race, understandably, remains an important issue in critiques and cultural histories of minstrelsy. During the antebellum period, Frederick Douglass, the great African-American abolitionist, described minstrels as “filthy scum of white society, who have stolen from us a complexion denied them by nature, in which to make money, and pander to the corrupt taste of their white fellow-citizens.” Russel B. Nye, writing in 1970, maintained that minstrelsy's obvious artificiality minimized the social effects of its negative African-American stereotypes. Robert C. Toll in 1976 stressed the popular appeal and entertainment value of the shows while acknowledging the harmful lingering effects of minstrel stereotypes. More recently, William L. Mahar (1999) and Eric Lott (1993) depicted minstrelsy as a two-way medium of cultural diffusion between blacks and whites.

Vaudeville superseded minstrelsy in popularity during the last 20 years of the 19th century. Vaudeville was principally an outgrowth of variety and burlesque, though it also perpetuated elements of minstrelsy. (Prominent vaudevillian

lians such as Al Jolson and Eddie Cantor were performing in blackface even as late as the 1920s.) Variety, which had the greatest influence on vaudeville, was a hodgepodge of low comedy, songs, specialty acts (jugglers, hypnotists, acrobats), and dancing girls. The venue for variety was the concert saloon, with the audience consisting of men who wanted to be entertained while they imbibed. The blend of booze and sexuality in the disreputable atmosphere of the saloon caused respectable women to stay away from the shows and led moralists and reformers to charge that concert saloons were dens of vice. Variety shows that featured scantily clad women were called leg shows. The more risqué of these evolved into burlesque, although the traditional burlesque theater specialized in comedy skits and parodies of well-known plays and novels. By the 1890s these separate strands had merged. The typical burlesque show of the late 19th century included song-and-dance routines, double-entendre jokes, and slapstick, but partially dressed women were the principal attraction. The more daring shows presented "exotic" dancers, who did a variation of the belly dance. (Striptease was a much later innovation.) The performer who called herself Little Egypt became a celebrity by doing such a dance in Chicago at the WORLD'S COLUMBIAN EXPOSITION in 1893.

A key figure in the emergence of vaudeville was Tony Pastor, a singer and songwriter who operated variety theaters in New Jersey and New York City after 1865. A devout Catholic who had once sung at temperance rallies, Pastor revamped variety by prohibiting alcohol and forbidding vulgar comedy and suggestive dances in his shows. His goal was to attract middle-class families to his theaters by providing popular entertainment in a respectable venue. Pastor's formula, which he continued to call variety, was adopted by the emerging vaudeville theaters of the 1880s and 1890s. In Boston, B. F. Keith and Edward F. Albee employed a similar strategy, but enhanced by continuous performances in opulent new theaters designed to appeal to a broader and more affluent audience than those who went to concert saloons and burlesque houses. The policy of continuous performances enabled patrons to arrive at their convenience anytime between 9:30 A.M. and 10:00 P.M. and see a complete performance. By acquiring a circuit of theaters and creating their own booking agency, Keith and Albee dominated the vaudeville business in the eastern United States. Martin Beck's Orpheum Circuit was equally influential west of the Mississippi. Black performers worked the so-called chitlin circuit, a network of segregated theaters scattered between New York and New Orleans, controlled by the Theatre Owners Booking Association.

Between 1880 and 1920, when vaudeville was the reigning form of popular entertainment in the United States, every city had at least one vaudeville house. New

York City had 10, including the Palace Theater, vaudeville's premier venue. Small towns and rural areas had to make do with occasional touring companies and tent shows. Vaudeville succeeded by virtue of its "cheerful frivolity," as one writer put it, as well as its peculiar blend of wholesomeness and urban sophistication, and the tempo and precision of its staging.

Successful vaudeville performers were those who timed, tested, and refined their material to achieve maximum impact during their brief turn in the spotlight. Shows typically opened with a "dumb act" (acrobats, jugglers, mimes, or trained animals). Then came comedians, ventriloquists, magicians, song-and-dance acts, skits, virtuoso instrumentalists, knife throwers, bird whistlers, and so on. The first half of the show always closed with a dynamic showstopper that made audiences eager for more. A similar lineup followed the intermission, except that the headliner came on next to closing. Among the leading vaudeville stars of the 1890s were comedians Weber and Fields, Sandow the Strong Man, dancer Eva Tanguay, and singer Lillian Russell. The final presentation was the "chaser," designed to hasten the crowd to the exits so a new audience could take its place. During the late 1890s motion pictures, then a mere novelty, served this function.

During its vogue, vaudeville, particularly the comedians, reflected the changing ethnic character of its audiences. With its broad appeal to pluralistic urban spectators, vaudeville provided unique opportunities for performers of varied ethnic backgrounds. African Americans were an exception to this trend. Even the great Bert Williams, one of the few African-American entertainers not restricted to the "Chitlin Circuit," did his act in blackface. Vaudeville also stereotyped Germans, Irish, and Jews, though the performers often shared the ethnic identities of their comic personas. Thus, white ethnic stereotypes provided employment opportunities for Irish and Jewish comics and singers. Vaudeville also offered prospects for women, who could find respectable employment, opportunities for self-expression, even wealth and fame in a business that welcomed their talents and allure.

The period after the Civil War also saw the beginning of a golden age for circus in America, thanks in large part to PHINEAS T. BARNUM, the nation's leading showman. Barnum launched his circus on a grand scale in 1871, then in 1880 teamed with James A. Bailey to create a unique spectacle: simultaneous acts in three rings surrounded by a hippodrome track for parades and races. Barnum promoted this "greatest show on earth" with parades and well-calculated publicity stunts. Jumbo, billed as the world's largest elephant, was the show's star attraction until the great beast was killed in a railroad accident in 1885. After Jumbo's demise the circus headlined the trapeze acts and tightrope walkers, supported by the usual clowns, eques-

Poster for Buffalo Bill's Wild West Show (Library of Congress)

trians, and wild animal routines. Barnum and Bailey were the first to make effective use of the nation's burgeoning railroad system, moving their circus from town to town and thus maximizing the number of performances by minimizing the time between show dates. Barnum & Bailey's main competition came from the Ringling Bros. Circus, formed in 1884. (The Ringlings acquired Barnum & Bailey in 1906 but operated it separately until 1918, when they merged their troupes to create the gigantic Ringling Bros. and Barnum & Bailey Circus.)

Wild West shows combined elements of the circus with the frontier myth to form a uniquely American spectacle. Barnum staged a Wild West show in 1874, but it was Colonel WILLIAM FREDERICK CODY (Buffalo Bill) who made the most of the "equestrian drama," as he called the genre. Cody, the renowned buffalo hunter and U.S. Army scout, was the hero of DIME NOVELS by Ned Buntline (Edward E. C. Judson) and in 1872–73 had appeared on stage in a play by Buntline. He returned to the West to fight under General George Armstrong Custer and Philip H. Sheridan in the Indian wars of the 1870s, but in

1882 at North Platte, Nebraska, he mounted an outdoor show featuring exhibitions of roping, riding, sharpshooting, and a dramatic reenactment of a stagecoach robbery. The initial public response convinced Cody that a grander version of the show would be a great attraction across the country. He enlarged his cast, added buffaloes and NATIVE AMERICANS for greater authenticity, and staged an exciting Pony Express ride. Cody's first national tour culminated with a successful engagement at New York's Madison Square Garden. In 1885 Cody hired the great Sioux warrior and holy man SITTING BULL and sharpshooter Annie Oakley. His 1887 European tour caused a sensation in the Old World. Circus magnate James Bailey gained control of the company in 1894, though Cody remained with the show. The logistical expertise Bailey had gained in the circus business enabled the troupe to barnstorm the country with maximum efficiency. Cody's success inspired competing shows such as the Miller Brothers 101 Ranch and Pawnee Bill's Show. Reformed bandits Cole Younger and Frank James had a show that reenacted famous bank robberies.

Wild West shows survived until the 1930s. By then movies were the principal interpreters and purveyors of America's frontier legends. The shows, however, had a lasting impact on American popular culture. They romanticized the frontier experience and immortalized the plainsmen who opened up the West. They glorified courage, resourcefulness, and personal freedom in a boundless land, but they also justified frontier violence by promoting negative stereotypes of Native Americans. Some modern critics contend that the spectacles simultaneously defamed and exploited their "Show Indians"; others note that the Show Indians welcomed opportunities to get away from oppressive reservations, travel the world, and enjoy a degree of economic independence. And, they add, by performing native dances, replicating their traditional village encampments, and reenacting heroic battles, Show Indians sustained for a time their cultural identities in the face of powerful pressures for assimilation.

If so, Show Indians would have been an exception, for popular entertainment in the latter years of the 19th century was, on the whole, an agency of assimilation. Vaudeville, for instance, provided an element of shared culture for people of diverse ethnicity, both on stage and in the audience. Show business during this period also operated on the principle that bigger is better, with shows and venues growing larger and more opulent. And, like other contemporary enterprises, the entertainment industry adopted a strategy of consolidation, often to the disadvantage of the performers. Finally, the rise of mass amusements marked the continuing decline of VICTORIANISM and the notion that leisure activities should not merely amuse but also build character.

## environmental concerns

The Gilded Age was an age of exploitation rather than environmental concerns. The nation's seemingly inexhaustible natural resources of land, timber, and minerals were consumed with little thought of future needs. There was no government plan for the intelligent use of land and its resources. If they appeared to hinder "progress," flora and fauna were ruthlessly eliminated. The bison (buffalo) were virtually annihilated, and the prairie sod was "busted" and farms expanded into areas suitable only for grazing, with the blessing of those who believed erroneously that rain followed the plow. Forests were clearcut and were not reseeded, while the extraction of coal and minerals scarred the earth and polluted the waters.

Intelligent planning was also absent in the rapid development of Gilded Age cities. As they grew, their problems multiplied with devastating effects on the environment. Smoke from factories and domestic stoves polluted the air, and water was often contaminated by raw sewage. Owing to its steel mills, Pittsburgh was renowned as "the smokey city" and was notorious for its impure water, drawn from the Allegheny and Monongahela Rivers. These rivers were polluted by hundreds of thousands of upstream residents. As a result, the death rate from typhoid fever in Pittsburgh was seven times that of New York City. Cities combined overcrowded housing and bad water with inadequate parks and nonexistent playground facilities.

A few developments, however, pointed toward a society more in harmony with nature. Although created to help the mining industry meet the demands of an expanding economy, the U.S. GEOLOGICAL SURVEY, established in 1879, showed that forest, water, and mineral resources were not infinite. Two years earlier in 1877, CARL SCHURZ, the German-born reform-minded secretary of the interior, aware of the scientific management of European forests, pleaded with Congress to preserve and manage rationally "all timberlands still belonging to the United States." Rejecting what Senator JAMES GILLESPIE BLAINE called "the land laws of Prussia," Congress passed the Giveaway Timber and Stone Act, which sold valuable forests for \$2.50 an acre to speculators, who often filed fraudulent claims. Even though the National Forest Reserve program began in 1891, it was not until the 20th century, after timber barons had illegally gobbled up much of the valuable timberland, that Schurz's conservation ideas were adopted.

Fortunately, the federal government did preserve as national parks a few points of breathtaking natural beauty. Yellowstone National Park (1872), Sequoia and Yosemite National Parks (1890), and Mount Rainier National Park (1899) were reserved for the people and offer a glimpse of the nation's pre-Columbian environment. Ironically, even the establishment of the Mount Rainier park was rooted in exploitation. It had been part of the Northern Pacific

Old Faithful erupting in Yellowstone National Park, Wyoming, 1883. Photograph by Frank Jay Haynes (Library of Congress)

Railroad's land grant, but its timber was worthless and its farmland nonexistent. JAMES J. HILL, who controlled the Northern Pacific, swapped its 450,000 acres of prospective park land for the same acreage in valuable timberland.

There were a few bright spots in the usually dismal urban landscape of the Gilded Age. Noting the crucial importance of the environment for cities, Henry David Thoreau observed that "a town is saved, not more by the righteous men in it than by the woods and swamps that surround it." Some cities did establish parks, where land was available. FREDERICK LAW OLMTED, the Gilded Age's outstanding landscape architect, planned several of these urban oases. On the same wavelength as Thoreau, Olmsted believed in the therapeutic value of landscape. Pastoral scenery with a mix of meadow, groves, and lakes created a peaceful sanctuary "with a sufficient number of trees about it . . . to completely shut out" the bustle and stress of the city. In Brooklyn, New York, his conception of the broad, tree-lined Eastern and Ocean Parkways, radiating from Prospect Park, with walks, bridle and bicycle paths, and a central space for vehicles, extended (some of) the natural beauty of the park, while beckoning people to it. But Gilded Age parks were usually near affluent neighborhoods

and remote from urban slums. By 1900 a few schoolyards were made available for play, but children who were not working usually played in the streets. Housing conditions in slums were so appalling that ALFRED TREDWAY WHITE began the American housing-reform movement in 1877 by building the Home Buildings in Brooklyn. His third large-building complex, the Riverside Buildings, constructed in 1890, featured a total environment with a community bath-house, park, playground, and music pavilion.

The Chicago WORLD'S COLUMBIAN EXPOSITION OF 1893 gave Americans a vision of what the city of tomorrow might be. Its carefully planned "White City" combined order and grandeur and stood in stark contrast to the grime, crime, constriction, and confusion of contemporary Gilded Age cities. The White City anticipated the rise of a City Beautiful movement with plans for urban reconstruction along environmental friendly lines.

## Ethical Culture movement

The Ethical Culture movement began in 1876. Its prime mover and leading spirit was Dr. Felix Adler (1851–1933), the son of Rabbi Samuel Adler of New York's Temple Emanu-El. After graduation from Columbia College in 1870, Felix Adler studied for the rabbinate in Berlin, Germany, and was exposed to the ideas of the "higher critics," who questioned assumptions about the credibility of biblical scriptures. In addition, Adler studied philosophy (especially that of Immanuel Kant) and economics at the Universities of Berlin and of Heidelberg, from which he earned a Ph.D. in 1873. He was profoundly influenced by Kant's categorical imperative, a universal law for both private life and political action. Like the Golden Rule, it required one to do what he or she would want everyone else to do in similar circumstances. Adler was also influenced by the German Historical School of economics, which rejected the harsh mechanistic laws of the classical economists and focused on people and reforms to improve their condition.

Although Adler had been slated to succeed his father at Temple Emanu-El, his rejection of traditional Jewish

views of God and scriptures were too extreme, even for that liberal congregation. From 1874 to 1876 he taught Hebrew and Oriental literature at Cornell University, but he was at heart a rabbi in need of a congregation. Returning to New York in 1876, Adler fused his spiritual yearnings, Kantian philosophy, and social-reform convictions to found the Society for Ethical Culture, with the motto: "Not by the Creed but by the Deed." It was a religious society, stressing both the spiritual and the practical, but without any dogma apart from insisting that "the ethical factor," "the moral element," be uppermost in personal, social, national, and international relations. Adler observed that theology, dogma, and doctrines, "the so-called duties toward God[,] too often interfere with the proper performance of our duties toward one another." He admired the moral strength of the Hebrew Prophets, the unselfishness of Buddha, and the ministry of Jesus to the poor and his capacity to cut through the welter of laws to the essence of religion. Indeed, Adler believed that every great religion began as a protest of the formalism of the time. Under Adler's leadership the Society for Ethical Culture aimed "to stimulate the conscience and . . . awaken an interest in the grave social problems of our day," which could be solved by "a vigorous exertion of our moral energies."

A superb speaker, Adler attracted large audiences at the Sunday services of the Society for Ethical Culture. Other societies were established in major American cities and in London, Berlin, and Vienna.

Adler and members of the Society for Ethical Culture were true to their emphasis on deeds over creeds. Although members were involved in a wide variety of reforms, the society's impact was greatest in EDUCATION and in ameliorating the condition of the poor. In 1877 the society established the first free kindergarten in the United States and in 1880 a workingman's school, featuring manual training of skilled trades. By 1895 that school had evolved into the Ethical Culture School, and in 1928 it became the Fieldston School. Its broad curriculum featured a mix of activities to develop both skills and moral values, integrated with the study of the arts and sciences.

To aid the poor the Society for Ethical Culture in 1878 helped set up medical dispensaries and nursing services in New York City. Adler also campaigned for better housing for the poor and in 1884 became a member of New York's Tenement House Commission. He found child labor particularly alarming, and from 1904 to 1921 he was chair of the National Child Labor Commission. The Society for Ethical Culture was also closely identified with the establishment by Stanton Coit, in 1886, of the Neighborhood Guild, New York's first SETTLEMENT HOUSE. Coit had met Adler in 1881, decided to become an Ethical Culture lecturer, and with Adler's financial support studied the philosophy of Kant at the University of Berlin, earning a Ph.D. in 1885.

On his return trip to the United States, Coit stopped for three months at London's Toynbee Hall, the world's first settlement house. He was inspired by its example of young people of education and means living in a slum, ministering to individuals in a secular setting, and striving for social reforms that would improve a class. Back in New York, Coit, with the blessing of the Society for Ethical Culture, established the Neighborhood Guild. In it Coit tried to avoid paternalism with his democratic idea of organizing groups of a hundred families into guilds to help one another and decide on their needs and what reforms to work for. The guild idea was less successful than the social clubs and kindergarten that were formed. In a year Coit accepted a call to be minister of London's Society for Ethical Culture. Although he returned briefly to New York, from 1892 to 1894, he settled permanently in England, winning many adherents to the Ethical Culture movement. Coit's subsequent efforts to develop rituals for the movement led to a break with Adler, but his major American legacy, the Neighborhood Guild, renamed the University Settlement, survived.

As might be expected, the Society for Ethical Culture was conspicuously on the side of virtue. It opposed municipal graft and corruption and supported good-government clubs. Adler was a member of the 1894–95 Lexow Committee and the follow-up Committee of Fifteen that exposed corruption in the New York City Police Department and its connection with prostitution. The work of these committees temporarily overthrew the Tammany Hall machine and helped pass New York's Tenement House Law (1901). Columbia University recognized Adler's expertise and the Ethical Culture society's concerns by appointing him professor of social and political ethics (1902–33). The Ethical Culture movement remained small in membership, but by attracting highly motivated intellectuals, it has had an important impact on society.

## evolution

The theory of evolution, which profoundly affected thought in the Gilded Age, was not new. Some ancient Greek philosophers, observing the great variety of animals adapted to their environment, assumed they had evolved from plants or out of nothing, but their ideas, while recorded, had no influence on Western culture. Christians believed the biblical account in Genesis that God created all animals in

their present form on the fifth and sixth days of creation 6,000 years ago. Among intellectuals the development of SCIENCE with the dawn of the modern era undermined a strictly literal interpretation of the Bible. They realized the Sun did not revolve around the Earth, which was round, not flat, and did not have four corners. Metaphors and poetic license could explain unscientific scriptural references, but by the late 18th century exploration of the globe revealed numerous previously unknown animals and fossils of extinct animals (too many it would seem to crowd on Noah's Ark). Most intellectuals reconciled these findings with Christianity by assuming that God created additional unchanging (immutable) species after the week of creation. A few scientists, among them Erasmus Darwin (1731–1802) and Jean-Baptiste Lamarck (1744–1829), embraced the idea of evolution. Lamarck theorized that changes in the environment cause changes in the structure of animals and plants but could not explain how these changes occur.

In 1859 Erasmus Darwin's grandson, Charles Robert Darwin (1809–82), offered a persuasive explanation of how evolution occurred, when he published *On the Origin of Species by Means of Natural Selection, or the Preservation of Favored Races in the Struggle for Life*. From 1831 to 1836 Darwin sailed as a naturalist on the surveying voyage of the *Beagle* and collected flora, fauna, and geological specimens from the coast of South America, the Pacific Islands, and Australia. He was especially fascinated by the slight variations among the fossils and species of the Galápagos Islands, located on the Equator in the Pacific Ocean, 600 miles west of Ecuador. While writing up the *Zoology of the Voyage of the Beagle* (1840), Darwin became convinced that all animals are mutable and share a common ancestor. More important, he found an explanation for the subtle variations in the descent of the species by the process of natural selection. Plants and animals with characteristics best adapted to their environment survive and flourish, while those ill adapted to conditions perish. Realizing his ideas, which he summarized in an 1844 essay, were controversial, Darwin shared them only with a few scientists, including the geologist Sir Charles Lyell and the Harvard University botanist Asa Gray, before going public with them in the late 1850s. Publishing his evidence of transmutation through natural selection aroused a storm of controversy, which a century and a half later has not subsided. It has continued to pit Darwinism against those who interpret the Bible literally.

Darwinism, as those ideas came to be known, also led to the application by disciples (among them Herbert Spencer) of the concept of evolution in fields of study beyond biology and botany, especially in the social sciences and history. A true believer in evolution, Darwin regarded *On the Origin of Species* as “a beginning” and expected his ideas

to be revised as more evidence became available. His supposition was correct. On June 26, 2007, for example, the *New York Times* reported that “laboratory studies are linking evolutionary change to specific mutations in DNA,” but that newspaper also observed that “Darwin's insight into the power of natural selection is still the foundation of evolutionary theory.”

## Exodusters

From 1879 to 1880 the thousands of AFRICAN AMERICANS who migrated from the Deep South to Kansas are known facetiously as “Exodusters.” True, their exodus was from a land of slavery and hardship, but the promised land of Kansas, while disappointing for many, offered more than dust. Although hard, life in the West was better than life in the South. The Civil War had brought freedom for slaves and hope for a brighter future for all African Americans. Like other Americans, they yearned for a farm of their own, which after generations of slavery they deserved. But only a fortunate few got farms on the handful of plantations that were confiscated and divided. Nevertheless, during the brief period of Radical Republican Reconstruction, black children were educated, their fathers could vote and participate in the political process, and the civil rights of African Americans were respected.

Then, in the 1870s, the planter aristocracy advocating white supremacy reasserted itself, and the political power of Radical Republican state governments in the South eroded, and with it black civil rights and economic opportunity. In states such as Mississippi, South Carolina, and Louisiana, where a majority of qualified voters were black, whites used violence, murder, and intimidation to gain control. The 1875 election, “redeeming” Mississippi, was the most violent election in U.S. history. Northern public opinion, which in the late 1860s sustained congressional Reconstruction, refused in the mid-1870s to use the army to uphold the Constitution in the South. The aspirations of African Americans were dashed; they were reduced to being tenant farmers, running deeper in debt through the crop-lien or sharecrop systems.

Given the situation of black southerners, the lure of Kansas, the land of John Brown and of ample acres, proved irresistible. A grass-roots mass movement developed and

when black leaders such as Frederick Douglass either ignored or opposed the new movement, it produced its own new leaders. The outstanding Exoduster leaders were Benjamin (Pap) Singleton and Henry Adams.

By 1869 Singleton, who lived in Nashville, Tennessee, had explored homesteading in Kansas. He and other blacks preferred to stay in Tennessee, where they and their forebears had been born, but land there was expensive, at \$60 an acre. In 1873, after some families successfully moved to Kansas, he made plans for the Singleton Colony for Tennessee blacks in southeastern Kansas on land that had been part of the Cherokee reservation. Serious migration, however, did not get under way until after mass meetings were held in Nashville in 1877 and 1878.

A former slave and Union veteran, Adams settled in Shreveport, Louisiana, and fearlessly struggled to educate black tenant farmers of their rights and worked to eliminate racial prejudice from the legal system. By 1875 continuing harassment and frustrations led Adams to embrace black migration to Liberia or to a western territory reserved for blacks. By 1877 Adams was the leading spirit of the National Colored Colonization Society. It signed up thousands, who wished to leave the South, but there was no money to finance immigration to Liberia. By 1879, believing it was imperative for blacks to leave the South, Adams backed the exodus to Kansas.

Singleton and Adams paved the way for the spectacular 1879 Kansas-fever exodus, but that migration was spontaneous. Critics referred to it as an “epidemic” or a “stampede,” but its origin was neither mysterious nor mindless. Within a few months in early 1879, 6,000 blacks from Louisiana, Mississippi, and Texas went to Kansas. They were moved by a realistic fear of violence from their former masters and by an unrealistic faith that land and prosperity awaited them in Kansas. They were profoundly religious, and a perceptive contemporary observer noted their exodus was “a sort of religious exultation, during which they had regarded Kansas as a modern Canaan and the God-appointed home of the negro race.” In fact, they knew little about Kansas, steamboat and railroad fares, and the cost of homesteading even if the land was free, and they would not listen to black leaders and concerned whites who tried to dissuade them. In large

numbers they flocked to Mississippi River landings, hoping for free transportation upriver to St. Louis and then by rail across Missouri to Kansas. Most were so poor they could not pay their fare and were left at the landing. To keep blacks from leaving the South, many steamboats would not stop, even for those who could pay. Some blacks pooled their resources and got part way upriver, where they were put off. Others made it to St. Louis and lacked rail fare to continue, but thousands nonetheless managed to get to Kansas.

Kansas was not the new Canaan. On the way the Exodusters learned there was neither free transportation nor free land that could be cultivated immediately. Yet, even when offered free transportation “back to Egypt” (the Deep South) virtually all Exodusters refused. A woman with a child at her breast, who was stuck in St. Louis, said she would rather starve than go back to the South. Exodusters were refugees from terrorism, not migrants. Their plight in St. Louis and before they found jobs in Kansas prompted nationwide charity efforts. In St. Louis local authorities were unfriendly, and charity was channeled through local black churches, but in Kansas, Governor John P. St. John declared his state a land of freedom, welcomed the Exodusters, and cooperated in relief efforts, as did the old abolitionist element in a Kansas Freedmen’s Aid Association.

Many of the migrants found work. A few families had enough money to farm, men got jobs in the building trades, and women often worked as domestics and washerwomen. The Freedmen’s Aid Association made a great contribution. It helped settle Exodusters in a colony in Waubesa County, helped start a school in a Singleton colony in Morris County, and, more important, became an effective employment agency. Although the Exodusters experienced great hardships, their migration was beneficial. It even helped those who remained behind, who were treated better, since the dominant planter class feared losing more laborers. But the Exodusters and their children were the big gainers from their inspired move.

## farmers' alliances

The term *farmers' alliances* was used to refer to the two powerful organizations that succeeded the PATRONS OF HUSBANDRY (the Granger movement) as the leading vehicles of agrarian protest in the post-Civil War period: the Northwestern Alliance and the Southern Alliance. Like the Grangers, the alliances were principally concerned with: declining agricultural prices, escalating railroad rates (shipping costs), problems with credit, land speculators, and the exploitation of farmers by the “money power” (banks and big business). Applying self-help solutions to their problems, they formed cooperatives and other marketing mechanisms such as stores, processing plants, and banks. These facilities were designed to break farmers' dependence on the “finishing merchants” who acted as the middlemen in an economic cycle that kept farmers in perpetual debt. They favored an inflation of the money supply either through an increase in the amount of greenbacks (paper currency) in circulation or the free and unlimited coinage of silver (FREE SILVER MOVEMENT). Alliance members also attacked the NATIONAL BANKING SYSTEM as a tool used by corrupt financiers and politicians to make an easy profit. In some ways, then, the alliances sought to create a new American society where economic competition would be replaced by cooperation.

As early as 1875, a group of Texas farmers had united to form an alliance against local cattle ranchers, railroad operators, and land speculators, but it was short-lived. A new farmers' organization, the Southern Farmers' Alliance, emerged in the 1880s to take its place. After 1886 Charles W. Macune and William Lamb led the Southern Farmers' Alliance. It quickly expanded from Texas into neighboring southern states, and by 1890 the Southern Farmers' Alliance had evolved into the National Farmers' Alliance and Industrial Union. It worked with an independent organization of African-American farmers known as the Colored Farmers' National Alliance and Cooperative Union and with the KNIGHTS OF LABOR.

Milton George, the editor of the *Western Rural*, a Chicago-based agricultural journal, founded the Northwestern Alliance in 1880. George wanted the new organization to combat what he believed were the unfair practices of RAILROADS against the nation's farmers. Under George's leadership, the Northwestern Alliance established several local alliances in the Dakotas, Kansas, Minnesota, and Nebraska. Yet, the Northwestern Alliance never formulated a cohesive program and had great difficulty in attracting and keeping members.

Although the Alliance movement would eventually become far more widespread than the Granger movement, it suffered setbacks. Alliance cooperatives did not always work well, in part because the market forces were too strong to overcome but also because of mismanagement. These economic frustrations led several Alliance members to seek other avenues to remedy their situation. By the late 1880s, they helped steer the Alliance movement into electoral politics through the creation of a national political party.

Meeting in Ocala, Florida, in 1890, representatives of the farmers' alliances made demands that Macune helped formulate. The Ocala demands called for the direct election of U.S. senators; a graduated federal income tax; an end to protective tariffs and the National Banking System; 2-percent federal loans to farmers; the establishment of federal “subtreasuries” for the storage of surplus crops on which the 2-percent loans to farmers could be based; prohibition of land ownership by aliens; the free and unlimited coinage of silver at a ratio of 16-to-one; and effective government regulation and, if necessary, control of railroads and public utilities.

Of these demands, the establishment of a subtreasury system was most important. Farmers could hold their crops in government warehouses and claim Treasury notes for up to 80 percent of the local market value of the crops. The loan was to be repaid when the crops were sold. The idea was that the subtreasury system would help farmers

pay their annual debts because they could hold on to their crops until market prices were more favorable.

Subsequently, leaders of the farmers' alliances discussed plans for the organization of a national political party at meetings held in Cincinnati (1891) and St. Louis (1892). They would follow the lead of Alliance members in Kansas who had already launched the PEOPLE'S PARTY (Populist Party) in that state during the summer of 1890. In July 1892 several Alliance members were among the delegates and spectators who met at Omaha, Nebraska, in what was the first national convention of the People's Party. The OMAHA PLATFORM in many ways mirrored the Ocala demands.

The creation of the People's Party effectively brought an end to the Alliance movement. The leaders of the Northwestern Alliance in their enthusiasm for the new party forgot the original purpose of their protest movement, while the members of the Southern Farmers' Alliance steadfastly identified with the DEMOCRATIC PARTY and were reluctant to join the Populists. By the middle 1890s, the Alliance movement had lost its vitality on the national stage as the Democrats and the emerging People's Party co-opted its ideas.

### **Field, Stephen Johnson** (1816–1899) *Supreme Court justice*

In his defense of property rights, Stephen J. Field, a U.S. SUPREME COURT justice for 34 years, anticipated laissez-faire constitutionalism. The son of a Congregational minister, who instilled in him a strong sense of right and wrong, Field was born in Haddam, Connecticut, on November 4, 1816, and grew up in Stockbridge, Massachusetts. His older brother David Dudley Field, Jr., is renowned for codifying New York's laws, and his younger brother Cyrus West Field is famous for financing and promoting the transatlantic cable. Stephen Field graduated from Williams College in 1837, but his study of law with his brother David was interrupted when Stephen nearly died from a dose of calomel a

physician had prescribed for an infection. Upon his recovery he completed his training at the Albany office of New York State attorney general John Van Buren. After Field was admitted to the bar in 1841, he became his brother's partner until 1848, when he toured Europe with other members of his family. Returning to New York in October 1849, he caught the gold-rush fever and in November departed for California via the Isthmus of Panama.

Field arrived in California on December 28, 1849, and quickly rose to prominence. Pausing less than a month in San Francisco, he moved to Maryville, where, with legal talent in short supply, he was elected to the judicial-mayoral position of alcalde and served a year in the California legislature. From 1851 to 1857 he was in private practice. In those violent early California days, Field, who had a hot temper, was involved in controversies, had his life threatened, and always carried a pistol and a bowie knife. Marrying Sue Virginia Swearingen on June 2, 1859, had a stabilizing effect on Field's tumultuous life. In 1857 he failed to be elected to the U.S. Senate as a Democrat but was elected to the California Supreme Court. There his decisions, upholding the property rights of large estates from Mexican patents, angered individual miners and homesteaders. His reelection was further endangered by the coming of the Civil War, which split the California Democratic Party and ensured a Republican triumph in the next judicial election. Rather than go down in defeat, Field, in March 1863, was elevated to the U.S. Supreme Court by Abraham Lincoln. The appointment of Field served two political purposes. Since he was a War Democrat, his appointment helped keep California in the Union, and his appointment repaid his brother David, a prominent Republican, who supported Lincoln's nomination for president.

Having been dominated for a generation by Chief Justice Roger Brooke Taney, the Supreme Court that Field joined subordinated the individual's property rights to the public interest, as interpreted by a legislature. Unless clearly unconstitutional, legislative acts were allowed to stand. In conflicts between state police power and personal property rights, the Court tended to give the legislature the benefit of the doubt. Coinciding with Field's term, during the Gilded Age the Court shifted to a conservative position, emphasizing the preeminence of property rights, conceiving of liberty as economic liberty, and undermining the legislative power to define the public interest. By the early 20th century the Supreme Court thought it, rather than legislatures, should determine social policy. Through the power of judicial review the Court maintained the status quo and ushered in laissez-faire constitutionalism.

The shift was gradual, and in it Field played a major role in dissents, whose ideas the majority adopted in the 1890s. Ever friendly to large-scale business, Field was the cutting edge of laissez-faire constitutionalism, but his deci-

sions also reflected his loyalty to the Democratic Party. His strong commitment to individual liberty in his dissent in *Ex parte McCordle* (1869) was fueled in part by his hostility to Radical Republican Reconstruction measures, and his defense of property rights (debts incurred in gold should be paid in gold) in the *Legal Tender Cases* (1871) was consistent with a Jacksonian hostility to paper currency. In these cases he based his arguments on fundamental principles of justice rather than on a specific clause in the Constitution.

Field buttressed his dissent in the *Slaughterhouse Cases* (1873) with the recently adopted Fourteenth Amendment (1868) to the Constitution, which was intended to protect the civil rights of AFRICAN AMERICANS from hostile state legislation. He argued that Louisiana abridged the “privileges and immunities” of New Orleans butchers without “due process of law” by compelling them to slaughter their animals for a fee in a narrow area controlled by one corporation. It set up a monopoly, which deprived butchers of their economic liberty to pursue a lawful calling. Field’s opinion forecast the increasing use in the Gilded Age of “liberty of contract” to attack state economic regulations and its corollary, “substantive due process,” under which the courts reviewed the substance of state regulations.

In subsequent dissents and decisions Field nudged the Supreme Court toward laissez-faire constitutionalism. In *Munn v. Illinois* (1877) he dissented from the majority opinion, which upheld a GRANGER-inspired law setting rates for Chicago grain elevators on grounds that their function involved “a public interest.” Upholding property rights, Field again restricted state police power and reserved for the courts the task of drawing the line between property that can be regulated and property that cannot be regulated. In his role as a circuit court judge, Field in *Santa Clara County v. Southern Pacific Railroad Company* (1883) ruled that corporations were “persons” and were protected by the Fourteenth Amendment. Upon appeal in 1886 the Supreme Court upheld Field’s position that California’s attempt to tax a corporation differently than other “persons” was unconstitutional. By the 1890s the Court adopted Field’s views on liberty of contract and substantive due process.

While expanding the compass of the Fourteenth Amendment to protect corporations, Field, reflecting the racist bias of the Gilded Age Democratic Party, restricted the amendment’s impact on African Americans. In dissents in 1880 he argued that the Fourteenth Amendment prohibited discrimination by states but not by individuals, a view the Supreme Court adopted in the *CIVIL RIGHTS CASES* (1883). It emasculated the Civil Rights Act of 1875 by allowing racial discrimination in hotels, theaters, and public transportation. Field harbored presidential aspirations, but his hopes for the Democratic Party’s nomination were frustrated in 1880 and in 1884 in part because his rulings

in favor of the unpopular Southern Pacific Railroad hurt him in his home state of California. Field was frustrated further in 1888 when GROVER CLEVELAND did not name him chief justice. To prevent Cleveland from naming his replacement, Field spitefully hung on, despite growing feebleness, until December 1, 1897, establishing a longevity record on the Supreme Court. He died on April 9, 1899, in Washington, D.C.

Field and Andrew Carnegie* (Cambridge, Mass.: Harvard University Press, 1951); Carl Brent Swisher, *Stephen J. Field: Craftsman of the Law* (Washington, D.C.: Brookings Institution, 1930).

### Filipino insurrection (1899–1902)

The Filipino insurrection was a three-year conflict that began in 1899 after the SPANISH-AMERICAN WAR, and the United States declared itself sovereign over the entire archipelago of the Philippines. The struggle against the Americans had its beginnings in the Filipino revolt against the Spanish. Its first phase ended in 1896 when Primo de Rivera, then prime minister of Spain, negotiated a settlement whereby Spain promised economic and political reforms and the rebel leader Emilio Aguinaldo would receive 800,000 pesos and leave the country. The rebels, exiled in Hong Kong, were well organized and anxious for another try at winning their independence.

They did not have a long wait. The American invasion of the Philippines at the start of the Spanish-American War in 1898 was seen by the rebels as a new opportunity to rid the islands of Spanish domination. Admiral GEORGE DEWEY, who was in Hong Kong preparing his fleet for the battle that would make him famous, offered veiled assurances to Aguinaldo that the United States would win independence for the Philippines in exchange for their support against the Spanish. When Aguinaldo arrived in Luzon after the Battle of Manila Bay, many Filipinos flocked to the cause. Within a short time Aguinaldo had enough troops to effectively block Manila from being supplied by land. Trouble, however, began in August 1898 after the United States tricked the rebels into yielding a portion of their entrenchments and then (with the connivance of the Spanish authorities) captured Manila without the Filipino army. Aguinaldo was further angered by continued American evasiveness as to their intentions in the archipelago.

By February 1899 Filipino troops faced American lines in a tense standoff that flashed into a conflagration

when Private Walter Grayson, a Nebraska volunteer, shot and killed several Filipino soldiers while he was on patrol. United States troops then stormed the Filipino lines, killing many soldiers; a bloody war had begun. While troops under General Marcus Mills seized the Visayan Islands to the west, General Arthur MacArthur, father of the more famous general Douglas MacArthur, headed north of Manila on Luzon to Malolos. Badly defeated in pitched battles that followed, the Filipinos switched to guerrilla tactics that the Americans, with only 24,000 troops, could not counter effectively, thus necessitating reinforcement by 46,000 more men. Aguinaldo hoped that guerrilla warfare would protract the war and wear down the already tepid public support for it in the United States.

The Americans won the hearts and minds of some Filipinos by setting up schools and local government and by constructing hospitals, roads, and sewers, but guerrilla activity and terrorism continued unabated. The inability to distinguish between friend and foe created frustration and fear among American troops, who increasingly tried to bring peace through brutality.

Internal dissent within the independence movement and the capture and defection of many of its leaders did more to slow the rebels' momentum than American military might. The insurrection could be said to have finally ended in March 1902, when Aguinaldo was captured in a daring raid perpetrated by American and loyal Filipino troops, but resistance in the southern Philippines continued for years after Aguinaldo's capture.

The costs of this war were appalling. Between 100,000 and 200,000 Filipino civilians died of starvation or were killed during the war. Military casualties for the rebels amounted to about 20,000, while American losses were 4,234 killed and 2,818 wounded. In addition, many surviving veterans would die back home from the tropical diseases they contracted during the war.

**Fiske, John** (1842–1901) *writer, philosopher, historian, lecturer*

A prolific historian and a popular lecturer, John Fiske was born on March 30, 1842, in Hartford, Connecticut, and was named Edmund Fisk Green. His father was unsuccessful in business, so from the age of one Fiske was brought up in Middletown by his maternal great-grandfather, John Fisk, and his grandmother Polly Fisk Bound. Three years after his father died in 1852, his mother, Mary Fisk Bound Green, married Edwin Wallace Stoughton, a successful

New York patent lawyer. Fiske elected to stay in Middletown and adopted his great-grandfather's name in 1855, adding the final *e* in 1860. Although Stoughton was generous to his stepson, Fiske was unfriendly to his stepfather.

Fiske was a precocious, shy child. He read widely and picked up languages with astounding facility but seldom played with other children and was bullied by other boys. He was religious and sang in the local Congregational church choir, but by the time he was 18 he no longer had faith in the divinity of Christ and the inspiration of the Bible. Having read the rational, scientific, positivist philosophy of Auguste Comte, Fiske was an "infidel," but he was not an atheist nor would he become one. All of his life, he was a searcher for absolute truth, for an overall explanation of the universe, for a law that would encompass all phenomena.

Since neither his grandmother nor Middletown, where they lived, were pleased with his religious views, Fiske moved to Cambridge, Massachusetts. In 1860 he entered Harvard College as a sophomore. Although he found his prescribed courses uninspiring, Fiske read widely in history and philosophy and discovered the works of Herbert Spencer. Utilizing Charles Darwin's theory of EVOLUTION to explain developments in science and society, Spencer "discovered a great law of evolution in nature, which underlies all phenomena," for which Fiske had been searching. Following Spencer's lead, Fiske applied the idea of evolution in his articles, lectures, and books on linguistics, philosophy, history, and religion. Even as an undergraduate, Fiske published articles in the *North American Review*. These articles marked him as a disciple of English positivist and evolutionary thinkers and made college authorities threaten him with expulsion should he proselytize his ideas. Shortly after his graduation from Harvard, Fiske impressed Spencer by publishing "The Evolution of Language" in the *North American Review* (October 1863). Fiske argued in the article that simple languages evolved into complex languages and gave, as an example, the development of ancient Chinese into modern Indo-European languages.

Although Fiske wanted to teach linguistics, his expertise in exotic languages such as Sanskrit was not in demand, and his espousal of evolution ruled out a position at Harvard. Having become engaged to Abby Morgan Brooks and needing a job, he studied law, was admitted to the bar in July 1864, and married Abby on September 6, 1864. They had six children. Not a successful lawyer, Fiske gave up law and, aided by subsidies from his stepfather and his wife's family, managed to support his large family through freelance writing. When his stepfather left the Democratic Party to become a Republican, Fiske moved from the Republican to the Democratic Party and found a major outlet for his writings in the Democratic *New York World*, which was firmly committed to laissez-faire principles.

Fiske's situation improved in 1869, when Progressives made CHARLES WILLIAM ELIOT president of Harvard University. Fiske had contributed articles to the *NATION* and the *Atlantic Monthly* in support of Eliot, who asked him to lecture at Harvard on positivist philosophy. Over the next three years Fiske taught philosophy and history there. Still perceived as an atheist, he did not receive a regular teaching appointment, but Eliot made him assistant librarian in 1872, which gave Fiske time to revise his lectures, a process that made him an even more devoted disciple of Spencer, with whom he was in regular correspondence.

Fiske was fortunate in having well-placed and well-heeled friends and admirers. They helped him publish articles, secured an offer for him from ANDREW DICKSON WHITE to teach American history at Cornell University (which he did not accept), and subsidized a year-long visit to England (1873–74). In England, Fiske met Spencer, Darwin, and other intellectuals and wrote his two-volume work, *The Outlines of Cosmic Philosophy* (1874). It was a readable version of Spencer's works, with additional explorations in the evolution of society, most notable for its attempt to reconcile evolution and religion. Although Fiske believed his "cosmic theism" was compatible with the essence of Christianity, few Christians agreed.

Fiske's book enhanced his reputation as a philosopher but failed to secure him a coveted position at Harvard. His defeat came both because he was not a specialist in an age of growing professionalism and because two months before Louis Agassiz died, Fiske had attacked him for failing to embrace Darwinism. Continuing to lecture and publish further observations on the relationship of philosophy, science, and religion, Fiske ultimately believed that evolution was "the way in which God makes things come to pass." Fiske's finances remained shaky, and he continued to depend on his stepfather (who in 1877 was named minister to Russia) and his wife's family to supplement his income.

In 1878 an invitation to give six lectures on American history in connection with efforts to save from destruction Boston's Old South Meeting House redirected Fiske's interests. Quitting his library job, he gave the lectures on "America's Place in World History." America was the cutting edge of evolutionary progress and would inspire a worldwide federal republic led by Anglo-Saxons. His eloquent, optimistic, and flattering portrayal was enthusiastically received in Boston, and in London, where Fiske repeated his lectures a few months later. In a few years Fiske was the country's most popular lecturer on American history. Basing his inspiring talks on the research of specialists, Fiske enlarged them into readable books, whose sale he promoted on his lecture tours. His first and most influential history, *The Critical Period of American History*,

1783–1789 (1888), was for generations the dominant interpretation of the United States under the Articles of Confederation, stressing economic depression and an impotent central government. Fiske's object was not to disparage the articles, but to stress the crucial step in adopting the federal Constitution, which preserved local government in an effective Union. Fiske published additional volumes on the colonial and Revolutionary War periods.

In the 1890s Fiske's optimism was shaken but not destroyed. He was disturbed by corrupt municipal political machines and the wave of immigrants that supported them. The espousal of Free Silver by the Democrats in 1896 forced him to abandon that party, and in 1898 the embracing of IMPERIALISM by the Republicans in the SPANISH-AMERICAN WAR distressed him. Fiske hoped his dream of a world federation would be achieved by example, not conquest. He died on July 4, 1901, the 125th anniversary of the nation he celebrated so effectively.

## flour milling

The expansion of grain-growing regions, the development of a rail network, and the building of storage facilities in the Gilded Age made possible the development of large-scale, year-round flour milling, but a process was needed to mill the hard spring wheat grown on the northern prairies. Cadwallader Colden Washburn, a Minneapolis flour miller, solved that problem in 1879 by utilizing technologies developed in Hungary (where rollers rather than millstones were used to break the hard wheat) and France (where purifiers with air blowers separated unwanted hulls, bran, and germ from the flour). Washburn also designed a mill that derived maximum efficiency from this machinery to produce flour rapidly and cheaply.

Washburn shared the technology of the "new process" mill with the Pillsbury brothers and other Minneapolis millers, and that city soon dominated the industry. By 1882 Minneapolis had replaced St. Louis as the nation's milling center. It produced 3 million bushels of flour annually, or one-twenty-third of the nation's entire output. In that decade the Pillsburys were the city's largest flour producers. In addition, they developed a nutritious, profitable cattle feed from the "refuse" hulls, bran, and germ that had previously been dumped in the Mississippi River. By 1890 Minneapolis milled more than 7 million bushels, or one-twelfth of all the flour milled in the United States, and by approximately 1900 it had overtaken Budapest as the world's leading flour-milling city. The huge volume of flour shipments out of Minneapolis and competing RAILROADS

enabled millers there to secure rebates and gain a larger share of the market. Indeed, discriminatory freight rates favoring Minneapolis flour ruined New York millers and led to demands in that state for railroad regulation.

## football

College football originated in informal matches. Students played both the soccer and rugby versions in pickup games and interclass rivalries. In November 1869 Rutgers University defeated Princeton University, 6-4, in the first intercollegiate football game at New Brunswick, New Jersey. The contest combined rugby and soccer. Princeton won a rematch, 8-0, at home a week later. Harvard University and McGill University in the spring of 1874 played a rugby style of football. Harvard defeated Yale University, 4-0, in their inaugural game in 1875. In November 1876 Columbia University, Harvard, Princeton, and Yale formed the Intercol-

legiate Football Association to standardize rules. Harvard's rugby style prevailed over Yale's soccer style, with play continuing until the ball went out of bounds. Opponents stopped the ball carrier by nearly any means. Football did not have a line of scrimmage, a series of downs, or forward passing. New rules added blocking, alternating ball possessions, and a fixed numbers of downs. Students operated college football teams, selecting, coaching, training, organizing, and financing the squads. Student captains trained and disciplined their teams, while other undergraduates held fund drives and raised subscriptions. Faculty and administration gradually intervened in the organization and oversight of the sport, but students continued to direct on-field activities.

Walter Camp transformed rugby-style football into American football. An all-around athlete at Yale from 1876 to 1882, the six-foot 200 pounder starred at halfback for six years as an undergraduate and medical student. He captained his final three years, picking the starters and deciding plays. Camp abandoned medicine to join the New Haven Clock Company (ultimately becoming its president), but he also directed the Yale football team and built it into a pow-

Football game between Yale and Princeton (Library of Congress)

erful winning program. Camp analyzed the team's work with student coaches each evening, institutionalized regular practice and training, and stressed team work, strategy, tactics, and character building.

Camp represented Yale for 48 years at football's annual rules conventions. In 1878 he pushed through a rule restricting starters to 11 players, and in 1880 he secured a rule establishing the scrimmage line. Organized plays further transformed English rugby into American football. To speed football, Camp in 1882 proposed a series of downs (three) to gain a set number of yards (initially five), new styles of blocking, and tackling below the waist. The committee established a scoring system, awarding one point for a safety, two for touchdowns, four for conversions after touchdowns, and five for field goals. Camp tried to outlaw the flying wedge, a play conceived by Princeton in 1884. The flying wedge placed the ball carrier in the crook of a V-shaped mass of offensive linemen who stampeded into the defense on each play. Camp proposed penalizing teams five yards for crossing the scrimmage line before the ball was snapped. In 1893 Camp became secretary of the intercollegiate football rules committee, securing the sport's future. The group eliminated the flying wedge and other dangerous plays.

Besides being an innovator, organizer, and tactician, Camp was football's most prominent national spokesman, promoter, and defender. He headed a blue-ribbon commission to investigate football brutality and concluded that football had markedly benefited players both physically and mentally. Camp also promoted football by selecting an all-America team beginning in 1889. Yale, Harvard, Princeton, and Pennsylvania dominated college football, often trouncing smaller schools and boasting all but two all-America players between 1889 and 1898.

By the 1890s college football had gained a degree of popularity among the middle and upper classes and became a national sport. The Ivy League and Western Conference were formed, rivalries were established, and teams traveled longer distances for intersectional games. As football's popularity increased, the alumni gained virtually complete control over college sports. Universities began to see football as a means of making money. Yale football receipts grew to \$100,000 yearly, one-eighth of the institution's total income. The annual Thanksgiving Day championship game between the two best college teams eventually drew more than 40,000 spectators in New York City and started the winter social season.

Football provoked considerable controversy. It was a brutal sport, causing frequent injuries: In a 19-year period, 50 players died from injuries. Football also developed a win-at-any-cost mentality. Players and alumni emphasized victory so much that many colleges engaged in shady, dishonest recruiting practices. Tramp athletes made a career of playing college football. Martin Thayer performed for 13

years at nine schools, while James Hogan played football at three other schools after being expelled from Yale. As college football truly became a spectacle, university officials began denouncing the sport. Dean Shailer Mathews of the University of Chicago protested, "Football is a boy-killing, education-prostituting gladiatorial sport," while President Nicholas Murray Butler of Columbia University called football "madness and slaughter." By 1900 college football needed to reform or face extinction.

**Forbes, John Murray** (1813–1898) *merchant, reformer, railroad entrepreneur*

John Murray Forbes was born into a mercantile family on February 23, 1813, in Bordeaux, France. From 1823 to 1828 he attended the progressive Round Hill School in Northampton, Massachusetts, which had recently been established by George Bancroft (later a distinguished historian) and Joseph G. Cogswell, under whom Forbes studied. When Forbes left, at the age of 15, to enter the China trading house of his uncles, James and Thomas Handasyd Perkins, in Boston, Cogswell declared he possessed "a far better education than nine tenths of" college graduates. Two years later his uncles sent him to Canton as their resident agent with Russell & Company, to replace his older brother, who had recently died. Soon becoming the confidential agent of Houqua (Howqua or Wu Bingjian), the head of the Hong merchants who controlled Chinese foreign trade, Forbes, who was fluent in French and Spanish, handled his foreign correspondence. After three years of hard work Forbes returned home in 1833 at the age of 20 to "recruit" his health and fell in love with and married Sarah Hathaway on February 8, 1834. They had six children.

Shortly after his wedding, Forbes returned alone to Canton to wrap up his affairs. When he was made a partner of Russell & Company and Houqua retained him on a lucrative 10 percent commission, he stayed three years, making a fortune in the cutthroat business environment of Canton. When he returned to the United States in 1837, the panic of that year was in full swing. He survived it, established J. M. Forbes & Company, invested in ships, and continued in the China trade, managing Houqua's half-million-dollar American investments.

In 1846, at the behest of lawyer James F. Joy and engineer John W. Brooks, Forbes mobilized capital to purchase the badly built 140-mile Michigan Central Railroad (MC) from the bankrupt state of Michigan and accepted the presidency of the railroad. Under Forbes's leadership it grew and by 1852 reached Chicago, the rail hub of the West. Moving eastward, Forbes secured a link connecting Detroit with Buffalo, through Ontario. Because he viewed RAILROADS as an investment not a speculation, he was able to mobilize investors and to thrive in a risky environment. To keep freight flowing to the MC in Chicago, the Forbes-Joy-Brooks team acquired four small Illinois lines and in 1856 formed the Chicago, Burlington, & Quincy Railroad (CB&Q). They extended the CB&Q west into Iowa and Missouri and ultimately to Denver (1882) in anticipation of freight. As in Canton, Forbes was a brilliant manager. He preferred dividing freight with other railroads in non-competitive pools, but when they fell apart he was a tough competitor.

A man of humane impulses, Forbes was a reformer as well as an entrepreneur. The year he returned from Canton, he was converted to the antislavery cause by Wendell Phillips's Faneuil Hall address in Boston, protesting the murder of Elijah P. Lovejoy by a proslavery mob. Ten years later Forbes originated the plan of borrowing the USS *Jamestown* to transport food from Boston to aid famine victims in Ireland. Forbes left the Whig Party when Daniel Webster supported the Compromise of 1850 and, despite advantages for his railroad interests in Missouri and Iowa, opposed the 1854 Kansas-Nebraska Act, which admitted slavery in those territories. In protest to the "Nebraska iniquity," he helped found the Republican Party, supplied money and rifles for the New England Immigrant Aid Society in its struggle to make Kansas a free state, and in 1859 welcomed John Brown to his home and gave him \$100 for his work in Kansas, which was probably used for his Harpers Ferry raid. In the secession crisis following Abraham Lincoln's election, Forbes hoped to avert war, feeling that farmers and laborers would suffer disproportionately. He attended the 1861 Peace Convention but refused to compromise on slavery in the territories.

When the Civil War commenced at Fort Sumter in 1861, Forbes turned much of his railroad responsibilities over to Joy and Brooks and threw himself into the war effort. Because Forbes was both a shipowner and a railroad man, Massachusetts governor John A. Andrew asked him to ship men and supplies to the Washington area. Forbes also, without a commission, served as a purchasing agent for the Department of the Navy to secure light-draft fast steamers to enforce the most extensive blockade ever attempted. In 1863 Forbes journeyed to England, where he helped prevent the ironclad rams, nearing completion in the Laird shipyards, from joining the Confederacy and

secured a loan for the federal government from Baring Brothers. Forbes was a leading fund-raiser for the U.S. Sanitary Commission, which helped care for sick and wounded Union soldiers. Forbes advocated the emancipation of slaves, helped raise black regiments, and supported the work of the Educational Commission at Port Royal, South Carolina, in educating and employing free blacks on an experimental plantation, which featured land planted in common and individually cultivated plots. To support the vigorous prosecution of the war, Forbes founded the New England Loyal Publication Society. Having significantly contributed to the Union victory, he was present when the Stars and Stripes was again raised over Fort Sumter, four years after its surrender.

Although Forbes remained on the board of the CB&Q, he continued his interest in politics, culture, and reform. At the end of the Civil War he helped found the *NATION* as an organ of reform. In opposition to spoils-minded politicians he advocated CIVIL SERVICE REFORM, and he also backed the gold standard, tariff reform, and woman suffrage. Witty and charming, he was a member of the intellectually stimulating Saturday Club, and among his wide circle of warm friends were literary luminaries Ralph Waldo Emerson and Oliver Wendell Holmes and the actress Fanny Kemble. Forbes also indulged in his favorite pastimes of horseback riding, tree planting, yacht building, and sailing.

In 1873 Forbes again concentrated on the CB&Q. His fears that its expansion had been carelessly managed were confirmed when he found that his trusted lieutenants, Joy and Brooks, and other "active" directors had made more than a million dollars by owning stock in the construction companies extending the CB&Q. After failing to reform from within, Forbes organized a stockholder revolt in 1875, eliminated Joy, and three years later took over the presidency and expanded the CB&Q from Nebraska west to Denver. In 1881 Forbes turned the presidency of the CB&Q over to his cousin Charles Elliott Perkins and became an active chairman of its board of directors. Together they presided over further expansion of the CB&Q, increasing its freight and enhancing its strategic value with its connections into Chicago. Renowned for his integrity, Forbes died on October 12, 1898.

## foreign policy

Through its territorial acquisitions in 1898 at the close of the SPANISH-AMERICAN WAR, the United States achieved world-power status. Historians have stressed that expansion before 1900 resulted either from Manifest Destiny, an American variant of a worldwide ultranationalistic urge for foreign conquest and colonies (IMPERIALISM), or from American industrialism and its need for markets for its products. Undoubtedly, the move by the United States onto the world stage had both internal and external causes as it experienced unprecedented economic growth in an age of increasing nationalistic rivalries. Changing global patterns required presidents to be increasingly engaged in the conduct of international relations. This growth of presidential direction and power is the most significant development in American foreign policy in the late 19th century. The period began with the Senate humiliating Ulysses S. Grant by rejecting the SANTO DOMINGO annexation treaty in February 1870, and it ended in 1900 with WILLIAM MCKINLEY sending an expeditionary force of 5,000 troops to help put down the Boxer Rebellion in China without consulting CONGRESS. The transformation of America's role in the world helped transform the American PRESIDENCY.

In 1870 Americans concentrated on the Western Hemisphere and were concerned by the presence of European powers: France had only recently withdrawn an army from Mexico, where it had supported a government headed by an Austrian-born emperor. The Dominion of Canada, although it had local autonomy, was a part of the British Empire. In the Caribbean, all the islands except Haiti were under the suzerainty of a European state. More importantly, Britain—not the United States—dominated the foreign trade of Latin America. Any assertion of U.S. interests had to take into consideration the commanding position of Europe in the Caribbean and in Latin America.

The United States, however, had enormous potential power. By 1885 it was the world's most productive manufacturer. Steel production exceeded that of Britain the following year, while energy consumption surpassed all other nations by 1890. Agricultural production did not lag behind: In the years from 1865 to 1890, wheat and corn production grew by 256 and 222 percent, respectively. The arrival of 11.5 million European immigrants in the last three decades of the century provided labor in fields and factories. Over the period from 1873 to 1913, the U.S. economy grew at an average annual rate of 5 percent compared with Britain's 1.6 percent over the same period.

American policymakers, however, were aware that American power was latent. America's small army was deployed against NATIVE AMERICANS on the frontier while its deteriorating navy (prior to its strengthening in the 1880s) was supposed to protect the coasts and in no

way could enforce foreign policy. The State Department in 1869 employed only 31 clerks, and its staff by 1881 had grown to only 50. While prominent politicians and intellectuals might find representing the nation abroad rewarding, few Americans aspired to a diplomatic career, which still had the taint of Europe's aristocracy. Exams for consular service originated in the early 1890s in the wake of CIVIL SERVICE REFORM, but few Americans were experienced in conducting international affairs.

In a world dominated by European political and military power, American diplomats had few opportunities to assert themselves. European powers subjugated Africa and Asia. Where formal colonies did not exist, the European powers exercised control through protectorates and spheres of influence. However, this redounded to the benefit of American businessmen and missionaries, who enjoyed the entitlements of white men. Most-favored-nation clauses in treaties with the states of East Asia enabled Americans to obtain the same advantages as British subjects.

Until the late 1890s U.S. foreign affairs were overshadowed by domestic matters. Despite minor territorial disputes with Britain, America's borders were secure, and its attention was focused on Reconstruction, financial panics and ensuing depressions, violent strikes, and differences over the printing of greenbacks and the minting of silver. Foreign crises occurred only intermittently, but in the final decade of the century, with increasing rapidity, problems arose involving Chile, HAWAII, Venezuela, CUBA, and China.

This quickening diplomatic pace reflected the accelerating pace of life in the late 19th century. The revolution in industrial production was accompanied by a revolution in the communication and retrieval of information. Telegraph lines and submarine cables provided instant communication around the globe, and information could be stored in a legible, accessible form thanks to the introduction of the typewriter, tabs, index cards, and file folders in modern offices. The U.S. State Department, however, with its archaic filing and indexing practices, remained haphazard in its record keeping (relying heavily on the memories of old hands) until the 20th century.

International rivalry increased for markets in both farm produce and industrial goods. By the 1870s American farmers found themselves competing in a global marketplace. More significantly, American businessmen and farmers became convinced that growth depended on finding foreign markets. This belief became commonplace even before the disastrous economic depression that began in 1893. Commentators of the time took satisfaction in the rising proportion of manufactured goods among exports, which reached one-third of the total exports by the end of the century.

Rivalry among the great powers also played a part in the rising American concern with foreign policy. The newly industrialized powers of Germany, Russia, and Japan joined

the competition for colonies in Africa and Asia, and American traders and investors had to contend with Germans as well as the British in Latin America and the Japanese in Hawaii. Americans had confidence that their products compared favorably with foreign rivals unless handicapped by barriers to trade, and to ensure favorable terms of trade the United States negotiated reciprocal tariff reductions with Hawaii and Latin America. Congress, representing particular interests that were frequently threatened by imports, viewed with unease the presidential power contained in the reciprocal treaties and frequently undermined these agreements.

The foreign crises of the 1890s increased the power of presidents. Civil service reform and the incipient regulation of business favored the executive over the legislative branch, but these were minor contributions to the modern presidency when compared with the demands of an effective foreign policy. America's status in world affairs was enhanced by the naval buildup begun in the 1880s and the investiture of larger and better-paid staffs of embassies abroad, including the appointment of military and naval attachés that began in 1889. The reach of the presidents of the 1890s was therefore longer than their predecessors.

In 1870 Grant's hope of annexing Santo Domingo was frustrated by the Senate, but the wartime emergency in 1898 conferred almost unrestricted power on McKinley as commander in chief. Traditional restraints on expansion and other foreign policy goals weakened at this time of heightened nationalism. McKinley was a masterful political manager, but he could not have enhanced the powers of the president without the opportunity to intervene in Cuba against Spain. The triumph of the expansionists with the declaration of war against Spain was not total, since Congress asserted that Cuban independence was the goal of intervention. But when American military forces occupied Spanish possessions, the economic and strategic arguments of expansionists prevailed, and the United States opted to control Cuba as a protectorate and Puerto Rico and the Philippines as colonies. McKinley, who made the key decision, embraced imperialism to thwart other imperialist powers. American presidents were no longer merely interested in upholding the Monroe Doctrine in the Western Hemisphere, where the United States was paramount; rather, as the century came to a close, they were prepared to assume new responsibilities across the wide Pacific Ocean.

### Forest Reserve Act (1891)

The federal push to manage logging and protect forests started in earnest in the late 1880s. CONGRESS responded by passing the Forest Reserve Act in 1891, which allowed the president to create forest reserves, a precursor of the national forest system.

In the colonial period, the British Crown—and early in the history of the United States, the federal government—reserved the right to preserve timber on lands in the public domain (for shipbuilding in particular), although early laws were not enforced, and a laissez-faire tradition built up around logging. Secretary of the Interior CARL SCHURZ was the first to attempt to enforce these early laws. Having been raised in Germany, where economic forest management techniques had been long established, Schurz took seriously the dangers of depleted forest lands. Schurz removed corrupt land agents, punished those who logged federally held lands, and developed a system of selling timber rights while retaining federal title of forest lands. Congress, however, pardoned violators if they paid a paltry \$1.25 an acre for land that they had cleared.

Not consistently hostile to the environment, Congress established a permanent Division of Forestry in the Department of Agriculture in 1886, the forerunner of the United States Forest Service, and subsequent studies confirmed that overharvesting would lead to a dire situation within a matter of years. Forest fires, exacerbated by logging, had already burned millions of acres, provoked intense flooding in watershed areas, and also compelled the federal government to protect forests.

The original Forest Reserve bill was narrow in its scope, but the Division of Forestry and Department of the Interior influenced legislators to attach a rider that allowed the president to set apart and reserve public lands covered in timber as public reservations. President BENJAMIN HARRISON immediately took advantage of this legislation, setting aside forests next to Yellowstone National Park in Wyoming as reserves. He added 13 million more acres of protected forest in four additional reserves. President GROVER CLEVELAND added 20 million more acres but also asked Congress to define the goal of the reserves. In response, Congress passed the Forest Management Act in 1897, which designated Forest Reserves as resources for timber, mining, and grazing, leading to the current forest management policy.

### Free Silver movement

The term *Free Silver* refers to the demand made by agrarian and silver-mining interests in the late 19th century for the free and unlimited coinage of silver at a ratio of 16-to-1 (i.e., 16 ounces of silver for every one ounce of gold). The Free Silver movement emerged from the debate over what should give the dollar its value. Americans who adhered to the “sound money” philosophy believed that it was the government’s duty to maintain a stable value of currency and that the best way for it to accomplish this was by the redemption of currency in gold. The gold standard was supported by bankers, some business interests, and many industrial workers whose real wages were thereby protected from inflation. On the other hand, many Americans, business owners as well as farmers, in the cash-strapped agricultural sections of the South and West argued that the government should manage the money supply to relieve any economic suffering caused by declining agricultural prices in the late 19th century.

In 1873 the government demonetized silver just prior to a fall in its market value, and shortly thereafter the nation’s agrarian and silver-mining interests denounced this as the “CRIME OF ’73.”

American farmers believed that prices were determined by the amount of currency in circulation and that the free and unlimited coinage of silver would bring about a general price inflation, thus increasing the amount of money they would receive for their crops and easing their burden of debt. Silver-mine operators joined the call for Free Silver after 1873 simply because they wanted the government to purchase more of their product.

CONGRESS enacted the BLAND-ALLISON ACT in 1878, but this law did not meet the demands for the free and unlimited coinage of silver. Instead, the law limited the amount of silver the government could purchase and mint into silver dollars to not less than \$2 million and not more than \$4 million worth of silver per month. The Sherman Silver Purchase Act of 1890 required the government to purchase and coin 4.5 million ounces of silver monthly. These silver dollars could be redeemed in gold dollars but had to be put back into circulation, which placed a great strain on the nation’s gold reserve. President GROVER CLEVELAND, an opponent of inflationary currency schemes, blamed the Sherman Silver Purchase Act for the financial panic that ensued in 1893 and called on Congress to repeal the law. Congress heeded the president’s demand and repealed the Sherman Silver Purchase Act.

Between 1893 and 1896, the Free Silver movement picked up much support. In 1896 both the DEMOCRATIC PARTY and the PEOPLE’S PARTY (Populist Party) adopted Free Silver as their main campaign theme and nominated WILLIAM J. BRYAN for president. Bryan and Free Silver, however, were overwhelmingly defeated by the Republican candidate, WILLIAM MCKINLEY of Ohio, who ran on a platform supporting the gold standard. As a result the GOLD STANDARD ACT OF 1900 declared the gold dollar to be the official American standard of value.

### Frick, Henry Clay (1849–1919) *businessman, patron of the arts*

Henry Clay Frick, the industrialist, was born on December 19, 1849, to John W. and Elizabeth Overholt Frick at West Overton, Pennsylvania. He attended school until age 14, when he accepted a position in his uncle Christopher Overholt’s store in Mount Pleasant, Pennsylvania. While living with his uncle he attended the Mount Pleasant Institute. He also studied for a brief time at Otterbein College in Westerville, Ohio. After spending two years with his uncle, he moved to Pittsburgh where he sold ribbons and bows during the day and attended a business school during the evening. In 1868 he accepted his grandfather’s offer to become bookkeeper for his Old Overholt Distillery in Broadford, Pennsylvania.

Frick quickly recognized the potential of the rich coking coal fields in the Broadford region. He formed a partnership, H. C. Frick and Company, to purchase coal land and build coking ovens. The firm survived the depression of 1873 by selling below cost and paying its workers in script good only at its company store. Frick used whatever cash he could scrape together to buy out his bankrupt competitors. When the depression ended, H. C. Frick and Company owned almost 10,000 coke ovens and was the major supplier of coke to Pittsburgh’s rapidly expanding iron and steel industry.

ANDREW CARNEGIE, who was Frick’s biggest customer, bought into the reorganized H. C. Frick Coke Company and soon secured the majority of its stock, retaining Frick as president. An 1887 miners’ strike, however, illustrated a discordant note between the two capitalists. Frick, the coal man, wanted to break the union. But Carnegie, the steel

man, was concerned over the supply of coke at his furnaces and ordered Frick to settle the strike. Frick resigned as president of the coke company. Although Carnegie did not care for Frick personally he recognized his ability, and six months later he reinstated Frick and made him a partner in Carnegie Brothers and Company and, two years later, its chairman of the board.

Running both businesses, Frick set out in 1891 to destroy the miners' union. After building up a large reserve of coke at the furnaces, Frick offered his miners a contract he knew they could not accept. When they struck he replaced them with strikebreakers protected by sheriff's deputies. On April 20, 1891, deputized guards killed nine strikers at Frick's Morewood Mines. The violence effectively destroyed the union. A year later Frick, with Carnegie's consent, employed the same tactics to destroy the iron workers' union during the HOMESTEAD STRIKE, but Carnegie, concerned about his image, tried to duck his responsibility by blaming Frick for the violence. Carnegie's claim that he could have averted the violence damaged their relationship and failed to convince the public, which sympathized with Frick after he survived an assassination attempt by anarchist Alexander Berkman.

While most noted for his ruthless antiunion stance, Frick was a capable manager. He directed the reorgani-

zation of Carnegie's steel interest, keeping the coke company a separate entity; bought large tracts of land in the Mesabi iron ore range in Minnesota; and purchased the Duquesne Iron Works, Carnegie's major competitor in the steel rail business. In 1889 when Frick took over the chairmanship, Carnegie Steel's profits were \$3.5 million, but in 1899 they were \$21 million. Despite this service, Carnegie forced Frick out of the steel company that year when they disagreed over the price of Frick's coke used by Carnegie Steel. The two became bitter enemies when Frick sued Carnegie for attempting to cheat him out of the full value of his share in the steel business. In their out-of-court settlement Frick received 11 percent of Carnegie Steel, which ultimately was worth about 12 times the \$5 million Carnegie offered him.

Although Carnegie and other business associates of Frick thought him provincial and uncultivated, interested only in coke and steel, Frick acquired one of the finest collections of European art in the world and housed it in a magnificent mansion in New York City.

## **Gage, Matilda Joslyn** (1826–1898) *women's rights activist*

Born on March 25, 1826, in Cicero, New York, Matilda Gage, a radical feminist, was tutored in Greek, mathematics, and physiology and taught to think for herself by her father, who was a physician, an abolitionist, a WOMEN'S RIGHTS advocate, and a free thinker. She married a prosperous merchant at 18, had five children, and suffered from poor health. Nevertheless in 1852, “trembling in every limb,” she began her participation in the women's rights movement by addressing its convention at Syracuse, New York, but in a voice so weak her stirring words were scarcely heard. She improved somewhat as a speaker, but her major contribution to the women's rights movement was as an organizer, thinker, and writer.

In 1869 she was a charter member of the National Woman Suffrage Association (NWSA) and the New York State Woman Suffrage Association. She tried unsuccessfully to vote in 1872 and served as president of the NWSA from 1875 to 1876, giving way to her friend Elizabeth Cady Stanton. Gage, Stanton, and SUSAN B. ANTHONY wrote the Declaration of Rights, which Anthony presented to a startled Fourth of July audience at the 1876 PHILADELPHIA CENTENNIAL EXPOSITION. Gage contributed to NWSA's paper *The Revolution*, and from 1878 to 1881 she edited the NWSA monthly *National Citizen and the Ballot Box*. She also coauthored with Stanton and Anthony the first three volumes of the six-volume *History of Woman Suffrage* (1881–1922). Trying to make up for the neglect of women, Gage was not above exaggerating the accomplishments of her sex in *Woman as Inventor* (1870) and in *Who Planned the Tennessee Campaign of 1862? or Anna Ella Carroll v. Ulysses S. Grant* (1880).

By the late 1870s Gage had become discouraged by the slow progress of the suffrage movement. She was convinced that Christian doctrines fostered in men a “belief in women's inferiority” and that church and state were obstacles to equality and freedom. Her attempts to con-

vert the NWSA to the view that Christianity was the enemy, however, aroused intense opposition among the devout, conservative elements in that organization. By 1890 Gage was sufficiently alienated from the NWSA to establish the Woman's National Liberal Union, which proclaimed the role of religion in subjugating women and struggled for constitutional amendments guaranteeing woman suffrage and the separation of church and state. Her *Woman, Church, and State* (1893), which she regarded as her most important book, elaborated on these views. Gage spent her last years in Chicago with her daughter Maud—the wife of L. Frank Baum, author of *The Wizard of Oz*. Just prior to her death on March 18, 1898, she wrote a speech for the National American Woman Suffrage Association celebrating the 50th anniversary of the Seneca Falls Convention, which had marked the beginning of the women's rights movement.

## **Galveston flood** (September 8, 1900)

The most devastating hurricane in U.S. history struck Galveston, Texas, on September 8, 1900, killing 6,000 people (more than one-sixth of that city's population). At the time of the storm, Galveston was the major American port west of New Orleans on the Gulf of Mexico. Situated on a low-lying island (basically an outer bank, a sandbar) between Galveston Bay and the Gulf, it was vulnerable to hurricanes because of its location and lack of altitude. The storm that hit Galveston was one of the most powerful ever recorded and did not dissipate until after it had headed east, crossed the Atlantic Ocean, and passed over Europe into Siberia. The barometric reading when its center was at Galveston was the lowest recorded in the United States up to that date. The storm surge (the extreme tide that

A flooded street after the 1900 hurricane in Galveston, Texas (Library of Congress)

accompanies a hurricane) flooded the entire city, caused most of the deaths, damaged virtually every structure, and cost about \$20 million.

The flood had two long-range effects: One was on the city of Galveston itself, and the other was on the form of government adopted by many other cities. Although Galveston regained its status as a major port, it was no longer the preeminent commercial center of Texas. Faced with a crisis of monumental proportions, Galveston needed a city government far more efficient than the typical model featuring a weak mayor and an unwieldy council, with no clear-cut delineation of responsibilities. The citizens responded by simply dissolving the existing government and appointing five powerful commissioners to head the various departments (fire, police, etc.) that functioned as a council. This commission form of government eliminated unwieldiness and pinpointed responsibility. In 1901 a new charter made the commission form of government permanent for Galveston, with one of the commissioners serving as mayor for ceremonial purposes. The commissioners conducted city business—legislation, appointments, and contracts—in open meetings.

The Galveston commission rebuilt the city, restored its credit, and constructed a 17-foot-high seawall to protect the city in the future. This commission form of government appealed to progressive municipal reformers and was widely copied, especially in the South, in the early 20th century.

Rice, *Progressive Cities: The Commission Government Movement in America 1901–1920* (Austin: University of Texas Press, 1977); C. Vann Woodward, *Origins of the New South, 1877–1913* (Baton Rouge: Louisiana State University Press, 1951).

**Garfield, James Abram** (1831–1881) 20th president of the United States

James A. Garfield was an American president who actually did begin life in a log cabin. Born on November 19, 1831, near Cleveland, Ohio, Garfield was left destitute when his father died two years later. Despite their poverty, his mother convinced him to get an education, and he discovered his lifelong love of learning at Geauga Academy. He was also attracted to religion, joining the Disciples of Christ and, in time, becoming a lay preacher. Working as a carpenter and then as a teacher, Garfield financed his studies and graduated from Williams College in Massachusetts in 1856. He returned to Ohio to teach at the Western Reserve Eclectic Institute at Hiram, where he was named president in 1858. That same year he married Lucretia Rudolph after a long courtship. Troubled at first, their marriage endured and then flourished with children and love. Awakened to the evils of slavery, Garfield studied law, entered politics, and won a seat in the Ohio senate, but he was irresolute about his future. The outbreak of the Civil War ended his vacillation. As a prominent politician he was commissioned a lieutenant colonel, and by luck, merit (serving gallantly at Chicamauga), and well-placed friends was promoted to major general by late 1863.

As a war hero Garfield was elected to the U.S. House of Representatives in 1862, where he served from 1863 to 1880. Initially the youngest man in CONGRESS, his intelligence, grasp of details, and eloquence quickly made him a leader in the House. At the same time Garfield had a streak of self-doubt in his makeup. Anxious to please, he was not an extreme partisan and when faced with complex issues, he was prone to waver. Garfield's colleagues thought him inconsistent and even weak, yet his capacity—especially in the area of government finance—was such that he became the undoubted leader of House Republicans after JAMES G. BLAINE left for the Senate in 1876. On the two issues he regarded as moral—emancipation and sound currency based on gold—Garfield was unwavering; on two other issues he favored—CIVIL SERVICE REFORM and free trade—he was less steadfast. Garfield did not wish to depoliticize the civil service, and he wanted to protect the products of his district. As a powerful politician with five children and a low income, Garfield on occasion sold his influence. Having invested nothing, he received from

Credit Mobilier a \$329 dividend or, as he claimed, a \$300 loan that he repaid. His \$5,000 fee from the DeGolyer McClelland Company for his help in securing a paving contract in Washington, D.C., was most questionable (Garfield was chair of the crucial Appropriations Committee), and yet it did not prevent his nomination for the presidency.

When the 1880 Republican Convention deadlocked over the candidacies of Ulysses S. Grant, Blaine, and JOHN SHERMAN, the Blaine and Sherman delegates turned to Garfield and nominated him. To be elected he had to carry New York and needed the support of its Republican machine headed by Senator ROSCOE CONKLING, who happened to have been the chief STALWART supporter of Grant at the recent convention. Ambiguously agreeable, Garfield activated Conkling's lieutenants, as well as other spoilsmen, with vague promises of patronage. He also encouraged the collection of political assessments from civil servants. Reformers worried that Garfield's "fiber" was not "steel," but the Democrats were even less apt to reform the civil service.

Garfield's strategy of opposing nobody won the election, but it paralyzed his administration and led to his

demise. His superb understanding of the workings of the federal government and the issues before it were irrelevant because he had raised expectations he could not or would not fulfill. Conkling got some patronage, but the biggest plum, collector of the Port of New York, went to his arch-enemy Secretary of State Blaine. Conkling was outraged and urged his colleagues not to confirm the nomination on the grounds that it violated senatorial courtesy (the practice that enabled senators to dictate to the president who should be nominated in their states). The struggle lasted two months, and when Conkling realized he would lose, he resigned, expecting that the New York legislature would show its support by returning him to the Senate. It did not, and Conkling had committed political suicide.

Garfield had triumphed, but he never had an opportunity to get his administration on track. On July 2 a deranged office seeker, shouting that he was a Stalwart, assassinated Garfield. He lingered for more than two months, but blood poisoning set in and he died on September 19, 1881. Reformers, claiming that Garfield had been murdered by the spoils system, pushed through the PENDLETON CIVIL SERVICE REFORM ACT (1883) as a memorial to Garfield. Ironically he had little sympathy for its prohibition of political assessments and for its reliance on open competitive examinations to secure qualified non-partisan appointees to office.

James A. Garfield (Library of Congress)

**Garland, Hamlin** (1860–1940) *short story writer, novelist*

Hannibal Hamlin Garland, a realistic novelist, was born on the frontier near West Salem, Wisconsin, on September 14, 1860, to farmers Richard Hayes and Isabelle Charlotte McClintock. Garland spent his early youth traveling westward with his family through Wisconsin, Minnesota, and Iowa, where he participated in the strenuous labor of running his father's homestead. He attended the Cedar Valley Seminary in Iowa, from which he graduated in 1881, and taught school in Illinois for a season. In 1883 he rejoined his family, who had moved to South Dakota after losing their farm to a plague of insects. For two painful years he worked his own claim near his father's, but the toil proved so arduous and unrewarding that he sold his farm for \$200 and moved to Boston.

Nourishing his literary appetites and ambitions at the Boston Public Library—where he spent entire days reading poetry, fiction, philosophy, and social theory—Garland was soon as well informed as any college graduate. After attending a few lectures at the Boston School of Oratory, he was appointed an instructor in English and American literature

there. Around 1886 he began contributing brief sketches to local newspapers, and the next year *Harper's Weekly* published a story about the rural life he remembered. By 1890 he was making a modest living as a freelance writer and had come to know the literary community in Boston, where he received encouragement from WILLIAM DEAN HOWELLS, the leading novelist and critic of the period. In 1891 he published his first book, *Main-Travelled Roads*, a collection of starkly realistic stories set in the Midwest, an area he called the Middle Border; in each of whose farm houses, as he was later to write, he saw an "individual message of sordid struggle and half-hidden despair."

During the next decade Garland produced a stream of books, including several novels and collections of short stories and a volume each of poetry and literary criticism. In all his early work he demonstrated and argued for his belief in a harsh realism that he termed "veritism." His 1892 novel *A Spoil of Office* was an exposé of political corruption on the western frontier and a tract for the POPULIST PARTY. That same year he published *A Member of the Third House*, dramatizing the cruel power of the railroad lobbies, and his later novels protested the fraudulent land practices of bankers, the condition of women on the frontier, and the exploitation of the Plains Indians. In 1899 he settled in Chicago, where he married Zulime Taft, the sister of the noted sculptor Lorado Taft; the couple had two daughters.

Following a series of commercially successful romantic novels in which he seemed to have forsworn his bleak vision of rural life, Garland returned to New York in 1916, and the next year published *A Son of the Middle Border*, the first of four volumes of autobiography that resumed his theme of the hardships and frustrations of pioneer life. This book and its Pulitzer Prize-winning 1921 sequel *A Daughter of the Middle Border* were to become his lasting legacy to American letters. A pioneer realist and an eloquent advocate for the rural poor, he provided a vivid picture of agrarian poverty in an age of industrialization, and his honest, often grim depiction of pioneer life did much to dispel the romantic myth of the midwestern farmer. Garland died in California on March 4, 1940.

## Gay Nineties

Apparently no one in the 1890s used the term *Gay Nineties* to describe the decade in which they were living. With the nation suffering in the mid-1890s from a severe economic depression, that decade was not a happy one for many Americans. It was a time of unemployment and violent

strikes, the rise of white supremacy, the growth of urban slums, and rural unrest, caused by falling prices for farm produce. Coping with wars and depressions, later generations created the legend of the "Gay Nineties," as they looked back at what seemed to be a happier, simpler, and more innocent age.

Legends, however, have a factual base. American society is complex, and gaiety, as well as despair, existed in the 1890s. MUSIC, for example, had a much larger place in Americans' lives than it had in the past. Middle-class people often had an upright piano on which they played romantic and sentimental songs, such as "O Promise Me." Ragtime was also in vogue, with Scott Joplin composing the "Maple Leaf Rag" in 1898. The march king JOHN PHILIP SOUSA toured the nation, with his superb band, and virtually every town had its own bandstand for local musicians.

Vaudeville was at its height in the 1890s and available for a large segment of society. It consisted of a stage show with a variety of acts, including comedians, musicians, singers, dancers, acrobats, and animals. Legitimate THEATER was also available, with touring companies presenting plays. Technological advances brought new forms of entertainment. Vaudeville houses began to show motion pictures, kinetoscope parlors multiplied, and 150,000 phonographs and 3 million records were sold in that decade.

Many Americans had more time in the 1890s for SPORTS AND RECREATION than in earlier decades. The BICYCLING craze hit its peak in the 1890s, and the tune "Daisy Bell" nostalgically evokes gaiety with the vision of sweet Daisy upon the seat of a bicycle built for two. The popularity of the spectator sports of BASEBALL and FOOTBALL grew rapidly, although the brutality of college football and of BOXING does not support the notion of Gay Nineties innocence. The decade had its seamy side, but subsequent generations prefer the cheering thought of Daisy Bell as a GIBSON GIRL in a shirtwaist dress riding a bicycle.

## Geological Survey, U.S.

On March 3, 1879, CONGRESS and President RUTHERFORD B. HAYES established the U.S. Geological Survey (USGS) as an Interior Department agency for "the classification of the public lands and examination of the Geological Structure, mineral resources and products of the national domain." The politicians and scientists who shaped the USGS leg-

isolation intended the new agency to aid the nation's struggling economy by supporting the mining industry's efforts to supply minerals for construction and currency. They also hoped to improve the civil service by increasing economy, efficiency, harmony, and utility in federal mapping and science surveys. The new law discontinued the three competing federal geological and geographical surveys of the public domain in the West led by FERDINAND VANDEVEER HAYDEN (Interior), JOHN WESLEY POWELL (Interior), and First Lieutenant George Montague Wheeler (Army Corps of Engineers). The USGS absorbed some of the functions of these organizations, whose combined appropriations for 1878–79 totaled more than the new agency's funds for 1879–80. To protect the impartiality and integrity of USGS data and analyses, the founding statute prohibited its employees from speculating in the lands and resources under study or conducting outside consulting.

The USGS "organic act" also named the Smithsonian Institution's National Museum as the repository for USGS scientific collections, detailed the nature of USGS publications and exchanges, and established a Public Lands Commission (PLC) to codify laws and recommend improvements in management. CLARENCE (Rivers) KING and Powell served on the PLC; Powell, under Smithsonian overview, also led the new Bureau of Ethnology (BE). Some of the disestablished survey's functions in botany and zoology passed to the commissioner of agriculture. The reformers did not succeed in establishing within either the Interior or War Departments a separate mapping agency for all geodetic, land-parceling, and topographic surveys, nor did they improve the Interior's administration of the public lands by its General Land Office (GLO).

President Hayes nominated King as director of the USGS. King, in helping to shape the USGS (1878–79) and then direct its operations (1879–81), drew on his experience while serving in the state-sponsored Geological Survey of California (1863–66) and leading the U.S. Geological Exploration of the 40th parallel (1867–79) for the Army Engineers. Continuing his policies, King intended USGS-mandated studies of mineral resources principally to yield immediate results of practical value to industry and a scientific classification of the national domain, which the attorney general's office determined to be those public lands (mostly in the West) still federally owned. King also expected the results in economic geology to increase an understanding of the classification and origin of ore deposits and, with the subordinate investigations in general geology, also to advance knowledge of the earth and its history.

In 1881 King resigned and advised President JAMES ABRAM GARFIELD to appoint Powell as his successor. A year later King's and Director Powell's friends in the 47th Congress convinced their colleagues and President CHESTER ARTHUR to authorize USGS activities nationwide to

support the completion of the reliable national geologic map sought by King. Under this rubric, Powell remade the USGS as an agency for topographic mapping (by design and default the needed national program) and basic research in general geology, but at the expense of economic geology. He continued to lead the BE and often merged with it USGS personnel and operations. Congress increased USGS appropriations through most of the 1880s. The 50th Congress and President GROVER CLEVELAND also gave Powell an opportunity in 1888 to pursue his long-standing goal of reforming land and water use in the West by authorizing and funding the Irrigation Survey (IS) within the USGS. But from 1890 to 1894, three Congresses and Presidents BENJAMIN HARRISON and Cleveland, seeking more economic geology, repudiated Powell's programs, principally because they did not yield the requested practical assessments of mineral and water resources. Powell's views and policies, unchanged by King's advice, contributed to the attorney general's decision to close the public domain to entry until the IS fixed the dam and reservoir sites. That decision also denied to six new states the federal-dowry lands due them at statehood. Powell's policies also left the USGS unable to respond effectively to a renewed currency crisis by facilitating new discoveries of precious metals. Congress first terminated the IS, then selectively slashed USGS statutory staff and operating expenses, and finally encouraged Powell to resign by reducing his salary.

CHARLES DOOLITTLE WALCOTT, hired by King in 1879, replaced Powell as director. In 1893 Interior Secretary Hoke Smith had advanced Walcott from chief paleontologist to geologist-in-charge of geology and paleontology to reform the USGS geologic unit decimated by Powell's agencywide reduction-in-force in 1892 in response to the congressional cuts. For the public good and to reward Walcott's success, King and Smith urged the 53rd Congress and President Cleveland to make Walcott the third director in 1894. To renew USGS usefulness to the nation, Director Walcott expanded the agency's mission to include any economic, educational, or other practical objective that could be advanced by a greater knowledge of the earth and its resources. Walcott's balanced program of applied and basic research restored congressional confidence, and the legislators increased USGS appropriations beyond those granted Powell. Walcott restored the USGS program in economic geology, reorganized the agency's other geological work, professionalized its topographic-mapping program, and began successful and continuously funded studies of water resources and arid-land reclamation, native peoples' lands, forest reserves, as well as tests of fuels and structural materials. By 1900 Walcott completed definitions of the USGS geologic, hydrologic, and topographic units, which remained the agency's principal scientific and mapping components until the Interior Department's research

biologists joined the USGS. Most of the other units Walcott managed, and those later transferred to the USGS that did not develop or retain scientific or mapping programs, subsequently became other Interior Department bureaus: Reclamation (1907), Mines (1910), Grazing (1935, then combined with GLO in 1946 as Land Management), and Minerals Management (1982). Additional functions went to existing agencies in other federal departments: Forest Service (1905) and the Bureau of Standards (1910). Walcott resigned as USGS Director in 1907 to become the Smithsonian's fourth secretary.
